Congressman McCormack went on to say that many people ask him why we should help other countries. As a legislator, he said, he does not have the right to appropriate \$1 to help other countries unless it is in the public interest of our country. He said that he often answers with a question, "What will happen if we don't?"

Elaborating on four major points, he continued:

"The Communist picture is that they are trying to take over Western Germany, Western Europe, in fact any country they can get their hands on by any means. In Western Europe they do not want the 200 million people for the population, but they do want the productive capacity and the brains. In overall productive capacity we are 3 to 1 over the Reds and Western Europe is 1½ to 1. Together we are 4½ to 1. But if the Reds had Western Europe's 1½ their capacity would be too close to ours for comfort.

"Whatever country dominates Western Europe economically also dominates Asia and Africa.

"Western Europe is our first line of defense. Military leaders have said that if we lose Western Europe we could never get another beachhead in Europe as we did in June

"If we lose Western Europe the probabilities are pretty good that we would also lose South and Central America with their weak ties to us and strong ties to the Old World."

In conclusion, the Congressman said:

"We are not yet committed to this policy of "peaceful coexistence." We must strike a happy medium between this policy and sound national defense. We now have a powerful offensive Air Force. What about our defenses? Will we have time in an atomic war to build our military power after a sneak attack as we did after Pearl Harbor?"

MUST BE STRONG

"As of today the Red leaders have not changed their intent of world domination, world aggression, world subjugation.

"If we are strong they will respect us through fear. Strength is what talks to the Communist leaders.

"The road to peace is through strength. It is much better to have strength and not need it than to need strength and not have it."

All Men Are Created Equal

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent editorial that appeared in the Lawrence Sunday Sun, Lawrence, Mass., on January 16, 1955, which warrants the serious consideration of every Member of the Congress of the United States:

ALL MEN ARE CREATED EQUAL

Did you know that current United States Government holdings of edible food surpluses are valued at \$6 billion?

And did you know that the annual expense of storing this 26 million tons of foods is 4 times the cost of operating our Congress?

Further, were you aware that this vast surplus could feed every man, woman, and child in the United States for a full year—and that if it were loaded into 40-car freight trains, it would fill 100 such trains every day for a year?

To bring the picture down out of the atmosphere of virtual incredibility, can you comprehend that, if you were to go out into the highways and byways and find 100,000 starving people, you could feed them all they could eat around the clock for a whole year and still they would be able to consume only one-fifth of 1 percent of this fantastic surplus?

This isn't our word for it. The figures come from an organization known as the Cooperative for American Remittances to Everywhere, Inc. This is more familiarly known to you are CARE, which is carrying on a campaign to move this gigantic supply to the free world's hungry peoples, and claims that it can be done for a nickel a day and still give each person receiving it generous feedings loaded with calories.

CARE claims that such distribution would be one of the best counter-Communist moves this country could make, and we are inclined to agree, even though it is a common practice for people to bite the hand that is feeding them.

We are confounded by the figures. Our imagination is staggered. We are unable to comprehend the enormity of the supply. It is a mountain of food the like of which never before existed.

Every one of us, every day, eats his fill of the good things produced in this wonderful land of ours, and still we have so much left over that it costs us millions of dollars annually to store it.

Where does this surplus come from? It's a simple question and the answer is simple. If a man operates a farm and it produces 10 dozen eggs a day, and all he can sell in the market is 6 dozen, the Government buys the rest and stores them away. That keeps the price up and the farmer happy and reasonably prosperous. The same applies to milk, cheese, butter, corn, wheat—all the basics which are produced so abundantly in abundant America.

So, we can feed a good part of the hungry world. If we have the will to do it, we can send all this bounty beyond our borders to alleviate misery. And, by so doing, we would rid ourselves of a monumental economic headache.

So much for food. What about clothing? We have \$6 billion worth of food cached away. One billion dollars is \$1,000 million. We have \$6,000 million worth of extra food, for which the Government has paid the producers handsome subsidies.

But what about clothing? There isn't an ounce of woolen or worsted cotton material stockpiled by the Government in the form of surplus for which subsidies have been paid to producers. Material for clothing is not perishable in relation to foodstuffs. Yet the Government has steadfastly refused to listen to pleas to keep mills operating in labor-surplus areas by stockpiling textiles.

Is there some difference between an American who produces cloth and an American who produces dairy products? Isn't one as much entitled to subsidies as the other to earn his daily bread?

Once again this year Congressman Thomas J. Lane has filed a bill calling upon the Government to set up a system of procurement of worsted fabrics by Uncle Sam which would help to keep looms turning in our textile industry, especially in areas of large-scale unemployment; and we believe that includes just about every textile-producing community.

munity.

How far will this proposed legislation get?
The man is trying—has been for years. But, while nothing is done for the textile worker, we have accumulated six thousand millions of dollars worth of perishable food.

Who was it that said, a long time ago: "Want in the midst of plenty."

The Federal Government and the Anthracite Industry

EXTENSION OF REMARKS

HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article which appeared in the January 12, 1955, Anthracite Institute Bulletin, Wilkes-Barre, Pa.:

THE FEDERAL GOVERNMENT AND THE ANTHRACITE INDUSTRY

The most casual review of the attitude of various agencies of the Federal Government toward anthracite over the past few decades leads to the inevitable conclusion that it has been unsympathetic, to say the least. While the following is far from complete, it serves to illustrate how this industry has been hampered in maintaining its rightful position in the overall fuel economy.

In World War I, the Fuels Administration announced that anthracite would be denied to the West and South and other sections of the country which had ample supplies of other fuels. Thus, hundreds of thousands of anthracite consumers were forced, by Government edict, to convert from anthracite, despite their preferences.

In the early 1930's, the Reciprocal Trade Agreements program resulted in admitting large tonnages of foreign anthracite into this country free of duty, at the very time our product was required to pay duties on entering Canada.

In World War II, the Solid Fuels Administration imposed restrictions on anthracite sales. This had the wholly arbitrary effect of changing the status of anthracite from a plentiful fuel for its then existing customers, who were compelled to share their supply with former users of competitive fuels which could not serve their-peacetime customers.

Currently, the Department of State, through its General Agreement on Tariffs and Trade (GATT), is permitting foreign oils to invade the very heart of the anthracite and bituminous coal markets in unlimited quantities. It is estimated that the foreign oil which entered the United States last year was the solid fuel equivalent of 59 million tons, and the volume of imports is increasing.

Also currently, the Federal Power Commission, by authorizing natural-gas pipelines to invade the northeastern States without regard to the effects on existing fuel and transportation industries is a further example of the influence of Government on the

normal marketing of coal.

The latest incident occurred 2 weeks ago, when the Commission was persuaded by the testimony of two gas-utility witnesses, neither of whom reside in the region, that it was in the public interest to authorize the introduction of natural-gas service in communities where anthracite is mined. The proposal had been actively opposed by counsel and witnesses for anthracite producers, the United Mine Workers of America, the presidents of the affected railroads, the railroad brotherhoods, and the local chambers of commerce and industrial-development funds. No one who lives in this area appeared to advocate the future displacement of our product in our own area, yet our formal request for oral argument on the issues was denied by the Commission.

It is indeed difficult for the coal industry

It is indeed difficult for the coal industry to determine just wherein the public interest lies under such circumstances.

It is increasingly apparent that the time is long overdue for the formulation and adoption of a national fuels policy, not only in the interests of conservation of energy resources for national security, but as an accepted guide to the determination of the public interest by governmental agencies concerned with regulation of fuels.

The Marble Industry

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I desire to call the attention of my colleagues to the possible destruction of one of the Nation's old and well-established industries.

West Virginia is the center of the marble and novelty production in the Nation. The following article in the Parkersburg Daily News, January 9, 1955, is a graphic portrayal of what will happen to at least six plants, now operating, if the newly proposed Japanese treaty is approved in connection with the renewal of our Reciprocal Trade Agreements Act.

The article follows:

UNLESS SITUATION CORRECTED ALL MARBLE PLANTS WILL CLOSE JULY 1

(By Marie Wood)

Harassed for months by a United States foreign tariff policy that has seen United States small business sacrificed to Japanese interests, heads of the American marble industry, heads of the American marble inprecedented step.

All members voted unanimously to demand that Washington immediately "correct

the United States tariff situation in which the United States marble industry and 20 other small United States businesses are bearing the full cost of the United States foreign tariff policy," or the American marble industry will shut down July 1.

The action was preceded by many months of effort to convince official Washington that the American marble industry can't continue to operate in the face of a United States tariff policy which sees Japanese marbles shipped into the United States at prices that are below the cost of raw materials used in the American marble industry.
In making their demand of Washington,

the representatives of the marble industry drew the following conclusions-predicated upon their own experiences over the past 5 years, plus the contents of the 37th annual report of the United States Tariff Commis-

sion for 1953.

1. That the American tariff policy has been one to sacrifice small industry to foster world markets for United States exports of large machinery-with the United States dollars which pay for these American exports acquired through the sacrificing of small business.

2. That the American tariff policy has been pointed toward a determination that Japan and other foreign countries not yet in the Russian orbit, shall trade with the United States rather than with Communist Russia and its satellites—a policy already a failure since one of the first things the new Japanese prime minister did upon taking office was to announce trade would be carried on with these countries.

3. That the American tariff policy aready has done more economic damage to West Virginia than to any other State in the United States, because of the type of industry in West Virginia, and it is damage which

will materially increase.

4. That already West Virginia population has decreased 6 percent in the last 5 years with West Virginia business off 4 percent in the fact of increasing good business generally in the United States-and the big reason West Virginia's record is what it is, the tariff trade policy of the United States.

Specifically the marble industry heads cited such figures as these: Japanese marble imports have cost American marble plants 60 percent of their sales within the United States, plus all their foreign markets, with employment reduced from above 900 to below

American marble production costs are 200 percent above those production costs in Japan due to low cost of Japanese labor, raw materials and taxes—with overall Japanese taxes 15 percent against United States Federal taxes of 52 percent, plus the various other taxes.

The average monthly wage of a skilled machine operator in a Japanese marble factory is \$41.66 and unskilled wages at \$16.66with child labor frequently utilized at much,

much less

United States marble factories pay skilled machine operators an average of \$300 a month and unskilled laborers approximately \$200 a month, with American labor working 40 hours against Japanese workweeks of 50 to 60 hours.

Japanese marbles then are loaded as ballast with shipping costs to the United States \$10 per 2,000 pounds and shipping costs on nonconference United States flag vessels and on Japanese flag vessels are considerably

The marble industry heads yesterday said bluntly that they are halting purchases of raw materials and liquidating inventories.

This stop comes as a result of all efforts having proved futile after plea after plea to the Tariff Commission, Customs Bureau, and other Washington officialdom.

Six of the seven marble plants in America are located in West Virginia, the seventh in Ottawa, III., and all were represented except the Illinois plant which sent a proxy.

The companies are:

Peltier Glass Co., of Ottawa, Ill. Clinton F. Israel of the Clarksburg firm Clinton F. Israel of the Clarksburg firm acted as spokesmen, with others attending including: H. A. Fisher, Herbert Spencer, and Howard Hildreth, of Parkersburg's Vitro Agate; Paul Cox, of Ravenswood's Novelty Works; Ralph (Pat) Michels, of the Penns-boro Champion Agate; Roger Howdyshell, of St. Marys Marble King; W. J. Heaton of Cairo's Heaton Agate.

Natural-Gas Ruling Hurts Free Competition

EXTENSION OF REMARKS OP

HON. JACK B. BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. BROOKS of Texas. Mr. Speaker, in any consideration of the very important question of regulating this Nation's natural resources, we are obligated to examine closely the possible effect Federal regulation might have on our competitive, free-enterprise system, which enables both family and industrial consumers to benefit from competitive prices. Mr. Lewis H. Haney, writing for the New York Journal-American in the December 9, 1954, edition, has outlined the dangers of stifling free competition with overregulation in a short, concise article. Mr. Haney's article, dealing with the Supreme Court decision in the Phillips Petroleum case, is well worth our time and interest. Preserving our system of free competition is fundamental to Americans and, under leave to extend my remarks in the RECORD, I include Mr. Haney's article, as follows:

NATURAL-GAS RULING HIT (By Lewis Haney)

Natural gas has grown in importance. Today 75 percent of American families deupon gas service, and one-fourth of the Nation's energy needs are supplied by gas. Since the war demand for gas has more than doubled, mostly at the expense of coal. There are over 21 million natural-gas customers, supplied by over 4,000 producers.

This is why the recent Supreme Court decision in the Phillips Petroleum case is so important to all of us. It rules that the Federal Power Commission can fix the price of natural gas and otherwise control its production. For years the Natural Gas Act of 1938 was supposed to exempt competing producers from such controls, as was plainly the intent of Congress. Now a condition bordering on the chaotic has arisen. Gas sales across State lines are tending to be reduced, expansion of the industry to new areas checked, and many industries are considering moving to the Southwest, where the bulk of the gas is produced.

One result would be higher costs and prices for millions of consumers in other areas.

The court appears to have thought that because the distribution of gas by pipeline is regulated as a public utility service and a monopoly the Government should also regulate production of natural gas by the thousands of competing concerns which drill wells, collect the gas, and deliver it to the big distributing gas companies.

VIGOROUS COMPETITION

But the difference is plain. Instead of being a monopoly requiring a franchise to use a right-of-way and necessarily subject to rate regulation as a common carrier as are pipelines and railways, the thousands of relatively small gas producers compete vig-orously. In Texas, the largest one supplies only 8.7 percent of the production. Of course, gas is competing with coal and oil.

If the court's decision about gas producers were right, why not subject the producers of coal and oil to Federal control and pricefixing? The producers of coal and oil also ship their product by pipeline or rail to consumers across State lines. But we let them run their own businesses as competitors, while regulating the rates charged by the rallways and pipelines. This is as Congress intended it to be in the gas business.

DANGERS CITED

The case for competitive private enterprise in gas production is strengthened by the efficient large output and the low price of the product. As Hines Baker, president of Humble Oil & Refining Co., has shown, the supply of gas has increased as demanded, and the price has not risen as have the prices of coal and oil. It is the cheapest fuel.

Remember, only one-tenth of the delivered price of natural gas goes to the producer. The other 90 percent goes to the distributors. and this part is or should be subject to regulation.

The danger to our economic system of the court's decision is clear: Federal bureaucratic control would spread to coal and oil production-the total fuel supply.

The obvious remedy is to amend the Natural Gas Act of 1938, so as definitely to exempt natural gas producers from Federal price-fixing and production controls. Possibly the producers' present long-term contracts with gas companies could be made more flexible, and the transmission companies could be more carefully regulated as separate public utilities. But the main thing is to encourage the maximum production of natural gas at a competitive price, and this only competitive private enterprise can do.

Let's Make Employment and Progress

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting editorial from the Boston Daily Record, Boston, Mass., October 5, 1954:

LET'S TALK SENSE

We are not greatly impressed by prosperity panaceas dreamed up in the middle of political campaigns.

Long experience-a good deal of it too bitter to swallow-has taught us that these enticing blueprints for a brighter future are apt to be nothing more than vote bait.

As soon as the polls are closed and the ballots counted, everything usually goes back to normal and we trusting souls can't be blamed too much if we suspect that the late Wendell Wilkie did not stray far from the truth when he scoffed at campaign promises and dismissed them as meaningless hot air.

Political panaceas would not be necessary at this time in Massachusetts if we had received the things we wanted and did not get during the past 2 years.

Business and employment would have been stimulated tremendously by the construc-tion of the \$300 million aircraft carrier at Quincy.

But the contract for this mammoth vessel eluded us and went elsewhere.

The depressed textile centers of Lawrence. Lowell, New Bedford, and Fall River wouldn't bothering much about politics if the defense orders they so eagerly anticipated had materialized.

But something strange and mysterious happened, and the orders never proceeded

beyond the false hope stage.

So now, as the November election creeps up on us, we hear a lot of talk about attracting new industries, about rehabilitating old industries, about inducing investors to drop their spare cash on lagging cities, and about making it possible for additional thousands of jobless people to collect unemploy-

ment relief money.

But all this fanciful talk does not hide the drab fact that the \$300 million carrier bypassed Massachusetts and the defense orders behaved similarly.

And that brings us to the real point of this whole editorial, which, simply stated, is:

If the politicians must talk, let them talk

The men and women of this great State, with its wonderful tradition of free private enterprise, need work and wages.

They don't need another dose of socialism in the form of thinly disguised doles and handouts.

The dredging of the Merrimack and Connecticut Rivers would create employment in a few months for thousands of men and would, at the same time, equip those neglected streams for low-cost barge transportation.

Then, all the languishing manufacturing centers on their banks would become inland ports; and the various industries, made more accessible to the sources of raw materials and the markets of the world, would be in a position to compete much more easily and effectively with their rivals in the South and West.

And let's face it: The cost of the dredging would be considerably less than the amount of money which we have given away to France, India, and other foreign countries in a single week.

What the Bill of Rights Means to Me

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

 IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. DOYLE, Mr. Speaker, by reason of unanimous consent of the membership of this distinguished legislative body for me so to do, I am pleased to herewith present to your attention an essay entitled "What the Bill of Rights Means to Me," and to further inform you that this very splendid essay was written by Miss Joan Gordon, 12122 Cornish Avenue, Lynwood, Calif.; she being a worthy student of the Lynwood High School and a member of the senior class of this outstanding school, which is in one of the

important communities of the great 23d district.

Recently this essay won first place in the essay contest sponsored by the Realtors Board, who have their businesses in the great 23d district, which I have the honor to represent, this my 5th term.

Because of her victory in competition last November, said essay is now to the attention of the National Association of Realty Boards. I am sure you, Mr. Speaker, and all of my colleagues of this 84th Congress join with me in congratulating her upon this unique and significant writing. I present it with pleasure and with the consent of the writer and of her parents.

The essay follows:

WHAT THE BILL OF RIGHTS MEANS TO ME The Bill of Rights is a scrap of paper, some words.

The Bill of Rights is my brother speaking to the student council.

It's my mother handing out the clothes early in the morning, talking to the neighbor of anything and everything from the best place to plant camelias, to the national

defense appropriations.

It's my father eating lunch with the men on the warehouse dock, discussing anything-the big fight, big game, big race-or communism.

It's my grandmother reading the Bible. It's the pastor calling on our family with

flowers from the Sunday service.

It's the fact that there are more than 27 different denominations meeting in my own little town.

The Bill of Rights is a group of 10 articles amending the Constitution.

It's the right to lock our door.

It's the boy we used to play hide and seek with on summer evenings, going off to boot camp.

It's his mother's tears, his father's pride. It's the day my dad went off to jury duty and came with a renewed interest in our court procedures, even though he was never required to try a case.

It's the President shaking hands.

It's campaign promises and the noise of election time.

The Bill of Rights is the demand of our ancestors as they insured our freedom.

It's our neighbor as he collects signatures for a petition and presenting of it himself at the town meeting.
It's my dad taking off his coat after church

and reading the Sunday papers.

It's my mother writing to our Congress-

It's our town library, quiet, dignified; filled with volumes of ideas, thoughts, challenges.

It's the fervent excitement of our main street at parade time.

It's squabbling over the best ways to combat smog.

It's my father watering the lawn just before dark, relaxing after a day of labor for his family.

It's the flag in front of our school.

It's a teacher eating dinner with our family; afterwards talking about education, as he helps with the dishes.

It's the Cub Scouts having a cookout in the city park; a father coaching the sixthgrade hardball team; a recreation leader reading stories in the hot, summer afternoon to a group of quiet children.

It's the good, quiet feeling that comes after the high-school band plays the Star-Spangled Banner.

It's my grandfather telling about the old days-buffalo, Indians, wagon trains, and then switching on the TV for an hour of Hopalong Cassidy.

It's the sounds of Independence Day and the feeling of Chrismas, club meetings, milk on the back doorstep, our dog barking at the mailman, the washbasket full of clean clothes, smell of furniture polish on Saturday morning, popcorn banging in the skillet, brother washing the car.

The Bill of Rights is a scrap of paper,

some words.

It's freedom. It's security.

It's liberty. This is my Bill of Rights-It's America.

The Coal Industry

EXTENSION OF REMARKS OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. BYRD. Mr. Speaker, the condition of the coal industry has been discussed in this House upon many previous occasions by me and by other Representatives of coal-producing areas. Various proposals have been advanced as solutions to the economic ills confronting this basic industry, and I think it is worthwhile to call to the attention of the Congress some articles written on this subject by Mr. Monroe Worthington, of Beaver, W. Va. The articles recently appeared as a series in the Beckley Raleigh Register. I shall not insert all of the numbers in the series but, with the permission of the House, I shall present one of Mr. Worthington's articles today, and others will follow within the near future. The arti-

Canal Would Open New Market in PROPOSED STATE CANAL WOULD OPEN NEW MARKET IN CANADA

Canada":

cle herewith is entitled "Proposed State

(By Monroe Worthington)

There is a way West Virginia can get a lot more of the Canadian market, which is expanding, and the world market for coal. The same way would bring the State a far larger share of the steel production, and thus increase the State market for coal at the same time.

Will the State demand it? It's doubtful. For, while favors from either Democrat or Republican administrations are not passed out alphabetically, almost every State says 'Me, too" in a louder, more convincing voice. While one dam project in Wyoming or California or Tennessee costs a quarter of a million dollars, a miserable \$10,000 is appropriated to investigate the feasibility of a dam on Possum Hollow, W. Va.

STATE NEEDS CANALS

To get its share of the Canadian and world market for coal, as well as a far larger share of the Eastern and and Midwestern market, West Virginia needs a canal. This canal has been proposed before. It has been declared to be feasible and fully justified.

The Corps of Engineers, United States Army, has made exhaustive surveys of different routes. One which they declare is entirely feasible leaves the northernmost curve of the Ohio River, through its tribu-tary, the Beaver River; through the Mahon-River past Youngstown, and Niles; through an entirely excavated canal to Farmington, then through the Grand River Reservoir, which would be formed by damming up the Grand River, and to Ashtabula, and Lake Erie.

The report made by the United States engineers has been returned to the Pittsburgh office for revision. There were naturally objections to it, as there are to many proposed improvements. Owners of the land to be flooded were not all happy, for instance. But information given in the report, dated May 24, 1948, is still of interest.

The canal was to have a minimum depth of 18 feet, and a minimum bottom width of Two parallel chambers were to be provided at each lock, thus permitting one boat to proceed each direction at the same time. Marked economies would result in transport costs, the engineers found, and there would be substantial flood-control benefits. The total first cost of the project was then estimated at \$439 million the Federal Government contributing all of it but \$23 million.

Were it constructed, low-water freight rates on coal would be offered to West Virginia producers who would ship to Michigan, Minnesota, Indiana, Chicago, all the American and Canadian Great Lakes ports, all the cities served by the Eric Canal and the Hudson River; all the world reached by the nowbeing-constructed St. Lawrence seaway.

But it will hurt the railroads many coal operators will object, forgetting that the railroads have turned their backs on the coal industry; that much of the present curtailment in the production of fuel is due to the 150 million tons of coal no longer used by the railroads.

COULD BRING STEEL MILLS

One of the big reasons for constructing the St. Lawrence seaway was that it would let fron come to the Great Lakes from Canadian and South American points. While the steel industry is currently running at less than full capacity, it will be expanding again. When it does, consider that West Virginia coal and West Virginia limestone could meet this ship-carried ore at a West Virginia point, and produce low-cost steel most profitably for all concerned.

The limestone?

There's millions, even billions of tons of suitable grade along the Greenbrier River. And that suggests a project which may subject your reporter to ridicule and even abuse. But Bonneville and Grand Coulee Dams, the Panama Canal, the TVA, and many another project, would never have been built had someone not stuck his neck out, years before construction actually started. So here goes.

If steamships are to be admitted to the

Great Lakes, by way of Canada, with financial help from the United States in the hundreds of millions, then why not open up water transport from the Atlantic Ocean to the Kanawha River, with its connecting streams, the Ohio, the Mississippi, and Missouri, and their tributaries? It would add immensely to the Nation's wealth and security, furnishing many jobs during construction.

CANAL TO ATLANTIC URGED

How, you ask, could it be done?

River boats with 9-foot draft come up to Kanawha Falls; locks to the slack water at Kanawha Falls and Gauley Bridge would be easy to construct, the lift being about 21 feet. Canalize the New River to Hinton; the Greenbrier River to a little past White Sulphur Springs, which is 5 miles from the Virginia line. Construct either a canal with numerous locks and dams or a navigable lighted and ventilated tunnel through or over Allegheny Mountains, to link the closest tributary of the Jackson River. Canalize this to its junction with the James River, near Clifton Forge. Improve this to Lynchburg and to Richmond, where ocean liners can already travel. Tonnage over this course would be as great or greater than through the Panama Canal. A 9-foot draft would be

sufficient to permit large-scale barge trans-

West Virginia coal, which is noncompeti-tive in the east coast markets because of competition of foreign oil, would find a larger market. There would be an immense market for West Virginia limestone and for the incredibly pure mountains of glass sand along the Greenbrier.

This idea is not original. The Virginia Assembly authorized an investigation of its feasibility 140 years ago. The report of the commissioners indicated that canalization of the Greenbrier would be comparatively easy (the fall is less than 7 feet to the mile), but "the velocity of the current and the enormous rocks which often interrupt it, the number and magnitude of the rapids and falls, the steepness, cragginess, and abruptness of the banks, constitute the great impediments which at present exist to navigation between the mouth of the Greenbrier and the Great Falls of the Kanawha."

CONSTRUCTION IS EASIER

This report was made 52 years before the invention of dynamite, a century before anyone dreamed of a bulldozer. Tasks which were almost impossible to a man with only a pick and shovel become comparatively easy with today's gigantic construction machinery. The greatest change has come in the past quarter century or less, for bulldozers are one of the latest blessings of man's ingenuity. So it is that even as late as 1925 the author of the Mercer-Summers-Monroe volume of the West Virginia geological survey thought the plan impracticable, although he, too, knew how advantageous it would be. "From Meadow Creek to the junc-It says: tion of New River with the Great Kanawha at Gauley Bridge the total fall is 615 feet in 47.8 miles, or at the rate of 12.87 feet to the mile. This section would require more than 50 dams, hence the use of New River for steam navigation would be entirely pre-cluded by the enormous cost."

The Panama Canal, which was seriously proposed by Balboa 400 years before it was actually built, has locks up to 30 feet high, at Pedro Miguel, although most of them are a little lower. No really high dams could be built along the New River without flooding the main line of the C. & O., obviously impossible. But if 30-foot locks were used, then 21, instead of more than 50, would do the job.

Since the river is narrow at points where locks are most needed, dam construction costs for such low structures would be comparatively small.

Canada, on its own, built the Welland Canal, linking Lake Erie and Ontario. It is 27 miles long, with a rise of 326 feet-just about that of the New River at its worst. Welland Canal is 30 feet deep, 200 feet wide. Most of it was blasted out of solid rock. The New-Greenbrier-Jackson-James Canal would be far less expensive, per mile, because it would follow the rivers for most of the distance, with only scattered boulders to blast The swiftness of the water would disappear when they are impounded by dams.

The writer does not expect to see this canal completed during his lifetime; perhaps not even started. The battle over its feasibility, cost and advantages he bequeathes to engineers, politicians, and industrialists. But two more things should be said.

Steamboats have traveled on the New River. Evidence to this effect was brought out by the Federal Government, in hearings at Minton, several years ago, when it was officially proven and declared to be a navigable stream.

COAL PUMP IS SOLUTION

Lest someone condemn this project, on the ground water would be needed along the wholly new part over Allegheny Mountain, and ask if kindly Mother Nature would be expected to rain the locks full of water, when a ship wanted to pass, this is not an objec-

tion. Water from the upper reaches of the Greenbrier, which veers northward from the desired path for the proposed canal near the Virginia line, would be impounded by storage dam on the Greenbrier. The same could be done on the Virginia side. Enough water to keep the canal filled, and to float ships, and raise and lower them through the locks, would be pumped. The city of London has for many years pumped perhaps a billion gallons of water from the Thames River with Humphrey pumps. They are operated di-rectly by coal, without making steam, with no rotating parts, and little to wear out. Such a pump can easily have a 10 or even a 20 foot diameter discharge line if needed. They are inexpensive. The coal to operate them is at hand. The pumps are so efficient the TVA seriously considered using them to repump water so it would run repeatedly through its hydroelectric turbines.

So if you like the benefits to be derived from this project, work for it. If you think it fanciful and foolish, don't condemn past and future proposals to benefit the coal business in this State. Consider them too, on

their merits.

Must Congressmen Have Additional Pay?

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. BURDICK. Mr. Speaker, I hope I never get to the point where I think I know it all. I have been opposed to an increase in congressional salaries, because I was of the opinion that Members were getting enough to pay their way on a standard of living that would be commensurate with the dignity of the office. So many Congressmen were telling me that it was impossible for them to live as they should on the present pay. This concerned me, and I was anxious to know just how they lived.

I was told that the dignity of the office demanded that I go to parties, give parties, and dress for occasions befitting our station. It seems that clothes make the man here in congressional estimation. I determined to try out this course of dignity for 2 weeks and see for myself what money was needed. Fortunately, I was invited to many functions and fortunately had friends whom I wanted to entertain.

The first requisite was a formal suit and a hat of the established makeup approved by the President. My cow hat would hardly do, although it cost more than one of these muley Homburg hats. I inquired of a tailor about dress suits. He reported that \$175 was about as cheap as he could furnish one, but said. "Don't worry, I will rent you a suit for \$10." "Lord," I responded, "you don't mean to say that these august Members of Congress go to parties in rented clothes, do you?" "Why, yes," he responded, "a large percentage of the Members do that very thing." This was an eye opener for me to realize that these splendid mannish figures I had seen floating across the society surface of this Capitol were just ordinary men in rented suits. I thought what a sham and a pity this was, and determined right there if I were going to do any buzzing around in society, by the Eternal, I would at least own the outfit.

Well, I rigged up, and while I looked like a cranberry merchant in the little Homburg hat, I felt at ease because I knew the society in which I was about

to enter, approved.

I had more trouble with this spike-tail suit. When I tried it on, it seemed too tight and I did not dare to bend over. I complained to the tailor, and he said it was made that way so I would be stiff and formal in my appearance. It seems these tailors are used to building trousers for "cathamned" diplomats but not for he-men. I tried it on in the office and a lady came in. I graciously bowed as I supposed I should learn the Sir Walter Raleigh act, and to my astonishment I heard a good ripping noise under my coattail and quickly erected myself. When the lady went out I made a checkup of my outfit and found the trousers had split right down from the waist to the end of the seam. But my confusion ended, for the spiketail took care of all embarrassment. I then learned that this spike-tail was for. It will cover up a multitude of errors.

I went out to parties and gave them. I was quite stiff and starchy and unnaturally erect-on account of this trouser trouble—and my everyday friends thought I was getting "uppish" in long service in Congress. We took in nice places with nice people, and I remember the first party I entertained. There were eight people, the men all dressed lightly and the ladies much more so. I thought when I started to that dinner that \$50 would do, but when the waiter began figuring, I lost heart-I knew I was stuck. The steaks were \$32, the drinks \$15, and the tips \$3, plus taxi fares and tips again. These tip receivers do not have any mercy on a poor man under these circumstances, and the guests seem to pry in to your affairs and find out just how much you tipped. They probably want to know right from the beginning whether you are traveling under the orthodox requirements of a Member of Congress, or whether you are in fact a tightwad. Well, when I got the bill the \$50 did not do, and I reached in my coat pocket-there was not room in my trousers for a billfold-and pulled out a \$100 bill. I felt like impressing this party that I never carried any change less than that.

I kept up the rounds for a week, just to see what it cost a Congressman to live in proper style while performing his duties to the people. My invitations increased when that \$100 was exhibited. I met many nice people I had not met before, I kept up the appearance of being very stiff and formal—I had to on account of my pants—and in all, I think I made the desired impression and convinced these people that I was a regular hard-working Member of Congress and of whom his friends were proud.

When the week ended I found I had spent \$500, and it just occurred to me that I would have to abruptly end this profligate system of expense, or I could not live here in that fashion on \$12,500

annually. I am back now on my standard of living, but feel that this experiment was worth all it cost. I would like to keep up that program, but I cannot do it on the salary I am getting. Probably \$25,000 as the President demands for Members of Congress would not do the job either, because you know most of this \$25,000 will be taken by the Government for taxes, especially when you have any other income to which this salary is attached for tax purposes.

I did not like to exclude myself from this gorgeous round of pleasure, but I finally asked myself this question: "What are you in Washington for, to work for the Nation and North Dakota, or to entertain?" I finally—I was compelled to—concluded that I had better go on just as I had done for many years, doing what I was elected to do and deny myself this grand and glorious society life. I am back now on ham and eggs and liver sausage, and at least feel at home. I will not continue this experiment for the second week—I would have had to borrow money if I did.

Please do not misunderstand me, I favor this social life. I would like to keep it up. When we are bawled out by the people if we do and do not on certain legislation a Member begins to feel like a worm, but this wormy feeling all disappears when you get into one of those formal affairs. The only time I have felt important since coming to Washington was when I wore one of these make-ups and was dishing out the money to everyone who came along. I am perfectly willing to try to do my work and do some society flitting, but I must have more pay to do it. If the people of North Dakota have no objection I will take this \$25,000 or as much more as I can get to carry out the orthodox way of congressional living.

The St. Lawrence Seaway

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Boston Post, Boston, Mass., Saturday, November 27, 1954:

ST. LAWRENCE POWER

Advocates of the St. Lawrence seaway, whenever confronted by well-attested arguments that the seaway would not benefit the commerce of the United States, except that it might cause shifts from the Atlantic Coast ports to the Great Lakes cities, usually fell back on the argument that, in addition to being an aid to shipping, it would bring a big increase in cheap electric power for New York and New England.

But Robert Moses, head of the New York

But Robert Moses, head of the New York State Power Authority, and a recognized expert, now says that the proposal to bring the St. Lawrence power down to New York City is ridiculous. He said the cost of the transmission lines would be prohibitive; that, even if New York City could obtain all the power, It would cost more than generation of the same amount of power in steam plants. As far as New England is concerned, our own experts here say that the St. Lawrence power, under the most favorable conditions, would not provide more than about 5 percent of our increased needs over the next 10 years. The St. Lawrence seaway may help Chicago, Cleveland and the other Great Lakes ports, but it will do so mainly at the expense of loss of business for Boston, New York and other Atlantic ports.

Social-Security Benefits for Widows

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 11, 1955

Mr. RODINO. Mr. Speaker, one of the finest traditions of our country is the sustained concern which Americans have always shown for the protection of widows and orphans. We are proud of

our record in this regard.

But, if I may so, this is an area in which our social-security system is too often discriminatory. As this law is now written, a widow is entitled to a benefit only if she is at least 65 years of age or if she has minor children in her care. Because I am convinced that the widows of this country are entitled to full survivor benefit rights, without the above restrictions, I have introduced a bill, H. R. 2189 which will allow widows to collect social-security benefits whether or not they have reached the age of 65 and whether or not they have children under their care.

I wonder how often the Members of this House have had the unhappy task of explaining to widowed constituents that they will have to wait until their 65th birthday before they would be entitled to social-security benefits? How many times has the letter from a despairing widow described her tragic circumstances. Sometimes she is ill and unable to work. Sometimes she cannot find a job because of lack of work experiencefor the good reason that she has spent her life in the home caring for her family. Sometimes she has managed to live for a time on accumulated savings-but has been unable to stretch those savings until her 65th birthday. Still the only answer we can make, under existing law, is to tell her she must get along somehow until she is 65.

My first consideration in introducing H. R. 2187, then, grows out of humanitarian reasons. I believe that appropriate benefits for the widows of wage earners should be part of any genuinely protective social-security system in America.

I am convinced, as well, that there are equally good reasons drawn from the cold facts of our time which call for enactment of my bill. Let me review them for you briefly.

First of all, statistics show that there is, on the average, a difference of about 3 years between the ages of husband and wife. Because wives are usually younger

than their husbands the family is often, under existing law, actually removed from the social security benefit role at the time of the death of her husband is over age 65 and receiving his own retirement benefit when he dies, that benefit is stopped at the time of the widow's bereavement unless she has also reached the age of 65. In too many cases, therefore, the widow is denied a benefit at the time she most needs one—at the death of the family breadwinner.

Secondly, all studies show that the average woman is less likely to have an adequate retirement income, from any source, than are men. The median income for persons with income is substantially lower for women than for men in all age groups. More specifically to the point, perhaps, is the data assembled in a recent survey of widows receiving oldage and survivors insurance benefits which showed that only 10 percent had independent money retirement income of \$1,200 or more per year. In considering my proposal, therefore, I ask you to bear in mind the evidence that roughly 9 out of 10 of the widows of workers covered by the social security system are in need of the protection of its benefits because they do not have adequate income from other sources.

We know how difficult it is for older persons with little work experience to find a job. We know that it is especially difficult for the older woman to secure any work, other than the most menial, because of the many years she has devoted to the role of wife and mother. So we surely cannot believe that widow's benefits have been withheld until the 65th birthday for the reason that, without such benefits, they could easily take care of themselves.

The only argument which has been presented to me against the proposal made in H. R. 2187 for providing benefits for all widows of insured workers, is that it would cost too much. I am informed that the level premium cost of providing such benefits would run somewhat in excess of 1 or 11/4 percent of payroll. If this is the case, I maintain that such costs are warranted if we propose to have a social security system which offers any kind of genuine assurance against hardship caused by the death of the family breadwinner. For my own part, I believe such added costs are more than justified in the name of the kind of protection they would furnish the wives and mothers in our country at a time of great tragedy.

Let us remember that the breadwinner has, throughout his working life, made regular contributions toward such protection for his family. He has had no way of anticipating when and how his death would occur. Is it equitable to say to one man: "Your wife will be entitled to benefits because she is 65 years of age"—and to another, "Your wife is not entitled to benefits because she is not yet 65 years of age."

Let us remember, as well, that because of his early death the breadwinner himself will usually receive no benefits at all whereas, if he had been fortunate enough to live to a ripe old age, both he and his wife would have been receiving benefits for each month beyond their 65th birthday. For this reason, alone, it seems only just to me to make up to the bereaved wife for the benefits her husband will never receive—in spite of his payroll contributions.

I urge your support for my bill H. R. 2187 in the names of the wives and mothers of this country. Surely reasons of humanity and of equity argue for the enactment of this legislation. In my confirmed opinion, we can never feel that we have provided really genuine security against distress caused by loss of wages until we have enacted this legislation.

The Defense Manpower Message

EXTENSION OF REMARKS

HON. JOSEPH F. HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. HOLT. Mr. Speaker, I should like to call the attention of my colleagues to the following editorial. I believe that a new long-range reserve program is essential to the safety of our country.

[From the New York Herald Tribune of January 15, 1955]

THE DEFENSE MANPOWER MESSAGE

The President's message on manpower for defense is necessarily a complex one. A nation of such size and diversity as the United States cannot form a plan for the training and mobilization of its youth on a simple, rigid formula. If the program is not to work unfairly and become too great a burden in peacetime, it must have flexibility. It must offer a variety of choices to men of military age while at the same time it distributes the duty of serving over as wide a field as possible.

The President pointed out that the general plan is intended to provide for armed forces in being, for trained reserves that can be mobilized swiftly in case of necessity, and for an additional pool of reserves with some training who could be brought in under a general mobilization. Extending selective service for another 4 years is a primary requisite if the first condition is to be met; so, too, are the pay increases which the President urges to attract professionals into the Armed Forces and to keep them there.

As for the Reserves, the President hopes to sharpen the distinction between those who would be ready and available to be called back when occasion should first demand and those who—because of combat service or possession of essential civilian skills—should be deferred until general mobilization is necessary.

Then there are to be various inducements, including outright compulsion, to supplement voluntary participation in reserve training programs. One group, composed of men between 17 and 19, will be allowed to enist for 6 months' active duty, on condition that they will take active part in the Reserve for the ensuing 9½ years. This is to insure a supply of younger men for the Reserve, as well as a core committed to follow the full reserve training program.

The National Guard will have its role in reserve training more clearly defined. It will be primarily a reserve group, composed of men who have had basic training, and the compulsions used to keep other active Reserve components at strength can be ap-

plied to the guard. At the same time, the States will be permitted to form another militia force, to take over the guard's peace-time duties of preserving order and to support civil defense whenever the guard is called into Federal service. It might seem that this last group could form the real State guard, and that the National Guard as such should simply be absorbed into the Active Reserve. However, there is practical value in maintaining the traditions, the organization, armories, and the camps of the guard, as well as avoiding the constitutional and political problems which a radical revision of the guard system would entail.

Congress is said to be willing to accept extension of selective service and additional pay for career soldiers without much dispute, but is more guarded over the fate of the reserve provisions of the President's plan. No doubt there is room for debate, perhaps for amendment, of the reserve plan. But the main point—a genuine Reserve, trained and ready—is an absolute essential.

Adjustment of Salaries for Judges

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the Record, I insert the views of my friend, Bernard A. Grossman, for the Federal Bar Association of New York, New Jersey, and Connecticut, on the subject of adjustment of salaries for judges:

Federal Bar Association of New York, New Jersey, and Connecticut, New York, N. Y., January 7, 1955. Hon. Emanuel Celler,

Chairman, House Judiciary Committee.

MY DEAR CONGRESSMAN: We note with satisfaction, and with the pride of a friend who has been militant in the general councils in that direction, how the new session of Congress has opened, and has greeted the new year with the Celler bill and the Multer bill and the other contemplated legislation for proper salaries to our underpald legislators and Federal judges. This association wants to be heard again on the subject, and wants to speak for at least the amount recommended by the Commission on Judicial and Congressional Salaries.

We know how concerned you have been over the years with the inherent delicacy of the matter. But such concern is contrary to the laws of nature and to a realistic recognition of the problem, and it is not necessary.

I have watched the mother of the species feed and feed its young to overflowing—but there always comes a point at which she must take something for herself that she might carry on for the common good. I have seen the mother of a litter in my own kennels nuzzle her own portion over to a gobbling young one, and wear herself down unnecessarily in the midst of plenty—but there always comes a point where she must stop the sacrifice, or else incapacitate herself from serving the common good. I have seen the hostess at a social function lavishly fill and refill the plates, and embarrass the guests by her delicate inattention to herself.

So it is with a feeling of inherent delicacy as to increasing legislative and judicial salaries to what is proper in these times. It is a delicacy that violates nature and a realistic recognition of the problem.

As you know from the many, many Congressmen who have spoken with you over

the period, in our name, or about our activities, we have been campaigning for increases for many years. As far back as 1948, when financial needs were less, and savings not as badly invaded, we were proposing a schedule of \$22,500 for judges and Congressmen, with \$25,000 in the circuit courts and \$27,500 to the senior circuit judges; \$35,000 in the United States Supreme Court and \$40,000 to the Chief Justice; \$15,000 to ref-erces in bankruptcy, and the putting of United States Commissioners on a salary basis. It seems we have now reached the point where increases will finally be provided for.

In that 1948-49 period, our representatives went to Washington to present our position for an increase across the country. They were well and helpfully received by your good self, and others. When hearings were held before Hon. FRANCIS E. WALTER, this association was represented by two of its members: Congressman Eugene Keogh and Congressman Abraham Multer. Hon. James F. Donnelly of this association also appeared for our special committee in the matter, and testified and presented a printed memo of our position. What they then said is subour position. stantially what we again say today, and what has been so ably and emphatically set forth in the report (1954) of the Commission on Judicial and Congressional Salaries. The Commission, in short, has officially found what we and many others have always maintained unofficially: That by virtue of unavoidable double expenses, an average Con-gressman operates at a yearly deficit of \$3,000 to much more, as far as his Federal salary is concerned; and that the Federal judiciary, which passes on every man's property, his reputation, and even his very life, more so today than ever, are not paid proportionate to their responsibility, nor to the scale of their brethren in city and State service, nor sufficient to uphold a standard of living ap-

propriate to their position.

This is not a time nor a situation for inherent delicacy. It calls for a realistic recognition of the unfairness of the situation, and meeting it, on a realistic level. And so I say, for this association, that we note with satisfaction, and with the pride of a friend who has been militant in the general councils in that direction, how the new session of Congress has opened with the Celler bill, and the Multer bill, and with the other contemplated legislation for proper salaries to the underpaid legislators and Federal judges. And we trust the amount eventually fixed for them will be at least the amount recommended by the 1954 Commission on Judiciary and Congressional Salaries.

Earnestly yours,
BERNARD A. GROSSMAN (For the Federal Bar Association of New York, New Jersey, and Connecticut).

Congressman Hinshaw Reelected Chairman of California Delegation

> EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. HILLINGS. Mr. Speaker, once again the California delegation has elected our colleague, Carl Hinshaw, as chairman. We from California are proud of our chairman and his splendid record of service in the House of Representatives during the past 15 years.

At this point, I wish to place in the RECORD an editorial from the Pasadena Star News of January 11, 1955, in which that newspaper pays tribute to our colleague. The editorial follows:

Representative CARL HINSHAW, Republican, of Pasadena, has been reelected chairman of the California delegation in the National House of Representatives. That this action by his confreres was expected takes nothing from the compliment paid the youngish Pasadena Congressman who is, nevertheless, dean of California Members of the House in

terms of years of service.

The California Members of the House, both Republican and Democrat, organize in each successive Congress for the purpose of considering any legislation favorable to Cali-fornia and with no partisan politics in-volved. Mr. Hinshaw is an energetic chair-man. It may be said also during all the time he has represented this district in Congress he has worked diligently for the best interests of the coast without regard to partisan considerations.

Irish Partition

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter to the editor, by Mr. William J. Conlon, of Lynn, Mass., which appeared in the Lynn Telegram-News, Sunday, October 24, 1954:

LETTER TO EDITOR

DEAR EDITOR: I am sending you that letter on Irish partition that I mentioned in my previous letter to you. Its title is "Grati-tude Where Gratitude Is Due." I am very pleased to note that 168 Members of the House of Representatives have recorded their opposition to England's enforced hold on the 6 northern counties of Ireland. Democratic Representative JOHN E. FOGARTY, of Rhode Island, is seeking to have the Fogarty resolution immediately acted upon by the full House. That resolution, if passed, would express the sentiment of the House, namely, that the free Republic of Ireland should embrace not 26 but 32 counties and that the voters of all Ireland should be granted opportunity to declare themselves granted opportunity to declare themselves in this matter. During the premiership of Lloyd George, the 6 counties were cut off from their 26 sister counties without a legal mandate of all the Irish people. Next to love of God, an Irishman loves his

Country. In County Armagh, as in County Wexford, County Tyrone, and County Tipperary, Irishmen look on Dublin, not London, as their capital city. They look upon the Republic of Ireland, not Britain, as their beloved country.

It galls the proud spirit of the Gael to be looked upon as a British subject. Well it may, for Ireland's civilization, her laws, and learning stretch far back beyond the establishment of England's Parliament.

Until the flag of the Irish Republic floats over all Ireland, Irishmen will not consider themselves free. America owes a big debt of gratitude to Ireland. Sons of Erin have proved their love and loyalty in America's every struggle since our tortured colonies be-

gan their fight for freedom from England's tyrannical oppression. The commander in chief of our successful Colonial forces titled a Wexford Irishman, one Jack Barry, "Father of the American Navy," and Commanding General George Washington publicly thanked their Irish troops for their heroism and bravery and loyalty. In our Civil War, it was an escaped so-called Irish rebel—he who delivered his classic sword speech from the dock in Tipperary, who led his soldiers, est to the workers" in the dread struggle at Fredericksburg. Meagher's soldiers wore their sprig of green. Barry and Meagher are but single examples of Irish help and valor in two of our country's struggles. Irish defenders of this country's Star Spangled Banner in every struggle everywhere would fill a book.

America is surprisingly slow to show her gratitude to Ireland. Our lawmakers have been importuned time and time again to speak out in condemnation of England's bold threft. America has given vast sums of money and thousands of precious young lives to other nations—here, there, and yon. (To our once tyrannical oppressor we have given most of all.) But for Ireland, our admirer, our friend and helper, we are slow to offer even a word of condemnation against Britain's foul imposition of a dividing line in the physically small but heroically great island nation. Speed the day when America's full House and Senate will publicly show gratitude where gratitude is due.

Very respectfully yours,

WILLIAM J. CONLON.

LYNN, MASS.

Danger of Lowering Tariffs on Japanese Crabs and Oysters

EXTENSION OF REMARKS

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. WESTLAND. Mr. Speaker, an international tariff-negotiation conference will be held in Genava, Switzerland, in February under the sponsorship of the countries associated in the General Agreement on Tariffs and Trade. The Committee for Reciprocity Information has announced that it will consider granting reductions in the present tariffs on imported fresh, frozen, and canned crab and on imported oysters packed in airtight containers. It is my opinion that any reduction in these present tariff schedules would have a disastrous effect upon the American crabbing and oyster industries.

At the present time there is a 221/2 percent ad valorem tariff on imported canned crab and a 15 percent ad valorem duty on fresh and frozen crab. In spite of these tariffs, of the canned crab sold in the United States in 1954, Japan supplied about 60 percent while American producers supplied only about 40 percent. The situation has been growing steadily worse. For example, in 1950 crab imports from Japan were 1,761,000 pounds while in 1953 the figure had increased to 3,860,880 pounds-a more than 100 percent increase. Contrast this with the American canned crab pack which declined during these same

years from 137,490 cases to 114,886 cases—a more than 20 percent decrease.

Japan was able so to invade the American crab market not because of a superior product but simply because an average worker in the American crabbing industry is paid about as much in I hour as the average Japanese crabworker receives in I day. In order to maintain the high wages and standards of the American crab industry—which I believe must be done—the American crab industry must have the protection of the present tariff. Failure to provide adequate protection would take American crab—including the world famous Dungeness crab—off the market.

There is another great danger which would certainly come from the lowering of the present tariffs on crab. If additional markets were to be opened in the United States by lower tariffs on crab, Japan undoubtedly would seek to supply these markets. Crabbing waters which Japan had owned, controlled, and fished prior to World War II were given to Russia under the Yalta agreement. In order to increase her crab production, Japan undoubtedly would make a deal with Russia either to purchase Russian crab for sale on the American market or to obtain fishing rights from the Russians in Russian waters. Whatever course of action was followed would be to the financial benefit of the Soviet Union. I believe there is a great unanimity of opinion in this country that we should do nothing to aid or strengthen Russia. A further lowering of the tariff on crab might well have such an effect.

The American oyster industry also would be in grave danger were present tariffs on oysters in airtight containers reduced. At the present time, imported oyster products from Japan are selling for 25 percent under the prices of American producers on steamed canned oysters and up to 40 percent under American producers on smoked oysters, canned or in glass.

Again, in the oyster industry a great difference exists between the wages paid the American and Japanese oyster worker. Whereas in the Pacific coast oyster industry the lowest hourly wage is \$1.55 per hour, in Japan the daily wage is 90 cents or less.

Furthermore, the American oyster grower is required to meet numerous State and Federal sanitary regulations in order to protect the American consumer fully. The added cost of complying with such regulations must be reflected in the final costs of the products. By contrast, Japanese oyster products are inspected and regulated only at time of entry. They are not required to meet the United States sanitary regulations at the point of production, and this in itself gives the Japanese oyster producers a very definite and unfair price advantage.

Actually, it would be to the disadvantage of Japan to have the American oyster industry destroyed, as the oyster industry in this country is a substantial purchaser of seed from Japan. If American oyster producers have to shut down, the Japanese seed-oyster industry most certainly will suffer.

Those who are engaged in the crab and oyster industries recognize the need for helping industries in other countries. But it seems foolhardy to give such help at the cost of survival of our American industries. The very livelihood of many of the residents of our small towns on the Pacific coast would be in jeopardy if the tariffs on Japanese crab and oysters were lowered. Fair play demands that these people not have their existence imperiled by actions taken by the United States Government.

Through the Peacetime Benefits of Atomic Energy We Have a Relatively Simple and Inexpensive Way of Adding Tremendously to the Numbers of Our Friends Abroad

EXTENSION OF REMARKS

HON, JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. VAN ZANDT. Mr. Speaker, the following address titled "Atomic Energy in Peace and War" was delivered by me before the 29th annual Women's Patriotic Conference on National Defense at the Statler Hotel, Washington, D. C., January 14, 1955:

Address by Representative James E. Van Zandt, Member of Congress, 20th District of Pennsylvania, Before the 29th Annual Women's Patriotic Conference on National Defense, Statler Hotel, Washington, D. C., January 14, 1955

It is an honor to be invited to address the 29th Annual Women's Patriotic Conference on National Defense.

on National Defense.

For many years, I have followed your activities and have admired the courageous and unfaltering position you have maintained on many vital and controversial issues.

In my estimation, your activities in the field of true Americanism, national defense, and the preservation of the American form of government are entitled to public acclaim.

May I digress at this point to pay a well-deserved tribute to the chairman of your conference, Mrs. David Daniel Good, of Osceola Mills, Pa., who I am proud to number among my constitutents.

Mrs. Good's legion of friends in Pennsylvania are might proud of her for she is an ardent exponent of your principles of red-blooded Americanism.

When I tentatively accepted your chairman's invitation to address this conference, I first thought of selecting the topic—"Is the United States a Constitutional Republic or a Democracy?"

I had in mind at that time of discussing the highlights of the Constitutional Convention in Philadelphia in 1787 when this budding Nation was constantly referred to as a Republic and not a Democracy.

The word "democracy" is not found in either the Declaration of Independence or the Constitution.

In fact, Thomas Jefferson, the founder of the Democratic Party always spoke of "the Republic" of "our republican form of government."

History tells us that when Benjamin Franklin was asked what kind of a government the Constitutional Convention had set up, he replied: "A Republic—if you can keep it."

In these trying days, as we fight to preserve our Republic, I would like to discuss atomic energy in peace and war, a subject that has occupied the attention of world leaders since that morning of July 16, 1945, when the first atomic weapon in the world was exploded at the Almagordo, N. Mex., test grounds.

Since that eventful morning of July 16, 1945, almost a decade has now passed during which the free world has depended for its security primarily on atomic weapons.

Government leaders and private citizens alike throughout the world are well aware of the growing strength in the United States stockpile of atomic and hydrogen weapons.

Here in the United States we have taken great pride in the accomplishment of scientific and industrial miracles, for these accomplishments definitely have prevented World War III and have caused the men in the Kremlin to hold their ambitions in check.

check.

At the same time, however, it is common knowledge that the Soviet stockpile of atomic and hydrogen weapons is ever-increasing; yet this fact seems to escape too many people.

When the Soviets had one weapon and we had many, there was good reason to believe that if they should attack our chances of being able to prevent any sizable amount of destruction to our own cities and military and industrial plants was good.

In addition, we had confidence in our own ability to retaliate with heavy atomic attack against the Soviet aggressor.

As the Soviet stockpile increased, it is no longer a secret that Russia's ability to wage an atomic war is now a definite reality.

Confronted with this threat of an atomic attack, neither an increase in our own stockpile of atomic weapons nor an increase in our own ability to insure massive retaliation can offset Russia's ability to engage in atomic warfare,

We are faced today with an absolute fact. If atomic war should come, many Americans would die in their homes and at their places of work.

I take little consolation in the continued assurance that we would be able to retaliate many times over.

That would be small comfort if New York, Chicago, San Francisco, and Washington were smoldering ruins.

What needs to be done is not so much a matter of simple patriotism as it is preparation for survival.

If we are to remain a free and vigorous Nation, we must take the maximum steps to insure that we can minimize the effects of massive Soviet atomic attacks against the United States.

We must make certain that we can maintain our social, economic, political, and administrative structure in spite of such attacks and continue on as a free Republic.

The American people in general have been lax in responding to the appeal of Federal Civil Defense Administrator Val Peterson to become civil-defense minded by realizing the devastating results of a Russian atomichydrogen attack.

It is my earnest hope that within the next few months Congress will appropriate the necessary funds so that Civil Defense Administrator Peterson will be able to improve and expand the present civil-defense program.

In my opinion, such a program must provide greater public education, for only if every American understands the threat with which he is confronted can we expect the support for a civil-defense program so essential to its success.

tial to its success.
So far I have been talking about what might happen if the bombs should start to fall

Frankly, it is a terrifying prospect and one we cannot ignore.

Yet falling bombs is only one small aspect of the total problem of living in an atomic age.

Therefore, we should not devote our attention to it and exclude the many other things which can be done.

One of the best ways to protect ourselves and our Nation against atomic attack is to see to it that war never comes.

I think there are two steps which must be taken simultaneously if we are to do all within our power to prevent an atomic war.

First, we must be prepared to absorb the worst an enemy can deliver and still strike back with terrible vengeance.

If we do that there will be no profit for the enemy in starting the attack at all. Secondly, we must speed the development

Secondly, we must speed the development and application of peacetime atomic benefits.

By so doing, the standards of living and of health throughout the world will rise so rapidly that peace will be more attractive than war as a means of achieving the humanitarian ends men desire everywhere.

As a member of the Joint Congressional Committee on Atomic Energy and the House Armed Services Committee, I have long had an active interest in both these necessary steps.

During the last 2 months I have devoted a great deal of time in pursuit of the second point, namely, the development and application of peacetime atomic benefits.

With other members of the Joint Committee on Atomic Energy, I visited 12 countries in November and December.

Most of these are backward countries where the people barely exist.

They never have enough to eat.

They never have enough to keep them warm and they have little hope for their own future or for their children.

The purpose of the trip was to see at first hand what we here in the United States might be able to do through atomic energy in order to raise the economic and health standards in these areas.

Our visit to these foreign nations was an aggressive and coordinated part of the "Atoms-for-Peace" plan launched by President Elsenhower over a year ago.

We intentionally went to countries which, for the most part, do not have a reputation for being in the forefront of modern scientific development.

Yet everywhere we went, we found large numbers of competent, well-trained scientists and technicians who were in close touch with their Government leaders.

We found that they have concrete ideas of what could be done through atomic energy for the betterment of their own people as well as the advancement of science.

In New Zealand we found that they had already used radioisotopes to study the growth of pasture land grasses.

As a result of their experiments they have made radical improvements in the number of sheep they can graze per acre.

As many of you know, a radioisotope is a chemical element charged in an atomic reactor and is easily traceable, whether in the human body, plant life, soil, or metals.

We saw New Zealand hills which we were told were brown 5 years ago because of the lack of certain vital trace elements in their soil.

Today they are lush and green as a result of atomic experiments which have proved exactly which elements needed to be added to the soil.

But the New Zealand program is seriously handicapped because the nearest sources of radioisotopes are in the United States and in England.

In New Zealand there is a real need for radioisotopes which will permit experiments to be conducted with radioactive elements. In Australia we found a broad and vigorous atomic program manned by well-trained scientists, engineers, and administrators.

The problems confronting the Australians in the field of atomic energy are more nearly parallel to those of the highly industrialized countries of Europe.

This was in marked contrast with most of the countries we visited.

Throughout the countries of southeast Asia and the Middle East, we repeatedly observed an urgent need for agricultural experimental stations using radioisotopes to improve crop yields and to improve the crops themselves.

We studied the health statistics with the public health officers in these southeast Asian and Middle Eastern countries and saw for ourselves what the principal diseases are.

We recognized, from our own knowledge of the work here in the United States, how modern medicine using the tools of atomic energy could bring early relief to the people of these countries.

Malaria, tuberculosis, cancer, cholera, these are but a few.

And in every country we found men and women ready, willing, and able to do the tob.

They need some equipment. They need some guidance. They need some assistance.

But the investment which needs to be made can be measured in a few thousand dollars in most cases, and the benefits which they stand to gain are scarcely measurable by any known standard.

The 83d Congress passed a revised Atomic Energy Act, which those of us on the Joint Committee on Atomic Energy worked many months to prepare.

This new law authorizes agreements for cooperation on peacetime atomic development with friendly nations.

I know that everyone of us on the trip came back with renewed enthusiasm for pursuing an international atomic cooperation program.

All of us acquired a better understanding of what needs to be done and when it should be done.

Frankly, small sums spent now in the proper places and in the proper ways will be far more beneficial both to the people to whom they are given and in the improvements in American relations abroad, than will vast sums given too late and with too broad a sweep of the hand.

Therefore, the time for a foreign atomic program is now.

It need not be a multimillion dollar for-

eign giveaway.

What is needed is a few dollars wisely and discreetly spent.

I was particularly impressed on this trip by the fact that the United States and atomic weapons are frequently spoken of as almost synonomous in Asia.

This is primarily the result of Soviet propaganda but it can be counteracted.

We need to strengthen our bonds of friendship throughout the world.

In this atomic-hydrogen age we cannot stand alone.

Through the peacetime benefits of atomic energy we have a relatively simple and inexpensive way of adding tremendously to the numbers of our friends abroad.

It is an indisputable fact that patriotism is the keystone of a strong nation.

But patriotism to be effective must be intelligent.

Blind sacrifice of time, even of life itself, is not enough.

As patriotic Americans we must stand ready to expend our energies, our resources, even our lives, in such a way as to prove most beneficial to our country.

It is not sufficient to confine our acts of patriotism to buying savings bonds and en-

gaging in the building of an adequate national defense.

We as a nation need to implement our efforts by developing friendly relationship with other countries so that should the horror of a third world war be visited upon us we will have stanch allies.

I should like to conclude my discussion by quoting former Atomic Energy Commissioner Thomas E. Murray, who recently said:

"I consider it the sober truth to say that atomic energy has resulted in the greatest change in man's relations with nature since the fateful day in the Garden of Eden.

"Man has within his grasp an unlimited force, the very source of all energy in nature—atomic energy.

ture—atomic energy.

"The difficulty is that this force is a potential equally for death as for life.

"The misuse of atomic energy means death on a scale that staggers the imagination."

Goodhue and Sullivan: Pioneers for Progress

EXTENSION OF REMARKS

HON, THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. LANE. Mr. Speaker, I ask unanfmous consent to recognize, through publication in the Appendix of the Congressional Record, the constructive achievements of two men—Lyle D. Goodhiue and William N. Sullivan, Jr.—in developing the aerosol package, which has been a boon to American industry.

In an age that accents the evils of our times, rather than the good that is accomplished by patient, dedicated, and self-effacing men, it is a relief to note and pay tribute to the men who make progress possible.

I take particular and pardonable pride in the role played by William N. Sullivan, Jr., because he was born and brought up in my native city of Lawrence, Mass. I believe that the values and the vision he learned in this environment helped to inspire him in the work that won for Goodhue and Sullivan the 1954 achievement award by the Chemical Specialties Manufacturers' Association.

As a further honor, I ask that the following account of their accomplishment and their careers, as presented to the 41st annual meeting of the association in New York City on December 7, 1954, be published in the CONGRESSIONAL RECORD:

The CSMA achievement award is the second major recognition of the work of Dr. Goodhue and Mr. Sullivan in developing the aerosol insecticide principle. In 1945 the city of Philadelphia presented them with the John Scott Medal, awarded annually under the terms of a bequest in 1816 by Scottish chemist John Scott in recognition of useful inventions or scientific contributions to human welfare or industry. Other recipients of the John Scott medal have included Mme. Curie (1921) for the discovery of radium and its properties; Orville Wright (1925) for the development of flying machines; Thomas A. Edison (1929) for numerous inventions, and Sir Alexander Fleming (1944) for the discovery of penicillin.

LYLE D. GOODHUE

Born on a farm near Newton, Iowa, in 1903, Lyle D. Goodhue was educated in the public schools of Newton and received his bachelor of science degree in 1928 from Iowa State College, where he led his class in the division of industrial science. The following year he received his master of science degree in plant chemistry from the same institution.

chemistry from the same institution. In 1929, Dr. Goodhue joined the Du Pont Co. as a research chemist at the Parlin, N. J., laboratories of its fabrics and finishes department, where he specialized in development of lacquer formulations. Leaving the Du Pont Co. in 1930, he returned to Iowa State and served as a chemistry instructor while studying for his doctor of philosophy degree in plant chemistry which he received in 1934. He then joined the Department of Agriculture's Bureau of Entomology and Plant Quarantine as a research chemist in the Division of Insecticide Investigations. It was there that he met William N. Sullivan, and, in 1940, they began their research into aerosol insecticides. After trying smokes and finally thermal aerosols, they perfected the present liquefled gas-propelled aerosol in 1942.

Dr. Goodhue continued with the Department of Agriculture as a research chemist until 1946 when he joined Aerosol, Inc., of Neodesha, Kans., as a research chemist on aerosol problems. In 1947, he became associated with the Phillips Petroleum Co., in Bartlesville, Okla.; where he is now engaged in research work on agricultural chemicals.

Dr. Goodhue has been granted over 40 United States patents on insecticides and methods of applying them and has authored more than 80 technical articles on the chemistry of insecticides. Along with Edouard H. Siegler, he won the annual medal of the Eastern Branch of the American Association of Economic Entomologists in 1948 for their paper on Effect of Particle Size of Some Insecticides on their Toxicity to the Codling Moth Larva. He also has received a number of Army and Navy citations for his work with Sullivan, and, in 1948, received the Iowa State College alumni award.

He is a member of the honorary societies of Phi Kappa Phi, Phi Lambda Upsilon, Pi Mu Epsilon, Gamma Sigma Delta, Sigma Xi, and Delta Mu Delta in addition to Alpha Chi Sigma professional chemical fraternity, the American Chemical Society and Entomological Society of America.

WILLIAM N. SULLIVAN, JR.

William N. Sullivan, Jr., was born in Lawrence, Mass., in 1908, received his early education in the public schools of that city, and was graduated from the University of Massachusetts, with a bachelor of science degree, in 1930. The following year he joined the United States Department of Agriculture's Bureau of Entomology and Plant Quarantine as a junior entomologist in toxicology at its Washington, D. C., laboratories.

In 1939, he received his master of science degree in entomology from the University of Massachusetts.

All of Mr. Sullivan's career has been spent with the Bureau of Entomology with the exception of 5 years during World War II when he served in the United States Army Air Force as a specialist in control of disease-carrying insects.

He was commissioned a first lieutenant in the Sanitary Corps of the Air Force in 1942 and assigned to Wright Field, Dayton, Ohio, where much of the research work in adapting the Westinghouse container to aerosol dispensing was carried on to perfection, After 3 months at Wright Field, Lieutenant Sullivan was attached to the Air Transport Command and assigned to introduce, and train personnel in the use of, the newly developed aerosol insecticide at United States air bases serving the north Africa and India theaters, in a move to combat spread of dis-

ease by insects among the Armed Forces. During the tour of duty, he traveled throughout British West Africa, north Africa, and to Karachi, India, in charge of disinsectizing United States planes to prevent their carrying the malaria-bearing anopheles gambia mosquito and other insects to South American air bases.

After 18 months of overseas duty Lieutenant Sullivan was transferred to the Army Air Force Center at Orlando, Fla., to develop methods of controlling mosquitoes in jungle areas by airplane spraying, and in July of 1946 he served as a radiological monitor on atomic-bomb tests at the Southwest Pacific atoll of Bikini. Released on inactive duty as a major in the Sanitary Corps of the United States Air Force in August 1947, he returned to the Bureau of Entomology and Plant Quarantine where his current assignment is in the field of disinsectization of aircraft.

Mr. Sullivan is a member of Sigma XI, the Entomological Society of America, the Washington Entomological Society, and the Insecticidal Society of Washington, D. C.

Immigration

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address made by me at the annual dinner of the Association of Immigration and Nationality Lawyers, Hotel St. Regis, New York City:

Mr. Chairman, ladies, and gentlemen, this occasion on which you have so generously given me the opportunity to address you, affords me a most welcome chance to say some candid and informal words on the subject in which we are all vitally interested—immigration. I am grateful to you as well as greatly honored.

I can probably skip introducing myself. You know that together with the late distinguished Senator from Nevada, my dear friend, Pat McCarran, I am the coauthor of the much maligned piece of legislation sometimes called the McCarran-Walter Act and sometimes more scurrilous names—some of them not fit to be mentioned in this distinguished and, what is very important, mixed company.

Immigration is a vast part of the field of human relations, in which law can do as much harm as good. Immigration means people. Immigration affects human fate and human destiny. The law can help, but the law can hurt terribly. The law can inflict great hardship and on occasions it can hurt beyond possibility of remedy.

Men writing legislation in the field of immigration have to be more cautious than men writing laws that affect taxes, tariffs, shipping, banking, etc.

In the first half of the current century, a few words in a certain section of the imigration law of the United States meant the difference between life and death for many people escaping totalitarian brutalities. Conversely, mistakes in the enforcing of the law can mean untold human tragedles and suffering. An immigrant inspector on the New York waterfront is just as much a protector of our and our children's security as any soldier who, while on active duty, is in charge of protecting a vital military establishment. The same immigrant inspector may be guilty of causing harm to a human

being-often, harm and damage beyond re-

I could dwell long on the subject of immigration. This evening, however, is to be devoted to much more pleasant things than my speech, and I shall therefore ask your indulgence in permitting me to talk about but few aspects of the problem which have recently been brought to my attention.

Since its enactment in June of 1952, the Immigration and Nationality Act has been savagely attacked by various organized groups—in my opinion—almost invariably for wrong reasons and on false grounds. We all know that the only sane purpose of any immigration law is to regulate the admission of immigrants and to keep out allens who may harm or weaken our country. Of course, carried to its logical extreme, such a policy could be inhumanly harsh. It would keep out all nonproducing foreigners—as they are kept out by many countries—even to the point that means separation of families.

As you know, we do not preach that policy and we do not practice it. The old, the infirm or the unskilled still find entrance to the United States along with their younger, more energetic and better trained relatives. More than that, we specifically accord preferential treatment to relatives of United States citizens and residents of the United States, regardless of age. In that respect, our immigration laws are certainly superior to those of many countries which are much less critically looked upon in discussions held in the world's press.

I would like to remind you that even enemies of our form of government are not necessarily forever barred from entering into our midst. You know well, that reformed totalitarians, including reformed Communists, can settle among us permanently and that active members or organizations which we hate and abhor can enter temporarily if they can show that their enmity toward our way of life does not carry immediate danger to our country.

Surely, that much of self-protection on our part is about the simplest minimum demonstration of common sense. But it is precisely on this point that baseless criticism is being leveled at the Immigration and Nationality Act.

One of the most brilliant minds of our era, that of Dr. J. Robert Oppenheimer, has recently produced, over television, a new set of totally confused ideas. Appearing on Mr. Ed Murrow's program, Dr. Oppenhemier has ventured a few opinions regarding the purport and effect of our immigration laws. I had some correspondence with Dr. Oppenheimer since his execursion into the field of law, and I hope that I was able to explain to him how entirely wrong he was in what he said. Unfortunately, the false impression has been created in the public's mind, and I am, of course, unable to correct it, since I am unable to diffuse my mind as effectively as Mr. Murrow helped Dr. Oppenheimer to

However, I would like to use tonight's fine forum for the purpose of suggesting to Dr. Murrow that he might want to have me on his show and ask me some questions regarding atomic energy. I would certainly be as qualified to answer them as Dr. Oppenheimer is qualified to answer the legal questions propounded by Mr. Murrow. The viewers and the audience would be equally edified, I assure you.

Dr. Oppenheimer's chief concern was the alleged exclusion of scientists and the impossibility of calling scientific meetings in the United States. Let me tell you without delay that I am just as eager as Dr. Oppenheimer to have all possible scientific meetings held in the United States, and I see no reason why they cannot be held here. It is a matter of record that not only persons who have allegedly associated with Communist organizations, but actual members of the

Communist Party, have been admitted to the United States temporarily under one section that this audience is certainly well familiar with, namely, section 212 (d) (3) of the act. It is also a matter of record that a chess team representing officially the Soviet Union, accompanied by, shall we say, trainers or masseurs-obviously they were secret policemen-were admitted to New York to participate in a tournament.

You also know about the group of clergymen from behind the Iron Curtain who were admitted to the Evanston, Ill., meeting last August and permitted to offer their totalitarian and heathen preferences to a Chris-

tian gathering.

There are hundreds and hundreds of less publicized cases of admissions of similar people. I am informed by the Department of State that most of our institutions of learning have established, very successfully, permanent contacts with the Department which permit to overcome difficulties and avoid delays in the admission under the provisions made for specially learned academicians.

I believe that it is time for those of us who are honestly concerned with matters of immigration, international migration, and the security of our country to take factual stock of existing immigration law without reference to personal bias or emotions fed

on narrow, egotistic interests.

Another favorite target for criticism is the quota provisions of the present law. The trick in this is to make a sweeping statement that only so and so many immigrants entered in the preceding year, whereas in former years—unnamed—twice or thrice or more could and did enter, the blame, of course, being put on the iniquitous McCarran-Walter Act.

Now, there is dishonesty in this statement, perhaps an innocent dishonesty on the part of many who repeat the story

The number of entries in 1954—both for permanent and temporary residence—show in overall numbers and by specific categories that our present immigration law has not curtailed the flow of aliens into the United States

· In the fiscal year 1954—that is, July 1, 1953, to June 30, 1954-208,177 aliens were admitted to the United States for permanent residence, which was 22 percent more than came in the preceding year. That fig-ure includes the 821 persons who trickled in under the very strange provisions of the so-called Refugee Relief Act of 1953.

Half a million (566,613) entered as nonimmigrants, 25,000 of them as students, 61,000 of them on business, and over 400,000 for various other reasons, including tourist

travel, visiting, etc.

Do those figures justify the cry that we have closed the doors to this country?

Sweeping or frivolous abuse heaped upon a carefully considered law is, in my view, unethical to the point of betrayal of our whole judicial and legislative system. It is treacherous because it seeks not to amend and perfect, but to destroy, and to destroy for dubious reasons, and often in promotion of self-interest. We have a duty to those who honorably seek shelter and opportunity within our borders, but we should not ignore our equal obligation to our fellow citizens who have built, developed, and defended this

haven from tyranny.

I do not mean, of course, that every immigration law passed by the Congress is perfect and so, above rightful criticism. Not at all. As a dismal example of sloppy legislation, we have the so-called Refugee Relief

Act of 1953.

Last week, when the 84th Congress convened, I introduced a bill to amend that abortive measure in the hope of actually getting help for some people.

I have never made a secret of the fact that I consider the Refugee Relief Act of 1953 a fraud and a phoney. For political reasons, the majority party in the 83d Congress rushed through the House and the Senate an ill-conceived and half-baked proposal which was designed to please every body without achieving any practical results. In spite of my public warnings and in spite of my vigorous opposition on the floor, that unworkable law was enacted to the accompaniment of political drum beat-

The only thing that I was able to do last session in order to correct that deficient law was to insert a few amendments, permitting to reunite families and to permit close relatives of American citizens to join

them in this country.

My new bill goes further in that direction in trying to make certain that people who need resettlement in the United States and are deserving of that privilege would get it. I aim to:

Equalize the requirements in relative cases. under the act with the requirements of the Immigration and Nationality Act so that the same evidence is needed to satisfy consular officers that relatives will not become pub-lic charges if admitted into the United States:

Eliminate the requirement that sponsors of immigrants keep suitable housing at a specific address open and available for the entire period of time that the intending immigrant goes through the screening and processing machinery;

Prevent the extended separation of famin cases where all members of the family are not present to accompany the principal applicant to the United States from the place where the visa is issued;

Revise the requirement as to documentation which must be produced by an applicant in order to harmonize the requirements of the act with those of the Immigration

and Nationality Act in this respect.

I hope that the enactment of my amendwill correct the ridiculous situation in which out of a total number of 209,000 immigrants authorized to come to the United States under the 1953 law, thus far 13,056 have come up to December 31, 1954, or during one-half of the law's entire lifetime.

Well, I hope that I have made my point ear. I have tried to tell you that I am for honest legislation, for honest administration of law, and for honest criticism of

A CUTE MAGAZINE COVER HORRIFTED THE RED BISHOPS

(By Eugene Gonda)

Four Hungarian Protestant bishops took the lead recently in a new kind of Red propaganda aimed at the United States.

The four-2 Lutherans and 2 Calvinists were members of a Hungarian delegation which attended the assembly of the Council of Churches at Evanston, Ill., last August. The Lutherans were Laszio Dezsery and Lajos Veto; the Calvinists, Albert Be-reczky and Janos Peter.

Bishop Bereczky gave well-publicized lectures about his sad American experiences. Bishops Peter, Dezsery, and Veto wrote articles about the horrors of American life and the successes of Iron Curtain churches at the Evanston assembly.

The bishops agreed that the fingerprinting and other preliminaries to obtaining their United States visas were the most mortifying experience of their lives. "Humiliating treatment reserved only for gangsters," they described it.

Bishop Bereczky reported indignantly that New York customs officers even examined his shaving brush and squeezed a tube of toothpaste in their search for Communist propa-ganda in the bishops' luggage.

"In Hungary," Bishop Dezsery commented, "foreigners can go where they wish without being bothered by authorities."

Bishop Veto found fault with American food and food service.

"America cafeterias recalled production lines in factories," he said. "One of the slanders by the western reactionary press about Communist countries is that there people wait in line for food in collective restaurants. The truth is that America is the country of waiting in line in cafeterias.

"You can get only canned food in the United States," he went on. "It is not possible to buy beer in bottles there; even this is delievered in canned form. Milk is sold in square paper boxes. American food is tasteless and is permeated with all kinds of unpleasant odors of fish, metled butter, and food oil."

The bishops deplored the savagery of the American press, which they said is full of stories of murder, vice and flying saucers and of war propaganda. And they all cited the same horrible example in support of this charge.

Each of them described in his own way a picture on the cover of an unnamed American publication: "A father with two loaded guns terrorizing his young son in a sickbed and thus forcing him to take a bitter medi-

The writer succeeded in identifying the picture which so horrified the Hungarian bishops. It was on the cover of American Weekly, and it showed a smiling young Weekly, and it showed a smiling young father kneeling at the bedside of his little boy, who was grimacing over a spoonful of castor oil. The father wore toy holsters and a toy sheriff's hat, and he was terrorizing

the youngster with two cap pistols.

Bishop Bereezky was particularly upset
over the ill-treatment of American children. He told of seeing a newsreel of babies forced to compete in a crawling contest, and he cited as typical the case of the Florida swimming instructor convicted of manslaughter in the death of his 5-year-old daughter for forcing her to dive from dangerous heights.

Bishop Bereczky was also shocked by the inscription on an Evanston war memorial which read: "1916-1919" and "1941-." He protested: "Is it possible to proclaim with such ostentation chiseled in marble that World War II is not yet ended?"

Bishop Peter devoted an entire article published in many Hungarian newspapers to the Evanston memorial, and concluded that the United States was suffering from war

hysteria.

(George Tomlinson, head of the citizens' committee which raised funds for the Evanston monument, explained last week that no terminal date had been added because there still had been no official ending of the war with Germany. Moreover, he said, the shaft was in memory of men who had fallen in all conflicts since the Civil War, and the names of some 25 men killed in Korea had still to

be added.)
Bishop Peter was convinced that the bad attitude of the American press toward the Hungarian delegates at Evanston was directed by the State Department, and Bishop Dezsery was even more outspoken in his indictment of the Secretary of State.

"Secretary Dulles inadvertently blabbed out his hope of secing the Evanston conference dominated by American propaganda," said Dezsery. "Therefore he tried to exclude the eastern churches from the assembly. He mobilized against us the American Legion, that Fascist organization of war veterans, and all kinds of European exiles. But he did not succeed."

Dezsery said that an American minister told him that his sermons were censored by police, and that an American engineer complained that he was always being bothered by FBI interrogators. "But all this could not prevent American sympathies toward us," the bishop added. "Many people came to see us secretly and shook our hands warmly in the absolute privacy of hotel elevators.

Bishop Dezsery described the plight of the United States in the words of one of his American friends, a Protestant minister who now lives and works in Geneva, Switzerland. Dezsery quoted the anonymous clergyman

"The country before your eyes is no more that of Lincoln, but that of McCarthy. America is dominated by a hysteria of fear. No European country would live in such fear. The country is a total political and diplomatic failure. Nobody knows what to do.

"The American people normally are very dynamic, but now they are in a state of wavering and great perplexity. President Eisenhower was elected on a program of peace and social progress. This has proved to be an empty illusion.

"Believe me, the American people have lost their faith in everybody; they are only anxious for their future. While reading a newspaper, the average American can do nothing but turn the chewing gum in his mouth."

The number of automobiles astonished Bishop Dezsery, but he had an explanation for the phenomenon. "Americans sweat all their lives to pay for their cars and the mortgages on their homes," he said.

He also explained the use of parking meters: "Cops are paid by corporations owning parking meters for fining those who refuse to pay for their parking."

This instance of collaborationist clergymen preaching Red propaganda is not unique since the death of Stalin, and it coincides with the frequent mention of religious topics on Red broadcasts, with the astonishing authorization to celebrate Christmas and with rumors of the liberation of Cardinal Mindzenty. Stalin's heirs seem to be fol-lowing the almost forgotten pattern of the czars, who based their despotism on a close alliance between sword and aspergillum (a brush used to sprinkle holy water).

Hetch Hetchy Bill Beneficial to Both San Francisco and Mountain Areas

EXTENSION OF REMARKS OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. ENGLE. Mr. Speaker, I have again introduced legislation which authorizes the Tuolumne County Water

District No. 2 to develop the power potential of the Tuolumne River near the Hetch Hetchy Reservoir of the city of San Francisco.

The development would be partly on lands in the public domain, and the stretch of the river proposed to be developed is in the area covered by a license granted to the city of San Francisco in 1913 under the so-called Raker Act; thus development by the district requires action by the Congress.

The legislation I have introduced provides that the profits from this power development can be used only for assisting and expanding agricultural development and municipal water development in Tuolumne County. The legislation provides further that the electric energy from the development can be sold only to public agencies of the State of California and that the rights granted for the development cannot be sold, assigned or transferred to any private person or corporation.

This valuable power drop has been sitting idle for 40 years despite the great demand for electric energy that has existed in the area. It seems only right and appropriate that the local area, which furnishes the water, shares in the benefits from the development of its resources. Expansion of agriculture and the furnishing of low-cost electric energy to the power consumers through public agencies benefits not only the local area but our whole national economy.

When I introduced this legislation in the last Congress there was oposition from the city of San Francisco. I want to cooperate with San Francisco and have so stated to its officials. This legis-lation takes nothing away from the city-not a bucket full of water. As a matter of fact, the water available to the city would be increased as seepage and evaporation losses would be reduced to some extent. Financially, this proposal would benefit San Francisco as it would be paid for benefits from regulation of Hetch Hetchy Reservoir. Both San Francisco and Tuolumne County would benefit under this legislation.

San Francisco's development on the Tuolumne River has been a virtual gold mine to the city for over 40 years. The local area does not begrudge the city the benefits it has received. However, we do believe it is high time the local area look to its own future and therefore this Tuolumne County water district is requesting an opportunity to share in development of its own remaining re-

Under the provisions of the Raker Act. San Francisco cannot develop this power potential itself but some officials have taken the view that no one else should be allowed to develop it. San Francisco has had 40 years to fully develop and operate the Hetch Hetchy project. It

has failed to do this.

Congress in passing the so-called Raker Act of 1913 made clear its intention to limit the city and county of San Francisco in its use of the Tuolumne area to the requested purpose-water supply, and such incidental power as might thereby be developed; provisions were inserted requiring timely development by the city of as much power as was needed for municipal uses. The Hetch Hetchy project thus came into being, as a permissive use of Federal properties under tightly drawn restrictions, with limitations clearly specified. In other words, Congress passed the Raker Act to assist the city in meeting its water needs and the power development was incidental to the development of a water supply. Congress consented to the inclusion of power in the project only on the condition that it would be operated without private profit for the benefit of the power consumers of San Francisco and the power would not be sold or transferred to any private individual or corporation for the purpose of resale at a profit. Also, it was the intention of Congress that the people of San Francisco should be furnished low-cost electric energy, not that the city should use the project as a means of reducing its tax assessment. There is little possibility the Congress will amend the Raker

Act to permit exploitation of the resources belonging to all the people.

I am confident that hearings on this bill will help determine, first, whether San Francisco, which is generating power under a Federal permissive use of Federal property, should be permitted, in perpetuity, to bottle up this power potential, at present undeveloped and being wasted and surplus to any foreseeable power needs of the city; second, whether city officials have complied with the restrictions and limitations of the Raker Act with respect to the development and disposal of power from the Hetch Hetchy project; and third, whether Congress, in the Federal and public interest and entirely in keeping with the restrictions and limitations of the 40-year-old Raker Act, should not reexamine that act with the view toward amending it to permit the people in the immediate watershed area to obtain benefits public in nature which will permit local agricultural and community development in Tuolumne County in the same manner in which the earlier Federal legislation involving the same area was intended to bring public, and I emphasize, public benefits to the city and county of San Francisco.

The Dredging of the Housatonic River Must Be Completed

EXTENSION OF REMARKS OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. PATTERSON. Mr. Speaker, it gives me a great deal of satisfaction that the budget presented to the Congress today contains a recommendation for an appropriation of \$750,000 to complete the dredging of the channel to Culver's Bar in the Housatonic River.

This recommendation, if passed by Congress, means the end of a mission designed to bring reduced utility costs to individuals and manufacturers in Connecticut. The last budget submitted to Congress contained an item of \$500,000 for this project. Subsequent action by the Congress reduced this amount to \$400,000. Today's figure of \$750,000 represents the Army Corps of Engineers' estimate of the amount needed to finish the work.

During last year's hearing on this project before the Civil Functions Subcommittee of the House Appropriations Committee, testimony was presented by an official of the Connecticut Light & Power Co. that plans call for the expansion of the company's largest steamelectric generating plant located at Devon, Conn., 4 miles from the mouth of the Housatonic River. It was estimated that by 1960, the Devon plant will consume a total of 1 million tons of coal a year, compared with 640,015 tons in 1953. The improvement in the chan-nel will permit the delivery of coal to

the Devon plant by larger barges and it is estimated that a saving in the delivered price of coal of 50 cents per ton will be achieved.

The project as authorized in House Document 449 of the 70th Congress provides for local contributions in the amount of \$150,000 on the part of the Connecticut Light & Power Co. and the amount of \$50,000 on the part of the adjoining towns in lieu of providing suitable bulkheaded areas for the deposit of dredged material.

Any savings in transportation costs to the power company are directly passed on to its consumers throughout the State of Connecticut by means of a fuel adjustment clause included in the rates of the company. Therefore, by the completion of this project, the taxpayers of Connecticut stand to gain as much as \$500,000 a year by 1960 in reduced power costs. It is my sincere hope that this recommendation will be passed by Congress with no reduction in amount.

Situation in Latin America

EXTENSION OF REMARKS

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. HILLINGS. Mr. Speaker, last year as chairman of the Subcommittee on Latin America of the House Select Committee on Communist Aggression, I repeatedly warned of the dangerous situation existing in Central America. The report filed by the subcommittee also pointed up this danger.

Since the issuance of the subcommittee's report, a war has broken out in Costa Rica; the President of Panama was assassinated; in Honduras the Congress has been dissolved and the situation there is tense.

Central America is extremely important to the United States and the free world. In this area, the Communists obtained their first beachhead in the Western Hemisphere when they were able to seize control of Guatemala until they were driven out last June.

The unrest and tension which grips this area today could benefit the Reds and undoubtedly efforts will be made to capitalize on the situation. It is my hope that our Government and the other governments represented in the Organization of American States will do everything possible to alleviate the difficulties which presently exist in that area. It is my hope too that we will be ever alert to any Communist attempts to gain a foothold in our own backyard.

I wish to call to the attention of the House, an editorial in the January 13, 1955, edition of the San Diego Union, which discusses this problem.

The editorial follows:

WAR IN COSTA RICA—LATIN UNREST IMPORTANT TO UNITED STATES

The importance of greater United States interest in Latin America is proved again by the invasion of Costa Rica. The Costa Rican conflict supplies evidence

of the growing unrest in central America.

Not long ago the United States discovered
that the Communists were in control of
Guatemala. A successful revolt has thrown
the Reds out of the country. But other uprisings have followed.

A few weeks ago, Juan Manuel Galvez, Honduran president, was removed from office and then allowed to regain his post. More recently the president of Panama, Jose Antonio Remon, has been murdered under mysterious circumstances.

Now we have a small-scale invasion of Costa Rica, apparently from Nicaragua with Costa Rican opponents of the present government participating. A committee from the Organization of American States is investigating the conflict.

One of Costa Rica's proudest boasts has been that its teachers outnumber its soldiers. With an attitude such as this, it is ironical that the tiny nation now finds war within its borders.

The present troubles prove again that no nation can afford today to be without an army. The central American republic abolished its army in 1950. It now relies for defense upon its agreements with other countries and upon a police force of 1,000 to 1,500 men and coast and national guardsmen who number probably 500.

Costa Rica was adequately forewarned of the present invasion and probably gave its limited forces special training. But the nation commendably has in the past given much of its attention to education. With a population of 869,000, only a little larger than San Diego County, Costa Rica has devoted more than 12 percent of its budget to schools, an amount exceeded only by spending for public works and the nation's executive offices.

This is a nation which we normally would consider needing little attention. It is a nation making progress in numerous democratic fields.

In the past United States citizens have taken revolutions and small wars lightly when they flared up in Latin America. But this continued unrest provides a condition which today will be ideal for Communist agitators.

The United States is in a delicate position in which it will not want to step in with a military force. The Organization of American States, which includes 21 nations in this hemisphere, may provide the immediate means of quieting the trouble without widespread fighting. But there is an air of urgency to the proposals for the United States to become a closer partner with its neighbors.

Resolution in Favor of Reduction of Eligibility Age for Social-Security Payments

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution adopted by the House of Representatives; the Commonwealth of Massachusetts:

Resolution memoralizing the Congress of the United States in favor of the passage of legislation reducing the age at which persons shall be eligible to receive socialsecurity benefits

Whereas there is now pending before the Congress of the United States a bill spon-

sored by Congressman THOMAS J. LANE, of Lawrence, to reduce from 65 to 60 the age at which persons shall be eligible to receive social-security benefits; and

Whereas many persons who have reached the age of 60 years either have difficulty or cannot receive employment even though

they are in good health; and

Whereas in many cases persons between the ages of 60 and 65 by reason of the lack of social-security benefits either become dependent upon relations or welfare agencies because of inability to secure employment: Therefore be it

Resolved, That the house of representatives respectfully urges the Congress of the United States to give favorable consideration and enact into law the bill reducing the age at which persons shall be eligible to receive social-security benefits; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of state to the President of the United States, to the presiding officer of each branch of Congress, and to each of the Members thereof from this Commonwealth.

House of representatives, January 11, 1955. Adopted.

LAWRENCE R. GROVE,

A true copy. Attest:
[SEAL] EDWARD J. CRONIN,
Scoretary of the Commonwealth.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U.S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodle is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Appendix

The National Highway Program

EXTENSION OF REMARKS

HON, HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement made by me in regard to the national highway program as submitted by the National Advisory Committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON, HARRY F. BYRD, OF VIRGINIA, RELATIVE TO THE CLAY COMMISSION HIGHWAY REPORT

I shall discuss the proposed new road plan at length in the Senate when the President submits it to Congress January 27. In this statement I am commenting briefly on the recommendations to the President by the National Advisory Committee for a national highway program.

The Committee's recommendations fall generally in two parts: (1) Continuation of the regular Federal ald to highways at the rate of \$623 million a year, and (2) expenditure during the next 10 years of an additional \$25 billion for the so-called interstate highway system. Federal expenditures on the 2 programs in 10 years would total \$31 billion. Including the interest, the expenditure will be \$42.5 billion.

The Committee estimates the \$25 billion would construct 40,000 road-miles designated by the Federal Government as interstate highway. This would be little more than 1 percent of all public-road mileage. The average would be about 800 miles per State. For this the Committee recommends borrowing \$20 billion at 3 percent interest and collection of \$5 billion in fees from filling stations, motels, etc., operating on the rights-of-way.

If the 30-year taxable bonds recommended by the Committee can be sold at 3 percent interest, and if they are paid off on schedule—the last maturing in 1987—the interest would cost more than \$11.5 billion. At this rate every dollar borrowed would cost taxpayers \$1.55.

Based on all recent Federal experience, I submit it is a violent assumption to predict these bonds will be paid off at maturity. In effect, we have not paid off a single dollar of Federal debt in 25 years. Continuing increase in the Federal debt is in prospect for an indefinite period.

It may be expected that even before the 40,000 miles are constructed, the program will be expanded in mileage, scope, and amount. It is certain that the system will be thousands of miles greater than contemplated in the Committee report.

As we grow, population shifts, and the impact on specific roads changes, and therefore our road needs shift and change. There

is no such thing as a permanent road because no one can predict years in advance what specific roads will carry the most traffic.

Actually the Committee recommends that the Federal Government assume virtually the complete obligation for the so-called interstate highway system (abolishing the 60-40 Federal-State matching requirement in this program) and that it be financed by methods which are unique so far as I know, and thoroughly unsound.

The Committee recommended to the President that the program be financed through a Federal corporation which, without either assets or income, would borrow \$20 billion from the public. The Treasury, under a contract with the corporation, would guarantee the corporation's bonds, but the debt would not be included in the record of obligations guaranteed by the United States. Annual appropriations to meet principal and interest payments would be requested, but the request could not be refused or reduced by subsequent Congresses, for 30 years, if the faith and credit of the Government are to be honored. If financial difficulty should develop at any time, the corporation with no further authorization sould make mandatory calls upon the Treasury for amounts up to \$5 billion outstanding at any one time.

Such procedures violate financing principles, defy budgetary control, and evade Federal debt law.

If the Federal Government can properly borrow money for roads in this fashion, without regarding it as debt, and spend it without budgetary control, it may be expected that similar proposals will be made for financing endless outlays which may be desirable for education, hospitals, public health, ets. In fact I am informed that such a plan is now under consideration for school construction.

This would mean operating the Government on two sets of books: One set for activities financed by borrowing outside the debt and expenditures outside budgetary control, and the other set for activities financed by borrowing on the record and expenditures under budget control.

Count it as you will, as we spend more than our income we add to our debt. The least the Government can do, in fairness to taxpayers, is to keep books and accounts in a manner reflecting the true state of our fiscal affairs.

When the Government contracts a bona fide debt, but arbitrarily removes it from classification as public indebtedness, it creates fiscal confusion and disorder, and destroys confidence in Government credit.

You cannot avoid financial responsibility by legerdemain, and you cannot evade debt by definition. The obligations of the Federal Government and all its citizens will still remain.

There is another grave objection to this Federal road plan, of importance equal to those I have mentioned.

GROWTH OF FEDERAL GRANTS TO STATES

Since 1934, Federal grants to States have enormously expanded in cost and functions. Every Federal grant elevates the control of the Federal Government and subordinates the authority of the States. Nothing is truer than the rule that power follows the purse. When the Federal Government makes a grant

it directs the exact manner in which the fund is expended, even though the expenditure is partly contributed by the States. Time and time again I have seen the iron hand of the Federal bureaucracy compel the States to do things that they did not desire to do, because of grants made by the Federal Government.

The growth in Federal grants is indicated by the fact that in 1934, 21 years ago, the total of such grants was \$126 million, for 18 grants-in-aid programs. Now the total of Federal grants is \$3 billion for 50 programs. This is an increase of 300 percent in programs and 2,300 percent in cost. Federal grants to States never end. They continue to expand.

The Committee's proposal contemplates the greatest increase in Federal grants suggested. A Federal agency will determine the location of the interstate road system, will fix the number and location of access roads, which may be considerable distances apart, will fix the fees for the activities such as filling stations, motels, restaurants, etc., that are located along the rights-of-way and will control construction standards, etc.

No one recognizes more fully than I the need of road improvement to meet the constantly increasing impact of modern-day traffic. A great deal of my public career has been devoted to the problems of a road construction in Virginia. As a substitute for the Committee's recommendations I propose:

1. That the 2-cent gasoline tax now being collected by the Federal Government be repealed, thus permitting the States to reimpose it.

2. Present Federal aid to primary, secondary, and urban road systems which, for many years has been integrated with State highway systems, be continued on the long-standing match basis. This amounts to \$535 million.

3. That the lubricating oil tax now collected by the Federal Government be continued.

4. A ½ cent per gallon Federal gasoline tax. Revenue from this tax plus the Federal lubricating oil tax, according to estimates of increasing use, shortly will be sufficient to compensate the Federal Treasury for this Federal aid.

Under such a plan States would retain as much control over their roads as they have had in the past; \$11.5 billion interest would be saved for additional road construction; and road revenue would be evenly distributed over future years to keep high-ways modernized to meet changing conditions.

Under the Committee plan principal and interest payments on the \$20 billion bond issue would dry up gasoline tax revenue for 20 years, from 1966 to 1987, with the exception of about \$300 million which is committed to matching funds of States for their primary, secondary, and urban systems.

In the next few days I will present on a yearly basis figures showing the plan I propose will result in more road development than can be accomplished under the Committee's plan; that it will avoid increasing the public debt, and that it will serve to preserve the soundness of the Federal budgetary system.

Foreign and Defense Policies

EXTENSION OF REMARKS

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the REC-ORD the text of the speech I made yesterday in Chicago, Ill., before the Newspaper Advertising Executives Association.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY HON. WILLIAM F. KNOWLAND, OF CALIFORNIA

Foreign and defense policies are and need to be the people's business. The decisions that are made in the months ahead may well determine whether we are to have a free world of free men.

The wise men who drafted our Constitution knew well the history of the world up to their time.

They knew that where people had lost their freedom it was because of the concentration of power in one agency of the Government.

Not only did they set up three great coequal branches of the Federal Government as checks and balances one against the other but they made the Federal Government one of limited and specified powers, reserving to the several States or the people thereof all other powers.

It was Thomas Jefferson who said, "I have sworn upon the altar of God eternal hostility to every form of tyranny over the mind

of man." The times call for frankness and where there is an honest difference of opinion the American people should be presented the

alternatives confronting them.

At the United Nations headquarters in New York a massive propaganda buildup is taking place to silence those who would analyze the facts of the recent visit of the Secretary General to Peking. The same arguments for voluntary censorship will be used later when the ultimate price of ransom is paid-lest we offend the killers in Peiping.

The Chinese Communist regime is the same one which committed the aggression in Korea; was responsible for inflicting 140,000 casualties upon us including 35,000 dead. That regime also killed in cold blood hundreds of Americans, with hands tied behind their backs, who were their prisoners.

It is the same regime which has consistently violated the Korean armistice and has prevented the neutral nations investigative teams from being anything but paralyzed, impotent examples of the free world's naive trust in a system which prides itself in treachery, assassination, and dishonor as legitimate weapons in the ultimate communization of the world.

Lest there be some who think I am not being slow to anger I will quote Lenin who said, "We must be ready to employ trickery, deceit, lawbreaking, withholding and concealing truth."

Communism is a global menace. not be stopped if Europe if allowed free reign in Asia. Lenin stated the basic concept when he said, "The road to Paris is through Peking."

In this age of the airplane and atomic power this Nation could no more return to

isolation than an adult could return to childhood.

We need and want stout allies but an alliance must be a two-way affair. A nation cannot buy friends any more than can an individual

The mission of Secretary General Hammarskjold was not a success and, in my judgment, no service is done the American people or those of the free world by pretending that it was.

Mr. Hammarskjold has returned without either the release of the prisoners of war held in violation of the armistice agreement or any prospective date in the future when they will be freed. He personally favors the admission of Communist China into the United Nations and his government has recognized that regime. In China he did not go to see our men and the conditions under which they are imprisoned. His mission was a failure by any fair standard or yardstick that Americans can use.

This is attempted to be glossed over by the statement that "When tensions are eased the members of our Armed Forces may be released." We already know the standards which the Communist Government has set for the easing of tensions. They are:

The admission of Communist China into the United Nations.

2. Reopening of trade, including that of strategic materials with Communist China.

3. The reversal of the American policy which holds that it is not in our national interest or that of the free world to have the island of Formosa, with its 91/2 million free Chinese, pass into Communist hands.

4. A reversal of our determination and of the free world to draw a line in the Pacific so that additional nations and their people will not pass behind the Communist Iron Curtain.

These surrenders will not be apparent all at once and for the most part, if accomplished, would be done despite the negative vote of the United States.

But first there will come the concessions which like paying other types of blackmail will be constantly enlarged:

. Assurances to the Chinese Communists relating to limitations and restrictions upon our pending treaty with the Republic China, now on Formosa, and other offshore islands.

This, I would point out to Mr. Hammarskjold is a dangerous game. The Chinese and North Korean Communists had understood from Mr. Acheson that the Republic of Korea was outside of our defense perimeter.

2. Assurances that while public opinion in the United States would not presently support Chinese Communist admission into the United Nations the Communist bloc and the neutrals would soon reward the Peiping regime for their generosity in releasing a fraction of our citizens held provided the American voice at home and abroad was throttled from telling the truth regarding the tyranny spreading its cancerous growth in Asia, Europe, and anywhere else they can subvert free nations.

Mr. Hammarskjold knows as well as does any other observer of the world scene that in Communist eyes there will be no lessening of tensions until the Communists are appeased in that manner.

What a vast difference the history books would records today if the men who gave us our Nation had not been prepared to take some risks. We would never have become or remained an independent free America.

How long can such a policy be followed without ending in disaster for ourselves as well as the other member states of the United Nations?

Our power was so diluted by the United Nations during the Korean action that the recommendations of our responsible military

commanders were constantly vetoed or ignored and our joint venture prevented the winning of the Korean conflict.

The United Nations record in Korea was not effective security in action. The United States furnished 90 percent of the manpower. Only 17 out of 60 members supplied any manpower at all. We supplied 450,000 in armed forces to 45,000 supplied by all other United Nations members.

Soviet chairmanship of the Security Council at intervals during the Korean war was like having the town arsonist to head the fire department. The Soviet Union admitted supplying arms, ammunition and moral support to the aggressor.

Will the same joint venture prevent us from securing the release of our own men in the uniform of the American Armed Forces without paying tribute to the Chinese Communist regime?

Before Mr. Hammarskjold and his associates at New York or their home governments commit themselves to appeasement in conformity with the current Communist line let them understand: Any such appeasement will be subjected not only to the most searching scrutiny by the American Congress but by a far more potent solemn referendum of the American people in 1956.

The time may be coming in the not too distant future when the people of the United States may have to insist upon a second

Declaration of Independence.

We did not change from a small colony of 3 million on the Atlantic seaboard to the great Nation of 165 million because we had the most people in the world. There have been a good many other nations that have had larger populations.

We did not reach our present place because we had the most resources in the world, for there are other nations which have greater

material resources.

I believe that we came to our present position of leadership because the founders of this Republic gave us a heritage of courage and a written Constitution that, better than any other document drafted by man, has given to our people the freedom-political and economic-without which this great progress could not have been made.

In this atmosphere the American spirit We were guaranteed the had free reign. right to worship God, each according to his beliefs.

To be sure, we have demonstrated time and time again that as a nation and as a people we are indeed slow to anger.

The religion and cultural background of the free people of China made them slow to anger. Their nation is today behind the Iron Curtain and millions have been liquidated, including men of religion, teachers, small merchants, businessmen, and non-Communist workers and farmers. The free people of Czechoslovakia were slow to anger, and are today behind the Communist Iron Curtain-though in the preceding election less than 20 percent of their people had voted the Communist ticket.

Some of our associates abroad apparently want to brainwash us of some of the history that has made America great.

But, there comes a time, as my old New England grandmother used to say, when we reach a point of righteous indignation, and out of this has come-cherished to each American generation, one succeeding the other—such terms as: "Give me liberty or give me death," "Don't give up the ship,"
"Remember the Alamo," "Damn the torpedoes; full speed ahead," "Perdicaris alive or Raisuli dead."

Despite the fact that in many instances e were faced with what appeared to be overwhelming odds, we have never found it necessary to sacrifice our national honor when a vital principle was at stake.

Nor must we ever permit any international organization to so dilute or undermine our spirit to the extent that Guiliver becomes chained by the Lilliputians and we are unable to even protect our own.

able to even protect our own.

The United Nations overwhelmingly passed a resolution giving support to the American position relative to the 15 American airmen being illegally held by the Chinese Communists.

While the Communists have acknowledged that they hold these 15 men in uniform, there are strong grounds for belief that they may be holding other unaccounted for Americans missing. During the Korean war there were more than 800 unaccounted for Americans in uniform who had fallen into Communist hands. We also know that they have 28 American civilian citizens still in Communist jalls, many of them having served there for 3 or 4 years. We know some of these have been in leg and arm chains for months at a time.

This Nation will want to know what additional steps the United Nations will promptly take to secure the release of the uniformed personnel? How long are we expected to be patient while our men are in Communist cells?

Are they prepared to apply against the Chinese Communist regime economic sanctions as well as moral condemnation by resolution? If these are not successful, are they prepared to support a tight naval and air blockade upon the China coast?

Or is the plan to silence Members of Congress, have a form of censorship over our press, radio, and television, lull our people into a sense of false security lest it offend the Communist leader at Peiping who as successor to the emperors of the old middle kingdom expects the representatives of the free world to kow tow and bring tribute to his august presence?

Since when did it become sound policy to reward the gangster with the Legion of Merit because he returns a part of his loot?

In the final analysis, however, neither the American Government nor the Congress can escape the responsibility for taking whatever effective steps are necessary to secure the release of these men wearing the uniform of this country. They do not wear the uniform of the United Nations though they did serve in the United Nations operation in Korea. As long as a single American is held in a Communist prison I shall not remain silent.

Some, though not all, of our present problems vis-a-vis the Communist world stem from the secret agreements of Yalta, Teheran, and Potsdam.

We should not consider all the people behind the Iron Curtain as being enemies of the free way of life.

At a matter of fact the people of Russia were the first victims of Communist tyranny from which we may hope they will some day be free.

Without the knowledge or consent of either the American people or their elected representatives in the Congress commitments were made for the postwar period which enabled the Communist conspiracy to gain control of Eastern Europe, China, and North Korea.

Since the year 1945, which saw the end of World War II in Europe and Asia, international communism has made great strides.

In January of that year there were less than 200 million people behind the Communist Iron Curtain. Today, Just 10 years later, there are over 800 million. The world's balance of power has been upset.

When 30 years ago Lenin said "The road to Paris is through Peking," he meant that China was the key to all of Asia with its billion and a half people. Once consolidated with the manpower and resources of Asia communism could turn with overwhelming power against the West.

Peace with honor is, and should be, the policy of the American people. This is certainly far different from a policy of peace at any price. Unless this is thoroughly understood, we could be lured into a sense of false security by the words of the men in the Kremlin which do not conform to their actions or their policies.

We must never lose sight of the fact that communism is the most brutal, Gedless tyranny the world has ever known. As a temporary expedient they may change their day-to-day tactics, but their long-term strategy remains the same under Malenkov as it was under Lenin and Stalin.

Some time between 1913 and 1915 Lenin studied the works of Karl von Clausewitz who is rated as one of the outstanding theoreticians of war. Clausewitz' statement that the conquorer always pretends to be peace loving because he would like to attain his objectives in a bloodless fashion (as, indeed, does the bank robber who kills only when resisted or disturbed in carrying out his mission) and that, therefore, aggression must be presented as a defensive reaction of the attacking nation was considered by Lenin to be a good idea. This idea is still at the bottom of Communist pacifist propaganda—peaceful coexistence.

The Kremlin's basic strategy is that communism will dominate the world, and free institutions and enterprise as we know them will be destroyed. Neither as a member of the Foreign Relations Committee nor as a party leader in the Senate has the slightest reliable evidence been presented to me which would demonstrate that the Communist leopard has changed its spots.

We and the free world must not allow ourselves to be paralyzed while nation after nation in Asia and in Europe is brought behind the Communist Iron Curtain. In such an event we might ultimately find ourselves as an isolated island of freedom in an otherwise totalitarian world.

Under such conditions, though the difficulties would be great, we might exist as sort of a continental Dien Blen Phu. However, we would not be able to maintain the same political or economic system which has enabled this country of ours to grow from a small colony of 3 million on the Atlantic seaboard to a world power of 165 million, the most productive industrially and agriculturally the world has ever known.

The doctrine of peaceful coexistence is being advanced by the men in the Kremlin, by the neutralist nations which do not desire to take sides as between freedom and slavery and by some of our people who have not necessarily understood the full implications of what the Communists mean by peaceful coexistence.

Their basic policy is and has been that they would permit a nation to peacefully coexist for such a time as suited the Kremlin's convenience and until they could either be subverted by communism from within or taken over by Communist aggression from without. They have in mind for us the peaceful coexistence the Thanksgiving turkey has (well fed and housed) until the axe falls.

Whatever their station in political economic or academic circles, those who lose sight of this basic fact endanger the freedom of this Republic and the hope of gaining or preserving a free world of free men. You could, of course, always buy temporary respite by a policy of appeasement, but the world should have learned at the time of Munich that "the road to appeasement is not the road to peace." It is only surrender on the installment plan.

Proposals almost certain to be made if and when a big four conference is held:

 Recognition and approval of the present borders of the Iron Curtain.

2. Communist China in the United Na-

This would mean the perpetual slavery of hundreds of millions of people without hope of ultimate freedom. It would mean a complete repudiation of the doctrine of liberation.

On November 15 in the Senate of the United States, in discussing coexistence, I raised a number of questions. They were:

"Are 'coexistence' and 'atomic stalemate' synonymous terms? If they are not, just what is the difference? Is the former merely an inevitable prelude to the latter? And what of our foreign policy and our defense policy when such an atomic stalemate takes place? Does not atomic stalemate mean inevitable Communist nibbling aggression, rather than peace in our time? How many years remain when we still have some initiative left? These are some of the basic questions before the Government and the people of the United States."

These questions have not as yet been fully explored. They will be during the present session of the 84th Congress. Without partisanship or factionalism we must face up to the facts and the challenges of our generation.

If we will only show the same courage and common sense that motivated the men who sat in Philadelphia and, under divine inspiration, gave us first the Declaration of Independence and then the Constitution of the United States, there are none of our domestic problems we cannot solve and there is no foreign foe we need ever fear.

Conservation of Soil: Our Greatest Resource

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the National Agriculture Limestone Institute in Washington at noon today.

On this occasion, I spoke on the subject Conservation of Soil: Our Greatest Resource. If we are to preserve our productive capacity we must conserve our soil. We should ever remember the lesson of China, where neglect of natural resources contributed to impoverishment of its people, political instability, and social discentent. Such an example should teach us we cannot continually mine our resources without replenishment, that to do so would invite national disaster. We should remember that it can happen to us.

that it can happen to us.

President Eisenhower, in his recent message to Congress on the state of the Union, said we must direct greater attention to the needs of low-income farm families. Many of these farmers are being strangled slowly by intense competition in the farm markets today. They constitute the group leaving the farm today, causing a reduction in family-size farms.

A properly financed, continuously adequate soil-conservation program, with prominent roles for lime and fertilizer, would enable these farmers to produce better quality crops in greater quantity, and permit them to compete more effectively with lower cost producers.

A betterment of his economic position would make farming more attractive to the low-income farmers and help keep them down on the farm. Further, the farmer's welfare is integrally bound to the Nation's welfare. He is a big buyer of finished steel products, oil, and chemical supplies. If we are to maintain a balance between agriculture and industry we should bend every effort to make farming a healthy, attractive, and thriving business.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. FRANK CARLSON, OF KANSAS, AT NATIONAL AGRICULTURE LIMESTONE INSTI-TUTE, STATLER HOTEL, TUESDAY, JANUARY 18, 1955

Mr. Chairman, it is a genuine privilege and a real honor to speak to the delegates and members of the National Agriculture Limestone Institute at its annual meeting. Your organization is representative of an industry that means much to the national welfare and the well-being of the American farmers.

It is most appropriate that I discuss with you the subject Conservation of Soil: Our Greatest Resource.

Your interests are not confined to soil conservation, but you have a direct and personal interest in the international and economic problems of the Nation.

I trust you will pardon me if I refer back to the Old Testament and use a verse of scripture as a text:

"And there saw we the giants, the sons of Anak, which come of the giants: and we were as grasshoppers in our own sight, and so we were in their sight." (Numbers 13: 33.)

These glants stand out as symbols of great difficulties—great obstacles. They are in every field of our activities. We meet them in our international problems—we meet them in our domestic problems—certainly we meet them in the field of agriculture. We must overcome them or they will overcome us.

Fortunately, our Nation has been blessed with men and women who had vision, great courage and an overcoming faith.

Two giants or obstacles in agriculture have been and are agriculture surpluses and production restrictions.

The stress of reduced demand during the depression years and the necessity for downward readjustments in agricultural output at the end of World War II have forced us to think a great deal about these two problems.

But as a long-run solution, acreage control of production of food, raw fibers, and the other products of our agricultural industry's as distasteful to the American mind as the restriction of output by an industrial monopolist would be.

Our greatest hope for the permanent solution of both the surplus and restriction problems thus lies in the direction of expanded consumption at home and abroad. Given sufficient time and a realistic approach to the problem of existing surpluses and the need for acreage diversions to prevent their continued accumulation, we can grow up to our present capacity.

It is entirely possible that within the nottoo-distant future, instead of worrying about curtailment, we may be having to think and plan for increasing agricultural production even in peacetimes, just as we have had to do several times during war periods in the past.

When one considers the prospects of our working out of these surpluses and the surplus productive capacity from which they come, four points come to mind:

 We are faced with a tremendous growth in demand resulting from an unprecedented increase in population.

2. We can hope and expect a continually rising standard of living for all these people.

3. With modern technology and research at work for us, there is almost no limit to the possible new uses and hence new demands for agricultural products which may be discovered.

4. Even though the export market for agricultural commodities has declined in recent years, there are still millions of underfed, underclothed peoples of the world who are anxious and willing to buy our products if they can find or be helped to find ways to pay for them.

Population growth, if we look far enough ahead, will alone have a tremendous impact upon the surplus problem. Population which today is 163 million is estimated at 190 million in 1965.

Within the next decade we shall thus be faced with substantially the situation which an excellent Department of Agriculture report, issued only a few years ago, entitled "The Fifth Plate." foresaw for 1975.

For every four people sitting down to a meal and consuming the products of agriculture today there will be another person, a fifth mouth, to be fed at the dinner table 10 and 15 years from now. While the figures on the rate of population increase have been variously presented, each time new estimates are made the earlier estimates seem to appear more and more conservative.

If all of us are to eat as well of pork products a decade hence as we have been doing, agriculture will have not only to produce as it did in 1950, but an additional amount equal to all of the pigs produced in Iowa and Nebraska in 1950.

If we are to do no more than maintain our per capita beef consumption, we will have to add to our national production an amount equivalent to the entire 1950 production of the great producing States of Texas, Oklahoma, and Minnesota combined.

With no increase whatever in lamb consumption per capita, we will need somehow to increase production by an amount greater than that of the combined production of Montana, Wyoming, Utah, and Nevada.

On this population count alone, it looks like our surplus problem may, in due time, give way to one of trying to make every 5 of our present acres produce as much as 6 acres do today. That will call for larger and larger dosages of capital in the form of lime, fertilizers, better seeds and machinery, together with improved farming practices generally.

Incidentally, the report already referred to notes that we can build up acres by using lime and that the tons spread during the agricultural conservation program in the single year 1949 resulted in 20 million tons more hay and pasture forage which, if converted to beef, would equal 1½ billion pounds live weight.

In our great concern for the problems of this agricultural surplus era there is a danger that we may overlook other important phases of our agricultural policies and programs. We should be careful in our thinking not to deemphasize the agricultural conservation programs. We must be ever aware of our duty to preserve the Nation's soils for future generations in a sound and adequate manner even during this period of temporary surpluses.

Only a few years ago we exerted every effort to increase production of practically all crops to meet demand. Who can say the same situation won't face us again a few years from now? Our conservation efforts must remain on a level consistent with the needs of our soil today and in the years to come if we are to faithfully discharge our obligation to the welfare of our farmers and city dwellers today and to those yet unborn.

In addition to the growth in population, we all look forward to a continually rising standard of living for those who make up that population. And a rising standard of living means in part improved diets for those at every income level.

While Americans today are on the average the best-fed people in the world, we cannot be content with present standards. The whole trend in income distribution is certain to be such that those who must now live on restricted or inadequate diets will be enabled to raise their standards and partake of more and more healthful foods.

As costs of producing various crops are realined, the grains which in the short run present embarrassing surpluses may well be applied to greater uses as animal feed. Our increased population and our rising standard of living will call for increased consumption of meats which is one sure way of cutting into our recent cereal surpluses.

The third outlook which we may expect to help minimize our surplus problem over the years ahead lies in the development of new uses and new demands for agricultural products. New and better uses for our crops present several aspects all moving forward simultaneously.

By lowering the costs of production and distribution of established crops through technology, new markets are constantly being tapped. The discovery of wholly new products and wholly new uses for established farm crops is another way in which demand for the products of our farms can be increased.

Still another front lies in the development of new crops, thereby facilitating the acreage shifts necessary to reduce production in some of the older crops, such as wheat and cotton, which are currently in surplus.

The constant trend toward lower agricultural costs by improved strains and the utilization of wastes makes it increasingly possible to sell agricultural raw materials in competition with other materials in their fields.

It is not necessary to illustrate each of these types. It is only necessary to recall the shifts in acreage made possible by the expanding industrial uses for soybean oil.

Back in 1924 American farmers harvested just under 5 million bushels of soybeans. In 1954 our soybean production was a record-breaking 343 million bushels, with a market value of nearly \$1 billion. Thus in the short space of three decades we have seen the development of a new major crop in this country and with it a new major industry.

We need only recall the expanded demand for products resulting from development of freezing and dehydrating processes, and such things as the spectacular use of hulls from rolled oats to produce furfural as a selective solvent used in the petroleum industry and as a raw material in the manufacture of chemical intermediates.

Who shall say what the future limitations may be upon our national development? In agriculture, what new crops will tomorrow bring? What new uses for old crops? In a world just now entering the atomic age, some of the most exciting laboratories ever known to man may be right on our farms.

While corn is not one of our surplus problems, the possibilities of readjustment are demonstrated in the shift from corn to new resistant combine grain sorghums in the southern great plains States and in central and western Kansas.

As an outgrowth of experiments conducted at the Kansas Agricultural Experiment Station in cooperation with the Kansas Industrial Commission, new types of hulling and milling equipment now permit the manufacture of flour and livestock feeds from grain sorghum, the flour being widely used in making gypsum lath or wallboard.

Varieties and suitabilities of grain sorghum have meanwhile been improved by research,

giving further impetus to the search for new uses of products and byproducts.

It was reported a few years ago that new industrial uses for grain sorghum had already provided added outlets for the crop from 2 million acres. The expansion would doubtless be even more dramatic if we had the later figures.

Last but not least among the ways which promise to help us work out from under agricultural surpluses is increased agricul-

tural exports.

Export markets have long been vital to our farm population. These export markets have unfortunately suffered in recent years and would certainly have fallen off considerably more had it not been for our foreign aid programs.

As the President observed in his January 10, 1955, message on foreign economic policy, "no single group in America has a greater stake in a healthy and expanding foreign

trade than the farmers."

During the recent year there has been some improvement in the export of farm crops, but during the past few years, agriculture has suffered a serious decline in the loss of foreign markets for farm products.

During the years 1951 to 1953, we lost the export markets for farm crops produced on 20 million acres of our farmland. The crops that suffered most from this loss of export markets were wheat and cotton.

The value of the farm crops exported for the years 1952 and 1953 declined from over \$4 billion to \$2,800,000,000, or a decline of 31 percent.

The average value of farm exports during the past 5 years has been \$3,500,000,000.

The last session of Congress provided for program of disposal of farm products under Public Law 480. This law authorized by the last Congress, provides for the disposal of \$1 billion worth of farm surpluses during a period of 3 years.

It is estimated that during the fiscal year ending next June 30, we will have sold or given away abroad under this program \$578 million worth of surplus farm products.

This program is functioning well and much credit must be given to the Secretary of Agriculture, Mr. Benson, for the zeal with which he is pursuing it.

The long-run potentialities of foreign markets may be illustrated by the case of cotton, one of the products which in recent

years has tended to be in surplus.

With a rapidly growing world population, there is no question that a need exists abroad for all of the cotton that can be produced in the United States, as well as in the countries which have lately become our competitors in this field of agricultural production. Per capita consumption of cotton in 1948 was, for example, 3.3 pounds in Asia, 6.2 pounds in Latin America, and 7.5 pounds in Europe, compared to 28 pounds in the United States.

Granting all that may be said about the increasing role of synthetic substitutes, it is still true that if per capita consumption of other parts of the world were brought up anywhere near levels prevailing in the United States, surpluses such as that of cotton

might well give way to shortages.

The key to future exportation of more

agricultural products is, of course, essentially a matter of imports. We ought not to hope to solve our agricultural problems permanently by aid programs, dumping, or giving away excesses

The potential foreign buyers must be permitted to earn the wherewithal to pay for the grains and fibers which they need and

would buy

The problem of international trade and the making of reciprocal trade agreements is one that requires the most diligent studykeeping in mind the interests of agriculture, industry, and labor.

The President has submitted a program calling for an extension of the Executive authority to negotiate tariff reductions, the easing of customs administrative burdens, and steps to encourage United States investment abroad, as measures that should contribute to an expanded trade with foreign countries.

Action will be taken on this program in this session of Congress and as a member of the Finance Committee of the United States Senate, I hope to be helpful in writing a program that will give agriculture its proportionate share of the agricultural export market. The farmers are asking no more, and they are entitled to no less.

All of the ways I have discussed for increasing demand for our farm products will be reduced to empty talk if the soils of our country are not maintained in a condition which will help us produce to

meet demand in years to come. I am as concerned as anyone else over our surplus problem but for one additional and all-important reason-that our preoccupation with it will obscure the ever-present necessity to constantly maintain and increase our soil-conservation efforts.

We must step back from the individual trees and look at the entire forest-we must view the problems and values of soil con-

servation in proper perspective.

In discussing a conservation program we should not think of it so much as benefiting this or that class of farmers or that only certain groups of farmers deserve to partici-We are dealing here with a program in which the entire Nation-every man, woman, and child-has a stake. For the soil of our Nation is a large part of our real wealth-our strength in a day and time sorely in need of such strength.

Our soil has contributed immeasurably to our country's prosperity, to the health of its people, to the creation of the economic glant we are in the world today and to the universal prestige we hold because of our economic power. We believe our way of life represents a force for good in this world; the productive power of our soil and our industrial might have elevated us to world leadership and have given us an opportunity to influence, by our position, the rest of the world to a way of life which would mean peace and

Considering soil conservation within this frame, who can say an appropriation of \$200 million or \$500 million or more is enough to accomplish an objective so interwoven with the welfare of this Nation?

It is disheartening to me to find so much emphasis being placed on the saving of dollars in connection with our soil-conservation program. Mere saving of dollars is economy if this practice becomes a habit and our soil deteriorates to the point where it threatens our productive capacity and ultimately far greater expense becomes necessary in order to rebuild the fertility level.

Economy is important but in soil conservation, as perhaps in national defense, there are other values to consider. It is easy to that so many billions of dollars can be trimmed from the defense budget. On the other hand, can anyone say positively that twice the expenditure isn't needed in view of the fast-changing race for the latest

weapons of destruction?

Today we hear about the imminent possibility of intercontinental missiles which can destroy cities in a matter of minutes. When this becomes a reality the sums we are spending for defense today may be paltry in com-parison with the outlays we may have to make.

The same may be said for soil conservation, The consequences of continually chipping away at appropriations for this vital pro-

gram could be ghastly to behold in years to come.

If we could only visualize the specter of ruin which would face our farm communities and the resultant threat to our economy as a whole following in the wake of neglected and inadequately financed soil conservation practices we would not be so anxious to save dollars alone. We should con-serve the real wealth of the Nation—the soil—and not so much the dollars that merely measure value.

In a sense the surplus era upon us gives us an opportunity to produce better quality With fewer acres in production we can concentrate on greater and more intelligent applications of lime and fertilizer, producing higher quality crops in substantial quantity and at a reduced real cost.

There is another area in which an adequate soil conservation effort can be helpful in the maintenance of a strong agriculture. For many years farm population has been steadily declining. In 1800 about 75 percent of our total population tilled the soil: today less than 20 percent make a living from the soil.

President Eisenhower, in his recent message to Congress on the state of the Union, said we must direct greater attention to the needs of low-income farm families. Many of these farmers are being strangled slowly by intense competition in the farm markets today. They constitute the group leaving the farm today, causing a reduction in familysize farms.

A properly financed, continuously adequate soil conservation program with prominent roles for lime and fertilizer would enable these farmers to produce better quality crops in greater quantity and permit them to compete more effectively with lower cost producers.

A betterment of his economic position would make farming more attractive to the low-income farmer and help keep them "down on the farm." Further, he farmer's Further, he farmer's welfare is integrally bound to the Nation's welfare. He is a big buyer of finished steel products, oil, and chemical supplies. If we are to maintain a balance between agriculture and industry, we should bend every effort to make farming a healthy, attractive, and thriving business.

The condition of the Nation's soil determines the quality of food products grown. Since we are what we eat, the fertility level of our soils has a direct bearing on the state of our health. Of the 4 forces determining the nutritious quality of food plants grownair, sunshine, water, and soil—only 2, water and soil, are considered variable.

To the extent that we can control our water resources and the chemical components of our soil we will control the nutritive value of crops grown. When our soil becomes deficient in calcium, nitrogen, and other elements the deficiency shows up in crops and livestock.

These mineral-lacking food products give us a poorly balanced diet affecting our health. We cannot afford the chance that our soil would deteriorate to the point of endangering our health. We should remember that a nation is only as strong as the backbone of its people.

If we are to preserve our productive capacity we must conserve our soil. We should ever remember the lesson of China where neglect of natural resources contributed to impoverishment of its people, political instability, and social discontent. example should teach us we cannot continually mine our resources without replenishment-that to do so would invite national disaster. We should remember that it can happen to us.

United States Foreign Policy

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. WILEY. Mr. President, on Sunday night it was my pleasure to deliver an address on the subject of United States foreign policy.

At that time, I stated my vigorous opposition to any rash attempt on the part of the United States to impose a unilateral military blockade on Red China at this time.

I send to the desk the text of my Harrisburg address, supplemented by additional comments which I made to the press yesterday when this issue came up for further discussion.

I ask unanimous consent that both items be printed in the Appendix of the RECORD.

There being no objection, the address and press-release were ordered to be printed in the RECORD, as follows:

SEVEN KEYSTONES OF NONPARTISAN FOREIGN POLICY

(Address by Hon. ALEXANDER WILEY, of Wisconsin, ranking Republican, Senate Foreign Relations Committee, in Harrisburg, Pa., at Jewish Community Center, at 100th anniversary of the center movement in the United States on Sunday, January 16, 1955)

I welcome this opportunity to survey with you current and future problems of Ameri-

can foreign policy.

It is particularly appropriate to come to the capital of the great Keystone State on so constructive an occasion as this—to consider the strengthening of nonpartisan foreign policy.

I shall refer to seven keystones of a sound international program for the United States—an enlightened modern program in this age of great challenge from international communism; this age of great opportunity; this contracted world of the jetatomic era.

JUDGING STATESMEN OR DEMAGOGS

It seems to me that our fundamental mission in international relations is to construct keystones of peace and justice and prosperity.

It seems to me that the one great standard by which you or I should judge those who are active in the field of foreign affairs at home and abroad is this:

Have they, like statesmen, built for better relations? Or have they, like demagogs, tried to tear down the edifice of better relations?

Have they planted good will in the hearts of men?—America for her allies, and her allies for America?—good will for us in the more than 1 billion hearts of the uncommitted segment of the world? Or have they planted seeds of discord, poisonous dragons' teeth of hatred?

Have they contributed to a better, more rational, more clear-cut understanding of the difficult, complex problems of our time? Or have they—in the chronic habit of the demagog—served to becloud issues, inflame them with emotional fury, so that problems become more and more difficult to solve?

These are questions by which you or I or anyone else should judge not only the men in public life who work on foreign affairs, but individuals in private life who also participate in this crucial subject.

SECRETARY OF STATE'S NOTABLE SUCCESSES .

With that standard, you and I are going to look at all the world's stage.

If time permitted, I would have liked to consider in detail some of the great advances which have been made during the past couple of years.

They represent successes which already assure for our distinguished Secretary of State an enduring mark in history as one of the greatest men who has ever held this high office.

I refer to such notable achievements as the settling of the Italian-Yugoslav dispute over Trieste; the English-Egyptian agreement on the Suez Canal problem; the settlement of the Anglo-Iranian oil dispute; the independent replacement of the Communist-dominated Government of Guatemala by a strong, able government representative of the will of those fine people; the great milestone represented in the Manila Pact; the very encouraging progress toward bringing into being of the new Western European Union; our mutual defense treaty with the Republic of China; and other impressive advances.

OTHER PROMISING FIELDS OF ACTION

I would have liked to discuss with you some of the current phases of our foreign policy program which are particularly promising.

One such program is the President's famous atoms-for-peace plan. It is one of the most promising of all suggestions for helping to resolve East-West tensions and to assure cooperation within the free world as well.

I should have liked to refer to the vital mission of our United States Information Agency which is doing such a fine job in our battle for the minds of men throughout the world—a peaceful battle using instruments of radio, press, motion pictures, and, yes, television.

In that latter connection, may I point out that in the last Congress; steps were taken toward the setting up of an International Telecommunications Commission, one of whose phases would be the development of international television. Action, unfortunately, was not completed by the Congress, although important spadework has been performed by an intra-Cabinet committee. I am hoping that the 84th Congress will flash the green light for international TV through the proposed Commission.

The use of the miracle medium of television throughout the world offers dramatic possibilities, particularly for dispelling lies and misunderstanding, generated by the Soviet Union against the free world.

DANGER SPOTS ON WORLD SCENE

And, too, if time permitted, I would have liked to take a detailed look at some of the specific danger spots in the world, particularly some of the scenes where force of arms is still the order of the day: Like the guerrilla war in Malaya; the border strife in the Holy Land; Mau Mau terrorism in Kenya; the fighting in Costa Rica; the air and sea strikes to and from Formosa and the Chinese mainland.

I would have liked us to consider problems which do not now involve clash of arms, but which represent sources of deep concern to us like the problems in southern Vietnam and elsewhere in southeast Asia; problems along the uneasy border of our devoted ally, the Republic of Korea.

But time does not permit us to look in detail at each of these specific phases, and so I should like to turn to some of the more general principles which do apply throughout the world. They are principles which will serve as guides to us in weighing the future foreign policy of our country. SEVEN BUILDING BLOCKS FOR PEACE

I should like to refer to 7 keystones—7 building blocks for an effective foreign policy: They are, as I see them: (1) Non-partisanship, (2) vision, (3) good will, (4) patience, (5) restraint, (6) partnership, and (7) spirituality.

NONPARTISANSHIP ESSENTIAL IN FOREIGN AFFAIRS

The first keystone is nonpartisanship. Without this keystone, we cannot possibly speak with one clear, eloquent, firm voice to the world.

But fortunately, we are going to continue to do so.

And so, I want to pay tribute now to the responsible leaders of both our major political parties who will help assure continuing nonpartisanship, notwithstanding the overall political division between the executive and legislative branches.

The relatively smooth transition of legislative control is, in my judgment a remarkable commentary on the vitality and worth of our two-party system.

Here too, in Harrisburg, next Tuesday you will be inaugurating a new Democratic Governor. Your new legislature will in turn be divided—with each of the parties in control of one Chamber.

You look forward however to responsible two-party government, I am sure.

In Washington, we have already had our legislative transition. Just 3 days ago, at its first meeting the Senate Foreign Relations Committee formally changed hands, as have all the other committees on Capitol Hill.

The particular smoothness with which this transition was made in our own committee was, I believe, an inspiring demonstration of responsible party and individual leadership.

In this crucial field of foreign affairs there is (on both sides of Capitol Hill) going to be basic continuity, I am happy to say. There may, to be sure, be some changes, as the new majority exercises its prerogative of review. But in the broad outline of past and current foreign policy, in the basic attitude of full and wholehearted cooperation with the executive branch. I am delighted that there is going to be sincere and cordial continuity. There is continuity in staff. There is continuity in teamwork.

At our committee helm, a Republican Senator from the Midwest has been replaced by a Democratic Senator from the southland, the esteemed Senator Walter F. George, of Georgia. Your speaker tonight was and is succeeded by this distinguished American, who has served in the Senate—as one of its most universally respected statesmen—who has done so longer than any other present man of that great body and who is now honored by serving as its President pro tempore.

I, in turn, who have been pleased to serve longer than any other current Republican but one—Senator Bridges—am honored to serve with Senator George and with a group of fine men which includes—as a neophyte, as a freshman for this Congress—the beloved Veep, our former Vice President Alben Barkley.

From men such as these and from our other associates, you can anticipate—with pleasure—the most responsible form of nonpartisan cooperation in foreign affairs.

VISION NEEDED TO BUILD THE PEACE

We turn to the second keystone.

In the Book of Proverbs, we read that "without vision a people perish."

Never has that been truer than in the dangerous world of the atomic-jet age. Without vision, as to the defense needs of our Nation, the economic-political, spiritual needs, this Nation could not survive.

Without such vision, indeed, this Nation could never have been born. But, 170 years ago the Founding Fathers had a vision—of a constitutional Republic, a Nation of checks

and balances, of separation of powers. And they had the courage and perseverance to

bring that vision into being.

In our own time, far-sighted men had the vision of establishing a United Nations. It was to be an organization which would achieve goals which neither the League of Nations nor any previous similar effort in attained: the goal of a history had ever world of lasting law and order, of enduring peace and justice. And great progress has been made in this noble United Nations organization.

AN ILLUSTRATION OF VISION: UNICEF

And men had other visions as well. They had the vision of a United Nations International Children's Emergency Fund which would tend the innocent little victims of war and of poverty and disease.

UNICEF, founded in 1946, now operates in 80 countries. Its services are estimated to have reached 25 million children in 1954. UNICEF surveys indicate that 600 million

children, two-thirds of all those living, are without adequate food, clothing, shelter, sanitation, or minimum medical protection.

Millions of them will die in childhood or live warped lives for want of ordinary care. And to help meet this need, UNICEF (which is not a hand-out organization) draws contributions from nearly 100 countries and territories. It does so on a matching basis with the governments of the benefiting countries. Thus, it has provided vaccine for the inoculation of 30 million children; penicillin to cure 3 million children of yaws. It has protected more than 13 million against malaria. This work, it seems to me, is one of the most impressive illustrations of international humanitarian effort. Incidentally, it is backed unanimously by every member of the U. N.

In the not too distant future, a UNICEF movie made by the world-famous comedian, Danny Kaye, with the splendid cooperation of Paramount Pictures, will be released. It will afford another opportunity for men of good will everywhere to become better acquainted with this fine organization-this organization founded and administered by

men and women of vision.

It was such men who are responsible, too, for the World Health Organization, which has done such outstanding work toward banishing epidemics and disease; the Food and Agricultural Organization, which has helped uplift farm production; the World Bank, which has helped assure credit for sound new enterprises.

And other men have had the vision to bring into being other vital parts of our system of collective security and interna-

tional justice.

I refer, for example, to the Office for European Economic Cooperation and its 18 member nations-the Council of Europe, the pioneering Coal and Steel Community.

I refer to the builders of our worldwide system of defensive alliances-bilateral and multilateral-which have done so much to help achieve equilibrium in this troubled

Without this type of vision, our chances for peace would perish.

GOOD-WILL EMISSARIES NEEDED

I turn now to the third keystone-good will

Here we need men and women who will build friendship, who will build warm understanding, who will combat the termites of racialism, chauvinism, provincialism.

We need men and women who will unite free men, irrespective of barriers of race and religion and nationality.

Fortunately, we have witnessed many fine

examples of messengers of good will.

I am thinking now, for example, of the outstanding good-will trip which was made by the very competent brother of the Chief Executive of our country, Dr. Milton Eisen-

hower. It was a trip which inspired the people of Latin America. That trip was later successfully followed up by the Assistant Secretary of State for Latin American Affairs, Henry Holland, and by the efforts of Secretary of the Treasury George Hum-phrey and Under Secretary of State Herbert Hoover, and others at the Inter-American Conference at Patropolis.

I am thinking, too, of the able work performed particularly in the Far East by the Vice President of the United States when he and his charming wife visited 19 countries and 2 Crown colonies in one of the most successful and fruitful such visits ever made by a high-ranking officer of our Nation.

I am confident that DICK NIXON'S forthcoming trip to Central America, beginning on February 6, will be similarly productive of good will.

But harmony and good will are spread by private citizens as well. Hundreds of thousands of American tourists and servicemen traveling or living abroad, embodying courtesy, tact, and fellowship toward foreign peoples, contribute to this process.

Every American, too, who sends a CARE package to relieve foreign need, every American who writes a constructive letter to a friend or relative or business acquaintance beyond the seas, every American who attends constructive international conference. such as the recent meeting in Vienna of the World Veterans Federation, or such as international church gatherings, fraternal, scientific, or other groups, dedicated to the cause of peace and freedom, can also serve to en-

gender good will.

Likewise, I refer to every artist who serves to cement relations between our two peoples. I am thinking now, for example, of the spectacular success of the traveling troupe which has been presenting the folk opera, Porgy and Bess. This outstanding group of Negro artists has probably done more to dispel falsehoods about racial relations in the United States than an almost infinite amount of words on the part of diplomats.

I am thinking, too, of the great job which has been done by individual artists like the great Marian Anderson-in helping to establish a framework of good will for us throughout the world.

WE NEED PATIENCE, NOT ARBITRARY ACTION, TO RELEASE AIRMEN

The fourth building block is patience. This is one of the most difficult of all to achieve. It is often hard to be patient before injustice, before resisting international

Such a crime has been committed in the imprisonment of 11 American airmen. There is no patriotic American who does not feel a burning moral indignation against this out-

And, yet, if we are to be true to the needs of these airmen: if we are to be true to the needs of our Nation and of the world, must continue to explore every reasonable diplomatic channel through the United Nations for the orderly release of these men.

Naturally, we all regret that immediate release was not effected through the recent trip by the U. N. Secretary General. But the fact that it was not an immediate and complete success does not for one moment detract from the fact that it did effect progress toward our objective.

In any event, we must not rush into hasty ill-considered, impulsive action. I, for one, definitely and absolutely oppose at this time any arbitrary steps involving the use of force—such as a military blockade—to effect the release of these men. I particularly oppose any unilateral forceful action on our part at this time. Talks with Peking are going to consume more time. But remember that the problem of these imprisoned airmen is related to the problem of other Americans-civilian and uniformed-whom we have very strong reason to believe are

still unjustly imprisoned behind the Iron Curtain.

I say, there is too much of a tendency for some of us to become so aroused by a single incident that we forget the overall picture, that we forget that hasty ill-considered action could start a chain reaction leading to diplomatic-military complications of the direct sort.

Nothing that is very good in this world is accomplished overnight.

Rome was not built in a day, nor was this

American Republic. The United Nations is today less than 10 years old. It has been learning, evolving, experimenting the hard way as has every simi-

lar institution. Look back to our own history and consider the difficult conditions which prevailed in this land when we, as a nation, were but 10 Remember that more than a halfcentury after we were established as a nation, not only had we not succeeded in solving our problems, but we were engaged in a long and

bloody War Between the States. Why, then, should we be so impatient when we are dealing not only with the Reds but with other men who do not speak the same language nor share the same geographic area as ourselves, diverse men and 60 diverse nations throughout the world-nations which are at different strata of development, nations which have different cultural, historical, religious, and political outlooks?

Let us indeed, as President Eisenhower has so eloquently suggested, have the courage of

patience.

THE COROLLARY OF RESTRAINT

Hand in hand with the building block of patience is the building block of restraint. We are the world's greatest power, but if we are to be the world's wisest power, we must play our role with restraint. The world will all the more respect us if we use our position with discretion and judgment.

Perhaps the best recent illustration of intelligent restraint came during the recent dangerous days when our ally France was debating the Western European Union in her National Assembly. That occasion afforded a remarkable illustration of United States self-restraint and Communist wildness.

On the one hand, our United States officials scrupulously refrained from either any word or deed which might in any way have been misconstrued as affecting the right of the French nation to decide its own course. On the other hand, the Kremlin ordered all sorts of threats, demonstrations, all sorts of propaganda, to try to stampede the French National Assembly into rejection of the pacts. But the Kremlin's efforts backfired, and France rose to the occasion and the Assembly ratified the WEU.

There will be other occasions when we must be similarly patient, similarly self-re-

One such occasion remains, of course, right now in connection with the problem of our imprisoned airmen.

The situation remains delicate. We will not be contributing to its solution if we fail to keep check on our emotions.

That does not imply weakness on our part. Actually, restraint is an act of strength. It does not mean timidity; restraint is an act of courage.

It does not mean softness toward communism. Anybody can easily hurl well-deserved epithets and denunciations at the Reds-in Peking and Moscow. But it takes a man of character and judgment to work quietly for his objective, against the Reds, but through the appropriate means at the appropriate time.

WE WILL NOT APPEASE RED CHINA

Let there be no mistake.

We are not going to appease Red China or the U. S. S. R. We are not going to surrender to blackmail. We are not going to allow Red China to shoot her way or blackmail her way into the United Nations. We are not going to appease.

You may recall that when Neville Chamberlain flew to Germany in September 1938, that great prophet, Winston Churchill, remarked, "England has been offered a choice between war and shame. She has chosen shame, and she will get war."

We will never choose the course of shame. But neither will we choose a course of war if war can possibly be avoided, as we know

it can.

Peace is our goal. Peace is our nature. Peace we will attain—with strength, with preparedness, but with restraint.

We approach now the two final keystones, as I see them, in the arch of peace.

TRUE PARTNERSHIP WITH EQUALS

The sixth keystone is genuine partnership. We Americans must make up our minds that we are in this international picture as partners and, contrary to a few persons' ideas, not as commanders. As a matter of fact, we have never as a nation sought to order any nation around. We have sought to lead by inspiration, by the soundness of our position, by our willingness to sacrifice and respectfully to ask others to do likewise.

We are not going to arrogate unto ourselves

all wisdom:

We are not going to try Atlaslike to hold up all the rest of the world. Every other free nation and group of nations must and

will do its part.

One of the soundest features of the activity of our Secretary of State has been his clear recognition of the great contributions which foreign statesmen like Premier Mohammed All, of Pakistan, or President Magsaysay, of the Philippines, can make, have made, and will continue to make toward world peace and justice; the contributions which the statesmen of Europe similarly make.

At times, they will differ with us. But, as good partners, we will work with them and we will present the facts to them as we see

them.

We will never try to order or boss them or anyone else around. It would not work, even if some people were so rash or blind as to recommend it to us. Some few Americans do unfortunately continue to seem to think we ought to adopt an "ordering" approach. But, they are wrong, they are in a very small minority; and they are completely unrepresentative of the sound thinking of the United States Government and of the American people as a whole.

I point out that the great neutral, uncommitted area of the world is especially not going to take orders from anyone. It is coming into its own. It is feeling its new strength. It has a right to have its position understood and to be given consideration. That we will do, and we in turn will ask that it join in its own enlightened self-interest in our partnership, in our team as sovereign

equals.

SPIRITUALITY: THE GREATEST SOURCE OF POWER

And lastly, my friends, is the keystone of our spiritual strength. I need not elaborate on the fact that our greatest power is spiritual power—the rightness of our cause under God.

This power should never be underestimated, for it is the strongest power in the world.

CONCLUSION

It has been a pleasure to be with you this evening.

In this list of 7 keystones, I have not, of course, attempted to cover all of the necessary ingredients for a world of peace and justice and prosperity.

But I think that if we can develop these particular keystones, just as you have built this center, then our children and our children's children will say after us that "they did well of their responsibilities in their time."

SENATOR WILEY URGES SUPPORT OF EISENHOWER POSITION

(Statement by Hon. ALEXANDER WILEY, of Wisconsin, ranking Republican, Senate Foreign Relations Committee)

I want to emphasize that I remain 100 percent in favor of the patient position recommended by President Eisenhower and by Secretary of State Dulles who rightly oppose any rash unilateral action at this time to free our United States airmen.

I am convinced that the American people as a whole support the President's commonsense, restrained judgment and oppose any impulsive action such as a unilateral mili-

tary blockade.

The chances are that for us to try to impose such a blockade at this time all by ourselves might (a) result in the immediate death of the airmen themselves; (b) cause neutral countries to unite against us and against the blockade; (c) cause a wide open split among our allies; (d) overcommit our available naval resources; (e) worst of all, possibly precipitate us into a war with Red China, which is probably just what the Kremlin desires.

Instead we must continue to explore every diplomatic channel available through the United Nations for the peaceful release of these men.

We must not allow our emotions to run away with us in our well-justified concern for our airmen. We must not let the Reds provoke us into an action which we might have deep cause to regret because of its possible backfiring against us.

Address Delivered by Hon. Herbert H.
Lehman, of New York, at the New York
Democratic State Committee Victory
Dinner

EXTENSION OF REMARKS

HON, HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of an address which I made at the victory dinner of the New York State Democratic Committee, at the Waldorf Astoria in New York City, last Friday evening, January 14.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After 12 long years, we have again known victory in New York State. And all present evidence indicates that New Yorkers are pleased with what they did on November 2, and approve of the manner in which the men and women elected and selected for high office have gone about meeting the problems with which New York is faced.

We meet tonight to do honor to the men and women who led us to victory: the candidates and the hundreds and thousands of others at the county, district, and precinct levels—those who are here tonight and those who are not. We salute them all—the leaders and the foot soldiers of the Democratic Party. And let us not forget our

friends of the Liberal Party, too, and those independents who belong to no political party, but to the party of good government.

As most of you know, it was my privilege to play an active part in the recent campaign. I had my heart as much set on victory last fall as in any other campaign in which I have taken part, either as a candidate or as an advocate. And I have participated in almost all of them, over the past 30 years. I am proud and glad for any contribution I was able to make to the election of Adrian Burke, Arthur Leavitt, George DeLuca, and Averell Harriman.

I am happy to know that the chair I had the great honor of occupying during 4 terms as Governor of this State is now filled by that distinguished American, that fine Democrats, whom I have long known as an old friend and outstanding public figure, Avereil

Harriman.

I am confident that he will add luster to the high traditions of the Democratic Governors of New York.

But as we rejoice in our success of last November and at the fact that our party now controls the State administration, let us pause and reflect on some of the implications of the event of 2 months ago.

Political victory is not an end in itself, although sometimes it has a regrettable tendency to become so. At the terminus of political victory is the beginning of responsibility. The test of victory is how we utilize it. It is one thing to command success. It is another to deserve it.

The people, the voters of New York, will sit in final judgment on the manner in which the responsibility now given our party is discharged. From here on our accounting is not within the party, but with the people.

We must account for the manner in which campaign pledges are discharged. We must account for the manner in which day-today actions are taken, and day-to-day decisions are made.

We must prove to the people that the pledges made during the campaign, and the platform agreed upon by the party and subscribed to by our candidates were seriously meant and will be redeemed.

If our leaders and officeholders will be guided by these rules of conduct, and I am sure they will be, our party, which is on trial before the people, will be judged worthy of responsibility and deserving of victory, both in the past and in the future.

The challenge we face as a party in New York State has a striking similarity with, and relationship to, the challenge we have taken up as a party in the Nation.

In Washington, we have assumed not executive but legislative responsibility.

But the basic requirement is the same, to discharge that responsibility in a manner which the people will judge worthy of the trust placed in us last November.

In Washington and in the Nation, as in New York State, too, there is within our ranks a strong sense of party unity. And a basic party unity is, of course, greatly to be desired in preparation for the great victory that beckons us in 1956, for in that year win we must and win we shall.

In November 1956 we are going to put an end to the giveaway regime, to the regime of bluster and blunder, of compromise and surrender, of privileges for the few and sacrifices for the many.

We are fortunately rich in leaders who can take us to victory in 1956, although my own preference has been and remains that great and eloquent apostle and leader of liberal democracy, Adlai Stevenson.

Yes, we will have party unity in 1956, and we will win in 1956. But our party unity must be based on principle. Let us beware of making party unity an end in itself, or of decreeing and enforcing it at the expense of basic principle.

The Democratic Party nationwide, as in New York State, is strong enough, and broad enough, to give shelter to differing views and to tolerate minority opinions, from both the right and the left, on even the most critical subjects. From the pull and haul of honest differences within a party comes political scope, development and vitality.

Let us not make a false or fatal confu-

sion between party unity and party responsibility. A political party has an inescapable responsibility to facilitate, by every appropriate means, the practical fulfillment by party officeholders of the pledges and undertakings made by the party and its candidates at election time. A party has the duty to urge and induce its officeholders to abide by party principles and platform commitments and to justify to the public those departures which are made by reason of clearly demonstrated need.

But there is no warrant to throttle or stiffe minority views, based on principle, within the party, or to discourage access to the free market place of ideas for the airing of party differences. Differences on public issues within the party can and should be met forthrightly and with forbearance. The final arbiter in such matters will be the people.

I recognize the necessity of being politically practical and realistic. It is important to get things done as well as to talk about getting them done. The encouragement of party unity as a means of making real prog-ress in legislation and administration is clearly desirable. And often, it is better to take one step at a time, rather than none at all, and to walk slowly, when running proves impossible.

But let us never sacrifice, or try to justify the sacrifice, of essential principle on the altar of political expediency, and surely not when the object of the sacrifies is the false

god of rigid party unity.

At the end of that road lies corruption of political integrity, and, instead of victory, only disaster and political repudiation.

Let me make clear that I am not attacking a present situation; I am only warning against a danger, a tendency which shows itself today as no more than a cloud the size of a man's hand on the horizon of our recent victory in the congressional elections.

The Democratic Party is the liberal party of the Nation. That is its tradition and its justification for being. The Democratic Party has been victorious in New York State and in the Nation only when it has stood by its traditions, and with outstanding candidates, has offered a clear program of liberalism to the people.

With specific reference to the Democratic Party of New York State, its role in the Nation is clear and unmistakable.

Its function is to cast its full weight—the weight of the 15 million people of this State—on the side of liberalism and progress within the Democratic Party.

Its role is to fight for liberal principles and liberal candidates for submission to the

Nation as a whole.

I am confident that the Democratic Party of New York will continue to fulfill this function in the months and years ahead.

We must continue to battle ceaselessly for the principles of humanitarianism, for equal civil and political rights for all, for the development and conservation of our natural resources in the interests of the consumers and of all the people, for special consideration of the needs of the underprivileged. and for the advancement of the economic interests of the consumer, the worker, the farmer, and the small businessman. must fight unyieldingly for freedom, and the practices of liberty.

These must be our banners, in domestic affairs, and we must irresistably uphold and

advance them.

Surely we will go forward, under these banners, to victory in 1956, and to another

and even greater victory, in New York State, in 1958. Just as surely we will fail if we compromise these principles or surrender them, in the name of political expediency.

We have had a fine victory in the State and in the Nation. Now we must redouble our efforts and develop to the utmost our resources of imagination, of courage, and of leadership. With God's help we will succeed in our purposes, to the greater credit of the Democratic Party, to the greater welfare of our people, and to the greater glory of America.

The President's Budget Message

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief statement prepared by me regarding the President's budget message with reference to natural resources.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR NEUBERGER

This is a budget which spells economic hardship and adversity for the Pacific Northwest.

Despite the urgent need for deepening the Columbia River bar to a depth of at least 48 feet, no funds are included for initiating this urgent project. The commerce and trade of Portland, Oregon's major port, are being choked by the shallow and dangerous shoals at the mouth of the Columbia.

The pledge of Federal assistance for new hydroelectric development is tied specifically to the discredited "partnership" scheme, un der which private power companies would monopolize the bulk of revenues at the dams. This is a shotgun promise, telling the people of the region they must accept "partnership" or reconcile themselves to virtually no new projects at all.

In spite of the extravagant campaign promises made to the voters of southern Oregon by nearly every Republican candidate in the election of 1954, the Talent irrigation and power project in Jackson County receives not one cent in construction funds. Both Senator Morse and I urged Secretary McKay to honor his party's campaign promises to southern Oregon, but our plea has gone ignored.

The Bonneville Power Administration, which has been the lifeline of Northwest hydroelectric production, is to receive in the coming fiscal year only 66 percent of last year's budget. This symbolizes the gradual decline of Bonneville under the present administration, which hopes to see the great Federal agency superseded by private power companies.

Furthermore, the \$500,000 for advance engineering, which may go to John Day, does not even represent a full year's work under a normal program. I regret that the Governor of Oregon, who made many references to Congress in his inaugural message, never once recognized the fact that the budget is prepared wholly by the administration. was not the Oregon Legislature asked to urge upon the administration a budget which would do justice to Oregon?

It is alarming that the total sum to be spent on natural resources, which are the lifeblood of the Nation, is the lowest since 1950, amounting to \$953 million, as contrasted with \$1,358,000,000 in the 1953 fiscal year, for example.

Senator Morse and I will try to add to this budget some funds for such urgent Oregon undertakings as Columbia River deepening, the Talent project, an accelerated John Day Dam, and authorization and eventually construction of Hells Canyon.

The total disregard of the desperate need to deepen the Columbia bar to 48 feet is an indication of the budget's inadequacy. at least another year—unless we can amend this budget as it goes through Congress— Portland and Astoria will suffer in their com-petition with Puget Sound and California seaports.

Taxes on Cigarettes

EXTENSION OF REMARKS

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. ROBERTSON. Mr. President, I . ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the January 1955 issue of the Southern Planter entitled "Uncle Sam Takes 'King Size' Cut in Cigarettes."

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

UNCLE SAM TAKES "KING SIZE" CUT IN CIGARETTES

Someone has said that the Lord made the year too short for the tobacco grower. About 14 months are required to grow, cure, and market a crop of tobacco. Starting in October and continuing into November and December, growers begin clearing plant bed sites; treating soil to kill weed seeds, insects, and disease. In late January and February, plant beds are fertilized and seeded. Then comes the tedious task of bed covering, weeding, and pest control. Plant beds in March and April are often sprayed or dusted 2 or 3 times a week to control blue mold, wild fire, and insect pests. Weeding is a timeconsuming, back-breaking job. Watering is a regular chore. Plant pulling and transplanting time follows when the whole family must chip in to finish the job while soil moisture is available.

Meanwhile, the land has been prepared, the rows layed off on the contour to prevent washing, and plenty of plant food applied. In May, June, and July come hoeing, cultivating, side-dressing, worm control, suckering, topping and, finally, priming—all hand labor, requiring special skills that come only through experience. With all this work, the grower must worry over drought, floods, pestilence, and price.

The curing period in mid-summer is a dayand-night assignment—the hardest, hottest, and most highly skilled hand labor in southern agriculture. After curing, the leaf has to be packed, graded, and hauled to market. Before all this work is finally finished, it's Christmas and the New Year. Fourteen months of time, talent, and cash have gone into producing cigarette-type tobacco.

Yet, when the cigarettes appear on the market the farmer gets only 3.1 cents out of an overall average price of 22.7 cents per The manufacturer who has aged the leaf for a couple of years; cut blended and rolled it into cigarettes and merchandised them to the American people gets 5 cents. The wholesaler receives 1.3 cents and the retailer who sells the cigarettes across the counter gets 2.5 cents. State and local taxes take 2.8 cents. Then Uncle Sam steps in and takes a king size cut of 8 cents a pack.

Cigarette tobacco today is bearing a \$2 billion Government tax burden. In some States cigarettes are now selling for 28 cents a pack. Chief Justice John Marshall sald, "The power to tax, involves the power to destroy." With cigarettes being taxed 8 cents a pack by the Federal Government, and 41 States, the District of Columbia, and 300 municipalities now adding another 1 to 8 cents a pack, the unlimited power of Government at all levels to tax tobacco can eventually destroy this great southern crop. Cigarette consumption is already falling and foreign markets for leaf are faltering. Some relief at this Congress is imperative!

Tobacco farmers should concern themselves with this problem. They should demand some Federal cigarette tax relief at this session of Congress and halt immediately any efforts to tax cigarettes further at the State and local level.

City, State, and Federal taxes take 10.8 cents out of the average price of a pack of cigarettes. The farmer gets 3.1 cents.. For every dollar the farmer gets from cigarette

tobacco, taxes get \$3.48.

The Army's Handling of the Peress Case

EXTENSION OF REMARKS

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. SCHOEPPEL. Mr. President, on January 10 there appeared in the Washington Star an editorial entitled "A Sorry Performance." I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record,

as follows:

A SORRY PERFORMANCE

If it does nothing else, the Army's 10,000word report of its handling of the Peress case reveals a classic example of not letting the right hand know what the left hand is doing.

Assuming that this report tells the whole story, there was nothing sinister in the promotion of Peress from captain to major. It was just that 1 branch of the Army concerned itself only with his professional qualifications, while another branch was spending some 14 months investigating evidence which made it immediately apparent that he was not fit to be an officer of any rank.

It may also be said that this report does two other things. One is to put Gen. Raiph Zwicker, target of Senator McCarthy's abuse, completely in the clear. It was no fault of General Zwicker's that Peress hung on as long as he did. The other is to introduce a certain element of extenuating circumstance into Senator McCarthy's attitude in this matter.

This chronological account discloses that the decision to speed the Peress departure from the Army via the honorable discharge route was made by Army Counsel John Adams and Lt. Gen. W. L. Weible after the McCarthy committee had started its investigation and in the face of a written demand from the Senator that Peress be retained in the service for court-martial. Perhaps the decision to let him out with an honorable discharge can be defended. But Sen-

ator McCarthy can hardly be blamed if he thought that the controlling motive was to get Peress out of uniform before he could look more closely at the handling of the case.

Statement by Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission

EXTENSION OF REMARKS

HON, HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement by Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission.

This is in connection with the heading of an article which appeared in the Washington Daily News of Friday, January 14, 1955, entitled "How Admiral Strauss Doctored History."

This headline was withdrawn from later editions.

There being no objection, the statement was ordered to be printed in the RECCRD, as follows:

UNITED STATES
ATOMIC ENERGY COMMISSION,
Washington, D. C., January 17, 1955.
Hon. Harry Flood Byrd,
The United States Senate,

Congress of the United States.

Dear Senator Byrd: Following our telephone conversation on Friday, January 14, concerning the speech by Senator Gore, I promised to send you a factual account of the incident to which he referred.

The Washington Daily News on Friday published an article which was advertised by a front page headline in its early issue "How Admiral Strauss Doctored History." This article, in disregard of the facts, alleged that I caused the transcript of a news conference which I held on December 17 to be falsified for some improper reason. I am informed the headline was withdrawn in later editions.

The news conference was called for the purpose of explaining, in an orderly, detailed, comprehensive manner, the origin and provisions of the Mississippi Valley Generating Co. contract in order to put into proper perspective the misunderstandings which have been current concerning it. Each reporter who entered the conference room was given a formal, written statement of 36 pages, bearing my name; also reproductions of the charts, graphs, and tabulations dealing with the subject which were exhibited during the conference.

In my formal statement, pages 10 and 11, I discussed the manner in which the site at West Memphis, Ark., was selected and stated:

"The Corps of Engineers has reviewed the plot plan showing the proposed construction and made certain suggestions, all of which we are assured will be complied with in the final plans and specifications. They also have stated that the proposed construction appears to be acceptable to the Mississippi River Commission from the standpoint of navigation and flood control. The site also has been investigated by AEC engineers, has been discussed by them with representatives of the Corps of Engineers' office, Memphis district. They concluded, after reviewing all available data, that the site selected by MVGC is

adequately protected from Mississippi River floods by the Corps of Engineers project levee."

The precise and factual account of the role of the Corps of Engineers was given to the reporters not only in my formal statement but also in two of the supplemental documents which accompanied the statement: (1) a reproduction of a drawing of the site which carried an inserted legend of explanation, and (2) a statement as to the manner in which the site was selected, including discussions which were held among AEC engineers, engineers of the sponsoring companies, and the Corps of Engineers.

After the 56 reporters attending the conference had received my formal statement, I turned to a large reproduction of the site drawing which had been affixed to the wall and mentioned again how the site had been chosen but this was only a passing reference, ad lib, since the subject had been covered thoroughly in the formal statement.

The ad lib quotation was as follows:

"The Corps of Engineers and the engineers retained by sponsoring companies have examined some 16 sites on the river and have selected this as the preferable one. This elevation here shows the maximum flood record in the river, the 1937 flood. I understand that records have been made since 1880 or thereabouts, some 74 years of record, and the plant has been located at what the Corps of Engineers feel is a safe place."

In this quotation, an obvious slip of the tongue was recognized as such by all except one or two of the fifty-six reporters present since in reporting the news conference they naturally relied on the prepared statement.

I left town following the news conference but in my absence the Public Information Division of the Commission corrected the stenographic transcript for grammatical errors, et cetera, and in the course of this process the transcript was conformed to the text of the formal statement. This was done in order to eliminate anything that might appear to be a contradiction. Any person speaking ad libitum, whether he be a Member of Congress, a witness before a committee, or a person conducting a news conference, is entitled to the assurance that the intent of his statements will be clearly reflected in a simultaneously presented written record.

These facts as I have stated them were ignored in the newspaper article and which purported to show that I had "doctored history," presumably for some insidious reasons. There was no word in the article about my formal 36-page statement, which is factually accurate to the best of my knowledge and belief.

I may be unduly sensitive but it seems to me that this whole incident has very little to do with the merits of the controversy over the contract.

Faithfully yours,

LEWIS L. STRAUSS.

Military Reappraisal

EXTENSION OF REMARKS

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Military Reappraisal," written

by Joseph C. Harsch and published in the January 14, 1955, Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> STATE OF THE NATION (By Joseph C. Harsch) MILITARY REAPPRAISAL

WASHINGTON .- At first glance the remarks President Elsenhower made at his news conference this week on the subject of arms and war seemed to confuse more than to clarify the question.

He did not disclose decisions which would logically explain the sudden December cut in the Army budget. He did not make clear whether the United States is committed to the use of atomic weapons, or under what conditions, if any, they would be used. He upset a current tendency of soldiers to draw a distinction between tactical and strategic weapons and tactical and strategic use of weapons.

But there is, I suspect, an implicit disclosure of first importance in the very cloudiness and indefiniteness of what the President had to say. It lies, I think, in the fact that western soldiers, Viscount Montgomery of Alamein prominent among them, have increasingly been asserting that atomic weapons would be used in any future wars.

The pattern of such remarks during recent months indicates -that western military thinking has been moving steadily for some time toward what might be called the point of no return on use of atomic weapons.

In the background of this military inclination is the fact that when the Eisenhower administration first undertook New Look at the United States Military Establishment, the advocates of budget economy argued that the United States could not afford to maintain two armed forces, one geared to conventional warfare and the other geared to atomic warfare. In effect, the Pentagon was told by the Treasury Department way back in the early Eisenhower days to make up its mind which kind of war it would fight and to prepare exclusively for that kind of war.

Certainly the end result of a Treasury ultimatum to build one kind of an Armed Force or the other, but not both, was to push military thinking deeper and deeper such dispositions and deployments as would take the United States in the end past the

point of no return.

What President Eisenhower has in mind is certainly not entirely clear in any respect except that it does indicate a tendency on his own part to pull back from the point of no return. He has, it seems to me, gone through an agonizing reappraisal far more agonizing than any Mr. Dulles ever had to endure over France. He has taken military knowledge of his own, gained out of his own massive experience in warfare, applied this knowledge to the trend of military thinking, and come up with doubts and uncertainties

For example, he knows from experience that there is no clear line between tactics and strategy. It follows from this that current military thinking is on dangerous ground when it contemplates using tactical atomic weapons on the theory that such use will not necessarily lead to strategic use of

such weapons.

For another example, he knows that every military situation is unusual and different. Therefore he declines to commit himself to any general decision about how he would meet a specific situation.

Also, he has come to realize that political factors are as important in war as military factors. This implies that a military deci sion to use atomic weapons might well be vetoed at the last moment by overriding political considerations. Perhaps he has in mind here a possibility that the use of atomic weapons against cities would have political consequences which could well cancel out

any immediate military gains.

It seems fairly clear that Mr. Eisenhower recognizes the impossibility of assuming the nonuse of atomic weapons. He has specifically given first priority to the twin tasks of building United States atomic striking power and of building a defense against such striking power in the hands of others.

At the same time, he says that in his opinion the use of light, mobile United States forces in local situations would normally not involve use of atomic weapons. And his own previous remarks on the utter horror of atomic war suggest the hope in his own mind that the ability of United States Armed Forces to strike and to defend in the atomic area will have the effect of preventing atomic

It would seem that Mr. Eisenhower has reversed the early assumption of his advisers that the United States can choose between atomic and nonatomic armed forces. stead, he specifies the probability of nonatomic fighting in local situations. Apparently, there will be a nonatomic United States police force.

Apparently also Mr. Eisenhower is pulling back from the point of no return. This, in itself, is very important news for everyone.

Conditions in the Automotive Industry

EXTENSION OF REMARKS OF

HON, PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. George J. Burger, vice president of the National Federation of Independent Business, before the Automotive Warehouse Distributors Association, Chicago, Ill., on December 5, 1954.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Entering the automotive industry in the spring of 1909 and watching the development of that industry for nearly a half a century, its tremendous expansion in the transportation world, both in civilian and commercial use, it is necessary that all independent factors in that industry stop, look, and listen where the independent members are aded. Will it be free competition or a headed. controlled economy?

The indication is on the latter-with the reduced number of producers both in the automobile industry and in the rubber tire industry-both depending upon the other for successful operations with both the public and commercial users.

It is necessary for the public first of all to realize what would have happened in the automotive transportation during the critical days of World War II if it was then found that there were few in number in independent ranks who would have served to maintain the necessary essential automotive transportation. If, at that time, there were few in number in the servicing field our Nation would have suffered tremendously.

It is necessary to recall the critical days of the rubber tire situation, and each and every one of us knows that if wheels were to move on the highways they could not have moved unless rubber tires were available.

It is necessary to note that the late William M. Jeffers, former president of the Union Pacific Railroad, then Rubber Administrator, warned the Congress of these United States of the necessity for keeping in existence many thousands of independent factors in the automotive servicing field, and he based his opinion on the fact that this Nation would face a most critical condition if there was ever another world war should we be deprived of the services of many thousands of independent servicing institutions in the automotive field.

It goes without saying that my observations are formed by contacts with a wide acquaintanceship with automobile dealers in many sections of the country. They are under a severe handicap from the control exercised by the car manufacturers as to the way the independent automobile dealer can operate. I saw this coming in the late twenties or early thirties "Do as you are told or there will be another agent." "You will take shipment of cars whether you need them or not, and you will buy your accessories and parts where we tell you, or it will be just too bad." In many instances the dealer was told where he could finance his cars and in some instances how much money he could draw out of his own individual busines

I warned many of my automobile dealer friends to take a position at that time to oppose the monopolistic moves, but unfortunately for their own good, they failed to act-resulting in ever increasing monopolistic control.

After the termination of World War II when automobiles started to become freely produced and the sellers market prevailed, a congressional committee held public hearings due to the complaints of buyers that cars were being loaded with unnecessary accessories, and it appeared in public print that the responsibility for such action was placed upon the automobile dealers throughout the Nation. At that time, in my official position with the National Federation of Independent Business, I saw fit to make our views known, placing the responsibility where it belonged in the first instance-with the dictatorial action of the car manufacturers forcing the dealer to take the equipment as furnished or it would be just too bad.

After the statement appeared in the public press I was commended by a national official of the Automobile Dealers Association for the views expressed, and I asked: "Why didn't your people make a similar public statement?" and he answered: "You know the situation."

Following such action can only lead up to one thing-captive organizations in the automotive industry, and that free enterprise will cease to exist.

It is to be noted as to the increasing

monopolistic trend in the invasion of certain car manufacturers into the automotive parts business, that is destroying the business life of automotive jobbers who are a needed factor in the automotive servicing field.

This situation must be most serious-and it is—when in an unexpected communication from a top executive of one of the three major motor car producers early this year he wrote me, and I quote: "One of our competitors, for example, recently announced that it is strengthening its manufacturing and distribution system for parts and accessories. The company that intends to maintain its share of the market must, of course, meet moves of this nature."

In the rubber tire industry the control exercised by the four major factors to control the retail field is resulting in diminishing numbers of independent factors in that industry.

The National Federation of Independent Business, attempting to bring about a condition of "the greatest good for the greatest number" has instituted major moves through new laws in the Congress to arrest the trend of manufacturers operating in the retail field, and if we are successful in our efforts through this legislation which has been pending before the Congress for these past 12 years, such action can result in beneficial effects for the independent members of the automotive trade.

It is the federation again, utilizing the present law, the Robinson-Patman Act, which has affected for the first time in the history of the law a section of the act, quantity discount rule, which would bring for the first time fair competition in the retail field for the rubber-tire industry.

If the automobile dealers are to be relieved of the pressure being placed upon them to take excessive inventories of automobiles, accessories, and parts, the correction must be made at the source, and never can be corrected through new legislation.

This problem facing the automobile dealers of the Nation is nothing new. It has been going on for over 20 years-excessive shipments of automobiles, irrespective of what way the dealer might get rid of them.

The independent members of the automotive industry of this Nation, through their accredited leaders, must take a determined stand on this monopolistic trend, increasing in leaps and bounds in the automotive industry. Lip-service action on their part is not going to help their future if they desire to remain a member of the automotive field. It calls for vigorous action upon their partcalling a spade a spade, and let the chips fall where they may.

If the independent members of the automotive industry, through their leaders, take positive position it can result in a healthy future for their individual busi-nesses throughout the Nation, through which the public will be the beneficiary, as will the industry itself.

The problem facing your people was preto the national federation, and we have taken the necessary appropriate action, through Government law, to bring about the needed relief. I will go into that matter in detail extemporaneously. Your problem is a most serious one; and if not corrected through law would work untold injury to Nation's users of automotive transportation.

Shanks Village, Orangeburg, N. Y.

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have inserted in the RECORD correspondence I have received from a representative of some 550 families presently living in Shanks Village, Orangeburg, N. Y. Shanks Village was originally a military post, used as a staging area during World War II. Following World War II, the military barracks were used to house veterans and their families.

The tenants are now under threat of almost immediate eviction. The attached letter from Mr. Paul F. Mundt and the article from the New York Herald Tribune of Monday, January 3, 1955, explain the situation.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

ORANGEBURG, N. Y., December 13, 1954.

Senator HERBERT H. LEHMAN. Senate Office Building,

Washington, D. C.

DEAR SENATOR LEHMAN: There are now approximately 550 families in Shanks Village. Of these, more than 60 percent work in local industry. The eternal problem these people face is to find decent, permanent housing. According to disinterested and professional there are rarely more than five observers, rental units available in Rockland County at one time. These rentals are usually beyond the reach of the average Shanks Villager. Carrying charges for homes offered in new housing developments are also beyond their reach; cheapest homes in the vicinity sell for \$13,500. A fair-sized Negro population is prevented relocation, even in cases of high personal income, because of segregation practices. In a report prepared by Prof. H. Ashley Weeks during December 1953 and January 1954, it was concluded that the closing of Shanks Village would create a housing shortage in Rockland County of between 400 and 600 units. What are Shanks villagers doing about it?

First, they have financed legal action to the tune of \$2,500-plus to prevent the sale of Shanks. A case is now pending in Washington, D. C., before the United States court of appeals on the issue whether the Administrator of HHFA is required by statute to extend the life of Shanks Village.

Secondly, and most important, is this second effort: They have formed a corporation known as New Village Cooperative, Inc. After consultation with prominent builders, Louis Pink, of the United Housing Foundation, and established architects, a plan has been proposed to build on part of Shanks Village site approximately 200 units at an estimated cost of \$9,500 per each 2bedroom unit. The project would be interracial. In the opinion of these architects, etc., a very attractive project could be developed under FHA auspices and under section 213 of the National Housing Act.

While this plan was being organized, the attorney for New Village, Inc., Milton M. Carrow, had two conferences with officials of the Public Housing Administration in Washington. At both, they informed him the Administration was interested and would consider negotiating for a portion of the land when the plan became more concrete. On August 25, 1954, they were asked to open negotiations for the sale of 50 acres at market value. They refused, contending the site could only be sold as a part of the larger entity-Shanks Village.

Obviously, they knew villagers could not do this. In effect, the Administration refused to allow villagers to help themselves. At the same time, they threaten villagers with eviction. In a letter to Senator Ives, Commissioner Slusser of PHA states:

"The tenants of the temporary housing will be given a reasonable length of time to find other accommodations. Your attention is invited to the fact, however, that the tenants have known for at least 20 months that Shanks Village will be sold and the temporary housing subsequently removed."

This letter, written November 23, 1954, contains in this paragraph an inadvertent The period of at least political admission. 20 months corresponds closely with that during which the Republican Party has held power. In light of the refusal to sell villagers land upon which to house themselves, it is also a commentary on the Republican political philosophy. To translate it still another way, the Administrator is saying:
"We would rather sell to 1 real-estate

speculator (the few) than to the 500-plus families (the many).

Support from Republicans as well as Demhas been forthcoming in Rockland County. All favor the New Village Cooperative concept. The Rockland Journal-News has backed it editorially. But the Administration will not budge.

I am looking forward to your reply.

Sincerely,

PAUL F. MUNDT.

[From the New York Herald Tribune of January 3, 1955]

FOUR THOUSAND SHANKS VILLAGERS UNPRE-PARED FOR EVICTION (By Lyn Fernbach)

SHANKS VILLAGE, N. Y., January 2.—A feeling of frustration bordering on disbelief marked the beginning of the new year this week end for 500 veterans and their families who were told by the courts last week that the Government has the right to evict them from their low-rent public housing units.

The 4.000 persons affected are residents of a temporary housing project created for veterans and their families in 1946 from military barracks which, during World War II, served as a huge staging area for American troops on their way to European battle theaters.

CAMP CONVERTED

After the war, Congress appropriated \$12 million to convert the 8,000-acre camp site into an emergency housing project for 1,500 veterans and their families. The bill creating this project also provided that it be razed by 1951, but the date was post-poned twice. In January 1954, the Public Housing Authority finally served notice on the residents that they would have to vacate by July 1, 1954.

The veterans promptly formed the Shanks Village Residents Association and sued the Government in United States district court for an injunction against the eviction order on the ground that no equivalent housing was available to them.

When the tenants' request was denied, by the court, they appealed the decision in the court of appeals. This court rejected their plea unanimously on Thursday, leaving them only a faint hope that the United States Supreme Court would accept an appeal of the verdict.

NO DEFINITE DATE

Although no definite date for eviction proceedings against the tenants has been set by the Public Housing Administration, the agency has indicated that it is anxious to close the project, according to Milton M. Carrow, attorney for the Shanks Village Residents Association, and former tenant of the project.

Describing the court of appeals decision as erroneous and arbitrary, Mr. Carrow said yesterday that a request by the SVRA to buy a 50-acre site of the project for relocation of the tenants threatened with eviction had been turned down by the Government. He said the latter wants to sell the 8,000-acre tract only as a unit.

"The whole problem is just how we can make the Government understand that these people don't want a free ride, but just housing," Mr. Carrow said. He added that the tenants' attitude at the court's decision was neither one of anger nor violence but merely one of helplessness.

CAUGHT UNPREPARED

Most of the families still living at Shanks Village are in income groups which prevent them from finding housing within their means near their present jobs in Pearl River. Piermont, and Orangeburg, according to Mr. Carrow. Residents of Shanks Village interviewed yesterday indicated that the court's decision caught them unprepared.

'I can't argue with the decision," Robert M. Levin, 34, a village tenant who earns \$75 a week as a draftsman for the Gair Paper Box Co. in Piermont, said. "But I have checked everywhere, and I know that I just can't get a 3-bedroom apartment for less than \$115 a month.

Mr. Levin pays \$45 a month for his fiveroom home, including gas and electricity. He also enjoys the advantage of living in the country on a beautiful tract of land in the rolling country of Rockland County. It appears an ideal location for the Levins and their three children.

EARNS \$71 WEEKLY

Frank McDonald, 44, a tenant who earns \$71 a week as an attendant at Rockland State Hospital in Orangeburg, feels that as a Negro and father of six children he will find it impossible to get suitable housing near his job.

"I'll tell you what the situation is," Mr. McDonald said. "I have no place to go. It's tough for colored people to find housing, and especially if they have six children. I just don't know what to do."

Perhaps the villagers' sentiments were best

expressed by a cartoon in the Shanks Villager, a weekly paper published by Shanks residents under the editorship of Mr. Levin.

Showing a village family sitting by a Christmas tree, the cartoon's caption read: "Enjoy your Christmas tree this year—next year you may be living in it."

Commendable Reversal

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article by Dr. Edgar Fuller, executive officer for the State commissioners and superintendents on school construction, appearing in the New Republic for January 17, 1955, be printed in the Appendix of the RECORD. Dr. Fuller is one of the Nation's outstanding experts on the need for school construction, in view of his association over many years with educational officials who administer education in all the States and Territories.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

COMMENDABLE REVERSAL (By Edgar Fuller)

What the public schools need from the Federal Government is substantial financial assistance for school construction, with full fiscal accountability by the States to the Federal Government but with State and local administration of all aspects directly affecting the educational programs of children. Every presumption should be made that the President's message marks a change in the administration's previous opposition to such a program. Better late than never.

The President's message at least makes it clear that there has been a change in the administration's 1953 position that Federal assistance for school construction must wait until after the White House Conference on Education late in 1955. Whether this is significant in terms of increased school facilities without further delay depends on the program the President will send to Congress

on February 15.
On this basis there is little reason for Most of the influences in and optimism. around the administration have committed themselves deeply to the 1953 position. commissions and committees appointed to make recommendations have been loaded with persons already known to be strongly opposed to Federal assistance for school construction, and their membership remains substantially unchanged.

The best evidence that the administration may yet go to almost any length to forestall the financial assistance needed came from the White House itself. The official text of the state of the Union message as released shortly before the message was delivered used the word "catalyst" in referring to the Federal responsibility for assisting school construction. At the last minute the word was changed to "agent." Webster says Webster says a "catalyst" accelerates a reaction but is itself recovered practically unchanged. the Federal Government as an "agent" will do remains to be seen, but if it seeks to be only a "catalyst" it may easily damage rather than assist in the construction of schools,

Well substantiated verbal and printed reports in Washington indicate that the Federal gesture may be only a new Federal agency, set up in corporate form to insure State school construction bonds, encourage establishment of similar authorities in the States, and perhaps grant small doles to a few school districts judged to be most in need. This is essentially the catalyst approach. It lends itself well to public advertising, but it would be fundamentally objectionable to most educators and citizens closely associated with the public schools. It would violate the basic policies of the leading lay and professional organizations on Federal and State administration of public education, which call for Federal administration in the United States Office of Education and State administration in the State education agencies.

Special State school building authorities are unconstitutional in some States. perience in a few States proves that they must pay much higher interest rates on bonds than local school districts or the States themselves. Such authorities spend public funds without public responsibility. They complicate the work of superintendents and school boards by usurping such educational decisions as the location, type and character of the facilities for teaching. Even when legally organized, they would be mere subterfuges to avoid tax and debt limits and substitutes for forthright solution of the problem.

Elementary justice demands that the potential change in the administration's program result in substantial Federal funds for school construction. Last year it increased Federal funds for highways from cash grants of \$585 million annually to \$885 million annually, and on January 27 the President will urge further expansion in a special message to Congress. Federal financing of physical facilities has been greatly increased in many fields at the same time comparable assistance has been denied for schools. Federal programs require increased matching funds in the States, thus providing powerful incentives to skim off State and local taxes and bonding capacity that would otherwise be available for school construction.

The national school facilities survey shows school building needs far beyond the practical ability of the States and local school districts to supply. There are serious needs in every State. Hearings of the Kearns subcommittee in the House in October 1954, brought testimony from 47 States and all but 1 Territory. The adverse testimony came from the National Association of Manufacturers and the administration.

Judging from the several bipartisan bills to provide Federal funds for school construction introduced during the opening days of the 84th Congress, it is unlikely that Congress will consent to further delays or to mere gestures in this field. Let us hope the President will participate in getting the affirmative action now he has called for, and that the program he sends to Congress on February 15 will be commensurate with the need and suitable for bipartisan enactment.

Fist Fight Led To Censure of South Carolina Members of Senate

EXTENSION OF REMARKS OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Charleston News and Courier of January 14, 1955, entitled "Nineteen Hundred and Two Fist Fight Led To Censure of South Carolina Members of Senate." The article was written by James A. Hoyt.

There being no objection, the article was ordered to be printed in the RECORD.

as follows:

NINETEEN HUNDRED AND TWO FIST FIGHT LED TO CENSURE OF SOUTH CAROLINA MEMBERS OF SENATE

(By James A. Hoyt)

WASHINGTON.-When the Senators from South Carolina, Tillman and McLaurin, engaged in a fist fight on the floor of the Senate they were both, by unanimous vote, declared to be in contempt of the Senate and both were suspended.

Later both were permitted to apologize to the Senate, thus purging themselves of contempt, and both were restored to their rights as Senators.

The incident, in 1902, precipitated an interesting debate, much of which is more or less pertinent to the situation in the Senate in 1954.

The debate, primarily, concerned the power of the Senate which constitutionally may expel a Member, or declare his seat vacant, by a two-thirds vote, to suspend a Senator for a definite period by majority vote, thus depriving a sovereign State of its equal representation in the Senate.

Senator John L. McLaurin, of South Carolina, had cast the decisive vote for the ratification of the treaty of peace with Spain, the two-thirds vote being 56 to 27. The vote was in secret session, as the Senate rules then required. (One other Senator, James, of Nevada, was later permitted to record his vote in favor of ratification.)

Preceding the vote on ratification February 6, 1899, McLaurin had made a speech in the The day before Senate opposing ratification. the vote was taken the Aguinaldo insurrection had broken out in the Philippines. Mc-Laurin said the "firing on the flag" presented an excuse for changing his position.

It is a matter of political history that President McKinley and his administration were very anxious to have the treaty of peace ratified, giving the the United States, besides other things, title to the Philippines. Mr. Bryan, the presidential nominee of the Democrats in 1896 and later in 1900, had advocated ratification, although opposing permanent retention of the Philippines. However, the

Democratic leaders in the Senate had strongly opposed ratification, and among them was Tillman, as well as Bacon, of Georgia, Daniel, of Virginia, and Chilton, of Texas. Some of their speeches in opposition proved to be prophetic, in the light of events 40 years later.

ACCOUNT OF VOTING

In its account of the voting on ratification, the Associated Press said:

"The call of the roll proceeded quietly until the name of Senator McLaurin was announced. He created the first stir by a speech in explanation of his vote for the treaty. This was the initial break in the ranks of the opposition. Mr. McLaurin made a brief statement in explanation of his change of position, giving the opening of hostilities in Manila as the reason for it.

'I am as I have been from the first,' he said, 'irrevocably opposed to the expansion of our territory, and should have voted against ratification but for the news that has come to us over the cable in the past 2 days."

"He then went on to say that the attack upon our troops had brought about a new condition of affairs, and that he should vote for the treaty."

This statement, said the Associated Press, created excitement, which was increased when McEnery, of Louisiana, said he had decided on the same course. He made no speech.

As a matter of simple historical fact, Mc-Laurin thereafter under the McKinley administration controlled Federal patronage in South Carolina and his friends and adherents were appointed to the best Federal offices, such as Collector of Internal Revenue. McEnery had the same recognition in Louisiana. It was openly stated also that Mc-Laurin was slated for appointment to the circuit bench, but if such appointment had been made confirmation would have been doubtful, perhaps impossible, and it may be also doubted that McLaurin wanted a judicial post.

He was a very ambitious man, and it is much more likely that he visioned a more active political career, in which he would be the evangel of new commercial democracy in South Carolina and the South. There was powerful, if not popular, support for such a movement among southern indus-trialists of that day, and they undoubtedly encouraged McLaurin in that aspiration. His conflict with Tillman wrecked that incipient movement and wrecked McLaurin's career and ambition as well.

It was undoubtely Tillman who spoke the sentiments of his constituency. Even his hitherto, bitterest critic, the State, approved his position and condemned McLaurin, to whom it had previously been at least

friendly.
With Tillman and the State both against him, McLaurin was even then marked for slaughter if he came up for a second term (in 1902), but subsequent events made his

candidacy impossible, as we shall see.
Reelected in 1900, Tillman was supreme in South Carolina politics. In the summer of 1901 he and McLaurin met at Gaffney in a joint debate on the issues on which they disagreed; principally McLaurin's commercial democracy. He was in high favor with the McKinley administration, which saw perhaps a chance to break the solid South at last, and South Carolina Democrats had not had any Federal jobs for many years. The Gaffney debate developed into a dispute as to which Senator really represented the sentiments of their constitutents. A challenge was made to submit it to the voters of the State and the challenge was accepted.

Each Senator submitted his resignation to the Governor.

Gov. Miles B. McSweeney, an amiable little gentleman, who had in 1899 as lieutenant governor come into the governorship on the death of Governor Ellerbe and who owed his election as governor the previous year, 1900, to Senator Tillman's support, was Mc-Laurin's personal and political friend.

The Governor sent both resignations back to the Senators. What had promised to be a sensation turned out to be a fiasco. The Senators did not insist.

In 1902 the bill regulating the tariff for the Philippines was up in Congress. again, reopened the question of our ultimate

On February 22, 1902, 40 years to the day from the time when President Franklin D. Roosevelt was to order Gen. Douglas Mac-Arthur to leave the Philippines under siege, the bill was up in the Senate and Tillman had the floor.

He went back and reviewed the ratification of the peace treaty, 3 years before. He took up a statement by Senator Spooner as to Mr. Bryan's part in securing that ratification. Tillman agreed that the influence of Bryan was potent but insisted that even Bryan's influence had not been sufficient to induce the Senate to ratify the treaty. After Bryan had done all he could, he said, the Republicans still lacked the necessary

"You know," he shouted in his strident voice, "how those votes were secured."

IMPROPER INFLUENCE

Spooner asked him how were they se-

Tillman shot back that he had confidential information from the Republican side that

improper influences were used.
"Name the man," said Spooner, who always delighted in baiting the Pitchfork Senator.

"I know," asserted Tillman, "that the patronage, the Federal patronage, of a State has been parcelled out to a Senator since the ratification of the treaty. "What State?" asked Spooner.

"South Carolina," shouted Tillman.
"Then," said Spooner, "I leave you to fight

it out with your colleague." Tillman continued, asserting he knew that

his colleague voted for the treaty.

"I know that improper influences were brought to bear," he said, and then concluded his speech.

The junior Senator, who had been absent from the Senate Chamber while the senior Senator was speaking, entered and rose to a question of personal privilege, he said he had been in a committee meeting and had been informed of what his senior colleague had said. He had previously, he said, denied the charge.

"I now say, he continued with distinct emphasis on every word, as the newspaper account of the day related, and half turning to Tillman, who sat now 3 seats away. now say that the statement is a wilful, malicious and deliberate lie."

Tillman sprang with tiger-like ferocity at his colleague. Senator Teller, between them, was swept aside, as McLaurin advanced to meet Tillman. Blows were exchanged, Mc-Laurin being struck on the forehead and Tillman on the nose. The two South Carolina Representatives in the Senate of the United States clinced on the floor of that supposedly deliberative body. Senators separated them finally.

SECRET SESSION

The Senate immediately went into secret session, and after discussion, on a rollcall vote both were declared in contempt of the Senate 61 to 0. Later both were permitted to apologize. Tillman said he could not prove his charge, as McKinley was dead.

His Royal Highness Prince Henry of Prussia, brother of Emperor Wilhelm II, the Kaiser, visiting the United States, arrived in Washington the next day, to be a guest of the President at the White House. was accompanied, incidentally, by the Secretary of State for the Imperial Germany Navy, one Adm. Alfred von Tirpitz, whose namesake battleship roamed the seas in World War II.

The day after the fight the Prince and his party visited the Senate Chamber and were received in state but Admiral von Tirpitz could discover no signs of the land battle of the previous day. All was peace in the Senate. But the row was not over.

Senate. But the row was not over.

Col. Theodore Roosevelt, who was no slouch himself at hurling the lie, had become President, following the assassination of President McKinley in 1901. He had issued invitations to a state dinner at the White House in honor of Prince Henry, his royal guest. Senator Tillman, as became rank in the Senate, was invited, and had accepted. After the fight, President Roosevelt requested Senator Cockrell, of Missouri, to suggest to Tillman that he withdraw his acceptance. Tillman spurned the suggestion. President Roosevelt then withdrew the invitation.

That incident had important repercussions in South Carolina, with tragic consequences which cannot be related within the span of this article. It can only be said that it led to a development which played its part in the playing of N. G. Gonzales, editor of the State, by Lt. Gov. James H. Tillman, nephew of the Senator, in January of the following year.

Increase in Postal Rates

EXTENSION OF REMARKS

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. BIBLE. Mr. President, I have studied with great interest the President's state of the Union message and his subsequent messages, particularly those dealing with the budget, pay increases for Federal employees, postage rate increases, and foreign economic policy. It seems to me that in our efforts to obtain high levels of employment and prosperity through maximum encouragement to our business community, the present administration is very inconsistent. I specifically refer to the proposal to increase rates on business users of the United States mails.

In this connection, my attention was called to an article which appeared in the January 17 issue of Advertising Age under the caption "Mail Users Condemn Postal Rate Hike as Detrimental to Sales Promotion."

This report was submitted to the Honorable Sinclair Weeks, the Secretary of Commerce, through his printing and publishing subdivision, and is supported by economic data obtained from Department of Commerce sources. The report states, in part:

As the Government has so definitely committed itself to helping people produce goods, so should the Government do everything it can to help in the creation of markets, the sale and distribution of goods to the consumer.

I believe the time has come for continued study and appraisal of our Nation's postal policies before we rush head-Iong into a rate increase that will work serious hardship on our economy. I note that such a study was undertaken in the 83d Congress, and feel the subject should be fully studied and the study completed as a basis for reaffirmation of the Congress' position on postal rate matters.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article published in Ad-

vertising Age.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

MAIL USERS CONDEMN POSTAL PATE HIKE AS DETRIMENTAL TO SALES PROMOTIONS

Washington, January 12.—Several groups of organized mail users joined today in a memorandum warning the Department of Commerce that proposals for increased postal rates may interfere with the development of sales programs which are needed to assure steady demand for the expanding output of the Nation's factories.

The groups contended that the Government has a big stake in everything that promotes an expanding economy. They pointed out that each 1 percent drop in national income-which might occur if advertising and sales are curtailed-would cut employment by 300,000 to 400,000 and clip \$1 billion from the Government's tax revenue. "Conversely," the report said, "a 1-percent increase in market absorption will increase both employment and Federal tax revenues proportionately."

The sponsoring organizations asked the

Commerce Department to:

"1. Provide the administration, the Congress, and the public with information showing the importance of advertising to the American economy.

"2. Oppose all legislation the adoption of which might impair legitimate advertising. "3. Make a continuing survey of advertising in America to determine its effectiveness

in fostering an expanding economy.
"4. Be prepared to advise on the following economic matters: (a) The contribution made by business mailers to the American economy through increased sales, the payment of taxes, the employment of individuals, and related economic facts; (b) the impact of postal rate increases on the volume of advertising, sales, profits, taxes, and employment; (c) the repeal of Public Law 199, which governs the size and weight of parcel-post packages, and the return of the fourth-class mail ratemaking power from the ICC to the Congress; (d) extent of the public service contribution made by the postal establishment.

"5. Cooperate with the Post Office Department in (a) the introduction of modern business practices; (b) obtaining the expanded use of postal facilities by business."

The memorandum was forwarded to Commerce Secretary Sinclair Weeks by Magazine Publishers Association, Direct Mail Advertising Association, Associated Third Class Mail Users, and Parcel Post Association. It reached the Secretary through the printing and publishing subdivision of the Commerce Department's business and defense services administration, which has been engaged in a study of the possible impact of postal rate increases on the printing and publishing industry.

"As the Government has so definitely consmitted itself to helping people produce goods," the memo says, "so should the Government do everything it can to help in the creation of markets, in the sale and dis-tribution of goods to the consumer."

After pointing out that the printing and publishing industry is small business—with 29,000 of its 30,000 establishments employing less than 100 persons—the memo argues, "Of all the Government agencies none so assists business in the sale of goods as the Post

Office Department. The selling messages carried by this agency create widespread demand for goods and services. Moreover, it serves as a major distributing agency to

With charts and Government statistics. the memo points out that consumer buying has lagged behind the increase in total dis posable income, and that the percentage of advertising volume has declined in relation to the early 1900's.

Warning that "the prosperity of the Nation requires an expanding economy," it declares, "That kind of prosperity is possible only if the demand for goods and services increases. Advertising creates increased demand. volume of advertising is controlled in large

part by postal rates."

Designed to recruit Cabinet-level interest in the business aspects of the postal-rate problem, the memo includes a Price, Waterhouse tabulation which suggests that the actual postal deficit is overstated by including subsidies and public services which should be charged to the general taxpayer. The tabulation was originally prepared for the special Senate Post Office Subcommittee which investigated postal-rate policy early last year.

Other portions of the memorandum discuss the current business problems of printed advertising media. Two charts, from Magazine Publishers Association, show magazine circulation at a peak of more than 160 million and daily and weekly newspaper circulation at 75 million per issue, but profits of 119 business, farm, and general interest magazines—which pay 45 percent of the second-class revenues, consume two-thirds of the paper, and carry over \$500 million in advertising—down from an 8.3-percent peak in 1946 to 2.8 percent in 1954.

Another table, based on ANPA data, said that profits are shrinking because publishers have been forced to accept 104.8-percent increases in newsprint prices, and similar increases for labor since 1945. Data obtained from DMAA showed that a half-cent increase in the mail rate for third-class matter would throw many mailers into the red, and sharply reduce the profits of the remaining ones.

The memorandum also argued against any action which would damage parcel-post service, pointing out that parcel post is the only existing nationwide distribution service carrying small parcels anywhere in the country for a reasonable cost. According to the report, 6 out of every 10 parcel-post packages are received or mailed by individuals or ultimate consumers. In 1952, the report said, each farm family received or sent an average of 16 parcel-post packages.

Peress Dispute Still Boiling

EXTENSION OF REMARKS

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. SCHOEPPEL. Mr. President, on January 10 there appeared in the Washington Star a most enlightening article by the distinguished columnist, David Lawrence. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

[From the Washington Star of January 10. 19551

PERESS DISPUTE STILL BOILING-WRITER CALLS ARMY REFUSAL TO FIRE DENTIST CONTEMPT OF SENATE; VIEWS RELEASE OF WHOLE STORY AS VINDICATION OF MCCARTHY

(By David Lawrence)

"Better late than never" may still be a wise maximum for the guidance of those in Government who try to cover up their mistakes and then find themselves confronted after all with the necessity of making a ciean breast of their errors—but in public controversies it is better to come clean at

Thus the office of the Secretary of the Army in making public a comprehensive report of exactly how the case of Major Peress, alleged Communist who got an honorable discharge, was handled clears up many a mystery and at the same time unwittingly vindicates Senator McCarthy, of Wisconsin,

For the Wisconsin Senator had insisted that the information sought by the Senate Subcommittee on Governmental Operations was not classified and did not involve security but concerned the administrative failures of an executive agency which are a

proper subject for inquiry by Congress.

It turns out now—as the new report reveals-that the derogatory information about Major Peress was known inside the Pentagon at least a year before the Mc-Carthy committee took up the issue. It develops also that General Zwicker knew all the facts and evidently the Wisconsin Senator knew that he knew them. Hence the refusal of General Zwicker to testify frankly before the Senate subcommittee appears now to have been either because he was ordered to cover up for his superiors or because he was gagged by his superiors who knew that if he told all the facts it would corroborate Senator McCarthy's line of inquiry.

If JOE McCarry had not yielded to his exasperation that day to make a denuncia-tory comment about General Zwicker-or. if he had later withdrawn it but insisted that there was a cover-up for which the general was not to blame—the Wisconsin Senator would have been on sounder ground. For the facts he sought so desperately were bound to justify his side—if he could have been patient.

Likewise if the Department of the Army had told all the facts last January that it now tells the public there would have been no McCarthy-Army row as the headlines called it nor any sensational hearings on the television which cost the Eisenhower administration so many votes in various election contests last autumn.

Senator McCarthy's idea all along was that it was better for a Republican Senator to expose weaknesses in a Republican administration than to let the Democrats have a field day-which is what may happen now.

For the Democrats are still resentful that they lost votes in the 1952 election because of the charge that they had been soft on Communists in Government and now the Democrats will point to the handling of the Peress case as an example of how careless, if not soft, the Eisenhower administration has been in handling a Communist issue.

What is most difficult to understand is why somebody in the red tape list of 61 officers in the Army-now disclosed to have had some part in handling the Peress case-didn't raise cain when he saw a notation on the application of Dr. Peress declaring that he refused to answer questions about membership in subversive organizations.

The new Army report shows that on April 28, 1953, Lt. Col. Ronaid F. Thomas, chief of the Counterintelligence Division, reported that there was adverse data on Peress and a letter about it was sent to the Surgeon General of the Army and to the Chief of the Intelligence Division of the Army General Staff.

This letter said that there was "sufficient evidence of disloyal and subversive tendencies to warrant removal of Peress from the service." It took several months for that letter to be acted upon and the delay is, of course, indefensible. Even when General Zwicker on October 21, 1953, wrote to the commander of the First Army that the retention of Dr. Peress was "clearly not consistent with the interest of national security" nothing was done for several months. Senator McCarthy got into the fray in January 1954 and demanded that Major Peress be courtmartialed and his honorable discharge held up.

It now is revealed that a decision to ignore the Senate committee's request and give an honorable discharge to Major Peress was made by John G. Adams, Counsellor of the Army, and Lt. Gen. Walter L. Weible, Deputy Chief of Staff for Operations and Administration. This was an action contemptuous of the Senate. It is perhaps the most flagrant case of disregard of a legislative committee by an executive official that has been recorded in a long time. One wonders what the Senate will do now to vindicate its honor, for it is plain that one of its committees was given the runaround.

Debt Payment by Britain

EXTENSION OF REMARKS

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the Record an article entitled "Britain Makes Debt Payment," by Mr. Ralph McGill, which appeared in the Atlanta Constitution under the dateline of January 1.

I agree with Mr. McGill that this financial transaction merits the attention of every American, for the reasons which Mr. McGill sets forth.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITAIN MAKES DEBT PAYMENT

Washington, January 1.—Yesterday, which was the one written in the bond. Great Britain paid in full her annual payment of principal and interest on the 1946 loans made by the United States. It was a payment on the debt of \$54 millions and interest in the amount of \$84 millions for a total of \$138 millions.

It seemed to me this financial transaction merits the attention of every American, who for so long has heard the whining accusations of the claque which hates the British and which has built up a feeling in this country that somehow the loans we make are never paid.

How much of a debt we, and every American citizen, owe Great Britain for standing alone as she did in all the desperate early months of the great war when the well-prepared and modernly equipped German army rolled to the channel, one cannot say. It is one of those gigantic intangibles which cannot be measured in terms of dollars or pounds. But owe it we do, and no honest person denies it, or wishes so to do. All western civilization owes her such a debt.

SAVED OUR CIVILIZATION

So, as she paid almost \$150 millions, which represent the equivalent of the total value of 4 months of exports from her factories and mills, it seemed to me well to note the fact, and not leave it buried in a paragraph or so on the financial pages. Especially so, since much of the debt was for lend-lease, which we might have written off, since it was used to save our civilization in the days when we sang The White Cliffs of Dover and Britain fought alone.

The debt which Britain incurred in 1946 was for two purposes. First, \$3,750,000,000 to provide dollars to buy goods from the United States; and, second, \$650 million to settle Britain's outstanding debt to the United States on the wartime lend-lease arrangements,

Marshall aid to Britain ended in 1950. From that time on the dollar aid which has been provided has been related exclusively to the joint defense effort. The object has been to cover marginal dollar purchases, so that Britain may undertake a larger defense effort than she could otherwise manage. This defense aid is now flowing to Britain at a falling rate. In 1953 it totaled \$286 million. In the first half of 1954 the amount was \$68 million.

Besides the annual repaying of the 1946 loans, Britain has been making, since 1952, regular half-yearly interest payments on the Marshall aid loans, totaling over \$8 million annually. Capital repayment on the Marshall aid debts will begin in June 1956.

Meanwhile, Britain has made a strong effort to pay her way in dollars by increasing her dollar earnings through exports. As a matter of interest, in 1946 her exports to the United States were \$140 million, and had risen in 1953 to a total of \$450 million. But in 1953 Britain's imports from the United States (including shipping and insurance) were \$711 million. There is, of course, a real need for Britain to export more goods to the dollar area, and it is her earnest hope that barriers impeding exports to the United States will be progressively lowered.

Gains in the Civil-Service Merit System

EXTENSION OF REMARKS

HON, EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. THYE. Mr. President, there appeared in the Sunday Star of January 16, 1955, an article entitled "Merit System Gains in 1954 Called Best in Civil Service Commission History," written by Joseph Young. The article is very enlightening, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MERIT SYSTEM GAINS IN 1954 CALLED BEST IN CIVIL SERVICE COMMISSION HISTORY

(By Joseph Young)

Civil Service Commission Chairman Philip Young declared last night that the past year has seen gains made in the merit system that are "without parallel in any comparable period in civil service history."

In a special statement commemorating the 72d anniversary of the civil service system,

Mr. Young by indirection answered Democrats and Federal employee union leaders who charge the administration with systematically destroying the merit system.

The criticisms against the administration stem mainly from the White House job-clearance order concerning top civil-service jobs and various other merit positions. Under the order, agencies have to list these job vacancies with the Republican National Committee and freeze the positions for 30 days.

PRESENTS HIS CASE

Mr. Young presented the administration's case as follows:

- 1. The new career-conditional appointment system which goes into effect next week "opens the way to full careers under the merit system" for hundreds of thousands of indefinite employees who have been denied career status since 1950.
- "I believe that the new system, as developed by the Civil Service Commission and issued by the President, represents the greatest advance of many, many years toward providing the American people with a strong and stable career force to carry on the essential and complicated functions of modern Government."
- Mr. Young said that under the new system career appointments in the future will be made only through competitive examinations. In those few cases where the Civil Service Commission because of its inability to furnish a register of eligibles for a certain job, gives an agency authority to hire on the open market, the agency will be allowed to make only a temporary appointment which will continue only until the Commission can hold an exam for the job.
- "It should also be noted that the Presidential Executive order establishing the new system includes a strongly worded and unequivocal prohibition against political discrimination in the competitive service," Mr. Young added.
- 2. The CSC has completed plans to bring 35,000 excepted overseas jobs under the merit system. "This will be one of the largest blocks of positions ever brought under the merit system at one time in the history of civil service in the United States," the CSC chief declared.
- 3. Many beneficial benefits were enacted into law for Government workers.

BENEFITS LISTED

Mr. Young listed such new benefits as the group-life-insurance program, the Government employees' incentive-awards program, modification of the Whitten rider, unemployment compensation benefits, longevity pay boosts extended to the higher grades, and the annual-leave-law restrictions modified.

"We are not resting on the achievements of the past year," Mr. Young said. "A progressive program for 1955 has already been announced, and the CSC is prepared to give it vigorous support. Among the objectives we have set for 1955 are the following: Salary increases and improvements in pay scales under the Classification Act; group health insurance for Federal employees, partially financed by the Government; more and better training for career employees, and improvements in overseas personnel administration."

Mr. Young concluded: "These and other measures proposed for this year will continue our progress toward strengthening and improving the civil service and making Government careers more attractive and satisfying for the high-caliber men and women our Government needs. The trend toward better government through a better career merit system is very clear."

Rochambeau Pay and the Growth of a Friendship

EXTENSION OF REMARKS

HON, HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 13, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Rochambeau Day and the Growth of a Friendship," by Salome Mandel, which appeared in the December 1954 issue of Freedom and Union.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROCHAMBEAU DAY AND THE GROWTH OF A FRIENDSHIP

(By Salome Mandel)

On a bleak October morning, under a leaden sky, a small crowd stood at attention as the poignant sound of taps cut through the silence surrounding a lonely white cross, half hidden in the shrubs.

The date: October 19, 1954.

The site: A small Virginia town at the mouth of York River where, 173 years ago, Lord Cornwallis surrendered to the allied armies of Washington and Rochambeau supported by the French Fleet of de Grasse.

The grave: That of 50 unknown French soldiers, killed during the siege of the city.

The occasion: A tribute paid to their commander in chief, General Rochambeau, who had led the 6,000-strong French Expeditionary Corps from its point of embarkation at Brest, France, to Newport, R. I.; thence, in a long and strenuous march, through the States of Connecticut, New York (where they joined Washington's American Army), New Jersey, Pennsylvania, Delaware, and Maryland to Annapolis; and finally, aboard ships provided by de Grasse, to York-

town, Va., and victory.

A momentous result which, in the words of United States Marine Corps Commandant Gen. Lemuel C. Shepherd, "turned the dream of American independence into reality" and "was due in a large measure to the fact that France, in the form of the mighty fleet under Admiral de Grasse and the valiant men under General Rochambeau, provided General Washington the means to achieve victory."

Yet, while the youthful Lafayette's generous idealism and unusual military skill had caught the people's imagination, the name of the older man, who actually commanded the expeditionary corps and was his country's military representative in the United States, had somewhat faded from the memory of the public.

Already Jefferson, in a letter to Madison dated February 8, 1786, seemed to be disturbed by the thought that Rochambeau "has deserved more attention than he has received." He suggested that a bust of Rochambeau be set up in the Capitol.

Jeffersen's suggestion met with no success. But time has not been able to erase completely from the heart of his countrymen the feeling that inspired it.

Some 2 years ago, a small group of history-conscious, fairminded Virginians decided to give this feeling concrete expression. This took the form of a resolution, introduced by State Senator Donovan and passed by the Virginia General Assembly, instructing the then Gov. John Battle to appoint a five-man, nonpaid Rochambeau Commission for the Purpose of arranging, in close cooperation with the seven other so-called Rochambeau

States, for the uniform marking of the route followed by the French Expeditionary Corps.

Chaired by Charles Parmer, the initiator and real soul of the project, the commission immediately went to work. As a result, Rochambeau celebrations have been held in several States. In Rhode Island and New York, for instance, public parks, named after Rochambeau, have been established. Finally, on October 19, 1954, in a Rochambeau Day celebration on the very spot of the allied victory, a model of the future bronze marker was unveiled and dedicated by General Shepherd, in the presence of Henri Bonnet, Ambassador of the French Republic; Senator Donovan; representatives of the States cooperating in the tribute; and numerous guests.

Among the highlights of the program, special mention should be made of the Huron March—the very march that greeted Rochambeau's aide, Chevaller de Chastellux when he visited Washington in his camp—as performed by the Drum and Bugle Corps of the United States Marines.

Frequently played in those days by French and American Army bands alike, the march—a part of Grétry's successful opera Le Huron—had since been completely forgotten in the United States. Is was rediscovered, on a hint from the French Embassy, by M. Sgt. W. O. Nickell, drum major of the Drum and Bugle Corps, who copied the score at the Library of Congress and arranged it for use on Rochambeau Day.

Another feature not to be forgotten was the lunch served by mess sergeants, under military tents, with a menu similar to the Rochambeau troops' V-Day rations: Cornbread and baked beans with cheese and lettuce to make it a real celebration. (Some of the guests wondered if history were to be thanked for the genuine French dressing served with the lettuce, instead of the shrimp-colored concoction usually served under that name.)

However important a man's achievements, his true greatness can be measured only by the capacity of survival and the impact of his life's work.

In this sense, it may be said that the highest tribute to Rochambeau and to his comrades in arms was paid by Ambassador Bonnet when he enlarged his address from the mere eulogy of a great compatriot to a global survey of the problems confronting not just the two ancient allies of the Chesapeake campaign but their new allies—their partners, as President Eisenhower would put it—as well.

The Franco-American alliance, Ambassador Bonnet said, "has proved its strength in times of peril in the history of both countries. It is based upon similar objectives in the international field, and upon a friendship which makes possible mutual frankness. It remains a permanent force in a world threatened by many perils in spite of the numerous sacrifices our two countries have made for the cause of freedom."

"The world," Mr. Bonnet went on, "is still deeply divided, at a time when all important problems have universal repercussions, and the solidarity of the free nations is more than ever the condition of their survival. No one of them, acting alone, can be assured of an independent future. In the absence of a global entente, it is by means of a balance of forces that security must be assured, as long as the Communist bloc will not show, by its actions, that it has renounced its expansionist plans."

DREAM OF LAFAYETTE AND WASHINGTON

This, of course, leaves us still very far away from the dream Washington outlined, in a letter (August -15, 1786) to his friend, Lafayette, of a mankind "connected like one great family in fraternal ties."

It comes much closer, instead, to the vision of another builder of the New World—Benjamin Franklin—who, in a letter dated

October 16, 1783, actually proposed to David Hartley, British plenipotentiary for peace, the conclusion of a "family compact between England, France, and America."

As a matter of fact, such a compact, although still limited as to its implications, already exists in the form of the North Atlantic Treaty. It differs from Franklin's idea mainly in the fact that the "family" has lately considerably increased in size, so as to include not only most of the countries bordering that new Mare Nostrum—the Atlantic—but its hinterland as well.

The recently issued declaration of Atlantic unity, by over 150 distinguished citizens from 8 NATO countries, urging their governments to make this most challenging and constructive experiment succeed, clearly shows their deep belief in NATO's vast potentialities and in the leading part it could play as a stabilizing factor in a restless world.

However, Ambassador Bonnet warned in his Rochambeau Day address, "whether it pertains to the military security of the free world or to its economic and political security, the corresponding tasks require continuity of effort, patience in achieving results, and mutual trust among countries defending the same values."

These happen to be the very virtues which helped the two great leaders, Washington and Rochambeau, to achieve against all odds the success of that other challenging experiment: the first of all Atlantic alliances, signed in 1778 between the United States, still struggling to be born, and the old French nation, without whose contribution, said General Shepherd—himself a Virginian whose forefathers fought at Yorktown—"the issue of the independence of this Nation would have remained in doubt."

And as they lived and fought side by side "in perfect concert and harmony," as Rochambeau put it (an utterance echoed by Washington when he wrote, in a letter to Congress, October 12, 1781: "The greatest harmony prevails between the two armies"), there emerged, as a result of that intercourse, something even more durable than a military victory, fateful as it was.

That something, pioneered by both the leaders and their troops during the 1781 Chesapeake campaign, was a new pattern for international relationship, based no more on the domination of one ally by the other, but on a genuine partnership.

HOPEFUL PORTENT

That the Franco-American alliance has been able, since, to weather all storms, is mostly due to the fact that, except for a few temporary eclipses, the relationship between the two countries has steadily followed the pattern established by Washington and Rochambeau; a pattern that has proved sufficiently solid and sound to become the cornerstone of a great Atlantic alliance—the one already in existence, and the one still in the making. The lonely white cross, half hidden is the shrubs at Yorktown, Va., has pointed the road not toward death and desperation but toward a new life and hope.

Social-Security Law and Benefits

EXTENSION OF REMARKS

HON, HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. LEHMAN. Mr. President, there appeared in the January 17 issue of the New Republic a very interesting analysis

of our social-security laws by Mr. Nelson H. Cruikshank, one of the Nation's leading experts on this subject, who is attached to the legislative staff of the American Federation of Labor.

Mr. Cruikshank, in his article, analyzes the implications of the references by President Eisenhower in his state of the Union message to social security and the level of social-security benefits.

I ask unanimous consent that this interesting and instructive article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY—WHAT WAS NOT SAID (By Nelson H. Cruikshank)

In contrast to those of 1953 and 1954 this year's state of the Union message does not call for significant changes in the social security legislation. The scant mention of the Federal old-age and survivors insurance program is devoted to a recitation of the achievements of the 83d Congress in broadening the coverage and increasing the benefit levels.

Actually the administration deserves credit for the leadership it exerted in this field during the last 2 years. Except for the President's endorsement of a postponement of the scheduled increase in the rates of contribution to the trust fund—a position which he later abandoned—the beguiling slogans of the chamber of commerce to "end discrimination among the aged" and for "pay as you go" failed to enlist adherents from among Government officials in support of, their schemes to destroy the essential character of our contributory social insurance program.

It is unfortunate, however, that the President and those in his official family responsible for developing policy in this field (which includes the Council of Economic Advisers and representatives of the Treasury Department as well as the Secretary of Health, Education, and Welfare) should apparently feel that the modest improvements adopted last year represent a finished job. In this respect the message is more significant in terms of what was not said.

For example, there is the matter of the wage base. When the Social Security Act was passed in 1935, limiting to \$3,000 the earnings on which contributions annual were collected and benefits computed, this was not serious as about 96 percent of all workers' wages came under this figure. The 1950 amendment raised this to \$3,600 and last year's changes brought it to \$4,200. In view of the opposition of insurance companies and the chamber of commerce the increase did indeed represent something of an achievement for a Congress not particularly distinguished for its record in the field of social legislation. But the \$4,200 limit brings us up only to the 1949 level of wage increases. In other words, last year the administration asked Congress to do in 1954 In other words, last year the what it should have done in 1949 if it intended to maintain the same level of wage coverage it established in 1935. Failure to move the wage base up to a realistic level acts to hold down benefits.

Still more significant is the failure of the message to acknowledge the remaining gaps in the protections afforded by our social insurance. The most glaring failure of our present system is in protection to the income of a family whose breadwinner becomes physically disabled. The half-way approach to this problem through State public assistance authorized in the 1950 amendments, with its means-test requirements and capricious determinations of levels of relief, has proved its inadequacy.

In the one area of social security where the message calls for positive action, namely the adoption of the Kaplan Committee recommendation for combining the protection of the civil-service retirement system and OASI for Government employees, the chances of accomplishment are not improved by the oversimplified argument offered in its sup-There is a serious question as to whether it is really possible to provide socialsecurity coverage for civilian Government employees "just as in private industry." While it may be theoretically possible, the question is whether it is politically practicable in view of the fact that the employer (in this case the Government) will have to make what amounts to voluntary contributions to two systems which is not true in private industry. Government employees will want to take a long look at what the President refers to as "certain adjustments in the present civilian personnel retirement systems" before agreeing to any wedding of the two programs.

The message's references to unemployment insurance are scanty but eloquent—again mostly in terms of what is left unsaid. If the Federal Government is to do anything at all to recover the ground lost in this field during the past 10 years it must start with the simple fact demonstrated at the time the programs started nearly 20 years ago, namely that State unemployment insurance acts respond primarily to direct financial incentives: employer experience rating on one side and offsets against federally imposed payroll taxes on the other. Specifically this means any improvement at the State level will come only when the meeting of Federal standards relating to benefits, and eligibility are made a condition of the offset.

Press Release of the National Federation of Independent Business

EXTENSION OF REMARKS

HON, HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a press release dated January 3, 1955, issued by Mr. George J. Burger, vice president of the National Federation of Independent Business.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

George J. Burger, vice president of the National Federation of Independent Business said today that it is the opinion of many Members of Congress that small-business problems will receive considerable attention during the entire life of the 84th Congress, which convenes in a few days.

Small business is aware of the opinions expressed by congressional leaders, and it is expected that the President, in his message to the Congress on the state of the Union, will give ample consideration to the increasing basic problems faced by small business throughout the Nation, and will make the corrective recommendations as to the needed help to small business.

Burger added, that due to nationwide polls of the entire federation membership, all independent business and professional men, numbering approximately 100,000, the polls disclosed and directed that a definite pro-

gram be carried out by Congress to protect efficient small business.

1. A continuing vigorous enforcement of all antitrust laws: It is to be noted from the record that the present head of the Antitrust Division of the Department of Justice, Hon. Stanley Barnes, has shown by his action, and not mere lip service, that his Department's actions in impartial and vigorous enforcement of the antitrust laws is in keeping with the original intent of Congress, and for which it was constituted. Congress should recognize this, and give the needed appropriation to the Antitrust Division of the Department of Justice.

The federation will urge such action on the new Congress.

2. Small Business Committees of the Congress: These committees, during the past decade, have proven the best business insurance in protecting the business life of small business. They must be continued and placed on parity with all other standing committees. Namely, standing committees' status with full legislative authority. It is to be noted that in the 63d Congress, 50 Senators urged such action in the Senate.

The federation will urge such action on the

new Congress.

3. Small Business Administration: During its short period of operation the agency has proven its help to small business throughout the Nation. The agency must be continued as a permanent agency for small business, and with full control of its administration in the hands of the Administrator, subject only to the control of the Congress. No other agency head or member of the Cabinet should have the veto power on major operations of the agency.

The federation will urge such action in the 84th Congress.

4. Small business will expect tax relief, so that they will be able to build up reserves to meet any and all economic trends.

The federation will urge such action in the 84th Congress.

5. Small business will expect the new Congress to enact legislation that will make it mandatory upon the armed services to give small producers a fair and just share in Government purchases.

The federation will urge such action on the the new Congress.

Progress in Dairying

EXTENSION OF REMARKS

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. BENNETT. Mr. President, on January 13 the Secretary of Agriculture delivered an address on the campus of the University of Minnesota, during the 53d annual Farm and Home Week. I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the Recorp, as follows:

PROGRESS IN DAIRYING

(Address by Secretary of Agriculture Benson)

It is a genuine pleasure to participate in this 53d annual Farm and Home Week here on the campus of the University of Minnesota. I am deeply impressed by the important contribution that meetings such as this are making toward better understanding of our agricultural problems.

This occasion exemplifies the leadership Which our educational institutions are taking in promoting group discussions and ex-Changes of ideas and information. I have long believed that research, education, and improved marketing practices offer the surest approach to our goal of a prosperous, stable, and free agriculture. It is encouraging to see that all of these steps are emphasized in your Farm and Home Week program.

I appreciate the opportunity to speak on this forum. For some time I have wished to talk frankly on several matters which are major importance to Minnesota farmers. Your kind invitation to appear was doubly

welcome for that reason.

Minnesota is fortunate in having the soils and climate which permit highly diversified farming operations. Only about 71/2 percent of the cash receipts of farmers in this State come from the basic commodities which seem to get most of the attention in farm-policy discussions. Dairying, hogs, and cattle-in that order-provide the major sources of farm income here. The feeding of hogs and cattle has been relatively profitable during the past year. The dairy industry has undergone some serious readjustments. that reason, I should like to talk primarily about this problem.

Sometimes it is necessary for us to look back to see how far we have come. Today I would ask you to look back for a moment— to the situation which faced the dairy industry of this Nation just 1 year ago.

Your Government was getting into the dairy business at an unprecedented rate. Milk production was booming toward new seasonal highs. Consumption was not only failing to keep pace but was trending dangerously downward, particularly in the case of butter. Surplus dairy products were piling up in Government storage at an alarming The industry was being out-promoted by its competitors at every turn. 'Despite price supports at 90 percent of parity, net income of dairy farmers had declined by more than \$200 million from 1952 to 1953. The dairy industry was sick. There were ominous rumblings that Government might be forced to invoke production controls.

All in all, it was not a very pretty picture. But this was, nevertheless, the situation which faced us just one short year ago.

Confronted by these facts and a law which specifically directed me to fix dairy price supports at a level which would assure an adequate supply, I announced a reduction from 90 to 75 percent of parity for the marketing year beginning last April 1. decision was not lightly made. It was reached only after long and careful consideration. I had no illusions as to its immediate popularity with many dairymen. Yet I believed then in all conscience, as I do today, that this adjustment-painful though it might be-was in the best, long-term interests of the Nation's dairymen.

May I say now that I received plenty of advice on this matter. Much of it was sound and most of it was well meant. gave full thought to all suggestions but one. I ignored the warning that the action con-

stituted political suicide.

Now, as we begin this new year, the time has arrived to take stock-to strike a sort of balance sheet—of the dairy situation since price-support levels were adjusted 9 months ago.

The first, and most impressive fact, is that milk production shows definite signs of leveling off. In December 1954, milk production was 1 percent below December of a year ago. Meanwhile, per capita consumption of dairy products is on the upturn. This is of vital importance to every dairyman in America. It means that the day is approaching when supply and demand will be brought into balance-not through a distasteful and uneconomic program of production controls but rather through increased use of the healthful dairy products which our people need.

Milk production during 1954 reached an estimated 124 billion pounds—a record total. The leveling-off process of recent months suggests that it will be about the same this year. At the same time, per capita consumption of butter increased by about 5 percent in 1954 a sharp reversal of the longtime downward trend. The average American also ate a fraction of a pound more cheese and drank a little more milk in 1954.

When we add to this the fact that our population growth provides about 2.7 million additional consumers each year, it becomes evident that we are rapidly bridging the gap between dairy supplies and demand. Even without any increase in per capita consumption of dairy products, this population growth alone provides a market for nearly 2 billion pounds of milk each year.

During 1954, milk consumption in all forms totaled about 118.5 billion pounds. If production during 1955 remains at the 1954 level-as we anticipate it will-our surplus of dairy products will be smaller than in either of the two preceding years. If the stepped-up promotional and merchandising campaigns of the dairy industry, which are beginning to show real results. meet our most optimistic expectations, we may well see an approximate balance between production and consumption by the latter part of this year.

When that happens—as it inevitably will if all of us are determined to see that it happens-prices of manufactured dairy products will move above the support level. support price will no longer be the ceiling price, as has been the case too long.

I am convinced that every dairyman in the Nation would prefer that to a system which makes the Government the market and ties the future of the industry to a mere formula. I am convinced further that this day will dawn for dairymen much sooner because the dairy industry and this administration elected to face the facts and refused to bow to political expediency.

Allow me to cite a few figures which support the conclusion that we are headed in

the right direction now:

In December-last month-the Government bought not a single pound of butter. This was the first full month in 2 years in which no purchases were made. During December of 1953 we bought more than 11 million pounds of butter and the heavy flow was just beginning.

During the final 3 months of 1954, butter purchases totaled only half a million pounds, as compared with 15 million a year earlier.

Government buying of cheese and nonfat dry milk has also declined sharply in recent months. Last month cheese purchases totaled about 11/4 million pounds, compared with nearly 7 million for December of 1953. This was the smallest amount we had bought in any month for 2 years. We purchased 11.2 million pounds of dry milk in December 1954-less than one-third the amount of a year earlier-and the second smallest total acquired in any single month over a 2-vear period. Only purchases for November were

Normally I prefer not to incorporate many statistics in a speech. But figures sometimes tell an interesting story. With your indulgence, I should like to cite a few more because they represent good news for every segment of the dairy industry, for the Government itself, and for the public.

Less than 6 months ago, Commodity Credit Corporation had 466 million pounds of butter on hand. At the beginning of January this enormous hoard had been reduced to 266 million pounds. It is growing smaller by the day. This butter is moving into channels or consumption in the United States

While it is true that most of these dispositions have been made at substantial losses, it is important that the butter is being It is also worth noting that nearly 20 million pounds of butter were resold into commercial-trade channels by CCC at prices which exceeded acquisition costs. Most of these sales were negotiated during the last 2 months. For the entire year of 1953, commercial-butter sales by CCC amounted to about 4 million pounds.

At the end of September 1954, CCC owned 435 million pounds of cheese. This inventory had been reduced by 100 million pounds by the year's end. Government sales of sheese in commercial-trade channels exceeded 116 million pounds in 1954, as compared with a bit more than 5 million pounds

during the preceding year.

CCC had on hand 92 million pounds of dry milk at the beginning of this year. Eight months earlier the Government inventory stood at 600 million pounds.

Despite record-breaking purchases of dairy products during the early months of 1954, we bought less butter for the entire year than we did in 1953. Cheese and dry milk buying were up somewhat for the year but the trend during the final months of 1954

was sharply down.

Altogether, CCC disposed of approximately 1.5 billion pounds of dairy products last year, as compared with 352 million pounds in 1953; more than 4 times as much. About two-thirds of the butter and one-half of the cheese was moved after August 1, when Congress gave us broadened authority to deal with the entire surplus problem. Most of the dry milk was sold at substantial discount for use in mixed poultry and livestock

Surplus butter holdings were distributed principally as domestic and foreign donations through school-lunch programs, church and welfare organizations, and charitable institutions. Millions of needy persons here and abroad shared in these donations. direct sales were made at reduced prices to foreign governments and United Nations agencies Further distribution was made through Foreign Operations Administration activities. These various outlets absorbed 264 million pounds of butter in 1954, as against about 100 million pounds for the preceding year.

In addition, the Department of the Army obtained more than 28 million pounds of butter from CCC stocks in 1954, nearly double the amount for 1953. We sold butter for use as a cocoa butter extender and for liquid milk recombining abroad. Butter was also made available to the Veterans' Administration. None of these outlets was employed during the preceding year.

School-lunch donations and welfare distribution at home and abroad accounted for the movement of 161 million pounds of cheese in 1954, approximately 5 times the total of a year earlier. At the same time 400 million pounds of dry milk, more than double the amount for 1953, went into these programs last year.

The effect of these overall disposal efforts, combined with the increased commercial demand for dairy products, is reflected in improved milk prices during recent months. For the final quarter of 1954 wholesale prices received by farmers for all milk averaged 86 percent of parity, the same as in March of 1954, when price supports were still at 90 percent of parity. Seasonal factors, as well as our improved supply position, are partly responsible for this strength. If we can come this far in the space of a few months, there is every reason to be optimistic about the future of the dairy industry.

In fact, I find that optimism shared by many dairymen with whom I have talked and by representatives of other segments of the industry. They believe, as I do, that we have yet to see the full effects of the aggressive

merchandising and promotional campaigns which have been steadily building up for several months. They know they have the finest food product in the world to sell—and at a bargain price. They know that there is a vast untapped market for this most nearly perfect food right here in America and they are determined to reach it.

The story of milk is being told today far better than it has in the past—through every conceivable advertising medium. The dairy industry is successfully employing many of the promotional tactics of its competitors. Its leaders have also recognized that there are two important steps in merchandising. First, to create a desire for the product, and second, to make it readily available everywhere.

It's rather sad, but nevertheless true, that it's far easier for many Americans to buy a bottle of pop or even an alcoholic beverage than just a plain drink of milk. In my travels over the country—waiting in airports and railway stations—I find that I can purchase candy, chewing gum, a variety of carbonated beverages—I can even insure my life or test my skill on a pinball machine—all by simply inserting a coin in a slot. But I can't buy milk with the same ease.

Why until a few months ago—even in the Department of Agriculture, where lights burned late as we sweated over the dairy problem—you couldn't buy a drink of milk except in the cafeterias at certain hours. You can now. You can also buy milk in thousands of other places where it wasn't available until the dairy industry got its

promotional campaign in gear.

We have had a magnificent response—here in Minnesota and elsewhere—to the new program approved by Congress which makes an additional \$50 million available this year and next for an expanded school lunch milk program. The armed services are cooperating in a move to increase the use of milk and other dairy products. These efforts represent more than a current contribution to the better health of our young people. They create the milk-drinking habit. They build markets for tomorrow as well as for today.

I have sought here to summarize what I regard as definite advances on the dairy front during this marketing year. The various facts and figures which I have detailed represent an impressive total on the credit side of the ledger. They indicate clearly that we are on the right road.

At the same time, I would not create the impression that all of our problems are behind us. As our continuing, though greatly reduced, purchases of cheese and dry milk indicate, production is still outrunning demand. The flush season is ahead of us. It will be little short of a miracle if the Government is not called upon to increase its dairy support purchase program over the next few months. Yet I am confident that what buying we are forced to do will be on a much smaller scale than it was during this period in 1954. That situation, as it develops, will be further important evidence of the fact that we are clearly emerging from the serious crists which gripped the industry such a short time ago.

I am not unmindful that dalry producers are caught in a perplexing price-cost squeeze. While final figures are not yet available, it is expected that they will show net income of dairy producers in 1954 was down some \$180 million to \$200 million from the preceding year, a decline of about 4 percent. Disturbing as this must be to all of us, it might be pointed out that dairy income declined even more between 1952 and 1953, despite supports at 90 percent of parity. To me this strongly suggests that the continuation of high level supports was not the answer, as some people have argued. If it were, the problem would never have developed.

I would rather think of the loss in dairy income as the industry's share of the cost of getting back on a sound foundation. The Government's share of that cost has been even greater. I do not regard either the industry's or the Government's contribution as an outright loss, however. Rather it is an investment in the future of dairying—an investment which will be returned many times in the years ahead if we have the courage and the determination to see this crisis through.

However much some individual dairymen may be pinched by the decline in income, they might well consider what their plight could have been had 90 percent supports been continued. Producers of the basic commodities who have been receiving price supports at that level have also been forced to take drastic production controls. In neighboring North Dakota, for example, 1954 wheat acreage was cut 20 percent below 1953.

It will be reduced again in 1955.

I am sure Minnesota dairy producers are thankful they are not faced with that kind of a production slash. High level price supports inevitably breed production controls. We have them this year on every one of the six basic commodities. To argue that dairying could somehow have escaped a similar fate—had maximum supports been continued—is to deny the very plain evidence to the contrary. As one who was engaged in dairying for many years, I might add my conviction that farmers would be no happier under milk production controls than I would be in administering them.

As every dairyman knows, his business is particularly sensitive to the factor of volume. His constant objective is increased production at reduced cost. He knows through hard, practical experience that a drop in production can hurt him just as much as a drop in price. Virtually every advance in dairying efficiency, on the farm and in the plant, is geared to large production. The careful upgrading of the dairyman's herd, the improvements in his feeding and milking operations, the better techniques in handling and transporting his milk are all primarily directed toward large volume marketing.

Farmers in our principal dairying regions might well consider another effect of production controls upon their operations. Any attempt to impose such restrictions by law would almost certainly be accompanied by a move to exempt small producers—just as they are exempted from the control provisions of some basic crop programs. The backyard producer—the 1 and 2 cow owner—would be permitted to operate as before, because of the tremendous obstacles involved in the enforcement of milk production controls.

Nearly 29 percent of all farms producing milk have only 1 cow. Seventeen percent have only two cows. Sixteen percent have either 3 or 4 cows. Thus, it would seem to be a fair guess that perhaps half of the farms producing milk would be exempt from production controls. The full burden would fall upon the larger and more efficient producers. Productionwise, if only 1- and 2-cow farms were outside the program, about 11 percent of the milk produced in this country would be completely unaffected by controls.

There is nothing startling about the fact that the dairy industry is adjusting to new conditions and situations. Such adjustments are constantly taking place—and, to a considerable extent, independently of prevailing milk prices.

For example, between 1944 and 1949—when prices of milk and butterfat averaged above 100 percent of parity—the number of farms producing dairy products for the market in this country declined by 19 percent. Yet the change in total milk production was less than 1 percent. The sharpest drop occurred on farms with less than 10 cows. In

Pennsylvania, 25 years ago, 47 percent of the total production came from herds of 9 cows or less. Today, in that State, only 18 percent of the milk comes from herds of that size.

There is a wide variation in dairy production costs in different areas of this broad Nation. There are even notable spreads among farms in the same area. One recent study in Pennsylvania revealed milk production costs ranging from \$3.50 per hundred to as much as \$9.50. I believe we need to ask ourselves whether we want an economic system that permits a producer with such almost unbelievable costs to provide our milk.

As all dairymen know, labor represents a large element of cost. Through the years the great emphasis has been upon obtaining increased production per cow and, with this, greater labor efficiency. To be more efficient, the dairyman need not necessarily work harder, faster, and longer. Rather the goal is to accomplish more, with less back-bending effort in a short time through planning, know-how, and laborsaving devices.

A survey by the Agricultural Experiment Station at Michigan State College pointed out opportunities for reducing milk-production costs by 45 percent, through the use of all available techniques and adjustments. This was done without increasing either the number of workers or the farm acreage. Gains were made primarily through the use of better-producing cows and improved

practices.

Now, of course, not every dairyman can achieve such an increase in efficiency. Many producers are already using most of the techniques employed in this test. But even they may increase operating efficiency and profits by using all of the available knowhow—the better breeds, feeds, and seeds and improved production practices. The dairyman who achieves only a part of the increased efficiency attained in the Michigan State test can offset the adjustment in price supports. It is still true in dairying, as in other segments of agriculture, that the individual farmer can do more for himself than Government can ever do for him.

Many would-be political leaders have been using high, fixed price supports as a smoke-screen to cover up one indisputable fact—the fact that it was the unprecedended demands of war, together with infiation, that kept farm prices high during the 10 years following Pearl Harbor. The parity ratio averaged between 100 and 115 during those years. Actually, it was cellings fixed by law at the top—not the 90-percent floor below—which set farm prices. Every farmer knows he would have received even more for his products during this period had there been neither ceilings nor price supports.

It has been apparent for some time that high, rigid, emergency supports were not the solution to our peacetime agricultural problems. These current problems have all developed under high, rigid price supports which remain in effect until the 1955 harvest. If farmers have experienced reduced prices and incomes, these reductions occurred under the old law which was supposed to prevent them.

There is nothing new or revolutionary about flexible price supports. They have been a part of our agricultural programs for nearly two decades. They have been endorsed at one time or another by every Secretary of Agriculture for 20 years, by the former occupant of the White House.

and by both major parties.

The financial pangs which go with readjustment to a peacetime economy are not new to agriculture. We have suffered them following every war in our history. Just as farm commodity prices go up faster than the general price level under the stimulus of war and inflation, they also drop further and faster than most nonfarm prices while the economy is read-

Justing to more nearly normal conditions. We are making the transition this time with fewer and less severe dislocations in agriculture and other segments of our community than ever before.

The depression which was so freely predicted a year ago falled to materialize. From an economic point of view, 1954 psoved to be the best peacetime year in history, although agriculture did not fully share in this prosperity. The changeover has hurt and is hurting most of our farm people.

Yet I believe all of the evidence indicates we have seen the worst. I am convinced that for agriculture the road ahead will be smoother than the one we have been traveling.

For several months now, most farm prices have been relatively stable. For the last 2 years, in fact, the parity ratio has averaged about 90, fluctuating narrowly between 94 and 86. It will be recalled that there was a 19 point plunge in the parity ratio during the 2 years preceding January 1953, when the new administration was installed.

We must not be content with mere stability of farm prices at current levels. But the price decline had to be halted before it could be reversed. The first half of that objective is being attained. The job at hand now is to get farm prices back into better balance with the general price level. This, I am confident, can be done under the Agricultural Act of 1954 which has as its goal a prosperous, stable and free agriculture.

Today I pledge anew to you and to all of our farm people that I will never knowingly sponsor or support any policy or program which I believe is not in the best interests of our farmers and all of our people, regardless of political pressure.

As the President pointed out in his state of the Union message: "Agricultural programs have been redirected toward better balance, greater stability and sustained prosperity. We are headed in the right direction. I urgently recommend to Congress that we continue resolutely on this road."

Now if I may leave one final thought with You, it is this: The future of American agriculture is bright—as bright as all of us have the will to make it. A kind Providence has blessed this choice land with vast natural resources—with soils and climate which, with American ingenuity, courage and freedom, have provided a standard of living unmatched elsewhere. May God guide us in the wise use of our abundance.

Proposed Interstate River Compact in the Pacific Northwest

EXTENSION OF REMARKS

HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. NEUBERGER. Mr. President, two outstanding members of the Oregon State Legislature recently discussed the Proposed interstate river compact in the Pacific Northwest, and demonstrated how it would react adversely to the State of Oregon and to the general progress of the region as a whole.

They cited book, chapter, and verse to show that the Federal power program should not be scuttled for a vague and nebulous structure, which could lead only to endless haggling and differences.

The TV and radio discussion by State Senator Robert D. Holmes, of Clatsop County, and State Representative Alfred H. Corbett, of Multnomah County, alerted many residents of Oregon to the dangers of the pending compact.

I ask unanimous consent that the discussion by Senator Holmes and Representative Corbett appear in the Appendix of the Record.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

INTERSTATE COMPACT WOULD MAKE OREGON
LOW MAN ON THE COLUMBIA RIVER TOTEM
POLE

ANNOUNCER. The following program is sponsored and paid for by the Pacific Northwest Resources Forum, Kenneth Kraemer, American Bank Building, chairman. The first speaker you will see is State Representative Alfred H. Corbett.

Representative Corbett. Good evening. I want to speak to you about the Columbia River Interstate Compact, which proposes the allocation of electric power and of water among the States in the Columbia River Basin: among Nevada, Utah, Wyoming, Montana, Idaho, Washington, and Oregon.

As low man on the Columbia River totem pole, Oregon stands to lose by this compact. You should think about it now, before final action is proposed, because the compact threatens to block Oregon's future development at least.

I was disturbed to learn that the Oregon delegation to the drafting committee cast its vote for the dangerously worded agreement. One member of that delegation had foresight enough to vote "No." I have asked that man, Bob Holmes, Democratic Senator from Clatsop-Columbia Counties, to discuss the compact with us tonight.

Bob, can you give us some background and tell how the compact came to be drawn?

Senator Holmes. Actually the first exploratory work seeking such a compact was begun about 4 years ago. The Republican leadership of the Pacific Northwest States of Oregon, Washington, Idaho, and Montana seemed to fear the suggestion of regional development under any type of a Federal program and were seeking some other means. Since that time, representatives of these States plus Wyoming, Nevada, and Utah have met in nearly 30 meetings, with this instrument as a result.

My Oregon colleagues on the Oregon compact committee know that I have opposed the suggested compact for several reasons:

First, I have felt that the overall committee was not representative of the people Out of some 50 memof the Northwest. bers there are only 3 or 4 Democrats, and while I certainly do not believe this should be a partisan issue, the very makeup of the committee in this respect seems to make it one. The thinking of the committee as a whole has not been representative. It has been dominated by the private power approach to the virtual exclusion of public power and middle of the road policies. Consequently I think that instead of trying to find out the best way to develop all of the resources of the Columbia Basin * * * this committee has been trying to prove that the suggested way is the only way.

Second, while the Intent of the commissioners was expressed again and again as that of making the whole compact recommendatory and advisory (which I might add is not in my opinion advisable if it is to mean anything), article 7, the apportionment of water and related problems, clearly establishes prior rights for upstream States for all beneficial consumptive uses of water

as against nonconsumptive uses for downstream States, with a "look-see" clause setting the year 2000 as a time to see how it has worked out. And so I think that this section clearly is in complete violation with the tenor of the document.

Representative Corbstr. The compact draft has been released for comment. What happens next?

Senator Holmes. The next step is for the compact as modified by any comments which may be accepted, to be presented to the State legislatures, and for a Federal consent bill to go before Congress. If these are passed, Oregon will be bound by the terms of the compact.

Representative Corbett. Maybe we'd better look at the proposed compact. As I understand it, there would be a commission consisting of the seven member States, and the delegates to the commission would meet and try and work out the resources problems of the Pacific Northwest.

Senator Holms. That's right. The four States of Oregon, Washington, Idaho, and Montana would each cast two votes on the commission, while Wyoming, Nevada, and Utah are given one vote apiece. Eight out of the eleven votes would be required to take action.

Representative CORBETT. Then Oregon alone, with two votes, could not block an adverse decision. We would have to swing two more votes. How do we make out compared to the other States?

Senator Holmes. Oregon doesn't get anything we don't already have and we give up the possibilities of a bright future. The whole idea is wrong. As you mentioned, Oregon is low man on the Columbia River totem pole. We will make out better if we draw from a Northwest pool, than if the water and power resources are divided up among the States. I think this compact illustrates the dangers of a plecemeal Stateby-State approach.

Representative Cordent. Let's look at the

Representative Corserr. Let's look at the sections dealing with the allocation of power and water.

and water.

Senator Holmes. Article VI is important. It deals with the allocation of power among the States. It says in effect that the compact commission should recommend the manner of dividing the power among States. The method is to look at each new project—at each dam—separately and to decide how much power is developed from that project. Then each State is given at least as much power as is developed at all of the new dams located inside its boundaries.

Representative Corbett. In other words, the compact would recognize the principle of giving to the State in which the power dam is located, all power from that dam. I mentioned during the last session of the legislature that the Seattle Chamber of Commerce wanted this principle established, and that Oregon would suffer.

Senator Hollmes. Yes, that is true. And the compact goes even further. It provides that the reservation of power to each State shall include (1) the full amount of prime power developed at site, (2) a fair share of additional power produced at site and at downstream dams, by reason of storage at the project. In other words, Montana would get all of the power produced at the huge Libby project plus all or part of the downstream power benefits which come from the release of water stored at that dam.

Representative Corbert. That doesn't leave much power to be allocated to Oregon, if the upstream States and Washington should gang up on us.

Senator Holmes. And that's more than a possibility. Washington has many more dam sites than we have in Oregon, and this formula is good for Washington as well as for the other upstream States.

Representative Corserr. I have tried to work out this power allocation just to see what might happen under the compact. It isn't favorable at all for Oregon.

To start out with I am assuming that the

To start out with I am assuming that the compact will not affect distribution of existing dams between Oregon and Washington across the Columbia, like Bonneville. The Dalles, and McNary or the Willamette Valley dams. Presently we are drawing approximately one-fourth of the generation from the Federal system, which amounts to the equivalent of about 800,000 kilowatts.

But when it comes to new dams we would suffer. The remaining dam sites are almost entirely upstream. The only sites remaining in which we might share are John Day, Hells Canyon, Mountain Sheep, and Nez Perce.

From John Day, if you subtract upstream storage we would get less than 200,000 kilowatts as our share.

As to Hells Canyon, if Idaho Power Co. receives a license to build the dams, I do not believe that Oregon under the compact could claim any power.

Mountain Sheep and Nez Perce, we would share with Idaho, providing the dams were

built federally.

Insofar as I am able to get informed estimates, this means that out of the 30 million unharnessed power potential in the Columbia Basin, Oregon could look forward with assurance to receiving little more than 2 million kilowatts additional power, about one-fifteenth of the new construction. This is in bleak contrast to the one-fourth we are drawing now out of the Federal system.

Senator Holmes. It is unfortunate we don't have exact figures. The Oregon delegation did not do what I requested, and that was to get an independent expert to tell us exactly how Oregon would make out under the compact arrangement. It seems to me vital that we have this information before

going ahead any further.

I might also point out that if this compact is adopted it would also make it even harder for the United States to come to terms with Canada about Libby Dam. You remember that the United States complained because Canada insisted on being allocated substantial downstream power benefits due to release of stored water backed up into Canada. This compact would approve the principle of allocating downstream power benefits to the State—or the country—where

the storage project is located.

Representative Corbett. Now let's look at article VII dealing with the allocation of

water.

Senator Holmes. This part of the compact would give the upstream areas an absolute priority for almost 50 years for any consumptive use of water, over a nonconsumptive use of water in Washington and Oregon.

Representative Corbett. Let me explain the terms. Consumptive use of water means municipal use, irrigation use or industrial use which results in substantial amounts of water being diverted or consumed and not returned to the river. Nonconsumptive uses which are given second place, are use of water for navigation, for generation of power, and for such other purposes as pollution control, fish propagation, and recreation.

Senator Holmes. This means that upstream areas (defined as east of the Cascades) like whole areas in Idaho, could withdraw water for agricultural purposes, or for some water-consuming industrial purpose like a paper plant, even though it might severely cut down power production or make navigation increasingly hazardous in Oregon and Washington.

Representative CORBETT. Obviously we haven't discussed the whole scope of the compact. The power and water features are most important, and I think it is worth while summarizing them.

The power allocation proposed in the compact would cripple Oregon's future growth. Today and in the past 20 years, we have drawn power from the northwest pool.

Cheap power has been available anywhere and everywhere in the Northwest. Oregon has attracted industries here based on this cheap power, based on our favorable ports, our labor supply, our climate, and other factors.

Under the compact, arbitrary State barriers would be drawn. Oregon would have difficulty in attracting industries because of the small amount of power which would be permanently allocated to this State.

Senator Holmes. And I believe that the attempt to allocate priorities for use of water would intensify this movement of industry away from Oregon. Today as in the past, water rights are almost entirely based on first come first served. Oregon has as good a chance as any other State to use water. Some main-stem dams have certain priorities to the use of water. Under the compact, Dregon and these dams would lose their prior rights.

Representative Corbett. The trouble is that the compact ignores the present needs and anticipated future needs of people for water and for power. Instead of letting water and power be divided among people in the whole region, the compact tries to impose arbitrary patterns on the economy of the Northwest.

The compact also adopts a dangerous policy, from Oregon's standpoint, of giving absolute priority for 50 years for consumptive use of water. While it may seem today that there is plenty of water, we don't know what developments will come in industry, nor can we envision all the schemes that may be thought of to siphon off water. Under the compact, Oregon would be signing away all rights to object to such consumption of water during the 50-year period.

Senator Holmes. It seems to me the proposal to divide up the Northwest into competing pieces is all wrong. We have grown and prospered as a unit. As soon as we start breaking the Northwest into competing pieces, we start the process of State fighting State. All of us, especially those of us who live in Oregon, will suffer.

Representative Corbett. I think people in Oregon who are most closely affected—the leaders of farm, labor, and business organizations, should get copies of the compact and study its implications. These are some of the dangers we see. Get copies and make up your own minds.

Senator Holmes. You can get copies from Columbia Interstate Compact Committee, H. Calvert Anderson, 320 Symons Building, Spokane, Wash.

Read the compact and make your comments known. This is a problem which affects all of us in Oregon. Before anything as far reaching as this compact is adopted, there should be much more consideration of what is the best way to handle resources in the Northwest.

Representative Corbett. Thank you, Senator Holmes, for being with us today and helping to discuss the proposed interstate compact as it affects Oregon.

Troubled Waters: The Formosa Strait

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1955

Mr. LEHMAN. Mr. President, there appeared in the January 13 issue of the weekly publication, the Reporter, which is published in New York, a very interesting and provocative special article

written by the editor of that publication. Mr. Harlan Cleveland, entitled "Troubled Waters."

This article analyses and discusses the recently negotiated treaty of military alliance with the government of General Chiang Kai-shek. The article makes a number of cogent points which surely must be considered by the Senate when this treaty comes before it for consent to its ratification.

I am not, myself, yet ready to subscribe to the thesis presented in this article, but it has given me much food for thought. It raises questions which must be answered.

I commend the reading of the article to all my colleagues in the Senate and to the people of the United States.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TROUBLED WATERS: THE FORMOSA STRAIT
(By Harlan Cleveland)

In a few weeks' time, the United States Senate will take up the Mutual Defense Treaty with the Republic of China. Its reception may not be as smooth as the administration thinks. Nobody will attack the aim: To defend Formosa from the Chinese Communists. But the document Secretary Dulles has signed contains two traps that could prove fatal to its ratification.

There is both an American and a Chinese reason for having a treaty. When President Truman issued his original order neutralizing Formosa and sending the 7th Fleet into the Strait of Formosa, his action was justified by the Korean war. But the war in Korea is over—or anyway Washington assumes that it's over. The new treaty provides a new justification to keep the 7th Fleet patrolling the China Seas.

The Chinese Nationalists want this treaty as long-term insurance. They know it carries no tangible benefit they don't already have. They know that the leaders of both our political parties are determined to defend Formosa. But they want a solemn treaty saying so.

TRAP NO. 1

The treaty itself is short and simple. Following the NATO model, it says the United States and China will each act in accordance with its constitutional processes to meet the common danger created by an armed attack against the territories of either of them. For purposes of the treaty, China's territories are defined as Formosa and the Pescadores Islands.

There was so much political nonsense in this country 2 years ago about unleashing Chiang that the new treaty has been widely interpreted as releashing him. But he was never going anywhere without American support, and he at least has known it right along.

The treaty is not, however, a mere ratification of the obvious. The important point is that, for the first time in an instrument requiring Senate action, the United States formally recognizes that Formosa and the Pescadores are part of the Republic of China.

For the better part of 10 years, the United States has been carefully ducking every chance to say that Formosa belongs to China At Cairo, to be sure, Roosevelt joined with Churchill and Chiang in declaring their "purpose" to restore to the Republic of China "all the territories Japan had stolen from the Chinese, such as Manchuria, Formosa, and the Pescadores." But the Cairo Declaration did not require Senate action, and when we got around to signing a peace treaty with

the Japanese in 1951, there were two rival Chinese governments to reckon with. Our major ally, Britain, recognized the Communist one. We could therefore agree with the British on only a single sentence: "Japan renounces all right, title, and claim to Formosa and the Pescadores." We had to leave out the whole question of who was to inherit these strategic chunks of earth.

The point is not just a legal nicety. The Communists have repeatedly charged us with aggression for the help we have given to the Nationalists in defending Formosa. They regard their fight for Formosa as an internal Chinese matter, and the Soviet Union backs up the claim that Formosa is Chinese. Indeed, on this point the Nationalists agree. The juridicial status of Formosa is not an lasue in China's continuing civil war. Both sides are sure the island belongs to China.

The question is, To which China? We recognize only one of the governments claiming the right to wear the China label, but we can't help seeing that our claimant is the less powerful of the two. We don't have the military strength to enable our man to establish his claim beyond the offshore islands he now controls. If we formally recognize Formosa and the Pescadores as territories of Chiang's China, won't our friends the British, who are stuck with their recognition of the Communists 4 years ago, be forced to consider the islands as territories of another China run by Mao Tse-tung?

In order to keep Formosa free from Communist control we may later want to argue that the island isn't necessarily part of the China that now controls the mainland. If instead we bind the islands to the mainland's fate by treaty, we tie our own hands and the hands of our allies in the Far East.

One trap in the China Treaty is thus the recognition of Formosa and the Pescadores as part of China. This may well have been inadvertense: The extraordinary fact is that this question was not even discussed in the negotiations leading up to the signing on December 2, 1954.

TRAP NO. 2

The other trap cannot be something the hegotiators overlooked. It is the effect of the treaty in brushing aside the United Nations. Suppose that tomorrow the Chinese Com-

Suppose that tomorrow the Chinese Communists should launch a real attack on Formosa. Our treaty would obligate us to come to the rescue. But would we get any help, any military aid or moral support, from the British and other friends with interests and armed vessels and warplanes in the Far East?

The help is there for the asking, if we ask through the United Nations. Mr. Anthony Nutting, Britain's Minister of State at the United Nations, said it very clearly the other day: "A Chinese Communist attack on Formosa is an attack upon a member of the United Nations and would, no doubt, call for collective action by the United Nations in which we would, of course, be involved as a member of the U. N." This remark, made on the "Meet the Press" television program, whipped up a brief political gale in England, but Nutting's superiors took pains not to contradict what he had said.

How does the treaty deal with the United Nations? In a resigned sort of way, it repeats the 1949 NATO formula on the subject:
"Any such armed attack and all measures taken as a result thereof shall be immediately reported to the Security Council of the United Nations. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security."

By specifying the paralytic Security Council as the organ in which we would raise the matter, the treaty ignores the possibility of action by the General Assembly under the "uniting for peace" resolution worked out

by Secretary Acheson in 1950. As now written, the treaty is a blueprint for going it alone.

We were able to act in Korea through the United Nations because it had previously guaranteed the integrity of South Korea. Now that the United States Government is clear that it wants a neutralized Formosa, not a Knowlandish adventure on the mainland, isn't it time for the United Nations to share with us the danger in the Formosa Strait?

The Chinese Nationalists would not be happy about the United Nations taking jurisdiction over their fight with the Chinese Communists, any more than the French wanted the United Nations in Indochina until it was too late. But in this era of unlocalized wars, Americans can hardly agree that Formosa is anybody's internal matter.

The American Association for the United Nations has already suggested a line of action that both the British and we could support. "The United States," says the American Association for the United Nations, "should join in sponsoring or supporting a proposal that the United Nations, without regard to the question of recognition, as to which its members are presently divided, should at once call upon both the authorities now in control of the government on Formosa and the authorities now in control of the government on the mainland of China to cease the use of armed force against each other in this area in the interest of world peace." Such an action would bring many of the free nations into the fray on the day a Red invasion force began its attack on Formosa. The backing of our friends in the United Nations, added to our own well-known determination not to let Formosa be taken over, should deter the invasion if any advance warning can deter it—and defeat it if the Chinese Communists were so rash as to ignore the collective warn-The Mutual Defense Treaty bypasses the United Nations, and makes it practically impossible for our Allies to help us even if they want to. The Senate will have to decide whether it wants to assert that we will go it alone in the world's No. 1 trouble spot.

IS THIS TREATY NECESSARY?

How did a treaty that so hobbles our freedom of action ever see the light of day? The real reason, which cannot be found in the official explanations, can be bluntly stated. The Elsenhower administration needs a treaty with the fire-eating wing of the Republican Party.

publican Party.

The Chinese Nationalists want to be reassured about the defense of Formosa, but they are in no position to insist that we codify our policy in treaty form. Senator KNOWLAND and his followers want the same assurance, and they have the political power to compel it.

Now it's entirely proper for the Secretary of State to wish for a peace settlement with the Senate Republican leader. Partisan passion about China has been a feature of our politics for too long already. Americans should be able to get together on the simple proposition that the Communists will be kept out of Formosa and the Pescadores—that, as Secretary Dulles has said, "Those islands are not for trade or bargain or anything else."

But let's not settle our internal fights by international treaty. For if the Mutual Defense Treaty is ratified as it stands, we shall have sealed ourselves in a puzzle box and thrown away the key. If there is war in the Strait of Formosa, we shall have blocked off the avenue of getting some help from our allies through the United Nations. And if there is peace, we shall have given the Reds a better claim to Formosa and the Pescadores than they could ever have thought up for themselves.

Universal Military Training

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. MULTER. Mr. Speaker, one of the most controversial issues facing the 84th Congress is the question of universal military training. I spoke in favor of it in 1947 when most of the people of my congressional district were against it. Now they are in favor of it because they understand the issues involved.

The following very fine article written by Myrick Land, which appeared in This Week Magazine on January 16, 1955, is worthy of the attention of every Member of the Congress:

Universal Military Training Is One of the Hottest Issues in Washington Today— Congress Fears It, But Here Are Findings That Show the Kids Want UMT

(By Myrick Land)

This month as our new Congress goes to work the spotlight will focus on one of the strangest mix-ups ever to confuse Capitol Hill.

A new military training bill is almost certain to reach the floor. Until last month high administration officials spoke out in favor of a universal military training program requiring that every able-bodied 18-year-old boy take 6 months of military training.

But at present writing the administration is proposing a much more limited program. Apparently it has backed away from UMT because most Congressmen consider it political poison. They're convinced most Americans won't stand for it. Many of their constituents have the same impression.

Yet the strange fact is that the 18-year-old boys themselves—and their parents—are overwhelmingly in favor of UMT. I have two nationwide surveys to prove it.

This odd misreading of the public pulse by Congressmen may have serious effects upon our teen-agers. Many youth leaders say that if the present draft act remains in operation, boys will face years of military insecurity.

MARKING TIME

They will begin marking time at 18, waiting to see whether or not they will be drafted. They may have to wait as long as 4 or 5 years for their call. Some will give up plans for attending college. Nearly all will run into a blank wall when they start looking for decent jobs.

The unlucky ones may crack up during this nerve-racking period, according to specialists in youth problems. Military insecurity has been an important cause of teenage crimes.

By taking one simple step, the 84th Congress could save our teen-agers from this difficult, sometimes dangerous, period of uncertainty. At the same time, Congress would begin strengthening our national defense.

The country's top military experts say that universal military training is the fastest and fairest way to build up our military reserves, which are now dangerously weak. Upon completing 6 months of UMT, many youngsters would be enlisted into the Regular Army. The hundreds of thousands not needed to keep the Army up to its authorized strength would go directly into a huge reserve force, and would be required to remain

in the Active Reserves for several years, taking a certain amount of refresher training from time to time.

Through UMT we could build up a readyto-fight reserve of 2 million men in about 5 years. Eventually, we could maintain a 5- or 6-million-man reserve if that is considered necessary.

It isn't even necessary for Congress to pass a new law to bring this about. There's a perfectly good law on the books—the Universal Military Training and Service Act. This act was passed way back in June 1951, and promptly forgotten. Under the act, UMT was supposed to go into operation as soon as Congress gave the go-ahead sign. But Congress has never given the signal. The act will die on June 30, 1955—unless our new Congress gives it a reprieve.

In the past, high officials in the administration have spoken in favor of UMT. But this endorsement carried little weight with its traditional opponents. For 10 years UMT has been receiving high-level support from leaders of both parties. But no Congress has ever put a UMT law into effect.

What are the chances that the 84th Congress will take action on UMT this time?

I put that question to Senator Lyndon

Johnson, of Texas. Senator Johnson, the

Senate's new majority leader, is noted for his ability to predict how Congress will vote weeks before a proposal reaches the floor. The Senator told me:

"I am afraid prospects for UMT are doubtful."

I checked with other Senators and Congressmen from various sections of the coun-Without exception, they also doubted that the new Congress would dust off the half-forgotten UMT Act and put it into operation.

What will be the arguments for letting UMT die? Although the debate hasn't started yet, it's easy to answer that ques-

"This is a democracy where the people rule, and the people are against UMT."

Those are the words of the widely respected Edwin C. Johnson, Colorado's new Governor, who was a bitter foe of UMT during his long senatorial career.

A surprisingly similar viewpoint was expressed recently by a strong supporter of UMT, Senator RALPH FLANDERS, of Vermont.

"The policy of universal military training has been one which the parents and children of America have come to view as the negation of the free life which is the ideal of western civilization," Senator Flangers said, in a speech favoring UMT.

Some economy-minded Congressmen are worried about costs at a time when the Government is pledged to a reduction in spending. But the feeling that the voters won't stand for the law is still the biggest roadblock.

What basis is there for this feeling?

I spent 6 weeks pinning down the answer. I started by checking with the Institute of Student Opinion, an organization which concentrates on discovering what teen-agers think about controversial questions. It is sponsored by scholastic magazines, a major publisher of magazines for use in classrooms. The institute sends out printed ballots, and gets the help of thousands of teachers in its polls of the country's teen-agers. The students vote by secret ballot.

The institute's 1954 poll on universal military training was one of the biggest it has ever taken. The ballots were marked by 48,399 high-school students in 48 States.

AMAZING REPLIES

Here's how the institute phrased the question:

"Under present world conditions, do you favor the general principle of compulsory military training for all fit young men?"

And here are the amazing replies:

Sixty-six percent of the high-schoolers came out flatly in favor of UMT.

Eight percent hadn't made up their

Only 26 percent—1 teen-ager in 4—opposed the idea of UMT.

Views of high-school girls included in the poll almost exactly paralleled those of boys.

These startling results among high-school boys sent me searching for a guide to adult opinion on the same question.

I examined the latest findings of Gallup's American Institute of Public Opinion. Here's the way Gallup's pollsters put the question to a cross section of the Nation's voters:

"Would you favor or oppose requiring every able-bodied young man in the country, when he reaches age 18, to spend 1 year military training and then join the Reserves?

You'll notice that Gallup was asking the country's parents to make twice as great a sacrifice as the UMT bill provides-1 year of training instead of 6 months.

Yet, a whopping 72 percent of the adults they favored this 12-month UMT program.

Six percent hadn't made up their minds. Only 22 percent-approximately 1 voter in -opposed.

Most of the adults said they favored UMT because they felt it would keep the United States out of war. They thought the additional military strength would keep any potential enemy from risking war. But what about the teen-agers? Why did

66 percent of them vote in favor of UMT? I started checking with youngsters in all parts of the country.

They soon convinced me that they knew why UMT had been proposed and how it would work. And they were able to tell me exactly why they favored it-or, in the case of a sincere and vocal minority, why they opposed it.

The 1 teen-ager out of 4 who disliked UMT seemed to settle on 1 of these reasons;

'UMT would be asking for war.'

"It seems to me that this plan would make America look like an aggressor Nation.

"I feel that compulsory military training symbolizes the gradual swing of the United States toward command by force. I feel that the strength of a truly great nation does not lie in military might.

"Six months of military training wouldn't be of any value to either the boys themselves or to the country."

DANGLING MEN

The range of arguments brought up by the 66 percent who favored UMT was much wider. Here's how they shaped up:

 They think it is necessary: "Let's face it," said "Butch" Fitzpatrick, of Salem, Ohio. 'These are bad times-3 wars since 1914. think we should train every 18-year-old who can pass a physical."

In Saginaw, Mich., Tom Dunning said: "If we have a war with Russia, we'll need all the men we can get."

"If a crook knows that a man has training in judo, and is proficient in it, he would think twice before he jumped him for his wallet," said Donald Schurman, of Baltimore.
"I think the same principle applies in international affairs."

2. They're tired of being dangling men: "I like the UMT plan a lot better than the draft setup we have now," 17-year-old Hubert Gainer, of Philadelphia, told me.
"Under UMT you'd go right in at 18, get your training over with, and get out. Under the draft, you just have to hang around and wait until the draft board decides it needs you. Once you get a draft card, you can't get a decent job."

Another teen-ager standing nearby chimed in: "Yeah. And that's when a lot of kids get into trouble. Nothing much to do, and feeling kind of mad at the world."

MILITARY INSECURITY

On this point, incidentally, a number of adults go along with the Philadelphia teen-ager's comment. William E. Titus, a former justice of the peace in Huntington, N. Y., named this feeling "military insecurity."

"'Military insecurity' starts at about age 16," Titus says. "Boys began to say: What is going to happen to me? Will I be drafted? How will Mom take it? Will my girl wait? And there are hundreds of other questions. all unanswered until Uncle Sam makes his final, often long-drawn-out decision.

"Youthful insecurity caused by the present draft law could be abolished in good measure by UMT and with it would go much of the juvenile delinquency which has arisen to

plague us in recent years."
3. They think UMT is fairer than the draft: "I don't think the present draft system is fair at all," said Eugene Hatfield, of Norman. "There are men I know of that were drafted at an early age when they were still in high school. Then there are men running their own businesses that are physically fit that should have received their draft notices long ago. I can't understand why one gets drafted and the other doesn't."

"You don't have to worry about the draft if you're a politician's son," a Baltimore youngster told me. "The draft board manages to misplace your records."

"If you're a big brain, the draft board says."That's all right. You go on off to college." Then you go to college, and get married, and have a couple of kids, and before you know it, you're out of the draft for good. Why don't they take the big brains?" a mournful Philadelphian asked me. "Don't the Army need any brains?"

4. They feel the military training will do them good: "Military training builds boys up physically," commented Ray Aceto, of Cleveland, "They have to learn to take orders and carry them out. And they have to learn how to get along with others.

"I'm for UMT because I feel every boy needs the strict training which is found in the Army and not found in the home any more," said Anthony Sepan, of Philadelphia-

On this point, "Butch" Fitzpatrick, the Salem boy, said: "We high school kids are just a little scared and afraid to admit it. This is a fast-changing world, and we're being pushed out into it without enough preparation. We are expected to know twice as much as our parents did—in the same amount of time. UMT would treat us all alike, and after finishing the training we would be a little older and a little better prepared to face this complicated world.'

As I checked with students in high school after high school, I think I discovered the reason for Congressional timidity about UMT.

NOISY MINORITY

The whole idea of training every 18-yearold is opposed by a minority which manages to make enough noise to sound like a majority. I noticed that many youngsters who favored UMT were startled to learn that they were expressing a popular rather than an unpopular opinion.

By speaking up forcefully and frequently, the opponents of UMT have practically ve-toed the UMT act. One result is that the United States now has a reserve force so small that Secretary of Defense Charles B-Wilson refers to the reserve situation as a scandal. Under UMT, we could quickly build up a ready-to-fight reserve of 2 million, 3 million, or even 5 million men.

For or against, the youngsters of America were not afraid to take a stand on UMT-

Will we be able to say the same about the Members of our 84th Congress?

Report of the CIO Standing Committee basis for decent and effective trade unionism. "Departures from morality and high ethion Ethical Practices

EXTENSION OF REMARKS

HON, HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1955

Mr. HUMPHREY. Mr. President, on June 22, 1954, I introduced S. 3649, a bill requiring the public disclosure of certain information in order to strengthen the administration of labor-management health, welfare, and retirement plans, At the time I introduced the bill I made clear to the Senate that we were attempting to suggest a constructive proposal to help eliminate as much as possible abuses in this vital area of labor-management relations. The development of health, labor, and retirement funds in union-management agreements has been one of the great advances Which collective bargaining has made in recent years and one of the best ways of safeguarding those advances was to be vigilant and guard against abuses of these funds by a few irresponsible and selfish people.

It is a matter of great satisfaction to me to learn that the American trade union movement is taking concrete steps to stamp out the shady and dishonest practices that have come to its attention. It is my understanding that both the CIO and A. F. of L. are interested in cooperating with Government to help

meet the need.

Within recent days I have had an opportunity to examine a report of a standing committee on ethical practices established by the CIO. It is a report which deserves wide distribution. The committee held extensive hearings, made a series of thorough studies, and has recently prepared a set of findings and recommendations which I desire to bring to the attention of the Senate.

Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the report of the CIO Standing Committee on Ethical Practices relating to their findings and recommendations and conclusion.

There being no objection, the excerpts from the report were ordered to be Printed in the RECORD, as follows:

CIO STANDING COMMITTEE ON ETHICAL PRACTICES

(Jacob S. Potofsky, Chairman; Joseph Curran; James G. Thimmes; Arthur J. Goldberg, Director)

PART I. THE FACTS

The Congress of Industrial Organizations has always demonstrated deep concern with the ethical standards of our labor movement.

For a number of years the CIO convention has adopted a statement of ethical practices. The 1953 statement of ethical practices fol-

lows in part:

"In previous years, conventions of the CIO have adopted statements emphasizing the determination of the CIO and its affiliated unions to wage war on unethical practices within and without the trade-union movement, and to take all necessary steps to emphasize the democratic rights of individual trade union members. We reaffirm these ttatements of CIO policy as a fundamental

cal principles are evil and harmful to society, regardless of the circumstances or surroundings in which they take place. Public officials who betray their trust and businessmen who use corrupt methods and bribery to gain their ends are both equally guilty of wrongdoing; they can no more—and no less—escape blame for their actions than the racketeers who prey upon the labor move-ment, seeking to use its respected organizations as a front for nefarious personal gains.

"Each American loses an essential part of his rights and privileges as a citizen wherever corrupt practices flourish. High ethical standards are essential to our democratic way of life and the well-being of our people. Freedom from political corruption depends upon freedom from both moral and legal

"The CIO joins all decent Americans concerned for the future welfare of our Nation in expressing our unqualified opposition to such practices by individuals, corporations, special interests and organizations.

"As for our part, we in the CIO are determined to continue those policies which have made our organization clean, decent and

honest, and to keep it so.

We adopt this statement of principles on ethical practices and individual rights in the firm determination that our members shall not be denied their right to an honest, decent, democratic trade unionism singlemindedly devoted to the advancement of the interests of American workers and the welfare of the Nation. The strength of our dedication to this principle was demon-strated in our forthright action 3 years ago in expelling 11 Communist-controlled unions with a membership of almost 1 million.

"We call upon other elements of our society-particularly all branches of Government and industry-to act with equal vigor against dishonesty and unethical practices wherever they may be found within their ranks. We ask them to join with us in attacking and stamping out racketeering and immoral elements in American life.

"Morality is an individual as well as a social matter. An eternal vigilance by all segments of society against the weakening of moral standards within their ranks will bring a stronger democracy."

This statement of principle has never been a dead letter in the CIO. The officers and executive board of the CIO have implemented this statement as the occasion required.

Recently the officers and board have given specific attention to the implementation of the ethical-practices statement in the field of welfare funds.

This important area of union activity is one of vital concern to the CIO which pioneered in the development of welfare programs through collective bargaining. It was therefore natural that when the New York State Department of Insurance, investigating the administration of welfare funds in that State, disclosed that there had been in some instances abuses in administration on the part of leaders of a few local unions of a CIO affiliate, that the president of the CIO, Walter Reuther, moved promptly and forth-rightly to rectify the situation.

President Reuther immediately sent a letter to President Max Greenberg, of the Retail, Wholesale, and Department Store Union, calling upon him "to take prompt remedial action against the local officials involved in the malpractices disclosed at these hearings." President Reuther also said that he would expect "a full report of the corrective actions taken by your union against the individuals named in these hearings and any others against whom there is a legitimate charge of racketeering or maladministration.

President Greenberg, of the Retail, Wholesale, and Department Store Union, reported to the October meeting of the CIO executive board as to what actions had been taken. As President Greenberg subsequently told the standing committee, the Retail, Wholesale, and Department Store Union immediately steps to protect the interests of the members of this handful of locals and also to demonstrate affirmatively that we in the Retail, Wholesale, and Department Store Union will not for one moment tolerate any abuses of moneys held in trust for the benefit of our members. Accordingly the five local unions were suspended and administrators were appointed. Three of the locals acceded to the international's suspension order. In a fourth we had to take physical possession of the local offices, an action that was anproved by the membership of the union at a meeting a few days later. The fifth local union was expelled from the Retail, Wholesale, and Department Store Union for refusing to accede to the suspension and to the appointment of an administrator.

The international union executive board also adopted a resolution on ethical practices which commended President Greenberg for taking effective disciplinary action and condemning the abuses of local union funds.

The executive board of the CIO gave careful and thoughtful consideration to the entire question of ethical administration of welfare and other union funds and unanimously adopted a statement on this subject. This statement is as follows:

Statement of policy on the administration of welfare and other union funds

During the past several years, CIO unions have negotiated pension and welfare agreements with employers throughout American industry.

This precedent-making development has brought tangible and substantial benefits to millions of union members and their families. Through the collective-bargaining process, the unions of the CIO have thus been responsible for a major assault on the hazards of insecurity arising from old age, death, disability, and illness.

Thousands of these welfare plans, achieved through collective-bargaining processes, are now functioning. Hundreds of thousands of families have benefited, hundreds of millions of dollars in benefits have been paid out to workers and their families. People who might otherwise have suffered privation and want have been able to preserve their dignity, self-respect, and standard of living, despite family catastrophe. These welfare plans are a testimonial to the vitality and flexibility of the collective-bargaining process in the American free-enterprise system.

The administration of these welfare plans varies. Some are administered jointly by unions and employers; some by employers; some by the unions alone. Whatever the method of administration, the objective in all cases is the same-to provide the maximum benefits at the minimum cost to the workers and their families. It is a characteristic of all well-administered welfare funds that the cost of administration is a small part of the total income of the fund.

The vast majority of these welfare plans are administered as they should be, as a sacred trust on behalf of the beneficiaries, The CIO is proud of this record of constructive achievement on the part of its affiliates in this field of human welfare.

We have been determined from the outset that the administration of welfare funds shall meet the highest ethical standards for the handling of fiduciary funds.

Year after year CIO conventions have reaffirmed, in our annual statement on ethical practices, our determination to prevent any corruption in the handling of funds belonging to, or held in trust for, our members or their families.

We have said, and we now repeat, that there is no room in the legitimate labor movement for crooks or Communists.

In the recent past a few cases of financial corruption in the handling of welfare funds on the part of certain local officials have come to light.

These situations, few as they are in relation to the whole picture, cannot be condoned. Even a few are far too many. They are shocking and disgraceful.

We commend President Reuther for the prompt and effective manner in which he demanded and secured remedial against these abuses, involving local unions a CIO affiliate in the New York area.

We unreservedly approve his statement that the CIO does not recognize any autonomous right of crooks and racketeers to use the good name of the CIO as a cloak for their corruption. The CIO executive board will unhesitatingly use its powers, under the CIO constitution, to preserve the integrity of our movement and to keep it free from any taint of corruption.

At the present time several Federal and State agencies are investigating the administration of welfare funds.

The CIO unreservedly welcomes every legitimate investigation of welfare funds and their administration.

The CIO pledges complete cooperation, in the firm belief that the pitiless light of publicity should fall squarely on those who betray their trust in the handling of welfare funds-whether these betrayers be union officials, corporation officials, or insurance company officials. There is no place in the labor movement for corrupt union officials, and they should go to jail, along with every embezzler of welfare funds, regardless of

The CIO pledges its cooperation to all legitimate efforts on the part of law-enforcement officials to make certain that proper punishment is meted out to these malefactors.

The CIO, furthermore, will not delay action to prevent or remedy abuses until a case has been formally established in the courts Just as we did in expelling Communist unions, we will, in accordance with our own democratic procedures, take prompt and effective action on our own initiative against financial corruption by union officials.

There is considerable discussion, as a r sult of recent revelations, of the need for remedial legislation. We have no illusion that a simple act of law will eliminate abuses in this area, any more than laws against murder eliminate killings.

There is, of course, no substitute for character and honesty in people in positions of trust. There is no substitute for internal union vigilance to insure that union office is held as a trust by responsible individuals.

Fair, thoughtful, and well-considered legislation, however-if inquiry demonstrates a need-can help minimize abuses in the administration of welfare funds.

The CIO pledges cooperation to all legitimate inquiries as to the need for legislation; and if legislation is demonstrated to be necessary, we likewise pledge full cooperation in formulating fair laws to help make certain that welfare funds are honestly administered. It goes without saying that the CIO will regard as inappropriate and antilabor any attempt to curtail the area of collective bargaining in this highly beneficial field of human welfare under the guise of preventing abuses in administration.

The CIO executive board empowers and directs the president of the CIO to appoint a special standing committee-

(1) promptly to investigate any charges or allegations of maladministration of welfare or other union funds within the CIO, and to report to the president and executive board of the CIO their recommendations for prompt remedial action; and

(2) promptly to formulate recommendations for standards for welfare funds; and if demonstrated to be necessary, for appropriate legislation to help make certain that welfare funds are honestly administered.

PART II

Findings

1. The standing committee has relied on an unusually authoritative body of facts as the basis for its findings and recommenda-The staff has examined the relevant literature in the field and reported on it to the committee; the questionnaire referred to above has provided a review of the practices of CIO unions in health, welfare, and retirement programs. The hearings gave the committee an unusually penetrating insight into the complex problems posed by these programs.

2. The extension of collective bargaining interests to the field of health, welfare, and retirement programs is perhaps the most significant development in industrial relations of the post-World War II period. These negotiated plans have undertaken to fill a serious gap in community resources for the protection of the individual against the hazards of ill health, old age, and unemployment.

3. The significance of these negotiated plans is stressed by the notable inadequacy of Government benefits to deal with these problems. And here again the labor movement is performing a historic task in a democratic society by seeking to deal with social problems through the medium of voluntary organizations. As the CIO has sald in other places, these voluntary efforts at best are far from adequate to deal with the total problem of health and old age, and our concern with improving the administration of health, welfare, and retirement programs should not be construed as lessening our conviction that the Government responsibility is fundamental in this field.

4. It would be nothing short of tragic if the dishonesty and chicanery practiced by a few individuals were to obscure the monumental contribution of these health, welfare, and retirement programs to the security of people who work for a living.

And the fact is, virtually everybody who has had anything to say on the subject has said that the incidence of such dishonesty and shady practices is isolated to a few local situations. The vast majority of these programs have been efficiently, honestly, and conscientiously administered.

We reiterate, however, the position which the CIO has taken from the very beginning of the revelations of maladministration Even though these instances are few and local it does not lessen our obligation to eliminate every opportunity for such dis-honesty, to remove the evil doers from the labor movement, and from the business community; and to exercise every caution against the repetition of such instances.

5. The CIO is concerned with more than actions that may be technically illegal. There are practices which may be technically legal but which merit condemnation and extermination on the ground that they violate the basic tenets of trade union ethics and morality. Indeed, it is the concept of ethics and morality that has provided the motivation for the initiation of these programs in the first place and the effective administration of these programs in the overwhelming number of cases.

The CIO will move to root out any practice in the administration of these health, welfare, and retirement programs which makes it possible for individuals to derive unjustified personal profit or advantage from the administration of such programs. As far as unions are concerned, we must rely both on trade union morality and our own internal high standards to keep our programs beyond reproach. What we count on as our greatest asset is the dedication of millions of union members and their elected leaders to the

great cause that the labor movement represents.

6. The recommendations that follow are concerned with standards of administration which, if adopted by this convention, will constitute CIO policy in this field affiliated unions. The problem of legisla-tion, if any, will be the subject of a forth-

coming report by this committee.
7. We want to make it clear that the which follow recommendations are meant to deal with the content of health, welfare, and retirement programs. In this highly fluid area of collective bargaining, there are no blueprints for health, welfare, and retirement programs that can be drawn for all unions at all times in all places. The historic autonomy of the international unions to run their own collective bargaining affairs, is not impaired by these recommendations.

The focal point of these recommendations is the administration of health, welfare, and retirement programs; and within the framework of administration we seek to set down recommendations that will make for better administered programs without in any way affecting the content of the programs. is also fair to say that these recommendations represent the overwhelming consensus of the expert advice and guidance which the committee has received from all sources inside and outside of the labor movement.

8. The recommendations that follow are in the first instance necessarrily directed at CIO affiliates with substantial administrative responsibility in connection with health, welfare, and retirement programs. does not mean that only such CIO affiliates are concerned. On the contrary, we believe that the standards set forth in the recommendations can be studied with value by all the other elements in the health, welfare, and retirement field.

The CIO is determined to take all necessary steps needed to insure that health, welfare, and retirement funds are administered in accordance with the highest ethical standards. This is essential to the well being of the men, women, and children who are the beneficiaries of these beneficient programs.

The CIO is determined that these programs shall be clean, decent, and honest and they shall be kept so.

Recommendations

1. The trustees or administrators of health, welfare, and retirement programs, whether union, company, or joint, and all others exercising responsibility in connection with such programs, have the obligation to make sure that maximum benefits are provided from the money available. These plans should be administered as a sacred trust on behalf of the beneficiaries. Their ad-ministration should meet the highest ethical standards for the handling of trust funds.

2. All welfare funds should be audited at least semiannually by independent certified public accountants who should certify that the audits fully and comprehensively show the financial condition of the funds and the results of the operation of these funds.

3. There should be full disclosure and report to the beneficiaries at least once a year by the trustees or administrators of all pertinent facts concerning the administration of welfare funds, including detailed financial reports and audits which shall specify the salaries, expenses, and fees paid in connection with the administration of the program. to whom paid, and how much, and for what

4. Persons occupying full-time paid positions with unions or companies should not receive additional compensation for acting as trustees or administrators of their own organization's health, welfare, and retirement

5. Where welfare benefits are carried through an insurance company, the carrier should be selected through genuinely com-Petitive bids on the basis of the lowest net cost for given benefits provided by a responsible company. The company should war-rant that no fee has been paid directly or indirectly to any representative of the parties in connection with the coverage provided.

6. The insurance carriers should be required to file statements with the trustees or administrators of welfare programs, specifying claim experience, commissions paid by the carriers, to whom paid, retentions, and amounts of dividends received and to whom paid. This information should be made available by the trustees or administrators

to the beneficiaries.

7. Brokers performing no service in connection with insurance coverage for welfare programs should receive no commissions or Other fee payments. Laws, if any, requiring such commission payments should be repealed. Savings resulting from nonpayment of unearned commissions should be utilized for greater benefits for the beneficiaries of the program.

8. International unions which negotiate Welfare programs, or whose locals negotiate

such programs, should:

- (a) Establish and enforce specific standards and conditions of performance relating to health, welfare, and retirement programs, incorporating the foregoing recommenda-
- (b) Have expert advice available for the negotiations and administration of such programs.
- (c) Provide for both internal and independent audits of welfare programs administered by locals and other subordinate bodies in order to insure proper administration.

(d) Provide training programs for union representatives in the techniques and standards of proper administration of welfare programs.

(e) Carry on educational programs for the members who are the beneficiaries of such programs as to the content of the programs and their rights thereunder.

(f) Act promptly to correct abuses in the administration of such programs wherever abuses occur.

CONCLUSION

This is only the first report of the standing committee. There will be additional reports, including one dealing with legislative proposals. And, of course, the standing committee stands ready at all times to discharge its mandate "promptly to investigate any charges or allegations of maladministration of welfare or other union funds within the CIO."

A Young American Is Looking Ahead

EXTENSION OF REMARKS

HON, CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. WOLVERTON. Mr. Speaker, I appreciate the consent that has been given to me by the House to extend my remarks in the RECORD and include a letter which I have received from Barry R. Billmann reading as follows:

WOODLYNNE, N. J., January 10, 1955. Hon. CHARLES A. WOLVERTON.

DEAR SIR: I am only 10 years old but I am planning to join the Naval Academy. I read the item in the paper about new candidates, and I am very interested. Of course, I won't be out of high school till 1963, but I would like to get my name in early, as my daddy

was in the Navy and he is a fine man, and I shipments of oysters into the United want to be like him. Hoping to hear from you soon, I am,

Very respectfully,

BARRY R. BILLMANN. P. S.-If you want me before then my phone number is Woodlawn 4-9179.

I have replied to this young man that if it is my good fortune to still be a Member of Congress in 1963 I will be glad to honor his request and nominate him for admission to the Naval Academy. I am certain that any boy 10 years of age who is looking forward already to admission to the Naval Academy and who is not deterred by the years that must intervene is entitled to favorable consideration. He is the kind of stuff that America can depend upon in the future. I feel honored to have such a boy residing in the congressional district which T have the privilege and honor to represent.

Tariff Rates on Ovsters Should Not Be Lowered

EXTENSION OF REMARKS OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955 Mr. MACK of Washington,

Mr. Speaker, oyster taking and processing is an important American food industry. In an average year about 60 million pounds of raw oysters, valued at \$25 million to \$30 million, are taken by American oyster fishermen from American waters. The value is further increased by the canning or deep-freezing of these oysters. The industry employs large numbers of people, both on fishing boats. on the oysterbeds, and in the canneries.

A proposal will be under consideration at the International Trade Conference in Geneva which starts next month to lower the tariff on imported oysters. If the present tariff rates on oysters are lowered, increased quantities of oysters, mostly from Japan, will flood the American market, thereby working great hardship on American oysterbed owners, oyster fishermen, oyster cannery owners and workers.

American oyster cannery labor cannot and should not be expected to compete with the low wages prevailing in the oyster canneries of Japan.

The Japanese women and girls who work in the oyster canneries of Japan receive a wage of only 8 cents an hour, compared to a wage of \$1.50 an hour in the oyster canneries of the United States.

Men who work in the canneries of Japan at cleaning, shelling, smoking, and shoveling oysters receive an average wage of \$0.197 or less than 20 cents an hour. In the United States, the average wage for similar labor is \$1.50 to \$1.78 an hour.

In short, the hourly wage paid in the United States is 15 to 20 times that paid in Japan. Unless reasonable tariffs or quota limits are imposed on Japanese

States, Japanese oyster producers will drive the American oyster industry out of business.

The United States Tariff Commission should be proposing increasing the duty on Japanese oysters instead of the Committee on Reciprocity Information now considering lowering the tariff on Japanese oyster imports.

Will Congress Vote Raises?

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. MULTER. Mr. Speaker, salary increases have been recommended to the Congress for armed services personnel. Federal workers, and Federal judges. The question now is, Will Congress vote a raise for themselves?

In that connection, I am pleased to direct the attention of our colleagues to the following article, written by Doris Fleeson, which appeared in the December 31, 1954, edition of the Evening Star of Washington, D. C .:

WILL CONGRESS VOTE RAISES?-OPPORTUNITY SEEN FOR PACKAGE FEDERAL SALARY INCREASE FOR ARMY, JUDGES, UNITED STATES WORKERS, AND LEGISLATORS THEMSELVES

(By Doris Fleeson)

With pay raises in prospect in 1955 for a million Federal workers and the Army and with dignified but nevertheless plaintive urgings in this respect arising from the judiciary, Congress may get up enough nerve to get into the act with a raise of its own.

Although Congress is the only agency of Government with power to set its own rate of pay, it has always been notably reluctant to pay itself well. This modesty in dealing with itself has, employees of other branches of the Government complain, kept the whole level of Federal salaries low.

In 1946, Congress voted a \$2,500 tax-free expense fund in addition to Members' regular \$12,500 salary. The tax-free provision failed to set well with taxpayers and in 1953 Congress withdrew it. Now Members of both Houses receive \$15,000, all of it taxable.

This may appear to be substantial in rural or small-town America. Yet Washington remains one of the Nation's most expensive cities, and running for office is becoming progressively more costly. Especially if he has growing children, a Member's salary does not go very far.

Some of the better known Members, espe cially Senators, eke out additional income by writing or lecturing, but these methods are by no means open to all. At times the means have run from the dubious to the outright

illegal.

The judiciary also can make out a strong case for both salary increases and more money for general administrative expense. Federal judicial salaries have not been raised in 9 years, a period in which living costs have gone up sharply. District judges now receive \$15,000 and appeals court judges \$17,-500. Lawyers point out that a man sufficiently able to serve on the Federal bench could make much more practicing law. They fear that low salaries for judges will dim the ambitions of the ablest men to serve and that the quality of Federal justice will be lowered.

Virtually the entire Federal bench is in agreement that Congress has been niggardly with the judicial branch. Complaints vary in importance from weakness of the Federal probation system enforced through lack of funds, to lack of typewriters and lawbooks. Sometimes, as happened in the last session of Congress, judgeships are created without provision for operations of all the new courts.

President Eisenhower vetoed the 1954 pay raise for civil servants which was passed by Congress. This year, however, he has announced he is for a raise and Congress almost certainly will pass the required legislation.

There is some hope that Congress will consider all the pay-raise plans together so as to avoid inequities.

Not much of this is calculated to bring happy thoughts to Treasury Secretary Humphrey as he struggles with the deficit. His hope of keeping it in the neighborhood of \$3 billion may soon seem terribly optimistic.

Gallup Poll Shows Overwhelming Support for Alaska-Hawaiian Statehood

EXTENSION OF REMARKS

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. ENGLE. Mr. Speaker, a recent Gallup poll shows that both parties in this country overwhelmingly favor state-hood for both Alaska and Hawaii. According to the poll, the Republicans favor admission of Alaska by a 5 percent margin over the Democrats, and admission of Hawaii by a 6 percent margin over the Democrats. So the Republicans should support both statehood bills or a joint bill.

The article by George Gallup, which I include in the Record, points to some fear that admission of these two Territories would disturb the present balance in the Senate. It is not the intention of the authors of statehood legislation to make the election of Representatives and Senators from these two areas effective prior to the election in 1956. That procedure will relieve all misgivings on that score. The article by Mr. Gallup follows:

ALASKA, HAWAII BILLS IN FAVOR
George Gallup, director, America

(By George Gallup, director, American Institute of Public Opinion)

Public sentiment in favor of admitting both Hawaii and Alaska to statehood in the Federal Union is greater than ever, according to the latest nationwide poll by the institute, despite the perennial failure of statehood bills in Congress.

A majority of the American people have voted in favor of statehood in every poll on Hawaii since 1941 and on Alaska since 1946. Today's poll, however, finds the majorities on both questions greater than ever, with \$2 percent approving statehood for Alaska and 78 percent welcoming Hawaii into the Union.

President Elsenhower would give Hawasi priority over Alaska in the matter of state-hood and many GOP Congressmen are opposed altogether to admitting normally Democratic Alaska, but rank-and-file Republicans across the country are even more in favor of admitting Alaska than are rank-and-file Democrats.

A representative cross section of the voters was asked separate questions about each Territory.

The vote:

	Alaska	Hawaii
Favor	Percent 82 9 9	Percent 78 12 10

Here is the vote on Alaska's admission by party affiliation:

	Demo-	Repub- licaus	Inde- pendents
Favor Opposa	Percent 80 10 10	Percent 85 8 7	Percent 82 8

The vote on Hawaii by party affiliation:

	Favor	Oppose	No opinion
Republicans Democrats Independents	Percent 81 75 80	Percent 11 14 9	Percent 8

President Eisenhower, in his state of the Union message, urged approval of Hawaiian statehood, but advised against admitting Alaska until its "complex problems are resolved."

Statehood bills have been introduced at every congressional session for many years, but have met opposition from several quarters

One important obstacle has been the fear of a shift in the political balance in the Senate in recent years over such issues as civil rights legislation.

If Hawaii, which is normally Republican, were to be admitted during the present session of Congress, 2 more GOP Senators would increase the number from the present 47 to 49.

That would make the composition of the Senate 49 Democrats (including Senator Wayne Morse, of Oregon, who has said he will vote with the Democrats on matters of organization) and 49 Republicans, leaving Vice President Nixon to break a tie vote in favor of the GOP.

However, if Alaska, which is normally Democratic, were also admitted during the present session, the Democrats would have 51 seats to the Republicans' 49.

The drive for statehood took on renewed impetus as a result of World War II, in which both Hawaii and Alaska played a strategic role, geographically. It was largely from bases in the Hawaiian Islands that the naval and air war against Japan was fought.

The islands in the Hawaiian group comprise only 6,407 square miles of land, but the census count of the population in 1950 was 499,704, compared to Alaska's 128,643. Alaska is more than twice as large as Texas.

Hawaii became a Territory in 1900, Alaska in 1912.

The Late Willis W. Bradley

SPEECH

HON. JOHN J. ALLEN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1955

Mr. ALLEN of California. Mr. Speaker, it was with great regret that I learned of the death of my former colleague, the Honorable Willis Bradley. He and I came to Congress at the same time and were both assigned to the Committee on Merchant Marine and Fisheries. We worked together closely during the entire period of his service. I learned to know of his great ability in the field with which he was concerned. Particularly in the field of legislation and information concerning the Panama Canal was he recognized as an outstanding authority in the United States.

It was a pleasure to work with him. It was equally a pleasure for Mrs. Allen and me to enjoy the company of Captain Bradley and his wife on the many occasions during which we were together. I extend my sincere sympathy to Mrs. Bradley. The country and particularly the district which Captain Bradley served has lost a very fine American.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Appendix

Inaugural Address of Gov. George M. Leader, of Pennsylvania

EXTENSION OF REMARKS

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. RHODES of Pennsylvania. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith the inaugural address of the Honorable George M. Leader, the new Governor of Pennsylvania:

My fellow Pennsylvanians, inauguration as Governor of Pennsylvania is a proud, a solemn thing.

I would not be-frank if I did not confess a stirring in my heart and a challenge, bold and emphatic, in my spirit. This is a post I sought; this is an opportunity I asked of my fellow Pennsylvanians. And the people of Pennsylvania gave it to me.

Today, when I take office by their vote, I owe them the performance they were promised. With God's help, I will work unremittingly in my term of office, sparing nothing of my strength, to accomplish the full scope of the program for Pennsylvania which we set forth as my pledge and the pledge of the Democratic Party.

That program, in its essence, is a simple

It is the assemblage of the great resources of this State, of the energetic people of this State, of the wisdom and the hope and the God-given intelligence of our leadership in every phase of community endeavor, into a common effort which will benefit us all.

Our great, our overriding concern, is the

economy of Pennsylvania.

Our effort is to find in that economy the source of a rising living standard, the full employment of our people, the provision of an environment which will bring today's opportunities to every home and every child in Pennsylvania.

I ask you today-you who wish me well, you who will work with me-to lift up your sights, to think of government as something more than a dreary contest for power and privilege, to think of our obligation to our present trust and to our future hope.

Pennsylvania through the years has made great progress, no matter who was governor or what party was in control. The energy of its people assures that much; the interplay of ideas, the effect of our enterprise, will bring us forward even when official leadership may fail.

But I take office in conviction that we can do more-much more.

It is my belief that there is a great potential of leadership in this sprawling framework of State government; that the stately Words "Commonwealth of Pennsylvania" mean something more than a commission to an office or a party to a trial.

I intend to do all that is in me to summon up that leadership; to make it effective; to make it helpful; to make it imaginative and alert to the problems of the people of this

I see the State government as the coworker and friendly partner of local government and community agencies everywhere in Pennsylvania, helping them to develop their resources and overcome their obstacles.

I see the State government as a vigorous spokesman for Pennsylvania before the Congress and the national administration, acting quickly to protect our people's interests, calling on Federal agencies to treat us fairly, alerting the Nation to Pennsylvania prob-lems which have national implications and with which we cannot deal alone.

I see the State government as the helpful friend of business and of labor, of the city and farm, as an agency which exists to help the people do, as Abraham Lincoln said, what they cannot do for themselves acting individually.

Good government acts to prevent injustice,

to prevent exploitation, to guard the humagainst oppression by the strong.

But, in a sense, those things are negative. As this administration will see it, this State government will also be a positive force for accomplishment. We will not sit by, wringing our hands, while any phase of our community life deteriorates, or while whole regions slip into stagnation, chronic unemployment, and decay.

We consider that we have a positive mandate to act.

We will carry out that mandate.

We will act in the fields of social prog-ress, the things of humane concern, such as public health, the care of retarded children and the mentally ill, the advancement of public education, the prevention of discrimination among our people.

We will act to conserve and to develop for our wise use the natural resources of our State, to purify its streams, to increase its opportunities for outdoor recreation, to keep sense of the forest and the field in our lives. The more complex, the more urban, our civilization becomes, the more we must preserve our right to restore ourselves by contact with the land and the water as God bequeathed them to us.

But all these good things have their source in one great fundamental-the enduring prosperity of the people of the State; the development of constantly increasing employment opportunities in our economy for today's population, and the rising population of tomorrow.

We must face the fact that growth and development are not automatic. We are in competition with other States and other regions. The relative growth pattern in this country is not necessarily favorable to us. We cannot depend upon the simple course of nature to protect us. We grew on a traditional energy source coal. Others now share with us the newer energy sourcesoil, natural gas, and the atom. We have in too many instances an aging industrial plant; newer industrial areas often gain an advantage in more efficient facilities.

To this date, we have not made a coordinated statewide effort to provide plant sites. Our effort, private and public, to attract new industry has not been emphasized enough, not been supported enough; it has been altogether too little.

But it is certainly not too late.

I pledge you today that the primary work of this administration will be to make Pennsylvania a good competitor, a winning competitor. This State must do more than hold its own. It must rescue its areas of distress: it must gain its proportional share of our national expansion.

This governor will be proud to be a salesman, an advocate, for Pennsylvania,

In that work, I am sure I will be joined by every Pennsylvanian.

In human affairs, there are times of passive resignation, of acceptance. In the stress of our daily lives, we may ignore community problems, regard them as something for others to solve or to ignore as they will.

Then of a sudden, a flame is kindled an example set, an impulse stirred. That has happened in Pennsylvania.

Our period of passivity is ended.

Our time of flame, of concentrated endeavor, of tireless, ceaseless work has now begun.

For the 4 years of this administration, and I hope for unnumbered years to come, this will be the theme of the State government and those who staff its agencies.

The governorship confers on me the titular leadership of my party—the Democratic Party-in the State. I intend to exercise that leadership as boldly and as strongly as I can, so that our party meets its respon-sibilities, redeems its pledges, and is an effective instrument for Pennsylvania's progress.

I have every confidence that our party will not fail our program or the State.

Nor, while I concede cheerfully the right of the opposition to oppose, do I believe the Republican Party will adopt a policy of willful or malicious obstruction. I have too much confidence in Americans, regardless of their party, to fear their basic attitudes on grave matters of public interest. Particularly, I know my former colleagues in the Senate, men with whom I served.

I cannot conceive that they will not unite with us in the cause of Pennsylvania's future.

We may have differences. We'll try to thresh them out.

Where our views cannot be reconciled, will have a mutual right to ask the people to judge between us.

It is known to us all that the State faces a crisis in its own structure. The outgoing governor, who shares this platform today, told the legislature a week or so ago, that his predecessor in office had not informed him of the burdens he was passing on, of the commitments made, the funds pledged, the lack of revenue to meet the State's

I will plead no such surprise, because we campaigned on the statement that the succession of Republican administrations had each practiced some deception of the people and each other-that, in effect, the administration would be a receiver in bankruptcy.

I must say today, however, that it is even worse than we thought.

As we must now forecast the deficit for this biennium, it will come to a staggering total of approximately \$86 million. That deficit must be financed in the budget which the legislature will adopt for the blennium that is ahead.

The budget figures for the coming biennium, compiled by the outgoing administration, including the current deficit, indicate that the State's revenues would be more than \$500 million short of covering its expenditures. Even if the general sales tax were reenacted, the revenue would still be \$400 million short.

Two things are obvious:

The general sales tax enacted by the 1953 legislature does not produce even a scant fourth of the amount needed to cover the State's income shortage.

And secondly the people, in what amounted to a referendum in the governorship campaign, instructed us to let the general sales tax die.

And die it will.

Our first task will be to revise the budget figures assembled by the outgoing administration, and to cut them wherever it is possible. We have developed plans which I will submit to our new department heads for reducing operating costs. We are planning a revitalized and more stringent administration of our revenue department to increase our tax income.

But I cannot be so optimistic as to predict that these measures will solve our basic

problem.

Past legislatures have made enormous commitments which are now the pledged faith of the State, and it has not enacted a tax program that is adequate to raise the money to honor those commitments.

That is the recipe for bankruptcy.

And, as might be expected, this adminis-tration inherits the full impact of a reckless fiscal policy in which each Republican governor in turn, and each Republican legislature, followed a policy of "after us, the

Well, the deluge is on.

But the people did not elect us, did not change their government after 16 years, so that we could rake over the past and bemoan our bad luck.

They elected us to solve the problem, and

solve it we must and will.

It is our plain duty to attack the problem of the State's services and the State's finances all along the line. We can tolerate no more postponement. We must provide an answer, and it must be an answer which the people of the State are willing to accept.

For my part, I will oppose half measures. And I suggest to our Republican colleagues that, inasmuch as their party bears the responsibility for the State's fiscal crisis, they join with us in an honest bipartisan statesmanlike attempt to reach a meeting of the minds on a finance program which will make

Pennsylvania solvent once again.

I would like to say this as to the philosophy which will imbue our administration. It will not be an administration that believes in party feuding as the prime function of government; it will have no hate; but will have no vindictiveness. It will not adopt the political technique of exhuming the past to pollute the present. It will not follow the old game of politics as usual, in every situation, under every circumstance.

I am loyal to my party and want it to succeed.

But that very loyalty joins with my conscience to tell me that party success can only follow public success; that any party deserves to win and to hold office only if it attains the objectives which it has promised and gives a competent administration of the affairs which are committed to its trust.

I may say that I detest, and will not tolerate, laziness and sloppy performance of a public duty. No one in my administration, no matter who he is, is going to draw pay from the State without rendering a fair return in work performed. This administration will be no hayride for anyone; it is going to be work, hard work, and more work.

I will be impatient of failure.

It follows that I will be merciless toward corruption, and strictly judge offenses against ethics, even if they are within the letter of the law.

This administration will not suffer itself to be wrecked or sabotaged by self-seekers whose interest is not the State, not its people, and not the Democratic Party.

But again, those things are negatives.

They are the least that can be expected; they are the lowest common denominator of decent government.

It is an article of faith with me that government can do much more; that it can expand its views; widen its horizons; draft into public service and into public thought, the whole imagination and vision and skills of a great community.

will be our cardinal principle to be always open to ideas; to seek the participation in our State's affairs of Pennsylvania citizens, regardless of their party, who have a zeal for public service: to set up new standards for the State's services; to improvise; to modernize: to excel.

We will have a sober respect for experience and tradition, but we will be unafraid of experiment, willing to take risks, ready to adopt bold measures if they promise to advance the interests of the State

It is our desire, our promise, that we will pass the State government to our successors as a stronger government, a better government, a more solvent government than that which we receive.

The next Governor of Pennsylvania, so far as we can help it, will have no cause to complain that this administration has not

faced its own problems.

And, above all, it is our desire, our premise, and our pledge that we will build toward an enduring economy in this Commonwealth—fruitful and prosperous farms, a rising living standard, new and expanded industry, more and more job opportunities for Pennsylvanians.

Let those who will call it idealistic, the

stuff of dreams, visionary.

But in this Bible on which I took my oath today, these familiar words, from Proverbs, chapter 29, verse 18, appear:

"Where there is no vision, the people

In Pennsylvania, I promise you, there will

YORK COUNTY BOASTS FIRST GOVERNOR

George M. Leader today became the first York Countian ever inducted as Governor of Pennsylvania.

Philadelphia leads all counties in the Commonwealth with seven chief executives sent to the statehouse in Harrisburg.

The next highest includes the counties

Luzerne, Allegheny, and Centre, with three each.

All but 3 of Pennsylvania's 38 governors have been native sons. The three born out of the State were Robert E. Pattison, Quantico County, Md., elected in 1882; Gifford Pinchot, Simsbury County, Conn., elected 1922; and John K. Tener, County Tyrone, Ireland, elected 1910.

The proximity of Governor Leader's birthday Monday and inaugural celebrations today has occurred twice before in the history of

the Commonwealth.

Gov. James H. Duff was inaugurated in 1947 on the day of his 64th birthday, and Gov. William Bigler was sworn into office in 1852 just 9 days after celebrating his 38th milestone.

Federal Agency's Work Cuts Waste

EXTENSION OF REMARKS OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. MILLER of California. Speaker, I am very proud of the fine record made by the regional office of the General Services Administration under the direction of Robert Bradford. The regional office is located in San Francisco.

The General Services Administration does all of the irksome chores of Government housekeeping. Its operations and responsibilities are many. GSA stockpiles rare and essential materials so necessary in our defense effort.

Here is the first of two articles appearing in the Los Angeles Times outlining

the work of this Agency:

FEDERAL AGENCY'S WORK CUTS WASTE-GSA ALSO CHARGED WITH STOCKPILING SUPPLY OF CRITICAL MATERIALS TO PREVENT SHORT-AGES

(By Ray Zeman)

(This is the first of two articles about the General Services Administration, the agency created by the Hoover Commission to cut waste in Government.-EDITOR'S NOTE.)

If war comes tomorrow-or next month, or next year-factories throughout America will pour a flood of orders onto a new Federal agency, the General Services Administration.

It has stockpiled 93 different critical materials throughout the Nation to prevent crises like World War II's rubber and aluminum shortages.

Sometimes the pile is only a few pounds of some metal like platinum, whose production is controlled entirely by Russia.

Sometimes the pile is literally a mountain

of crude rubber or ingots of aluminum, man-

ganese or copper.

The size and location of these piles are secret. Someone in Moscow might like to know. But their value can be told. It's bebetween \$5,500,000,000 and \$7 billion. And it's growing.

While increasing these stacks, the General Services Administration is tackling a different job in trimming 360,000 tons of Federal Government records.

Imagine these records on a train. They would fill 11,454 freight cars.

Imagine them in stacks. They would equal 131/2 Empire State Buildings.

FIVE HUNDRED THOUSAND CARINETS

Imagine the job of trying to get Government employees to quit adding to those stacks at the rate of 10 billion documents a year-enough to fill 500,000 filing cabinets costing \$25 million.

That's the job the GSA is tackling-all the way from Administrator Edmund F. Mansure in Washington to Robert B. Bradford. regional director in San Francisco, to Mrs. Margaret H. Bayless, Los Angeles business service center manager.

The GSA sandwiches these little chores between others like supplying a pencil, 100 trucks, 40 miles of cable, or 1 million other items for other Federal agencies. It may buy or sell a defense plant or put one in mothballs. It's talking about a new \$18,540,-000 Federal office building and \$3,950,000 customhouse for Los Angeles.

TOP OF THE TARLE

And, under Hoover Commission orders, it is eliminating the notorious 5-percent "gimme" men by laying all deals on top of the table, with no opening of bids in the back room.

It's making bidding on Government supplies and projects a one-stop service at 1031 South Broadway in Los Angeles, instead of runs all over town or to Washington.

Bradford, Mrs. Bayless, and Frank A. Chambers, regional director of GSA's business service centers, yesterday told how the redtape-cutting agency was started July 1. 1949, by the Hoover Commission on Government Efficiency and Economy.

The Hoover group arranged a three-way executive split. The Bureau of the Budget handles money, the Civil Service Commission handles people, and the General Services Administration handles property. Bradford adds that the GSA also gets "everything else."

NO TRADITION

"Our biggest advantage," Bradford said, "is that we haven't a lot of tradition to live down, going back to 1812."

All operations are decentralized to regional offices, with Washington handling policy only.

Bradford, 44, is a veteran of 20 years' Government service. During World War II he was with the War Production Board. Later he was a zone administrator of surplus property, disposing of war plants valued at hundreds of millions of dollars.

Nationally and locally, the GSA is putting business methods into government. It has a complete internal audit system like a corporation. Bills can be paid in the field without Washington approval. A standard 20-day discount plan is used.

FEDERAL HOUSEKEEPER

As the Government's landlord, the GSA is responsible for all public buildings, leasing, cleaning, and repairing them.

"The Government owns 17 buildings in Los Angeles and leases 185." Bradford said.
"That's a crime. It's paying too much rent in this town. The only big building the Government owns is the Federal Building. It's paying about \$1,500,000 a year rent in this city. When it gets through it doesn't own anything.

"We hope to get a general government office building for Los Angeles in the near future. The customhouse might be part of it or might be separate. All work will be done by private contract."

Bradford was referring to the \$18.540,000 office building, a multiple-story structure to be erected in the area bounded by Commercial, San Pedro, Market, and Los Angeles Streets, and the \$3,950,000 customhouse. Peter A. Strobel, United States Commissioner of Public Buildings, has suggested the customhouse be outside the civic center, perhaps somewhere in the area bounded by Olympic Boulevard, Los Angeles Street, Washington Boulevard, and Figueroa Street.

LEASE-PURCHASE BILL

Bradford praised Senator Thomas H. Kuchel's subcommittee of the Senate Public Works Committee for getting passage—and President Eisenhower's signature—for a lease-purchase bill for acquisition of more public buildings.

"Until now, we've been limited to 5 years on leases," the GSA Director explained. "The Kuchel bill permits 10- to 25-year leases, with the option to purchase. This is just the way you buy a house on payment. The property stays on local tax rolls until the Government finishes paying for it and takes title."

California has 245,000 Federal civil service employees, more than work in Washington, D. C., or in any other State. Half of them are in the Department of Defense. Two-thirds are white-collar workers and one-third are blue-collar, without desks.

Nationally there are 2,400,000 Federal civilian employees but another 4 million are directly dependent upon the Government, such as workers in aircraft plants making planes for the Government.

CUT IN WRITING

The GSA is trying to get the Federal employees to cut down on the 1 billion business letters written by Government agencies every year at a cost of at least \$750 million.

"Every carbon copy of a letter costs 8 cents," Bradford said. "If 5 copies are made, its 40 cents. We're trying to cut down.

"We're using what we call 'birth control' in trying to stop records before they start. Government agencies create nearly 10 billion documents a year.

"We have moved many records from downtown Los Angeles to a 54,000-cubic-foot storage annex at 2401 East Pacific Coast Highway, Wilmington. "We released \$176,250 worth of empty cabinets here for other use. The Federal Government has almost stopped buying file cabinets since this program started. Nationally, it bought 97,000 of them in 1951, about 38,000 in 1953, and 5,000 in the first half of 1954.

"The Hoover Commission estimated you save \$27 a year for every file cabinet you empty and put the records in a storage center.

"The one at Wilmington has shelves 11 feet high. It's a low-rent warehouse, not in a congested area, and everything is stored in 6-cent cardboard boxes, under sprinklers. The Internal Revenue Bureau was choking to death with records in the Federal Building downtown. Now it—or any Federal Judge—can get records stored at Wilmington in a day or less."

Moving of files and other economies have resulted in office space trimmings so that the 114 square feet average per person in this region (California, Arizona, Nevada, Hawaii, and the Pacific) has been cut to 106 square feet per person since 1950. Bradford estimates the saving in office rentals at \$2,400,000 a year.

STILL TOO MANY

Bradford summarized: "Too many Government records are still made, filed and kept too long, too expensively and too inefficiently."

Is the GSA making progress?

"We report to Congress every year how much we save," Bradford said. "The figure was \$80 million year before last and \$130 million last year in provable savings. This year it will be way over \$150 million."

General of the Armies of the United States

SPEECH

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. HILLINGS. Mr. Speaker, on January 26, 1955, a great American will celebrate his 75th birthday. General of the Army Douglas MacArthur, who served as supreme commander in Pacific areas during World War II and in Japan in the years following the war, will be honored at a civic dinner in Los Angeles, Calif., on that date.

It is my thought, Mr. Speaker, that a grateful nation should take additional action to commend him for his years of service. To further that purpose, I am introducing a bill today to revive the office of General of the Armies of the United States. This is the rank which was conferred upon the late General Pershing following World War I. In such a position, the Nation had the benefit of his experience and advice in the years following his active service, including the period of World War II. To date, no such promotion has been given to any of the World War II officers, although a number of them hold the rank of General of the Army, the five-star rank which was created during World War II.

I urge that the Congress and its appropriate committees take prompt action to pass this bill with the hope that General MacArthur could be appointed to such rank on his 75th birthday.

My bill contains a limitation in that the rank would be conferred upon only one officer who served on foreign soil during World War II.

It is interesting to refer to the precedents which exist. In 1866 U.S. Grant was promoted to the rank of general as a reward for his service in the Civil War. Previously, in 1799, Congress passed an act authorizing the appointment of a general of the armies of the United States which would have allowed the promotion of George Washington to such rank but his name was never sent to the Senate. It would appear that General Pershing was the only Army officer appointed to the rank of General of the Armies. In view of the precedent of honoring our military commanders, I urge enactment of my bill.

The text of the bill follows:

A bill to revive the office of general of the armies of the United States

Be it enacted, etc., That the office of general of the armies of the United States is hereby revived, and the President is hereby authorized, in his discretion and by and with the advice and consent of the Senate to anpoint to said office a general officer of the Army who, on foreign soil and during World War II, has been especially distinguished in the higher command of military forces of the United States; and the officer appointed under the foregoing authorization shall receive pay in the sum of \$ per year and such allowances as the President shall deem appropriate; and any provision of existing law that would enable any other officer of the Army to take rank and precedence over said officer shall not be effective: Provided, That no more than one appointment to office shall be made under the terms of this act.

Benjamin Franklin

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. MULTER. Mr. Speaker, on January 18, 1706, a great American was born—Benjamin Franklin. I believe it is only proper that the anniversary of his birth be commemorated by refreshing in our memory a few of the highlights of a life devoted to public service.

With that thought in mind, I am pleased to direct the attention of our colleagues to the following editorial, written by my good friend, Harry H. Schlacht, which appeared in the January 15, 1955, edition of the East Side News:

BENJAMIN FRANKLIN (By Harry H, Schlacht)

On Monday America will celebrate the 249th anniversary of the birth of Benjamin Franklin.

We salute his memory in humble and reverent tribute.

We pledge our renewed fidelity to our country for which he did so much to create.

Of him it may justly be said that a crown would have lost its splendor upon his brow, for it was adorned with the wreath of freedom.

In whatever light we address his character, it is replete with instruction and inspiration.

From whatever position we survey him, it is an inspiring and fascinating picture.

Yes, there never was another who lived a more virile and varied and masterful life in his day.

He may properly be called the godfather of our country.

His name is a sound whose charm was borrowed from his thoughts and deeds which gave it perpetuity.

No high-raised marble marks his birth-

No pilgrims kneel before his dust or offer incense on his golden shrine.

His life is one of the world's treasures.

The world was his school, and necessity was his teacher.

He rose from bare beginnings.

He owed nothing to parentage or patronage.

He enjoyed no early education, but he lived to stand before kings and parliaments.

He won his place in the front ranks of the world's scientists, diplomats, statesmen, men of affairs, and men of letters.

His public life ran the full gamut of activities.

It was he who, as a delegate from Pennsylvania, submitted his Albany plan of union to the first American Colonial Congress in Albany on June 19, 1754, thus laying the foundations for the birth of a United States.

His plan, which was unanimously adopted, was followed by a general resolution, declaring that a "union of all the Colonies is absolutely necessary for their security and defense."

In 1775 he was a member of the Second Continental Congress and also served on the committee to draft the Declaration of Independence.

In 1766 he appeared before the House of Commons to explain colonial opposition to the stamp tax.

In 1776 he was sent by Congress as one of a committee to negotiate a treaty with France.

He was welcomed by the French leaders and became immensely popular during his stay from 1776 to 1785.

He also signed a treaty of commerce and a treaty of defensive alliance with France.

He was appointed in 1781 commissioner, with Jay and Adams to negotiate peace with Great Britain.

He was later a member of the Constitutional Convention in 1787, and 3 years later he signed a memorial to Congress asking for the abolition of slavery.

He died at the age of 84.

His writings are still widely read after more than 2 centuries.

His utterances are engraved in our hearts as it is stamped on his soul.

They are known round the world and his life will be further emphasied when the Nation at large will be celebrating his 250th birthday in 1956 amidst a surrounding of patriotic color and pageantry.

We may not be able to achieve his greatness but we may strive to imitate his goodness.

What a glorious legacy to the youth of America is the history of his patriotism, of his faith and self-sacrifice in the service of his country.

Let young and old read his writings.

Let us all refresh our minds with the recollections of wise sayings and of his virtuous deeds,

May his spirit shelter us from all species of oppressions.

May his spirit preserve forever our liberty and the glory of our Nation.

West Virginia Pottery Industry Reports on Tariffs

EXTENSION OF REMARKS

HON. ROBERT H. MOLLOHAN

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. MOLLOHAN. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following statement on behalf of the United States Potters Association presented before the United States Tariff Commission and the Committee for Reciprocity Information by Mr. Joseph M. Wells, secretary-treasurer of the Homer Laughlin China Co., of Newell, W. Va.:

STATEMENT OF JOSEPH M. WELLS, SECRETARY-TREASURER OF THE HOMER LAUGHLIN CHINA CO., NEWELL, W. VA., IN BEHALF OF THE UNITED STATES POTTERS ASSOCIATION, BE-FORE THE UNITED STATES TARIFF COMMIS-SION AND THE COMMITTEE FOR RECIPROCITY INFORMATION, DECEMBER 1954

This is my 15th appearance before a governmental body in the past 25 years, in an effort to obtain fair and adequate tariff protection for the pottery industry of the United States. So far all my efforts, and those of my many associates, have ended in complete and dismal failure with the result that, in spite of the enormous increase in population and buying power in this country in the past 40 years, there has been no significant increase in the production of dinnerware.

The only bit of apparent success we ever attained (which promptly proved entirely futile) was the addition, in the 1930 Tariff Act, of a few cents specific duty to the existing ad valorem rates. This was granted, we feel sure, only because the British pottery industry supported our petition, in an effort to give them a little protection in the American market against competitive Japanese exports to the United States. As soon as the law became effective, Japan depreciated the yen and both we and the British were in worse shape than before.

By 1935 imports of Japanese dinnerware were breaking all previous records and continued to do so until they were practically barred from our markets in 1938. This situation has been exactly duplicated since 1946, when our markets were again open to them. And remember, our imports from Japan are still subject, with exceedingly small exceptions, to the rates in the Smoot-Hawley Tariff Act of 1930.

We have studied the recent statement on United States tariff policy from the Committee for Economic Development. The conclusions arrived at should cause no surprise in view of the make up of the research and policy committee which produced it. Of the 32 men named as members of this committee, there is just one whose business would suffer directly from the tariff reductions proposed. I note that he and only one other dissented from the recommendation.

Early in the report the statement is made "The effectiveness of our efforts to expand world trade is not, of course, dependent on our policies alone. How other countries respond to our lead is equally important, and their response should condition the course of our tariff policy."

Just how long, may I ask, does it take our executive department to determine the response of foreign states to our lead? For more than 20 years we have been drastically reducing our tariffs until today our average tariff level on dutiable items is about 70 percent below the level of the 1931-35 period. No other country can exhibit a record ap-

proaching this, and the almost universal response has been for other countries to build higher and higher their barriers against the importation of American products. Where minor tariff reductions have been granted, they have been completely nullified by quotas, exchange controls, import licenses and currency manipulation and devaluation.

Later on in the report appears the following: "Adoption of a clear-cut policy of tariff liberalization would be signal evidence of our concern for the economic welfare of other free nations." It seems a little strange to the lay mind, that a clear-cut policy in effect for 20 years should still not be considered adopted. We are wondering when, after all these years of our great concern over the economic welfare of other nations we should start to show some concern over the welfare of the dozens of our own industries and hundreds of thousands of their employees who are suffering from the continually rising imports of competitive products at prices far below our costs of production.

Again the Committee for Economic Development says in one place that the tariff liberalization policy it recommends should be gradual and selective. And in another, "Situations of hardship can be anticipated and avoided in most cases if tariff reductions are preceded by a careful examination of the possible results, product by product and industry by industry." Now that is all we askbut then they flatly recommend authorization for the President to reduce all tariffs by 5 percent per year through the period (a minimum of 5 years) of extension of the Trade Agreements Act. Also that he reduce any tariff now above 50 percent of an import's value, to that level. It would be interesting to know just when you should start, and how much you should reduce the 70 percent duty on decorated china without causing hardship, when at least two members of the Tariff Commission, on the recent application of the chinaware manufacturers for an increase, found that, in order to enable them to meet Japanese competition, the ad valorem rate would have to be raised to 284 percent.

The Committee for Economic Development report strains the point that the purpose of the peril point and escape clause is to prevent serious hardship rather than to prevent any reduction in domestic output. Then they attempt to define serious hardship as reduction in output and employment on a substantial scale, where a major part of the labor and facilities released would be unable to find suitable alternative employment or use within a reasonable time. Tell me, just who is going to develop satisfactory definitions for the words, "substantial," "major part," "suitable," and "reasonable time."

The Committee seems to recognize one of the fundamental weaknesses of its position in the following phrase, "Although it is doubtful that lower tariffs would increase our trade with Western Europe and Japan in the next few years, the longer run effects could be important if our tariff policy could be put on a stable basis so as to minimize uncertainty." There has been no time in There has been no time in the past that we have heard of, when the tariff policy of this or any other trading country has been on a stable basis. For more than a hundred years, up until the present administration, our tariff policy has regularly changed with each change of the par-This also has been true, to a ty in power. lesser extent perhaps, in most other countries.

However, we should recognize that a change in the value of a country's currency has a much more serious effect on its foreign trade than any normal tariff adjustment. And just when, since the First World War, has there been any certainty of the value of the currency of any one of the great powers, including the United States?

We want to register our complete disagreement with the Committee for Economic De-

velopment's statement that "In general, increased imports at costs and prices below those involved in domestic production raise our standard of living."

Imports that undercut our market when it is in a surplus state will threaten the whole economic structure. They will go counter to all the special provisions made to cushion our economy against deflation, such as unemployment insurance, social security, minimum wages, obligatory collective bargaining, farm-price supports, bank-deposit There are all well-imbedded insurance, etc. interferences with a free market; but the reduction of tariffs is in the opposite direction and will tend to undo the effects of these measures.

Unfair foreign competition makes more difficult the planning of production; it puts a damper on investment and on plans to expand production facilities. Therefore it undermines the conditions necessary for continuing prosperity.

Also it must be realized that there are 4 or 5 times as many workers employed in industries and agricultural pursuits that are exposed to injury from imports in varying degrees than are employed directly or indirectly in production and servicing of goods for export. This is necessarily so since the manufactured products most vulnerable to foreign competition, almost without exception, require a very heavy labor cost in their production.

There is another situation of the greatest importance to our foreign trade that has been ignored entirely by the Committee for Economic Development. That is the steadily decreasing percentage of the dollars we spend for imports that is coming back to us in the purchase of our exports.

The trade policies of other nations are new clearly designed to accumulate dollar reserves for these nations. Our dollars are now considered more valuable for their own sake and what they will buy from other nonconvertible currency nations, than for what they will buy from us. In spite of the steady increases in United States imports, and of the growing demand abroad for United States products, our export of goods has not grown correspondingly. Our merchandise exports (exclusive of military shipments) decreased just about one billion dollars from 1952 to 1953, and for the first 8 months of 1954 there was a shrinkage of over \$300 million dollars from the 1953 figures. Please note that during that 20-month period Western Europe, where our loss of exports was greatest, was enjoying the greatest improvement in general prosperity of probably any given period in all its past history.

It is all too clear that the mass production exporting industries and international bankers, so heavily represented on the Committee for Economic Development, are interested chiefly in increasing our exports and believe this can best be done by increasing our imports, regardless of what those imports consist and regardless of the effect of those imports on dozens of smaller American industries and millions of American workmen and

farmers.

Those of us who believe the American producer should have a fair chance to meet foreign competition in the American market and who want the purchasing power of the American worker to be maintained, also desire an increase of imports-but of imports that do not directly compete with the commodities produced in our country. And we know the way to increase those imports far beyond anything in the past, and to increase the overall demand for the products of our exporting industries far in excess of any possible increase in the foreign demand, is to have full employment at our factories. farms, and mines with American rates of pay. Unfortunately, there is no possibility of full employment of our trained workers in the pottery industry under present tariff rates, and what further reductions will do to us is not hard to guess.

In all the circumstances, it is incredible that our State Department, who seem now to be in complete control of tariff policy, would be so hell-bent on building up individual industries in foreign countries, particularly Japan, at the cost of destroying similar industries in the United States. This becomes even more amazing when the records show that the enormous grants we have made to revive foreign industry have been used largely to enrich the owners and stockholders and at the expense of the workers. A special report prepared by the National Industrial Conference Board of the National Electrical Manufacturing Association shows wage rates in all European countries are now a smaller percentage of the American wage rates than they were in 1938. In 1938 British wage rates were 37 percent of those in the United States. In 1952 they were only 28 percent. In France the comparison was 43.3 percent in 1938 and 31 percent in 1952. In Italy it was 22.7 percent as compared to 19.5 percent. In Germany 46.6 percent as compared to 22 percent. In the Netherlands percent as compared to 20.4 percent. Please note that in Germany and the Netherlands the gap between their wages and ours is more than twice what it was prewar. Is it any wonder that communism remains a constant threat in Western Europe, when the result of the use of the money we have given away, from the taxes of our citizens, for the rehabilitation and modernization of foreign industry, has resulted in the foreign worker getting a smaller and smaller share of the wealth he produces?

Now we are told we must further reduce our production and lay off additional employees so our foreign competitors will have still more dollars to use, inevitably, as they have used our gift dollars in the past. We cannot see how anyone can take the position that it is more important politically, economically, or morally for a Japanese potter to have a job than an American. only too evident that the health, happiness, and prosperity of the American potter is of no interest or consequence to the free traders and their amazing following in the administrative and congressional branches of the United States Government. What is not so clear is why these groups make the Japanese potter their fairhaired boy at the expense of the British and French potters. It is my impression the English and French were our allies in the last two wars and that it was the Japanese who despoiled Pearl Harbor and killed thousands of our young patriots.

British, French and German exporters are just as hard hit as our domestic producers by Japanese exports of china and earthenware to the United States. As a matter of fact, only a short while ago representatives of English exporters petitioned our State Department to do something to reduce American imports of Japanese china.

Exporters of dinnerware from Great Britain have already indicated their approval of the establishment of fair and flexible quotas by the United States on imports of china and earthenware. Every other country except Japan would obviously benefit by the establishment of such quotas.

So long as we maintain the "most fa-vored nation" policy, and production costs vary from nation to nation, the quota is the possible plan that will be fair to all countries. Nothing could be more unfair to England than to apply the same rates of duty to their exports as to those of Japanwhen English wage rates are three times those in Japan.

Attached to the copies of my brief you will find a sheet showing combined operating results from 1947 to 1953, inclusive, of 23 United States plants manufacturing earthenware tableware. These plants are responsible for more than 85 percent of all earthenware tableware produced in this country. You will note the headings are: sales; earnings before taxes; earnings after taxes; total dozens shipped; total wages paid production

employees; and total man-hours worked. The column of "total wages paid" does not include wages and salaries paid executives and supervisors.

Also you will find attached a copy of a report the Tariff Commission was enough to have prepared at our request last month. This report you will note covers United States production and imports for consumption of earthenware table and kitchen articles and chinaware household table and kitchen articles. The earthenware articles come under paragraph 211 of the Tariff Act of 1930 and the chinaware articles under paragraph 212. In each of these classifications, the report covers both dozens and This record covers the years 1935, 1937, 1939 and each of the years from 1947 to 1953, inclusive. Also the figures for the first 6 months of 1954.

On this report we question the figures that appear under the one classification "Earthenware Production in the United States." footnote under this classification states that all figures are estimates except for the year 1947. For that year the reported United States production was 42,285,000 dozens. You will note under that year on our report we show our production as 27,293,281 dozens. Adding 15 percent to this figure to cover estimated production by companies not covered in our report, we arrive at the figure of 31,-400,000 dozens. This is some 25 percent less than the Government figure; and, with all due respect, we believe our figure is more nearly correct than the one appearing on the

We also believe that the estimates that have been used for the later years, particularly for 1949 and 1950, are considerably wide of the mark. You will note the Government figure for both years is 45 million dozens, while our adjusted figure for 1949 would be less than 25,100,000 dozens, and for 1950, 26,600,000 dozens. We are confident the figures for these years, as reported by our companies, are correct.

The columns in our report to which we would particularly call your attention are "Earnings after taxes," "Total dozens shipped," and "Total man-hours worked." These are much more important in reflecting the trend in our industry than "Total sales. Sales figures being affected, of course, by price increases that have been necessary because of advances in wages.

Let us consider first what has happened to earnings in the 7 years covered by the report. These 23 companies reported earnings after taxes in 1947 as \$4 million on sales of \$56 million, or a profit percentage of 7 percent on sales. That figure dropped steadily, with the exception of a slight increase in 1950 over 1949, until in 1953 we show total net earnings after taxes of \$255,815, or less than one-half of 1 percent on sales of \$53 million. Of the 23 companies reporting, 12 showed actual losses for the year's operation. In 1952 the profit figure was \$942,504, or 1.6 percent on sales. Those figures leave little doubt where the industry is headed financially. And remember 1952 and 1953 for industry generally were two of the most prosperous years in our history.

Now consider the figures on our report under the column "Total dozens shipped." Against 27,293,000 dozens shipped in 1947, we have slipped to 19,337,000 dozens in 1953-a loss of just about 30 percent. During that same period, our population increased more than 7 percent, and spendable income went up more than twice that percentage. Just how much faster must an industry lose its home market to qualify as being seriously injured?

Now consider what has been happening to our employees. From a total of 25,700,000 man-hours worked in 1947, we were able to supply for our employees only 16,700,000 hours of work in the generally prosperous year of 1953. A reduction of 35 percent.

As an indication of what we can expect in earnings and employment for the full year

of 1954 as compared to the very poor year of 1953, let me cite the experience of my own company, the Homer Laughlin China Co., of Newell, W. Va., in unemployment compensation. We are the largest employer in the industry and have about 2,600 people on our payroll at present. For the first 10 months of 1953 we paid out in unemployment compensation \$12,314. For the first 10 months of 1954 the figure was \$78,263-just about 61/2 times as much as in 1953. are quite sure this is fairly representative of the industry as a whole.

It is painfully evident we are far past the threatened-with-injury stage, and for at least 3 years have been suffering actual and serious injury. It is just as evident, in comparing import and domestic-production fig-ures, that a major portion of that injury is due to imports under present tariff rates.

By way of contrast, let us see what has been happening during those years, in imports from Japan of earthenware table and kitchen articles. We find the first postwar year in which these imports appeared in any quantity was 1948. In that year Japan shipped us 185,000 dozen. The increases since then have been spectacular, until in 1953 they amounted to 2,245,000 dozen, or more than 12 times the 1948 quantities.

What is equally impressive and particu-

larly pertinent to the proposed tariff reductions, is the increasing percentage of imports from Japan of this type of tableware, to total imports from all countries. In 1948, imports from Japan amounted to only 11 percent of the total and in 1953 to 62 percent. Even with the American industry in its usual role of the forgotten man, it is rather difficult to understand why we should make changes in tariff rates that can only result in giving Japan a still greater advantage over all other countries in the American market.

You will note from the chart that our import of Japanese chinaware, table and kitchen articles has followed the same pattern as the earthenware. From 54 percent of our total imports of this class of ware in 1948, the Japanese share has jumped to 80 percent in 1953. These imports from Japan are just as hurtful to us in the earthenware branch of the industry as are the earthenware imports. We find that comparably decorated dinner sets from our earthenware factories are selling in the department stores at approximately the same prices as china din-ner sets from Japan. And no woman in her right mind is going to choose an earthenware. set when she can get one in chinaware at the same price.

The ability of the retail merchant to offer these sets at comparable prices is explained when we see that the average price per dozen for china dinnerware in Japan is \$1.30 per dozen and the average price the American manufacturer has to get for earthenware is \$2.70 per dozen. It is our understanding \$2.70 per dozen. that, with duty, freight, insurance, etc., Japanese chinaware lands at our ports at just about twice the factory price in Japan. So that the average price of Japanese china landed in the United States is \$2.60 per dozen or 10 cents per dozen less than our average factory prices of earthenware.

Allow me to show you an example of this Japanese chinaware and American earthenware competition. Here is a plate showing a pattern made by the Homer Laughlin China Co., of Newell, W. Va., for exclusive distribution by the Montgomery Ward Mail Order Co. Here is a Japanese china plate with a comparable pattern, sold by the company. For a 100-piece dinner set in the American made earthenware pattern, their catalog price is \$62.50. For the same set in Japanese chinaware their catalog price is \$59.95, \$2.55 less for the chinaware set. You will be no less surprised than were we, when we were advised that our set would be dropped from the next Montgomery Ward catalog.

A man, very active in our industry, has just returned from a tour of the Orient. During his stay in Japan, he was taken on a

guided trip through the plant of the Noritake China Co. in Nagoya. This company is much the largest manufacturer of china tableware in Japan. He reports this plant and its equipment, as much more modern than the average American plant and in some respects, as well ahead of any plant in this country. Also in certain departments, with elaborate belt conveyor systems, the production per man hour is substantially greater than in our most modern factory. So that the differences in production per man-hour has practically disappeared and wage rates became directly comparable.

It is the difference in wage rates which constitutes the enormous advantage Japan enjoys in production costs. The average pay for the employees in the Noritake plant is just about \$10 per week of 48 hours, or 20 cents per hour, and we are told this is more than is paid in any other pottery in Japan. The average rate for an employee in our domestic factories is \$1.70 per hour with many men in the more skilled trades earning more than \$3 per hour. This difference in wage rates acquires such enormous importance because more than 65 percent of our total cost of production goes to labor.

Our representative was told at the Nagoya Chamber of Commerce that all potteries had been working at full capacity for some years and several were at present considering an

expansion program.

So, gentlemen, we have here now, in front of us, a situation that I dare to say has never been duplicated in all of history. An aggressor nation, which violated all the rules of humanity and war in its efforts to bring us to our knees, has a prosperous and flourishing dinnerware industry. In our own country the same industry is steadily losing ground. Yet, we have what appears to be a majority of the leaders of both our political parties determined to follow a course that will further benefit the Japanese and, to even a greater extent, injure the American industry. If any individual in any other country suggested such a national policy. he would be thrown in the nut house.

In view of all the circumstances, we cannot believe there is any possibility that your Commission will arrive at a peril point below the present rates of duty in paragraphs 210, and 212. We do believe careful and serious consideration of all the facts will convince you that additional protection is necessary to prevent further serious injury to, and eventual extinction of, the American pottery industry. And that the only way to supply that protection, fair to ourselves and foreign competitors, is through the establishment of a flexible quota.

Composite report from 23 American earthenware manufacturing companies

¹ Includes a very small amount of hotelware.
2 Quantity estimated except for 1947; value estimated for years after 1947.
3 Does not include kitchenware, or casual china; estimated from census and industry report for years before 1947.
4 Not available.

^{*} Preliminary.

* Imports by countries do not include individual entries for immediate consumption valued at \$250 or less; figures for total quantities and values for January-June bave been computed to include such entries.

Veterans' Administration Regional Office, Montgomery, Ala.

EXTENSION OF REMARKS

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. RAINS. Mr. Speaker, Mr. Harley A. Smith, who, for many years has been manager of the regional office of the Veterans' Administration at Montgomery, Ala., has done, and is doing, an outstanding job. At the beginning of January he sent a letter to the employees of the regional office of the Veterans' Administration which gives an overall picture of the work which is being done at the Veterans' Administration regional office. It points up such an outstanding job until I think it should be incorporated in the Congressional Record.

The letter follows:

VETERANS' ADMINISTRATION, REGIONAL OFFICE

Montgomery, Ala., January 13, 1955.
FELLOW EMPLOYEE: Another year has gone by. This is a time when we like to think of things ahead and make plans and resolutions for the new year.

It is also a time for reflection on what we did and how we spent our time in the days that are forever gone. On this score, we in this regional office of the Veterans' Administration can look back with pride in the amount of service we have brought to the veterans of this State.

The figures I recite below are not just figures. They are so many services that we have been privileged to bring to those who have earned it. Every single thing we did was done for the purpose of bringing a service to a veteran or his dependent.

All of us are interested in knowing, I think, that in the year just passed over 4,500 veterans, who had never done so before, flied a claim for compensation or pension. There were more than 40,000 actions taken by the rating boards and more than 14,000 other actions were taken on claims. Nearly 70,000 letters, including form letters, were written about claims for compensation or pension. At the end of the year more than 50,000 veterans in Alabama were receiving compensation or pension. Nearly 600 veterans made personal appearances before rating boards. Automobiles were awarded to 40 veterans in the State and more than 300 actions were taken by the committee on waivers.

In the year 1954 more than 7,500 veterans applied for guaranty of loans to buy homes and over 5,000 loans on homes were guaranteed. This brings the total of home loans guaranteed for veterans in Alabama to more than 44,000. During the year nearly 9,000 appraisals were authorized and over 12,000 appraisal reports were reviewed. More than 13,000 certificates of reasonable value were More than 11,000 certificates of eligibility were issued. Over 700 applica-tions for direct loans were received and nearly 500 such loans were made, making the total of direct loans in Alabama to date more than 2,000. Over 21,000 service actions on loans were made during the year and taxes and insurance were kept up on more than 3,000 properties. More than 20 homes were acquired and 175 were sold by this office of the VA. More than 1,100 homes have been acquired and nearly 900 sold since the beginning of the program and we still have nearly 300 owned by the VA. Over 500 mortgages were acquired during the year and at the end of the year the office held nearly 3.000 mortgages.

The finance division paid directly to veterans as compensation or pension, disability allowance, or subsistence allowance nearly \$61 million. Over two million was paid to institutions for tuition, books, and supplies. About seven million was paid out for other purposes. Nearly \$00,000 checks were certified for these payments. At the end of the year more than 72,000 veterans were being paid some benefit regularly. Nearly 60,000 actions were taken by the agent cashier in receiving and paying out money. Nearly 130,000 documents were processed in the accounting section. Over 90,000 vouchers were examined and more than 500 employee pay accounts were maintained.

Over 600 veterans or dependents of veterans had to be provided with a guardian or other fiduciary during the year, and at the end of the year more than 7,000 veterans or dependents were under fiduciaries. The value of the estates administered by such fiduciaries at the end of the year was more than \$8 million, of which over three million was invested in Government bonds. More than 5,000 accounts from fiduciaries were audited during the year. Nearly 2,500 field examinations were made and about 800 legal opinions were written. Over 300 legal actions were taken in connection with loan-guaranty work.

A few more than 100,000 contacts were made by veterans and others, and over 45,000 telephone calls were received. Contact division made over 3,500 rating-board appearances, helped to fill out over 2,400 applications and prepared more than 26,000 pieces of correspondence.

More than 100 different items were maintained in stock at the end of the year. During the year over 20,000 items were received and more than 26,000 issued. Nearly 5,000 items were purchased at a cost of over \$100,000.

Medical service was given in the clinic to more than 10,000 veterans, and over 12,000 were given service by hometown doctors on authorization of the regional office. The clinic brought dental service to more than 1.600 and authorized service to more than 66,000 through fee-basis dentists. In the medical service over 18,000 laboratory tests were made, more than 23,000 X-ray pictures were taken, and over 16,000 prescriptions were filled. The social service talked to over 6.000 veterans and members of their families. They conducted nearly 600 social surveys and made more than 1,500 other reports. Over 1,200 electrocardiograms were made in the clinic and more than 200 artificial refills were given. Nearly 900 appliances such as limbs, eyes, etc., were issued to veterans at a cost of over \$46,000; and 902 appliances were repaired at a cost of \$12,000.

In the year 1964 over 900,000 pieces of mall were received in the regional office and over 850,000 were dispatched. Over 600,000 veterans' flies were pulled and refiled. A total of nearly 500,000 files on veterans (claims and R. and E.) were maintained. Over 16,000 new files were established, and nearly 60,000 new applications were processed.

More than 12,000 files were transferred out and nearly 10,000 were transferred in. Nearly 400,000 thousand index actions were taken. Almost 20,000 travel authorizations were prepared. Nearly 5,000 messages were sent and about 6,000 were received. More than 1¼ million impressions (mimeograph, etc.) were made. Over 6,000 requests for forms were milled. More than 1,600 different forms were maintained in stock. Over 400,000 tabulating machine cards were punched and the same number verified. More than 111 million cards were run through the machines in tabulating machine section.

in tabulating machine section.

In the year 1954 more than 2,000 veterans were given vocational counseling; over 500

entered vocational rehabilitation programs of training; and more than 200 were rehabilitated. Training officers made more than 10,000 personal supervision contacts. A total of more than 18,000 applications for education and training was received and more than 16,000 certificates of eligibility were issued. Nearly 15,000 veterans entered for the first time a program of education and training, and 26,000 interrupted their training. Over 60,000 authorization actions in education and training cases were taken. More than 800 surveys of education and training institutions and establishments were made. At the end of the year more than 20,000 veterans were in training.

In the year 1954 more than 800 personnel actions were taken, reflecting some change in status of an employee, and more than 100 different type positions were allocated by classification action. At the end of the year there were 504 employees on duty with the regional office.

These are striking figures but they are not just figures. They represent something we did to provide a service to a veteran—making somebody's life just a little more enjoyable.

I am proud of the volume of service you have rendered and still prouder of its high quality. I am proud of you as a fellow employee who enjoys with me the privilege of serving. As the administrator said when he was here, "What more satisfying job could we ask?"

HARLEY A. SMITH,
Manager.

Milwaukee Commission on Human Rights

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. ZABLOCKI. Mr. Speaker, the efforts of the Milwaukee Commission on Human Rights to promote good interracial relations in our community have been recognized and praised by many outstanding leaders both on the local and national scenes.

The Milwaukee Commission has made considerable progress in easing intergroup friction and in furthering cordial relationships between members of minority groups and the community as a whole. They have shown how much can be accomplished by sincere, voluntary efforts of citizens interested in safeguarding the rights of all individuals, without regard to race, color, or creed.

Last fall, the United States National Commission for UNESCO met in Milwaukee. On that occasion, certain members of the Milwaukee panel of the UNESCO Citizen-Consultation Group endorsed and submitted to the commission a statement prepared by Mr. Bruno V. Bitker, member of the Milwaukee Commission on Human Rights.

Under leave to extend my remarks in the Record, I wish at this point to call to the attention of the membership of this body Mr. Bitker's statement, together with a letter of transmittal signed by Dr. Adolph Suppan, discussion chairman of the Milwaukee Citizen-Consultation Group, and by those members of his group who endorsed the statement. In addition, I wish to insert an editorial

which appeared in the Milwaukee Journal on June 6, 1953, describing the work of the Milwaukee Commission on Human Rights.

The matters follow:

OCTOBER 13, 1954.

To the Members of the United States National Commission for UNESCO, Municipal Auditorium, Milwaukee, Wis.

(Attention: Hon. George N. Shuster, chairman.)

DEAR SIRS AND MESDAMES: Article I of UNESCO's constitution provides for promoting human rights and fundamental freedoms among the nations. The need for the United States giving its full support to the principles of the United Nations Charter with respect to human rights is of obvious importance to the position of the United States before the world.

The attached statement prepared by Mr. Bruno V. Bitker, a member of the Milwaukee Commission on Human Rights, is being sent to you with the strong endorsement of those members of the Milwaukee panel of the UNESCO Citizen-Consultation Group, whose names appear on this letter.

We urge your consideration of this docu-

Sincerely yours,

Adolph Suppan, Director of Extension, Wisconsin State College, Discussion Chairman, Milwaukee Citizen-Consultation Group; Mr. Maurice H. Terry; Rev. Everett W. MacNair; Mr. Sharon L. Hatch; Rev. Ensworth Reisner; Mrs. Margaret M. VanWagenen; Mr. Kalvelage; Mrs. George P. Ettenheim; Mr. Charles Gruender; Mrs. Carl Romanik; Mr. Laurence F. Giese; Mr. Arthur W. Else, Jr.; Miss Virginia Huebner; Mr. George Hampel, Jr.; Mrs. Isadore Weiss.

STATEMENT OF BRUNO V. BITKER, ATTORNEY-AT-LAW AND MEMBER OF THE MILWAUKEE COMMISSION ON HUMAN RIGHTS, BEFORE THE UNITED STATES NATIONAL COMMISSION FOR UNESCO, MILWAUKEE, WIS., OCTOBER 14, 15, AND 16, 1954

Prior to World War II. during the ponderous growth of international law, human rights were a matter of concern solely to the individual state. They were wholly domestic matters. But the ruthless denial of basic rights and the utter disregard of human life that were part of the Nazl practice, suddenly assumed international nificance. Not only was there a general revulsion at the inhumanity of the dictatorships, but the world speedily recognized the connection between the brutal treatment by a state of its own citizens and the savage attacks upon other nations.

Tragically, the period since the close of war has furnished no assurance that the treatment by the present dictatorships of their own nationals will not again lead to aggression against the rest of the world. is mid-20th century and long beyond the time to speak for man.

During the ages there has always been some who have attempted to establish, by force if need be, customs, rules, even laws which would deny basic rights to certain fellow humans. The same fight against the denial of these rights has been carried on by peoples as far apart in time and place as Vedantic India, classical China, the early Jews, the first Christians, by Greece, Islam, medieval Europe, right down to our

Through the years of history, written declarations of the rights of individuals as against each other as well as against the state, have appeared and reappeared. Long before the United Nations had formalized a statement of principles, written declarations had appeared in one form or another in early Poland, in Czechoslovakia, in the British Magna Carta (1215), in the Habeas Corpus Act in England (1697), in the American Declaration of Independence, in the Prench Declaration of the Rights of Man.

More recent declarations appear in such documents as the Atlantic Charter (August 1941); in the Chapultepec Conference Act (March 1945); the Convention adopted by the Council of Europe at Rome (November 1950); the statements adopted at various international conferences of American states, including that adopted only a few weeks ago at Caracas.

The League of Nations may have been the first faint realization that an international political entity was more than a dream. But even the League of Nations failed to recognize that human rights were a matter not of mere local interest, but of international concern, a matter of world peace.

The failure of the League to provide international obligations for protection of human rights was thus described by Prof. Rene Cassin, the French delegate on the Human Rights Commission. He said, in part:

"I was personally present at the dramatic debates which took place at Geneva between March and October 1933. At this time, the only way in which the criminal actions of Hitler Germany toward her own nationals could be brought to the notice of the Council of the League of Nations was to resort to the indirect procedure of invoking the Polish-German treaty on the protection of minorities concluded in 1922. On the day on which the Assembly dared to refer to the general principles authorizing the legally organized International community to protect human rights, even in a sphere not covered by some special minority treaty, Hitler took advantage of the Third Reich's absolute sovereignty over its citizens and denied the League of Nations any right of inspection; and on October 14, 1933, Germany left the League. It is well known what attacks against the national independence and what massacres sprang from the impunity with which Hitler's first great crimes were committed."

It is little wonder that Gen. George Marshall, while Secretary of State, when referring to the significance to international peace of the obligation upon all states to observe human rights, commented that "governments which systematically disregard the rights of their own people are not likely to respect the rights of other governments and other people and are likely to seek their objectives by coercion and force in the international field."

It was natural that this obvious connection between maintaining world peace and observing human rights should find expression in the charter of the new world organization. When the charter was drafted in San Francisco in 1945, and as subsequently ratified by the United States Senate, its references to the recognition of human rights was so clear as to leave no doubt that human rights were within the province of the United Nations. Many of the delegates at San Francisco believed an international bill of rights should have been written into the charter But the controlling number of governments then felt that such provisions could be considered separately and adopted subsequently by way of an appendix to the charter.

A few references to the charter provisions will indicate how much a part of the charter of the new international entity was the idea of protecting human rights. At the outset, as a means of premoting peace in the world, the charter preamble asserts that "We, the peoples of the United Nations, determined . to reaffirm faith in fundamental human rights in the equal rights of men and · · · do hereby establish an interwomen national organization known as the United Nations."

To Americans this has a familiar ring, Our own Declaration of Independence says that "All men are created equal . . . that they are endowed with certain inalienable rights * * * (and) that to secure these rights governments are instituted among men."

It is to secure these rights that governments are formed. And it is to secure these rights that the international organization, the United Nations, was formed. nificant, too, to note that the United Nations Charter says, "We, the peoples of the United Nations," not "We, the sovereign powers," or "We, the emperors," but "We, the peoples." Again this is a familiar phrase to Americans, Our own Constitution opens with "We, the people."

I do not cite our Declaration of Independence nor our own Constitution merely to assert that because we used these words, they must be right. I cite them only because our use of these words and our assertion of the ideals of the equality of man has had a great effect upon the world. It has placed upon us a special obligation to further these principles within the family of nations.

Again and again the charter speaks of human rights. The purpose clause (ch. I. art. I) asserts that the United Nations is created to promote "respect for human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." The General Assembly (ch. IV, art. 13) is required to assist in the realization of these rights and freedoms and by articles 55 and 56 of chapter IX each member nation is required to promote observance of these rights and freedoms. Indeed, the Economic and Social Council (ch. X, art. 68) is directed to set up appropriate commissions "for the promotion of human rights." This appears to be the sole provision in the charter requiring the establishment of a specific commission.

Little wonder then that the President of the United States in June 1945, at the closing session at San Francisco, said:

Under this document (the charter) we have good reason to expect the framing of an international Bill of Rights, acceptable to all the nations involved. That Bill of Rights will be as much a part of international life as our own Bill of Rights is a part of our Constitution. The charter is dedicated to the achievement and observance of human rights and freedoms, and unless we can attain these objectives for all men and women everywhere, without regard to race, language, or religion, we cannot have permanent peace and security."

Now, what is the record since 1945? On the side of collective security the program has been surprisingly better than many of the early critics of the United Nations had prophesied. Nor would I minimize the numerous other functions successfully carried on by specialized agencies of the United Na-Above all, I could not forget that in Korea we did not fail nor did we repeat the shameful performance of the League in But on the vital obligation, the Ethiopia. duty of protecting human rights, the picture is one of slow disintegration from the proclamations and ideals of 1945.

During the first few years, considerable energy and time was devoted to bringing into being something akin to an international bill of rights, such as had been envisioned at San Francisco in June of 1945. It is true that a universal declaration of human rights emerged from the General Assembly in 1948. It is true, too, that a genocide covenant was finally approved and has since been adopted by the requisite number of nations to be effective as to the signatory nations. But even this treaty, designed to prevent the systematic destruction of people on racial, religious, or cultural grounds, exists on paper only. It has yet to see the light of day in our own Senate.

Political organizations at best are not eternal. Like manmade buildings, they can crumble with the passage of time. The United Nations will disintegrate someday. But ideas never die, and perhaps we must settle for a mere declaration of principles instead of a series of formalized commandments. If nothing else comes out of this attempt to unite mankind, the universal declaration of human rights will stand as the record that there were men of good will in this day who recognized these inherent rights.

There is little doubt that the very adoption of the universal declaration marked a step forward. But the 5 years since that event have been years of retrogression in protecting the most elementary of human rights. This is true not only of Iron Curtain countries, but in Asia, in the Middle East, in South Africa, even in parts of Latin America. It is obvious that the efforts to achieve genuinely binding obligations toward protecting the simplest human rights have become increasingly difficult.

Perhaps the moment of greatness passed

Perhaps the moment of greatness passed with 1945. It may be too late in this chapter of world's history to retrieve that loss. Fortunately, however, the charter has its own built-in retriever. This is the provision for a general charter revision conference in 1955. This could be our chance to move forward from the point where San Francisco left off.

It would be utopian to expect to spell out a covenant which as of now would be acceptable to all member nations. But there are some principles which should and must be recognized if the goal of universal peace is to be approached. These are the basic human rights which in some manner must become a world code of rights. They are simple and easily understood.

These fundamental rights encompass freedom of speech and of press; freedom of religion and of worship; freedom of assembly; freedom of petition; freedom from unreasonable search and seizure; freedom from arbitrary arrest and punishment; and, above all, the right of every human being to share these freedoms equally with his fellow human beings without regard to race, sex, language, or religion.

These are rights which human beings throughout the world have come to understand. They constitute the common denominator among all men upon the face of the earth. They come into existence with the birth of every man. They appertain to every man without regard to his nationality or color, or to the status of his parents or social beliefs, or to his store of or lack of knowledge. These rights are the clothing of dignity to every individual. Man now senses that he need not loathe himself because of his skin, or submit to punishment, or be denied basic rights by the fact of his birth.

When our Constitution was drafted in the early days of the new American Republic, it had neglected to spell out human rights. This defect was speedily cured with the almost simultaneous addition of the first 10 amendments, which we have come to know as the Bill of Rights.

Perhaps such an addition could be made to the charter. If nothing more, the rights so generally referred to, could be made more precise, be defined, even given names. If nothing more, the individual whose rights are violated should have the right of petition. If a judicial determination on a complaint through the International Court of Justice is now too visionary, perhaps some means of mediation could be established.

The fallure to provide a means of receiving and acting on individual complaints, no matter how informally, is particularly disturbing. As the Secretary General of the United Nations reported, this defect in proceeding has brought "disappointment and disillusionment to thousands of persons all over the world who, through the publicity activities (regarding the Universal Declaration of Human Rights) have been led to believe that one purpose of the United Nations is the

achievement of cooperation in promoting and encouraging of universal respect for human rights and fundamental freedoms."

At the session of the Commission on Human Rights held at Geneva in April 1953, our Government retreated from leadership in drafting covenants. It announced its proposal for a new action program to consist primarily of studies relating to specific aspects of human rights and for annual reports of the status of these rights in local areas, with emphasis on education.

It is unfortunate, however, that Secretary of State Dulies found it necessary to announce that the United States would not now seek ratification of the Genocide Covenant nor press for a final drafting of a human-rights covenant. Presumably he did so to appease the supporters of the Bricker amendment, which, in great measure, was aimed at the proposed treaties on human rights. But while Mr. Dulles paid the price of peace, the administration was forced nevertheless to go through a prolonged fight against the Bricker proposals.

Rules in some form must be adopted, recognized and observed. The adoption of an international bill of rights would not, for example, insure to an Iron Curtain national a fair tury trial. But then thousands of years have passed since the Ten Commandments were handed down and they are not yet universally observed. Their existence nevertheless has helped attain their objectives. Our own Bill of Rights does not guarantee that our civil rights are not at time violated. But their inclusion in our Constitution gives them legal status and our courts provide the means of attainment. So with an international bill of rights. These rights would then acquire the prestige of the charter. fact of their existence would sooner or later pierce national barriers. Even the great debate that might precede the adoption or rejection of such a program would itself be educational toward a worldwide recognition of these inherent rights of man.

The United States is in the unique historical posttion of having demonstrated in a practical manner the effectiveness of a bill of rights. We are under a moral obligation to lead the fight for the recognition of human rights everywhere. This is a means of attaining the goal of world peace. I urge consideration to the proposals outlined herein.

[From the Milwaukee Journal of June 6, 1953]

MILWAUKEE HUMAN-RIGHTS GROUP IS CITED AS EXAMPLE TO BE EMULATED

The warmth with which Milwaukee is trying to build good intergroup relations in this community is being felt afar off. That is shown by a letter from Henry Cabot Lodge, Jr., commenting on the 1952 report of the Milwaukee Commission on Human Rights.

Lodge halls it as showing how much can be accomplished by earnest voluntary effort of citizens to promote the rights of all individuals, regardless of race, color, or religious affiliation. He is a United States delegate to the United Nations and is calling the Milwaukee report to attention of the U. N. Human Rights Commission. It will help that commission in formulating a new action program to promote greater recognition of human rights, worldwide.

Those familiar with the work of the mayor's commission on human rights and that of other cooperating bodies and individuals understand that it covers a good deal more than combating discrimination against members of minority groups in housing, employment, or public accommodations. It aims higher than protecting civil rights under law or constitution.

The 1952 report of the Milwaukee Commission tells of progress in easing intergroup friction and in trying to remove the chief

cause of that friction—prejudice. The commission tries actively to promote cordial relationships between members of minority groups and the community as a whole.

Hospitality to 10,000 Negro delegates to a Baptist convention here in 1952, for instance, was outstanding. Homes of whites as well as Negroes were opened gladly to these delegates in the City of Fellowship.

Milwaukee can justly take pride in its progress along these lines and the example it is setting. We can be proud of widening recognition of such achievements. All reflects credit on the community and the Milwaukee Commission on Human Rights for the leading role it has taken.

Acadian Bicentennial

EXTENSION OF REMARKS

HON, EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. WILLIS. Mr. Speaker, this is a most proud and happy year for the Acadians of Louisiana, as the State and Nation join in observing a yearlong bicentennial celebration marking the Acadian migration from Nova Scotia 200 years ago and paying tribute to the loyalty, courage, character, and accomplishments of their descendants who have had such an important part in Louisiana's history and development.

I have the special honor and privilege of representing the Third Congressional District of Louisiana where so many of these fine Acadian people reside and which is truly the center of Acadian life and traditions in this country. I have the further pleasure of making my home in St. Martinsville, the heart of Louisiana's Acadian area, where the bicentennial celebration will be climaxed with a pageant in Longfellow-Evangeline State Park, dramatizing the migration.

Launching the celebration in a most significant manner, members of a large delegation of Canadian business, civic, and cultural leaders have visited Louisiana this month as goodwill emissaries from the Canadian counterpart of the bicentennial year in Canada. Many events have been arranged in honor of the visitors and they have received a royal welcome. The Times-Picayune New Orleans States, in that newspaper's issue of Sunday, January 16, expressed the spirit and meaning of this visit and its background, in the following editorial:

WELCOME TO CANADIAN ACADIANS

Coming to New Orleans Monday and Tuesday after visits around the State in what Louisianians have long known as the "Acadian" country, are some 135 Acadians from Canada—descendants of some of those French colonists of Nova Scotia who either were not torn from their homes and families or who succeeded in returning when the scared Governor Lawrence had relaxed his ban. Included in the group to do honor to the 100 families who found hospitality and lands in Louisiana after 1755 when they were exiled from Acadia (Nova Scotia), are distinguished Canadian civic, governmental, religious, and social leaders. Some

of the visitors are Acadians from New England.

Until Governor Lawrence headed the British colony of Canada, the Acadians had been permitted to take a restricted oath of allegiance to the British crown—excepting only the requirement to bear arms against their former fellow countrymen. The British Lords of Trade and ministers had long accepted this limited oath. But Lawrence, panic-stricken by groundless fears of an uprising of French colonists during the bitter French and Indian War, decided to take action on his own.

The memory of Lawrence will be held in particular distaste during this Acadian Bicentennial Celebration for the ruthlessness with which he carried out the exportation of the Acadians. There was brutal disruption of families and complete disregard for the safety of an exiled people. Several ships foundered. The American colonies disallowed new settlements and most colonies even denied landing rights. The courage and perseverance of the Acadians in their attempts to survive and to reestablish their families is almost legendary.

Louisiana-in 1755 a Spanish colony of Frenchmen—gave generous hospitality. The first of many Acadian settlements seems to have been in St. James's parish in 1756 when Yet some the Mouton family reached there. of the refugees who were sent to Georgia and the Carolinas and then traversed the wilderness to the Mississippi and paddled downstream, may have settled just below Baton Rouge at an earlier time. The first official mention tells of 193 families arriving in 1765 from Santo Domingo where they had found temporary refuge, and given lands in the Opelousas district. Later arrivals spread throughout the Teche country and westward. The mislon of distinguished visitors from Canada this week is far different from the first arrivals. They are joining with us in paying tribute to the great courage and accomplishments of the Acadians of both countries.

The newspaper in my hometown, the Teche News, edited and published by Mr. Marcel Bienvenu, himself a member of a pioneer and greatly respected Acadian family, conveyed the following welcome in French, the language of the Acadians which is so frequently heard in southwest Louisiana:

Vous Er Les Bievenues

Nous sommes heureux d'annoncer, pour samedi prochain (le 15 janvier), l'arrivée dans notre ville d'une dé legation de Canada français. Ces délégues, venant de la Nouvelle-Ecosse, du Noveau-Brunswick, de l'Isle du Prince-Edouard, de l'Ontario et du Québec, nous joindront nous autres Acadiens louisianais, pour célébrer avec nous le deuxiéme centenaire de l'expulsion des Acadiens de la Nouvelle-Ecosse en 1755.

Sans doute leur visite ne manquera pas d'évoquer en nous un couvenir bien triste, notamment "le Grand Dérangement." cette expulsion qui força nos aïeux de quitter leur chère Acadie, d'abandonner les foyer où furent nés leurs enfants, de quitter une vie tranquille et heureuse pour affronter un avenir incertain.

Mais nous sommes convaincus également que la visite de nos amis canadiens nous apportera une très vive joie, car leur séjour parmi nous—malheureusement trop court nous permettra de connaître des personnes qui sont nos frères spirituels.

Les événements historiques et les frontières géographiques semblent nous distinguer comme Canadiens et Américains, mais ils n'ont pu rompre les liens du passé et même du présent: une langue commune (où devrait-on dire deux langues communes?), une religion commune et surtout les traits de caractère que nous ont transmis nos

ancêtres. Ce peuple, noble, dévoué, patriotique, a bravé la mort plutôt que de renoncer à sa foi, à son pays; ce peuple nous a confié une foi inébranlable, une foi qui nous a soutenus dans toute les vicissitudes de la vie.

Voici donc l'héritage commun qui nous lie, les Canadiens français et les Acadiens louisianais, ce trésor spirituel légué par nos ancêtres, ces aventuriers intrépides. Il nous ont transmis un courage noble, une générosité de coeur, une fidélité à dieu et à la patrie et une foi chrétienne profonde. Travaillant dans une région sauvage ils ont façonné pour nous, leurs fils, "l'Amérique": les Etats-Unis et le Canada.

Soyez assurées, très distingués messieurs et mesdames de la délégation canadienne, que l'accueil que nous vous faisons est sincére et cordial, car ce n'est pas en qualité de touristes que vous venez nous visiter, mais votre visite a pour nous une valeur historique. Nous vous remercions du grand honneur que vous nous faites en venant parmi nous pour nous apporter l'amitié et la bienveillance de nos frères de Canada.

En vous offrant, messieurs et mesdames, le plus chaleureux accueil nous souhaitons que votre séjour à St. Martinville vous laisse un souvenir ineffaçable à votre retour au Can-

Mr. Speaker, in just recognition of the services the Acadian people have rendered through their devoted and patriotic contributions to the Nation's welfare and prosperity, I feel that a tribute from Congress is most deserving and I have therefore introduced today a resolution which would carry out this purpose. I believe my colleagues will wish to join me in paying this worthy honor.

Federal Commission To Study Copyright Laws Proposed

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I have today introduced a bill creating a Federal commission to study the copyright laws and to make recommendations for their revision.

We are living in an age when every encouragement must be given to the free interchange of ideas. The development of methods of mass communication have provided the means of bringing creative work to millions of people simultaneously. These methods include books, periodicals, newspapers, and sheet music as well as motion pictures, radio, television, and phonograph recordings. A constantly growing part of the population of our country is being reached via these technological advances, and a constantly growing number of people are employed by the industries that have grown up in these fields.

With industries as large as those in the field of mass communications there are many problems of equity and justice involved. Performing rights in musical works were first recognized in 1897. The Copyright Act of 1909 imposed limitations as to musical compositions where performances were public and for profit. Legislation to end the exemption granted to jukeboxes by the act of 1909 has been introduced in nearly every Congress since 1926.

There seem to be certain important respects in which the copyright laws differ from the patent law which grants a patentee the exclusive right to make, use, and vend the invention or discovery. The inventor seems to be better protected than the author and composer, yet the advancement of science and the useful arts was written into the Constitution as one of the basic concerns of this Nation, and of the Federal Government.

If the arts are among those activities which make our civilization endure and flourish, as President Eisenhower declared them to be in his recent message on the state of the Union, then it is time that a study be made by an impartial, blue-ribbon Federal commission of the exceedingly complex subject of the copyright laws.

Some of the issues involved have been ably set forth in a series of three editorials which appeared in the Billboard magazine during the month of December 1954, and I include them here for their informational value.

The articles follow:

[From Billboard magazine of December 4, 1954]

LET'S JUST GET THE FACTS

(This is the first of a series of editorials on copyright legislation. The Billboard believes Congress should confine its 1955 legislation on this subject to appropriating money for a factfinding commission to be appointed by the President to explore changes in the entire Copyright Act of 1909)

Proponents of copyright legislation designed to remove the existing jukebox exemption have already laid plans for the introduction of bills in the new Congress convening in January. Thus, for the fourth time in as many years, legislation will have been initiated. And there is little doubt but what one or another of the proposed bills will reach the hearing stage; and so for the fourth time in as many years, jukebox operators on the one hand and licensing organizations (spearheaded by ASCAP) on the other, will be presenting the same old conflicting evidence.

Justice moves slowly, often necessarily so. Evolution in the copyright law, as in any major law, moves ponderously. And there is justice in this slowness; for it is difficult to undo the damage caused by a new law that is a bad law.

But those of us who have followed copyright hearings over the years cannot fail to wonder if this annual performance before Congress is not impeding, rather than contributing to progress. Is this series of return engagements the only way to cope with the problem? Isn't there something wrong—and futile—in repeatedly throwing at Congress the responsibility for resolving an issue so complex?

Can any useful purpose be served in going through the same routine again with the same principals—ASCAP on the offensive and the operators on the defensive? The same pro and con arguments will result. The same time and money will be wasted.

A new approach is needed. And the way to begin is to take Congress off the hook until the log jam of conflicting and blased testimony is broken by a factfinding commission working in an atmosphere that is free of pressure, bitterness and fear.

The Billboard believes the 1955 Congress should confine itself to legislation that en-

ables the President to appoint a factfinding commission to undertake the study of all facets of the Copyright Act of 1909. The jukebox exemption is only one important phase to be studied. There are others, some of which will be considered in next week's editorial, "Inequities Versus Interdependence."

[From Billboard magazine of December 11,

INEQUITIES VERSUS INTERDEPENDENCE

(This is the second in a series of editorials on copyright legislation. The Billboard believes Congress should confine its 1955 legislation on this subject to appropriating money for a factfinding commission to be appointed by the President)

It is dangerous to attempt to modernize the Copyright Act of 1909 by piecemeal legislation. There are many areas of the act which need clarification. More important, the music industry has grown under this 1909 law to vast proportions involving investments running into billions of dollars. We are only beginning to learn how sensitive is the interdependence of all phases of the music business, one upon the other. If piecemeal legislation upsets this balance, there is no quick way of determining in advance how extensively several phases of the music industry could be damaged economically.

How easily the existing balance in the music industry could be upset can be illustrated by a review of some of the previous efforts to correct what were considered inequities in the Copyright Act. Today, after the passage of years, many would argue that it was extremely fortunate that justice moved slowly, so slowly that many of the proponents of changes in the Copyright Act changed their minds before it was too late.

What were some of these areas of dispute, areas where modernization appeared necessary at one time but later became either undesirable or of questionable necessity?

THE PERFORMING ARTIST

Is the performing artist entitled to a royalty when his disks are performed over radio stations? There is a long history to this problem, involving many top artists. Court battles were fought to force radio stations to pay artists every time artists' records were broadcast. The National Association of Performing Artists tried to establish this principle on a national and then on a statewide level. For a time the American Federation of Musicians took an interest in the matter. Such men as Fred Waring and Paul Whiteman were principals in the tangled dispute, and attempts were made to license stations.

Compare the reasoning in those days—and it seemed mighty logical reasoning—to the attitude today. It is now common practice for the artist and publisher, and often the songwriter, to pay heavily to promote the use of their records on the air.

THE RECORD MANUFACTURER

If the performing artist was entitled to royalties for the performance of his records over the air, what about the disk manufacturer? Diskeries years ago claimed as much. Some even went so far as to prohibit the playing of their records on the air. Some threatened to license such use.

Compare the advantages they thought they would gain then to the present competitive practice of literally flooding radio stations with free records.

MECHANICAL ROYALTIES

Such royalties are limited by law to 2 cents per side manufactured, paid direct to publishers on the basis of sides sold and then divided between the publishers and songwriters. Publishers and songwriters have often argued that it is not enough. Yet every day these same parties, by mutual agreement with record manufacturers, revise

the rate downward to give the manufacturers incentive to record their songs.

THE COMPULSORY LICENSING ACT

This is one of the most controversial phases of copyright. When a publisher issues a mechanical license to one record company to record his song, he must allow all other manufacturers the privilege of recording the same tune. There are some solid arguments in favor of a revision of this law. Many publishers and writers, for instance, feel that they can never adequately regain a rightful share of the control over their copyrights without the law being amended.

So where are we?

Why do artists no longer try to stop the playing of their recorded performances on the air?

Why has not the compulsory licensing provision been changed?

Why has not the songwriter and publisher pressed to get a raise in the 2-cents-per-side mechanical rate?

Why indeed? Very often, the original proponents of such changes experienced a change of heart themselves. They decided it was best, after all, to leave things as they were. In fact, had it not been so hard to achieve changes in the Copyright Act, damage far in excess of any good might have resulted. Often, the original proponents of change were protected by the very slowness of democratic legislative procedure.

And so we are on the verge of another attempt by ASCAP to amend the Copyright Act. What of that? Many who are aware of how attitudes have sharply changed in the course of years, feel it is best that the democratic process is grinding on ever so slowly.

These men feel that proponents are so bent on winning the simple piecemeal issue at hand—the end of the jukebox exemption—that they fail to view in its entirety the complex interdependence of the entire music industry. These cautious men cannot favor removing the exemption, when in their opinion, so much of the music business hangs in the balance—when it is possible that the intended beneficiaries of such legislation today may be sufferers tomorrow.

On the other hand, those in favor of removing the exemption argue that what is involved is the protection of a copyright—the right to collect a fee for performance of copyright songs for a profit. Widely held theory, among these proponents, states that a moral right to collect performance fees does exist and must therefore be exercised. Let the drive for revision lapse and they feel the entire principle of performance rights is in danger. These men hold that even should an amendment disrupt the current economic balance within the music business, the risk is worth taking in order to protect a principle so vital to performing rights and licensing societies.

Would another congressional hearing help to resolve this deadlock? Congress has heard the bitter pros and cons many times. The way must be found to gather facts and carry on research in an atmosphere free from pressure, bitterness, and fear. What is needed is a neutral factfinding commission.

Next week's editorial, Reasons for Fear, will discuss why a factfinding commission can—and should—dig deeper into all economic aspects of the music industry, if this issue is ever to be resolved.

[From Billboard magazine of December 18, 1954]

REASONS FOR FEAR

(This is the last of a planned series of editorials on copyright legislation. The Billboard believes Congress should confine its 1955 legislation on this subject to appropriating money for a factfinding commission to be appointed by the President)

Last week we discussed the dangers in-

herent in attempting to modernize the

Copyright Act by piecemeal legislation—the dangers involved in upsetting the peculiar balance of the music industry. We noted that piecemeal legislation could boomerang on the very segments in the industry that think they could benefit from a copyright amendment removing the jukebox exemption. Pointing out that another congressional hearing could contribute little, we stated that a factfinding commission was needed to gather testimony and carry on research. Such a commission would operate in an atmosphere free from pressure, bitterness, and fear.

A commission will be able to go beyond the organized groups in the jukebox industry and beyond the licensing organizations in order to better understand the opinions and problems of the individual jukebox operator, songwriter, publisher, and record manufacturer.

OPERATOR'S VIEWPOINT

The point of view of the individual operator is important to explore. Very often he is a marginal operator. He honestly feels an unfair music levy would drive him out of business. Like any other businessman, he would resent being forced by an outsider to stand an expense which does not show a tangible return.

This feeling of fear and resentment is increased by reason of the intricacies of copyright law. Like other ordinary mortals, he cannot understand it all. Nine out of ten operators will either admit this, or prove by their misstatements that copyright is a mystery to them. And herein lies the strength of the Music Operators of America.

THE MOA'S STRENGTH

The MOA's strength is derived from the operator being dependent on that organization to protect him against ASCAP. If MOA gives the least evidence that it will do anything but give ASCAP 100-percent opposition, it will lose the confidence of operators and may even disintegrate.

This complete opposition is going to exist as long as licensing organizations seek to collect fees without giving the operator the assurance that such fees will be equitable, and in proportion to value received.

A factfinding commission is in the best position to study the basic issues. There is nothing a new congressional hearing will uncover about operating jukeboxes that cannot be found in the records of previous hearings. But a commission quite properly may find the jukebox operator is willing to pay more to songwriters and publishers if reasonable payments will spell the end of ASCAP's annual attempts to put the jukebox industry in the same category as radio, television, ballrooms, etc.

COMMISSION'S POWERS

Just as a factfinding commission can talk directly to operators, bypassing MOA, so can a commission talk directly to songwriters and pulbishers, bypassing the licensing organizations. Such a direct means of ascertaining the basic facts and the personal interests of individuals in all phases of the music industry would seem logical, in view of MOA's complete opposition to ASCAP, and the latter's insistence that the jukebox exemption must be removed.

A factfinding commission will be able to examine all the complicated economics of the entire music industry, including the types of music royalties and music uses which are part and parcel of this controversy.

For example, jukebox operators feel they are paying songwriters and publishers for the use of the music these men create and exploit. They believe they are doing this through the mechanical royalty, a fee fixed by law at 2 cents per side. In the minds of the operators, this royalty totals a considerable sum—for unlike radio, for the most part, or television, the operator buys his records. The jukebox, in other words, represents a

real record market in addition to its value as a promotional medium for songs. And because records represent a sizable business cost to the operator, he tends to brush aside the argument that what is involved is performance right rather than a mechanical right.

ASCAP OBLIGATIONS

ASCAP, in its allocation of funds, has felt morally obliged to provide an incentive for music on a broad basis. It never forgets its financial obligations to those writers who once were but are no longer productive. For this—as well as other reasons—it can be said that ASCAP's distribution goes into the pockets of writers and publishers, but the distribution does not go directly, or totally, into the pockets of the copyright holders of a specific song.

In contrast, mechanical royalties from a song go direct to the specific songwriter and publisher of that song. These royalties are paid by the disk manufacturer to the publisher, who divides them with the writer. ASCAP does not administer these royalties.

Only a factfinding commission is in a position to determine whether writers and publishers are getting their fair share; only such a commission can place in proper perspective the different types of royalties and music uses. Only such a commission can objectively weigh all the moral and technical issues and resolve the conflicting points of view.

SUGGESTED LEGISLATION

Legislation could propose the establishment of such a commission by the President. The membership of such a body generally includes impartial citizens, and could include, ex-officio, several Congressmen. At the discretion of the President, representatives of different segments of the music industry could be named. The initial legislation would also outline the commission's purpose—exploration of the Copyright Act's effects on all facets of the music industry.

What would be the commission's authority? It would have power to assemble a competent staff, work closely with individuals as well as all groups involved in the controversy, and prepare a report. It is customary to set a time limit for the report, and in the case at hand 1 year has been suggested as reasonable. This would give the Congress, which created the legislation calling for the commission, the opportunity to study the report and act upon recommendation therein.

We consider such a commission the best means of correcting inequities where inequities exist. Let us not repeat the same wasteful, abortive performance we have seen in past years.

Flood Control Leader

EXTENSION OF REMARKS

HON, FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. SMITH of Mississippi. Mr. Speaker, members of the House Public Works Committee are very pleased to have Cliff Davis once again as chairman of the important Subcommittee on Flood Control. We who work with him know Cliff Davis for his devotion to this vital legislative problem which means so much to the welfare of the entire Nation. We are glad to note that his constituents are also aware of his accomplishments in this

field, as reflected in the following editorial from the Memphis Commercial Appeal:

FLOOD CONTROL LEADER

The seniority of Representative CLIFFORD DAVIS rebounds to the benefit of the entire lower Mississippi Valley in that he is now chairman of the Flood Control Subcommittee of the House Public Works Committee. It is his group which must pass on all proposed flood control projects.

Representative Davis is a sincere and vigorous advocate of sound water resources development, as his support of the St. Lawrence Seaway and other approved major projects clearly indicates. His study of water resources problems is continuous, and he is equipped to give the Flood Control Subcommittee intelligent leadership.

Israel: An Adventure of the Human Spirit

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. KEATING. Mr. Speaker, under leave to extend my remarks in the Record, I include excerpts from an address by Abba Eban, the distinguished Ambassador of Israel to the United States, at the University of Notre Dame, on January 11, 1955. The guest honors his host, as the host's invitation honors the guest. The extension of this invitation and the presence on this Catholic platform of this outstanding Jewish spokesman is in the finest traditions of our great Nation.

I commend it to the reading of all my colleagues. My only regret is that the limitations of space in the Record made a condensation of this splendid address necessary.

The excerpts follow:

ISRAEL: AN ADVENTURE OF THE HUMAN SPIRIT

Four thousand years of history have extended their span between Israel's first ascent to nationhood and her restoration to freedom at the turning point of the century. The redemption from Egyptian bondage must be regarded in any serious conception of history as one of the authentic points of climax in the progress of mankind. * * *

The flight across the Red Sea and Sinai preserved a resolutionary idea which could never have evolved in the idolatrous despotism of the Pharoahs. The idea was the sovereignty of God, the Ruler of the universe, omnipotent, one and indivisible, the embodiment of righteousness, and the loving Father of all creation. * * *

The narrative of this rebellion against idolatry by men charged with the custody of an irreplaceable idea also occurs in the history of thought in a more secular aspect. This is the original and classic episode of national liberation. The memory of Israel's first struggle for freedom has inspired and consoled many subsequent movements of national independence. When Benjamin Franklin and Thomas Jefferson were consulted on the emblem of the future American Union, they suggested that the seal of the United States should represent the children of Israel fleeing across the parted waters of the Red Sea on their way to freedom.

This portrayal was to be surmounted by an uncannily Hebraic slogan, "Resistance to tyrants is obedience to God."

THE DIMENSIONS OF HISTORY

It is not presumptuous to believe that future generations will conserve the memories of Israel's modern revival with a similar reverence and tenacity. This will certainly come to pass in the particular domain of Jewish history. Nothing since the miraculous redemption 4,000 years ago can compete in that history with this recent transition from martyrdom to sovereignty, this sudden ascent from the depths of agony to new peaks of opportunity and pride. * * *

I have come to this abode of Christian faith and learning to suggest that Israel's resurgence is an event to be conceived in the highest dimensions of history. It evokes from the past and may portend for the future a deep lesson concerning the potency and nature of spiritual impulses. * *

There is nothing global, or even massive, about the State of Israel in political terms. The territory in which our independence has been fulfilled is great in history but pathetically meager in geography. It is the bridge between the three continents of the ancient world.* * * But in the strategic calculations of this atomic century this piece of earth is of humble measure. The bridge is fragile, the highway is narrow, and in the age of air transportation it no longer obtrudes itself inevitably athwart the paths of conquest and empire. The population directly affected falls short of 2 million. * *

Clearly, if modern Israel is to be regarded as a historic incident of universal scope, this is because of a stature to be ascribed to it in a completely different dimension. If modern Israel is to have any elements of greatness then this quality must be vindicated in the spiritual realm.

THE RECORD OF ACHIEVEMENT

To say this is not to deny that some of Israel's material achievements are impressive and sometimes deeply moving. The collective survival of the Jewish people is itself a rare event of history. Many other peoples have lost their independence under the heel of invading empires; but no people, other than this, having been so engulfed has shown such a capacity for recuperation as to preserve amidst martyrdom and dispersion, all the elements of its union and identity—its language and tradition, its consciousness of attachment to the land of its origin, and the undying hope of eventual restoration. * * The banner of a free Israel now files proudly again in the family of nations from which it had been absent for so many tragic generations. * *

Nor are these the only achievements which may be accounted remarkable in secular terms. There is the pioneering toil and sacrifice which have transformed the wilderness to a semblance of its ancient fertility. There is the epic of mass immigration which has brought hundreds of thousands of returning newcomers to our shores. There are great efforts, and at times, serious results, in the increase of industrial and agricul-tural resources. There is the formation of a new culture, welding many varied immigrant traditions, tongues, and experiences into the unified tapestry of a distinctive civilization, in the image of the ancient Hebrew past. There is the struggle against the ravages of pestilence and erosion which had debased the physical aspect of the land and degraded its historic reputation as "the perfection of beauty, the joy of the entire earth." There is the adventure of establishearth." There is the adventure of establish-ing within a region dominated by despotism and autocracy a sanctuary for the demo-cratic way of life and the principles of free government. There are advances in literature, the sciences and arts, which without yet reaching the peaks of the ancient revelation, are yet significant and promising in relation to the circumstances of time and of space in which they have been accomplished. Nor can we omit from the positive record of Israel's achievement the turbulent struggle for physical security of a small people besieged on all its embattled frontiers by an unyielding and comprehensive hostility. To have achieved so large a volume of international recognition within so brief a time and against such heavy challenge is not the least surprising of Israel's modern victories.

THE POWER OF WILL

If despite all this, we concentrate our gaze upon the spiritual aspects of Israel's achievement and destiny, it is not because we renounce our claim to sympathetic appraisal in political, economic, social, or even military history. * * Rarely in history has any achievement been recorded against heavier calculations of chance. All the circumstances of time and of place argued against its success. A few decades ago the prospect that an independent Jewish state could be established in its ancient homeland appeared so fantastic, as to bring its advocates under the suspicion of insanity. Statesmen and diplomats to whom the idea was broached in the early years of the First World War were startled at hearing so eccentric an idea even submitted to their official attention. * * *

Yet within a single lifetime we had passed from a world in which the existence of an independent Israel seemed inconceivable into a world which seems inconceivable without its existence. I know of few more tangible testimonies in history to the power of the human will to assert itself against material colds. * *

This belief in the power of the human will is a recurrent theme in Israel's history. The most distinctive attribute of Israel's character, the source of some weakness but of greater strength is this stubborn, tenacious refusal to recognize the distinction between imagination and reality. In the grammar of classical Hebrew there is none of the sharp differentiation possessed by modern languages between that which is and that which shall be.

This deliberate confusion between imagination and reality, between the will and the fact, has been illustrated at many stages of our history. In 1918 our first founding father, Dr. Weizmann went up to Mount Ecopus, overlooking Jerusalem, to perform the ceremony of opening a new university. In its outward forms this resembled similar ceremonies whereby universities have been opened and dedicated in many parts of the world. There was only one incidental cir-cumstance which made this particular solemnity in any way distinctive. This was that the university did not exist at all. It was unrepresented even by a cornerstone. * * * Yet because the establishment of a university in Jerusalem was for us a matter of intense and passionate will, the absence of the physical conditions necessary for its fulfillment was not an adequate reason to abstain from all the acts and gestures which should mark its dedication. Surely enough, within two decades the university existed, and the ceremony, even in retrospect, no longer appears quixotic. * * *

Just as the establishment of Israel proves the dominant power of the human spirit, so is this theme illustrated by many acts which have unfolded themselves within the general process. The most vivid example is to be found in our immigration movement. The dispersed Jewish communities from which this immigration came were utterly divergent in all material things. Their social. economic, political, and linguistic backgrounds had nothing in common. Unity and solidarity existed only in the plane of spiritual allegiance. * * The spiritual unity had not merely to exist but actually to overtome a great aggregate of divisive material

forces. That it did so trlumph, and that hundreds of thousands responded by immigration to the call of Israel's sovereignty proved that unity will prevail against divergence, provided that the unity is truly spiritual and the divergence only material.

THE HEBREW TRADITION

Thus far I have spoken of Israel's establishment as a general victory for spiritual forces. But we also owe attention to the particular lineage of Israel's spiritual history. * * * Ancient Israel had taught individual morality, social justice, and universal peace. That the conditions in which that florescence had been achieved should once again be restored was a prospect that could not fail to appeal to any sensitive imagination.

THE FAMILY OF CULTURES

The community of nations is also a society of cultures and civilizations. Many modern states, whatever their formal relationship to established religion, exemplify and embody the Christian civilization in its various forms. Some 15 modern states are dominated by the heritage and outlook of Islam. Three or more sovereignties in the Far East are cast in the mould of Buddhist tradition. There are many states, as we know too well, which exemplify the various materialist heresies of our age. But until 1948 there was one culture, and one alone, which had no distinctive representation in the family of nations; one civilization which nowhere on earth had the opportunity to express its ideals by response to the challenge of statehood, society, and international relations. No single state spoke as the conscious champion or exemplar of the Hebrew tradition. *

In our age, for the first time since the legions of Titus subjugated Jerusalem, the Hebrew tradition has become embodied in free political institutions, on a level of equality with all other nations in the human family. By this act of remedy, the family circle of the world's free cultures has become complete. The community of nations is now a comprehensive symphony of the traditions and cultures of mankind.

It is, of course, true that the concepts of Hebraism continued to affect history after the destruction of the Jewish kingdoms.

* * * The stream of Hebrew civilization nourished the great rivers of Christianity and Islam; but its own native waters continued to flow perennially fresh. We have escaped from the great handleap and reproach of homelessness. No longer need we poignantly recite: "They have appointed me to keep many vineyards, but mine own vineyard have I not kept."

ISRAEL IN INTERNATIONAL EQUITY

There are many aspects of Israel's revival which belong to the domain of political history, but which cannot be denied their place in a spiritual appraisal. The homelessness and martyrdom of the Jewish people was not merely a source of international political tension: it was also a heavy burden upon the Christian conscience. The weight of this burden became heavy beyond endurance by any sensitive mind in the aftermath of the Second World War, when the curtain went up on the burnt and mangled bodies of 6 million Jews including a million children. The Jewish people had fallen victim to the most fearful agony which had ever beset any family of the human race. A whole continent was saturated with its blood and haunted by its unexpiated sacrifice. As the world rose from the ravages of the Sec-World War, it came periliously near to creating an injustice more helnous than any which had been illuminated by the triumph of the Allied cause. It became hor-ribly but seriously possible that every na-tion would be granted its freedom, amongst those which had suffered under the heel of Fascist tyranny, except the people which had

suffered the most. If the world order had been established upon this discrimination, it would surely have been conceived with an intolerable measure of original guilt.

From this spiritual peril the community of nations cleansed itself belatedly, perhaps a little too grudgingly, but nevertheless decisively, when it ordained and later recognized the establishment of Israel. • • • The establishment of Israel's sovereignty, though ostensibly a fact of political organization, was, in the deeper sense, an act of universal equity.

REGIONAL EQUITY

The same consideration arises with particular force when we examine the problem of equity in its regional aspect. No people benefited more lavishly than the Arabs from the new inheritance of independence bequeathed by the Allies' victory in two world wars and the establishment of the United Nations. In an area where not a single free Arab or Moslem had lived in conditions of political independence four decades ago, there were now to be created 7, 8, or 9 separate Arab sovereignties extending over a vast subcontinent from Pakistan to the central Mediterranean, from the Taurus Mountains to the Persian Guif. * *

Here again the international conscience was faced with a burning problem of equity. Was it considered right for the Arab people to hold sway over a continent, and wrong for the Jewish people to establish its independence in a tiny fragment of that huge domain? Would it be the decree of history that the Arabs must be independent everywhere and the Jewish people nowhere-not even in the land which owed all its luster in history to its connection with the ancient Hebrew tradition? * * * Here again there was the peril of an award so one-sided, so monopolistic, and discriminatory in its nature as to weigh down the international conscience for generations to come. After many hesitations the world community cleansed itself of any such reproach. It rightly established and encouraged the emancipation of the Arab people on an almost imperial scale. But the benefit, nay the elementary right, which it conferred upon the Arab people in such abundant profusion, was also bestowed upon the Jewish people, albeit within meager and austere limits. * * * It would have been an indelible disgrace to the cause of international justice if a world which had bequeathed this vast liberation to the Arab people had begrudged the Jewish people its minute share of that inheritance. morality expressed in the parable of Naboth's vineyard would have clouded the constitutional and political structure of the Middle East.

ISRAEL'S CULTURE

As we survey the origins of Israel's independence in spiritual terms, we cannot fail to let our minds linger in speculation on the question of Israel's cultural destiny. As a military power, a political force, or an economic unit, Israel's horizons are restricted by deficiencies of material power. * * * But in these realms Israel will never compete with the might and influence of the continental or imperial powers. The only domain in which we are free to soar to the highest peaks available to any nation are those of scientific, cultural, and spiritual progress. However pressing are Israel's preoccupations with physical security and economic welfare, the challenge of cultural achievement cannot be set aside. Would we not be an extraordinary people if we were to devote all our efforts to those material fields in which, after all, our limitations are inexorable, and stand aside from the only areas in which, at least, the potentialities of greatness lie open before us.

Three elements are available to us in the formation of Israel's new culture. First, there is the Hebrew biblical tradition expressed in our incomparable language and

evoked by the physical associations of the country itself. • • • The sentiment of belonging, in the most intimate sense, to the great sweep of Israel's history in this immortal land has a far greater influence than is commonly realized in the formation of our national character. Our literary movement and recent discoveries in archaeology constantly remind our people of this primary element in their spiritual formation.

A second element in Israel's culture is the accumulated experience acquired by the Jewish people in its wanderings after the period of national independence. The generations of dispersion and persecution were also a period of constant interplay between the Hebrew mind and the cultures of Europe and the New World. The Rabbinical and Talmudical literature, the post-Biblical Hebrew poetry and philosophy, the traditional attachments of the Jewish people to the arts and sciences of the Western World, are all part of the reservoir from which modern Israel draws its sustenance.

The third element available for our cultural development is western civilization, with special reference to its political institutions and its scientific and technological progress. It is Israel's fortune to be the sole representative in its immediate region of political democracy and scientific progress, which are the two most distinctive achievements of European and American civilization. This western civilization is strongly expressed by the Anglo-Sakon tradition with which Israel has two links of special intimacy. First, the great bulk of the free and extant Jewish people is a part of the English-speaking world. Second, the tradition of the English-speaking people is not something alien or external to Israel's life and experience. It is itself morally derived from the original Hebrew tradition of which Israel is the modern representative and embodiment.

From the effervescence of these three elements—the Hebrew Biblical tradition, the broader Jewish experience, western science and political organization—the culture of modern Israel will emerge. * * * We have at least restored to our people the conditions of a creative culture—pride of soll; the sense of continuity; deep roots in a superbly aristocratic cultural tradition; and the special exaltation which attends a people in the formative hours of its national revival. Who can be certain that these conditions will not bring a message in the spirit and quality of our original inheritance.

THE CHRISTIAN ATTITUDE

I am certain that your invitation to me to discuss these high themes within this Catholic sanctuary reflects your conviction that the unfolding of Israel's new career as a nation is a matter of moment and concern to the Christian world. The great issue in this generation is drawn, not between Christianity and Judaism, or between Israel and the Christian nations. The frontier lies rather between those who assert and those who deny the supremacy of faith and of You and we occupy different areas of tradition, experience and outlook; but we occupy them on the same side of that fateful demarcation. Our differences are not insignificant, and we should not be disposed to obscure them. . . But if the rise of Israel is a victory of the human spirit, a triumph of international integrity, a burden removed from the universal conscience, the addition of a new voice to the symphony of human freedom, then this is a victory for the Christian cause as well as a direct salvation for the Jewish people.

It is memorable and significant that the Christian world lent its sympathy to Israel's revival. The great Catholic countries of Europe and Latin America were amongst those who most ardently sustained Israel's struggle for independence and recognition. Our devotion to a kindred heritage, our common

respect for human values, our unremitting resistance to tyranny, are unifying forces which transcend all secondary divergences of judgment or interest. The people of Israel who first in history rebelled against the might of barbarian and pagan empires, which raised the first voice against idolatry—this people in its new life of independence will never bow the knee to dictatorship.

THE HOLY PLACES

.

An understanding of the spirit of the Christian world ranks very high among Israel's chief aspiration. We are fully aware that many causes and assets sacred to Christianity lie within our control, and demand our most vigilant reverence. This consideration has led us constantly in recent years to proclaim our readiness to place under international influence the Holy places in Jerusalem which are the cradle and inspiration of the Christian faith. By such a solution, reconciling the full political independence of the people of the Holy City with interna-tional interest in that which is truly universal in Jerusalem, we could achieve a double purpose. We should prevent an en-croachment on the political liberties of Jerusalem's population, while at the same time acknowledging the moral authority of the world community over the sanctuaries of your faith. * * These are the considerations which have caused the Governments of the United States and of Israel to cooperate so constantly within the United Nations on behalf of solutions which respect both the sovereignty and secular independence of Jerusalem's population, and the rights of the Christian world to see its holy places kept immune from turbulence and desecration. I am satisfiled that this attitude is now shared by a majority of the members of the United Nations.

In the same spirit, you will understand how devoutly we have welcomed the warm praise expressed by Msgr. Antonio Vergani, representative of the Latin Patriarch in Israel, by the Very Reverend Father Brunet and by visiting Cardinals and Prelates to the efforts of my government to ease the journeys of pilgrims, to effect a road link to Mount Tabor and to repair the ravages inflicted by war on some of the buildings and properties of the Catholic Church in Israel. In paying this tribute to the Government of Israel for its substantial subventions, enabling the rehabilitation of the Hospice of Notre Dame de France in Jerusalem. Father Brunet eloquently and devoutly concludes: "May God youchsafe to us to see this edifice risen from its ruins, and pilgrims coming once again to recite their prayers on the soil of this Holy Land, where spiritual interests should bring all hearts together in peace."

This is the goal of Israel's spiritual adventure, in the freedom of its ancient home—
to live a national life consecrated to the
universal vision of fraternity and peace. If
we serve this ideal, within the limits of our
human imperfection, the new era of Israel's
freedom will be not unworthy of the inheritance of the fathers.

Court District Needed

EXTENSION OF REMARKS

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. HILLINGS. Mr. Speaker, I wish to place in the Record an editorial which appeared in the San Diego Union for January 18, 1955, in support of legislation which I have introduced to provide for a separate Federal judicial district for the southern district of California. The editorial follows:

COURT DISTRICT NEEDED

San Diego has grown to the extent where it should have a separate Federal judicial district with two judges.

For the third year running the local bar association is making a concerted effort for such legislation. During the past 2 years appropriation has been made for a new courtroom and provision has been made for a Federal grand jury. A separate district is the next logical step.

San Diego County has grown to the extent where it should not be a stepchild of Los Angeles. A separate district would eliminate many difficulties now caused by overloading the Federal court.

Man of the Year in Financial World

EXTENSION OF REMARKS

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. HAYS of Ohio. Mr. Speaker, it is with great pleasure I include as part of my remarks in the Record an article from the Cleveland Plain Dealer of December 31, 1954.

Mr. Cyrus Eaton is truly one of America's financial giants and one who has a deep and abiding interest in people. Many of my constituents have personally known of this due to Mr. Eaton's actions in helping to save the Follansbee steel mill for the Ohio River valley community, where it employs some 800 men from both Ohio and West Virginia. The people of my district wish Mr. Eaton and his associates well in this new venture as in all of his business activities.

I had the pleasure to point out at Follansbee at the banquet in the mill a few days ago that Cyrus Eaton is a builder who has confidence in the people of America and in the future of America.

The Cleveland Plain Dealer article follows:

EATON FINDS BUSINESS WITH SECOND WIND, HITTING STRIDE—C. & O. CHAIRMAN URGES TAX CUTS FOR LONG-TERM ECONOMY

(By John E. Bryan)

Business has its second wind, and the American economy again is hitting its stride. This was the outlook yesterday by Cleveland's famous financier and industrialist, Cyrus S. Eaton, who marks his 71st birthday this week and the winning of his own second wind this year.

The chairman of the Chesapeake & Ohio Railway, Steep Rock Iron Mines, Ltd., and West Kentucky Coal Co., and president and chairman of Portsmouth Steel Corp., stated:

"As the new year begins, the basic industries with which I am closely associated—railroading, coal, iron ore, and steel, are experiencing a heartening resurgence. All present signs point to a busy and prosperous 1955."

For a healthy and expanding economy over the long term, however, Eaton believes the American people must insist on fundamental and far-reaching reforms in Federal Government.

"There can be no permanent progress and prosperity under a system that taxes its citizens to the point of confiscation in order to support a bureaucracy that smothers the initiative of those same citizens under mounting layers of redtape and regulation, he asserted.

RAGS TO RICHES

America grew to its giant industrial staturebecause it was the land of unlimited economic opportunity for everyone, he pointed out. The man who was willing to work strenuously and to risk such small capital as he might be able to assemble, could literally from rags to riches, Eaton adds.

"Today there is relatively little incentive for the spirit of venture. Security, supervised by the state, is the most likely lot of the common man.

"To those who have set aside some substantial store of worldly goods, the temptation is ever stronger to convert their wealth into tax-exempt municipal bonds, and to abandon the energetic empire of industry and risk-taking for the cult of carefree laziness in warmer climes."

The best minds in labor and agriculture, as well as business, need to be brought to bear on the vital problem of governmental reform to restore true free enterprise in the finest American tradition, Eaton urges.

IMPORTANT MOVES

Eaton, who also is a director of the Cleveland Cliffs Iron Co. and the Sherwin-Williams Co., and a breeder of fine cattle in Northfield, is being called one of the "men of the year" by the financial world as it recalls his many important moves.

He acquired working control of the C. & O. last January 19 from his friend, Robert R. Young, who is hailed by many as "the man of the year," for \$9 million, enabling his predecessor as chairman of the railroad to win his fight for the New York Central.

The genial but shrewd financier, who has the vigor of a man of 35, also "came to the rescue" of the citizens of Follansbee, W. Va., when the State's Governor asked him to buy and operate the steel mill with the town's name, instead of allowing its equipment to be sold for removal by Republic Steel Corp., which Eaton founded.

In addition, Eaton has been adding to his vast holdings in Cliffs and has acquired the huge Ungava ore deposits. He is seen building another empire, perhaps greater than the one he started in the 1920s, which collapsed for him in the depression years.

More Than 1 Million Pupils in Los Angeles County Schools

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present to this great legislative body the text of what I believe to be a most interesting and informative communication recently received by me from Mr. C. C. Trillingham, superintendent of schools in Los Angeles County in my native State of California. I present with it the letter by which Mr. Trillingham transmitted this information to me. Since the population status of Los Angeles city and Los Angeles County is so well known

throughout our beloved Nation, and since the public school problem, and the lack of number of school buildings and, therefore, classrooms, is also well known and again this year is one of the most urgent of public matters which must be handled by this great Congress as promptly and fully as possible. I do not feel it necessary to specify the signifi-cance of these figures of Los Angeles County. I do wish to say, however, in the great 23d District of Los Angeles County, which I am representing this my fifth term in this great legislative body, there still continues a stressing shortage of adequate school facilities in many portions of this congressional district, which extends approximately from the north boundary of the city of Long Beach to within about 20 blocks of the city hall of the city of Los Angeles and easily has an estimated more than one-half million residents.

Mr. Speaker, not only should there be no place in America for the children and youth to grow up noticeably illiterate on account of lack of classroom facilities; but, Mr. Speaker, it is also crystal clear that the entire future destiny of our great Nation depends upon what the children of today are enabled by the adulthood of America to become. I firmly feel and believe that adult America will have cause for deep regret, if adult America does not forthwith and more adequately meet the manifest needs and deserts of our Nation, to the essential end that no group or segment of American children shall grow into adulthood, illiterate in their letters and lacking in the common advantages of reading and writing and ability to do simple figures because American adulthood has continued to fail to perform its reasonable duty to our own young offspring.

My own present-day convictions on this subject are necessarily partially formed by my experiences as a member of the California State Board of Education prior to coming to this Congress. I am always even more shocked when, as a member of the Committee on Armed Services. I note the figures specifying the thousands of American boys who cannot qualify in the very simplest of military examinations and requirements, because of their utter lack, in a great number of cases in the very simplest of schooling benefits. This lack, Mr. Speaker, naturally also definitely enters into the weakening of our national defense and our national security.

The communication follows:

COUNTY OF LOS ANGELES, SUPERINTENDENT OF SCHOOLS, Los Angeles, Calif., January 14, 1955.

Mr. CLYDE DOYLE,

Congressman, 23d District, California, House of Representatives,

Washington, D. C. DEAR MR. DOYLE: We thought you might be interested in the enclosed information about school growth in Los Angeles County.

On October 29, 1954, there were 1,053,042 pupils enrolled in the public schools of Los Angeles County. On November 1, 79,800 pupils were attending schools in part-time sessions.

Cordially yours,

C. C. TRILLINGHAM, Superintendent. Growth trends in Los Angeles County, October 1954

1. POPULATION OF LOS ANGELES COUNTY

	Jan. 1, 1945	Jan. 1, 1950	Jan. 1, 1954
From regional planning com- mission: Estimates	3, 375, 150		€ 4, 806, 633 1 4, 847, 043
1950 census Rate of increase		4, 131, 687 23, 01	1 15, 78

1 July 1, 1954.

1941	1,892	1, 023	54.
1940	1,759	973	55.

Does not include districts which were chartered city, unified, or elementary city districts in 1949.

8. SCHOOL ENROLLMENT IN LOS ANGELES COUNTY ON MAR. 31, 1954

Kindergarten	82, 722
1st grade	86, 210
2d grade	78, 830
3d grade	
4th grade	65, 772
5th grade	
6th grade	
7th grade	56, 884
8th grade	
9th grade	
10th grade	
11th grade	
12th grade	29, 608
13th grade	1 24, 218
	4 11, 106

1 Includes part-time students.

It will be noted that the number of pupils enrolled in the first grade exceeded by more than 5,000 the combined enrollments in grades 8 and 12.

9. MOBILITY OF POPULATION IN LOS ANGELES COUNTY

In 1949-50, there were 788,000 family moves in Los Angeles County. This degree of mobility has grave implications with reference to unstable family life, lack of membership in community organizations, general uncertainty and unrest, and juvenile delinquency. Growth and mobility constitute two of the schools' most serious problems today.

Short Legislative History of Attempts To Amend the Copyright Laws

EXTENSION OF REMARKS OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRES-SIONAL RECORD an article from Billboard magazine of December 4, 1954, giving a short legislative history of attempts to end the exemptions granted by the copyright laws. This article was written by Benjamin J. Atlas, chief of the magazine's Washington bureau.

The article follows:

JUNEBOX LEGISLATIVE HISTORY-ATTEMPTS TO END COPYRIGHT EXEMPTIONS DATE BACK TO

(By Ben Atlas)

Legislative attempts to end the jukebox exemption from copyright royalties have had

a long and wordy history on Capitol Hill.

Legislation to wipe out the exemption mandated by the Copyright Act of 1909 has been introduced in nearly every Congress since 1926

There have been eight different hearings before congressional committees, most of them running to considerable length. legislation reached the floor twice; it was debated on the House floor in 1930 and on the Senate floor in 1935. Since 1936, legislation on the subject has failed to emerge from committee.

Here is a rundown of the history:

Sixty-ninth Congress, second session (1926-27): Hearings held, bills left on scrap heap;

Seventieth Congress (1927-29): Legislation introduced, left on scrap heap.

Seventy-first Congress (1929-31): Legislation introduced, hearing held by House Rules Committee; House floor debate in 1930. lot of the debate involved an amendment offered on the floor rewriting the section of the Copyright Act which specified an exemption for jukeboxes. The amendment was debated and tabled. The House subsequently defeated the amendment without The bill went to the Senate without the amendment relating to coin-operated machines. The Senate Subcommittee on Copyrights held hearings in 1931 (3d sess. of the 71st Cong.). The Senate committee amended the bill, making it provide that the use of a machine for the reproduction of musical works was not a public performance for profit unless a fee was charged for admission to the place where the rendition occurred. After extensive debate, the amendment was agreed to by the Senate but the bill failed to pass.

Seventy-second Congress (1931-33): Hear-ings held by the House Subcommittee on Copyrights, Patents, and Trade-Marks in

Seventy-fourth Congress (1935-36): Two bills introduced in the Senate, two in the House. Hearing held before Senate Subcommittee on Copyrights, Patents, Trade-Marks in 1935; hearing held before House Subcommittee on Copyrights, Patents, and Trade-Marks in 1936.

Seventy-fifth through Seventy-eighth Congresses (1937-44): Bills were introduced almost every year in each of these Congresses but no hearings were staged.

Seventy-ninth Congress (1945-46): Two bills introduced. Lengthy hearings were staged by House Subcommittee on Copyrights, Patents, and Trade-Marks.

Eightieth Congress (1947-48): The battle centered on 3 bills, 2 of them to wipe out the jukebox exemption. The third bill, sponsored by Representative Hugh Scott, Republican, of Pennsylvania, who was also author of one of the jukebox royalty bills, proposed to permit copyrights on recorded versions of previously copyrighted material. Known as the interpretation bill, this would have authorized copyrights on individual arrangements of recordings. This legislation got lengthy hearings before the House Judiciary Subcommittee on Copyrights, Patents, and Trade-Marks in 1947.

The issue got a going-over on another front in that Congress when the House Education and Labor Committee deliberated the question of uses of royalty funds. This question rose when the committee in rewriting the National Labor Relations Act called for outlawing welfare funds, then widely employed by James C. Petrillo's American Federation of Musicians, as well as John L. Lewis' United Mineworkers. Representative CARROLL D. KEARNS, Republican, of Pennsylvania, chairman of a subcommittee on Petrillo's activities, seriously sought to draft a bill proposing that phonograph records be labeled separately for commercial use only and for home use only. The idea dropped as too cumbersome to administer, though it was revived briefly at a subsequent jukebox-copyright hearing.

Eighty-second Congress (1951-52) - Representative Scorr at the outset of this Congress hopered a bill identical to his old one calling for outright repeal of the jukebox exemption. Soon afterward, Senator Estes Ke-FAUVER, Democrat, of Tennessee, introduced a more detailed bill. Four months later, a modified version of the Kefauver bill was hoppered by the late Representative Joseph C. Bryson, Democrat, of South Carolina, days later, Kefauver introduced an identical counterpart to the Bryson bill. Bryson-Kefauver bill, which would have made the rendition of a copyrighted composition on a jukebox a public performance for profit, exempted single jukebox operators or owners. The bill provided that owners or operators of more than one jukebox must obtain a license and pay royalties. The bill would have allowed them to use records in the jukeboxes without first obtaining a license, provided that they subsequently paid I cent per record royalty to the composer of every copyrighted composition on each record inserted in any particular juke-

Lengthy hearings were held by the House Judiciary Subcommittee on Copyrights, Patents, and Trade-Marks, headed by Representative Bryson.

FOR AND AGAINST

The line-up of witnesses was pretty much the same as in previous hearings, with the American Society of Composers, Authors, and Publishers in the van of proponents, as it had always been. Other supporters: Broadcast Music, Inc., Authors' League of America, Songwriters' Protective Association, National Federation of Music Clubs, Music Publishers' Protective Association, Music Council, American Book Publishers' Council, Federal Bar Association of New York, New Jersey, and Connecticut, the Register of Copyrights, the State Department, and the Librarian of Congress.

Opponents of the legislation this time included the record-manufacturing industry (spokesmen for Columbia, Capitol, RCA-Victor, MGM, and Decca Records). Some threescore witnesses were on hand against the bill, including manufacturers of coin-operated phonographs, such as David Rockola, president of Rock-Ola Manufacturing Co.; distributors, opertators' groups, such as the California Tavern Association.

Debate was so acrimonious that subcommittee members urged the participants to seek an industrywide conference to see if they could resolve differences.

The Bryson subcommittee failed to reach agreement after studying some suggested compromises of their own, including revival of the old Kearns idea of establishing separate home use and commercial use labels on disks, so as to impose jukebox royalties on commercial labels. An 11th-hour at-tempt by Bryson to get the bill favorably discharged from his subcommittee to the full committee failed, and the coauthor had to content himself with a minority report recommending the legislation.

Eighty-third Congress (1953-54): The battle shifted to the Senate side. The late Senator Pat McCarran (Democrat, Nevada) introduced a bill to extend the Copyright Act to jukeboxes but exempting operators of single jukeboxes. Senator EVERETT M. DIRK-SEN (Republican, Illinois) hoppered a bill identical with the old Scott bill, but DER-SEN made it known that he didn't want to press his bill. Lengthy hearings on the McCarran bill were held by the Senate Judiciary Subcommittee on Copyrights, Patents and Trade-Marks. Both bills wound up on the shelf of the Senate Judiciary Subcommittee on Copyrights, Patents and Trade-

Meanwhile, efforts to get a jukebox royalties exemption clause in the model global Copyright Treaty failed at Geneva, but proponents managed to insert a clause authorizing creation of an international commission to study the question at any time. The model Copyright Treaty was ratified by the Senate in the 83d Congress and was signed by President Elsenhower. Legislation bringing the Copyright Act into conformity with treaty provisions was enacted.

Here in a nutshell are the major arguments, pro and con, as debated at committee hearings:

PRO ARGUMENTS

Proponents argued that the jukebox exemption is:

(1) Anachronistic, since it was inserted in the 1909 Copyright Act when the phono-

graph was in a "primitive state."
(2) "Unreasonable," since it bars the copyright owner from asserting that the performance on a jukebox is for profit and thus denies the copyright proprietor from "participating in the proceeds derived from the public performance."

(3) "Discriminatory" against other users for profit who pay royalties to the composer, "as provided by the Constitution and carried out by the Congress." According to this argument, a person who buys a disk for home use pays a price which includes a royalty paid by the disk manufacturers, whereas the person who buys a disk for use in a jukebox pays no more than a private retail consumer.

(4) "Inherently unfair to the composer." According to this argument, the jukebox industry "breeds on the work" of creators of the music, exploiting the composer "without his permission" and without extra recompense to him for this exploitation.

CON ARGUMENTS

Foes of the legislation argued:

(1) The jukebox is "the greatest agency for popularizing music," contributing to widespread dissemination of works of composers and authors and therefore jukeboxes should not be charged any extra royalty for public performance for profit. This argument went on to declare that the coin-operated phonograph had already become well-known in the United States by 1909 when Congress wrote the Copyright Act exempting jukeboxes from royalties.

(2) Any hike in the cost of disks would produce an economic threat, drying up sales, penalizing disk manufacturers, hitting authors, composers, singers and other artists, di-

rectly affecting their incomes.

(3) The legislation would drive a large number of jukebox operators out of business. Their profit margin is low, the argument ran. This, in effect, would be discriminatory, especially since jukebox operators now pay for the music they use in the form of the 2-cent statutory royalties imposed upon disk manufacturers since 1909.

(4) The legislation is administratively impractical. Operators argued they would be required to file monthly reports to copyright owners. Individual operators testified they would be compelled to take blanket licenses from all performing rights, societies and independent composers or keep the records and make individual payment to individual copyright owners.

People's Prize

EXTENSION OF REMARKS

HON. PETER W. RODINO. JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Newark (N. J.) Evening News under date of January 18 entitled "People's Prize":

PEOPLE'S PRIZE

A few years ago it would have occurred to no one to award Newark a prize. Its municipal government was notoriously inefficient and extravagant, a condition that reflected discredit on the people of the city.

But these same people were to prove that

But these same people were to prove that they had been misjudged. They didn't like what was going on at city hall, either, and they got together to do something.

What they accomplished, through a series of bitterly fought elections, has attracted national attention. The new charter and the administrative code adopted by the city council are widely regarded as major advances in city government, and requests for copies of them come from all parts of the country. Now the National Municipal League and Look magazine, cosponsors of an annual competition, have named Newark an all-American city. The basis of the award is energetic, purposeful, and intelligent citizen action.

Newark was one of 10 municipalities so honored. The award states its purpose is to pay tribute to the people of Newark for ridding their city of a wasteful government and for making their community "a better place

in which to live."

C. Willard Heckel, chairman of the citizens committee, the instrument of change, who pleaded Newark's case before the jury, says, "Newark is now a city that has found itself, and what was once a spirit of defeat has become a spirit of confidence and trust in the city's future."

It would be dangerous to assume that the fight for a good local government has been won. It has only begun, but it has made a good beginning. The people have shown they want good government and are willing to go to a lot of trouble to get it. They'll have to keep at it.

Set Net Legislation

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BARTLETT. Mr. Speaker, under Federal law, regulations governing the Alaska fishery are made and enforced by the Fish and Wildlife Service of the Department of the Interior. By custom and, it must be assumed, because conservation would best be served thereby, set nets, a form of gear for the taking of salmon, have been spaced at different distances in different sections of Alaska. Last summer a Federal judge of the district court for Alaska held that set nets are fixed gear within the meaning of the organic act concerning the Alaska fishery. The Fish and Wildlife Service immediately announced that as a consequence of this ruling 1955 regulations would require these nets to be not less than 1,800 feet distant one from another or a much greater distance than has been the case in most areas of Alaska.

It is generally agreed that this would create chaos, no less. Therefore bills have been introduced in the Congress seeking legislative cure. It is my understanding that in principle they are endorsed by the Fish and Wildlife Service, by the fishing industry, and by the fishermen who, to date, have made their views known. Thus we have what might properly be described an unparalleled situation in which all elements are in harmony as to what should be done, in what had the possibility of being a highly controversial Alaska fishery issue.

Senator Warren G. Magnuson, of Washington, and I have introduced identical bills on this subject. The requirement now is for speedy action so that the law may be changed before the 1955 fishing regulations become applicable.

Only this morning I received from Clarks Point on Bristol Bay in Alaska a radiogram signed by a good many residents of Clarks Point and Ekok whose livelihood is directly concerned with the operation of set nets. The body of the message reads:

We, the undersigned, urge that the House of Representatives and Senate approve legislation now before you to reduce distances between set nets from 1.800 feet to those distances that were in effect during the 1954 fishing season.

The message is signed by Joe Bermanon, Clara Clark, Joseph Clark, Nancy Wilson, Mary E. Shade, M. E. George, Aurora George, Rose Garcia, Matrona Javier, Verner Wilson, John W. Anderson, Annie Anderson, Ingvar D. Johansen, Peter Hamilton, Jr., Aliek Evon, Annie Evon, John Gardiner, Louise Gardiner, Annie Ramondos, Charles E. Wolfe, John R. Andersen, Peggy Andersen, Emil E. Endel, Messa Egeand, Andrew Roberts, Martha Hamilton, Steven Wassily, Mark M. Hiratsuka, Mary Hiratsuka, Dick Lopez, Victor Tumutak, Andres Javier, Matrona Debano, Peter Traust, Harry Barnes, Daisy Barnes, Domingo Sloresta, Mary Floresta, Mrs. Anita Lopez, Pete Debenno, Jack D. Howard, Lilla M. Howard, Henry A. Shade, Nick Nankon, Mary Echuck, Jacinto A. Blancaslor, Peter Heyano, Rosa Heyano, Gene F. Pillian, Charlotte Pillian, Jack Savo, Tikano Savo, Sakalie Talogan, Nick Hansen, Annie Hansen, Tarrey Nolly, Sophie Nolly, Susie Muneyasu, James Muneyasu, and Henry E. Shade.

Peter Campbell Brown: A Gallant Fighter in the American Tradition

EXTENSION OF REMARKS

HON, SIDNEY A. FINE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. FINE. Mr. Speaker, on the occasion of the resignation of Peter Campbell Brown as chairman of the Subversive Activities Control Board, I was pleased to add my tribute to the many others paid him by both sides of the aisle for his qualities as a man, his sagacity as a lawyer, and his fidelity to the public service. I expressed confidence that his rulings during the entire course of the lengthy hearing over which

he so ably presided would be affirmed by the appellate courts.

A few short weeks ago the United States Court of Appeals for the District of Columbia upheld the order of the Board of which Mr. Brown was the author. I was happy to join in the deserved tribute to him then as I am pleased to congratulate him now for a difficult job so well done which, despite the continued harassment to which he was subjected by the Communist Party, was accomplished in the American tradition of eminent fairness and without even a minute abridgement of any of the constitutional guaranties.

Under leave to extend my remarks, I wish to include a column entitled "Only Human," by Sidney Fields, which appeared in the New York Sunday Mirror of January 2, 1955, which provides a further insight to this devoted public servant who, to the pride of all New Yorkers, now serves as the city's commissioner of investigation in the administration of Mayor Robert F. Wagner:

PETER CAMPBELL BROWN: HUNT WITHOUT HEADLINES

In the loyalty check now going on among nearly 200,000 city employees 6 have so far resigned and 5 have been dismissed from their jobs. The check is being conducted without hysteria or headlines by the city's chief security officer and commissioner of investigation, Peter Campbell Brown, a gentle, burly man, who moves with measured slowness and brilliant sureness. But 11 resignations and dismissals after a year of checking are hardly overpowering results.

"The fact is the vast majority of city employees are devoted and loyal Americans," Brown says, and then cautions: "But don't be swayed by numbers. One or two Communists can cause much damage. Remember the Rosenbergs and Klaus Fuchs."

Brown once served as chairman of the Federal Subversive Activities Control Board. Ten days ago the United States courts of appeals upheld the Government order to the Communist Party to register as a subversive organization dominated and directed by Soviet Russia. Nowhere in the endless accounts was Brown's name mentioned as the author of the opinion on which the court based its decision. He prefers it that way. And there is no better index to his character.

"Anyone doing a job against subversion doesn't make headlines," he says. "He doesn't have the time."

In his present job he must, among other things, make surveys and studies, at the mayor's orders, of the city government, or its departments; and he is required to investigate any complaint filed against the departments or their employees.

"It's been our experience that 9 out of 10 complaints are motivated by envy or jeal-ousy," says Brown. "Besides complaints, our work ranges wide: Subversion; a thorough study of how the city can earn revenue from waste collection; or getting rid of such nonsense as those 13 hydrant inspectors. At least 2 of them made up to \$10,000 a year."

THE WAR YEARS

Brown is 41, a devout Catholic, and was born in Brooklyn. His father, now retired, worked in the city controller's office, but with his modest salary made a teacher out of his daughter and a lawyer out of his son. Brown went to Fordham College and Fordham Law School, practiced for 3 years, and then enlisted as a private in the Air Force shortly after Pearl Harbor. He emerged a much decorated major 4 years later. Before he left for combat in Europe he married a pretty model. They now have three sons and a daughter.

"I didn't see my first born until he was a year and a half old," Brown says. "The same thing happened to Bob Wagner. We were in the same outfit together."

On his discharge Brown was appointed an Assistant United States Attorney General, and 13 months later started a 7-year stint in Washington: Chief of Internal Security in the Criminal Division of the Justice Department, First Assistant of the Criminal Division, Executive Assistant to the Attorney General, then a member and finally chairman of the Subversive Activities Control Board.

As chairman he conducted the 2 years of hearings that pinpointed the Communist Party as a tool of Russia. During the long and harrowing hearings they tried every ruse and trick to break his patience and provoke him into an injudicious error that could later be used to reverse his findings. They falled. Later he summed up the experience with magnificent simplicity:

"We must always champion the freedom, which our Constitution guarantees. But we must make certain that the Constitution itself is not destroyed by those whose rights we seek to defend. * * * Liberty does not mean license. There is no such doctrine as absolute freedom of the individual. Where individuals by their teaching and conduct threaten our very existence as free people they should be restrained. * * We shall conquer this godless doctrine of communism when we adopt the Judale-Christian principles of equality, brotherhood, and freedom in accordance with the laws of the Almighty."

CELEBRATED SUCCESSORS

There was already one vacancy on the Control Board when he resigned. The two spots were filled by Thomas J. Herbert, an ex-Governor of Ohio, and Harry P. Cain, ex-Senator of Washington.

"In my wildest dreams," says Brown, "I never imagined a Brooklyn boy would be succeeded by a former governor and Senator."

He returned to New York and private practice, but remained at it only briefly because his friend, Bob Wagner, was running for mayor. It is the custom of the mayor to appoint a close and trusted friend as city commissioner of investigation, and after the election Wagner asked Brown to fill the \$15.000 a year job. He brought to it one basic lesson he learned in Washington:

"I never want to be guilty of abridging or tampering with the rights of anyone."

His predecessor had started the loyalty check of city employees with a questionnaire. Brown discarded the questionnaire after much soul-searching, and decided to rely on face-to-face interviews.

The questionnaire was "rough" and "even insulting," and would not get at the hard core of Communists he was after. Face to face interrogation would. Interviews take place continuously.

"The manner and method of our loyalty program is the most important contribution I can make," Brown says. "But this is our most important task and we won't let up until it is finished."

The President's Budget Message

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BURDICK. Mr. Speaker, when we heard the President's budget message somewhat of a political stir arose over its contents. The Democrats seem to think the President made some misleading statements in the message. I examined it carefully, as I do all of his messages, and I failed to see where it was misleading. I think the President stated the matter as plainly as possible with what information he had. When the matter is considered by the Appropriations Committee defects will be detected, and, no doubt, many of the items will be reduced. John Taber, on the Republican side, took about this position: That every request would be carefully scrutinized when the committee gets the message before it.

Probably some of the conclusions reached by the President were subject to debate. For example, on page 1, he stated:

Thus, we continue to progress toward a balanced budget.

On page 15 he made this statement: Therefore, I have no alternative but to ask Congress for an increase in the public debt.

Of course, it is difficult to harmonize these two statements. Personally, I do not think it will be necessary to raise the debt limit. The old debt limit was \$275 billion, and last session we increased it to \$285 billion. On December 31 the debt was \$278 billion, thus leaving a leeway of \$7 billion, and this in the face of a big tax reduction. Unless we appropriate, and have to borrow, too much money for foreign aid, I do not see where we shall have to worry about raising the debt limit. I do not dispute the President's statement that the limit will have to be raised, but on the surface it would seem not to be necessary.

Sixty-five percent of the budget estimate of \$62,400,000,000 will go for national security, and in this I have no complaint. We should spend all that is necessary for our own defense. This amount may have to be increased, because our security depends upon how well we ourselves are prepared to defend this country. In my judgment, we have neglected ourselves too much, because we are just waking up to the fact that in the final analysis we shall have to do our own defending. In his message the President did not take up the subject of cutting down the size of the Army. I am sure objection will be raised to this when the time comes.

We are not on a peacetime economy, even though there is no war. We are still supplying billions to factories to to turn out war material. In other words, war or the fear of war, is still present, and we have no definite way of determining what our national condition would be if we were actually on a peacetime economy.

I will do as I have always done strenuously object to handing over billions to foreign countries—but will support every move to prepare a full and adequate defense for ourselves.

Under present conditions I think the President said about all that could be said, and, as time passes, any mistakes in recommendations can be ironed out. These corrections are made to every budget, and have been ever since I have been a Member. What a department asks for is not necessarily what they will get.

The Tariff Again

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I desire to call the attention of my colleagues to an excellent article written by George Sokolsky in a recent issue of the Washington Post and Times Herald regarding the economic effects of the proposal in Congress to liberalize and extend the present Reciprocal Trade Agreements Act.

Mr. Sokolsky's article, under the caption "Tariff Again," follows:

There are two ways of looking at President Eisenhower's tariff proposals which emanate from the Randall commission:

One is that as we are going to give away some of our wealth to foreign countries, anyhow, we might as well do it on an economic rather than on an eleemosynary basis.

The other is that if all of the President's proposals go through, certain American industries, such as coal, electrical equipment, watches, wallboard, bicycles, ceramics, etc., may have to be abandoned because they will be forced to compete in the American market with commodities that are made with cheaper labor that can employ American capital which has a 14-percentage-point benefit so far as income taxes are concerned, and that will come in at a reduced tariff.

The history of the tariff in the United States has in the past been principally the story of a conflict between manufactured goods and farm products, between the industrial East and the agricultural South and West. In 1955 that is not the conflict. The differences of view are between the great units of production—big business, as it is called—and the small manufacturer.

Big business is world-conscious. It not only hopes to sell universally, but it manufactures in many countries. Its capital is not only locally invested; it is invested in many countries.

That is not true of the small manufacturer. He makes goods for a local market, whether that market is the United States or some region of the United States. He may or may not produce a superior product to one made elsewhere on the face of the earth, but he employs American labor, pays taxes not only to the Federal Government but locally, and his price is geared to the American standard of living. If our smaller manufacturers are driven out of existence by faulty economic policies, the social damage could be enormous.

Those who are doctrinaire about the free market do make the point that if such American manufacturers cannot compete with foreign goods, they ought to go out of business, as an admission of their inefficiency. This position would undoubtedly have much virtue but when the Government subsidizes the export of American capital to manufacture competitive goods by a 14 percentage point differential, the advantage to the American manufacturing abroad with cheaper labor and cheaper costs all around

is so great as to be noncompetitive. A free market is only possible if there are no subsidies, no rebates, no economic tricks. In this struggle, big business will no doubt win the immediate battle. It has utilized

In this struggle, big business will no doubt win the immediate battle. It has utilized great persuasive forces to convince the American people that we ought to have a lower tariff, easier customs procedures, and now a rebate on taxes for investments abroad, a tax differential that benefits them tremendously. But this does not solve the social problem of unemployment in the United States and that will have to be solved because the unemployed vote in elections as well as the employed do, and their votes count for as much. In such a State as West Virginia, where residual oil is knocking down the coal industry, unemployment can develop into a major political issue as it already is a social problem.

The present tariff proposals are the most radical in our history. Neither President Roosevelt nor President Truman—both low tariff men—dared politically to grant a subsidy for the export of capital. That has now been done and is before Congress for decision.

"Chamber of Smears"

EXTENSION OF REMARKS

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. McVEY. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in a recent edition of the Washington Evening Star. Much has been said recently with regard to the smearing of political parties and candidates for office. This subject was highlighted recently by the "chamber of smears" promoted by the Democrat National Chairman Paul Butler. It is somewhat difficult to understand how any remarks could carry greater stings than those inflicted by former President Harry Truman and Mr. Adlai Stevenson in comments they have made during their speeches. The article which appeared in the Washington Star on this subject is rather thought-provoking and it is repeated here for the information of those who may not have seen it:

"CHAMBER OF SMEARS"

The Democrats, with an impressive show of righteous indignation, have put together what National Chairman Paul Butler calls a Chamber of Smears. The purpose is to prove that Vice President Nixon, despite his disclaimers, really did smear the Democrats during the recent campaign, and that the President, by praising Mr. Nixon's efforts, has become a party to these smear tactics.

One might just as well concede at the outset that some of Mr. Nixon's comments, as reported by the Democrats, have many of the distinguishing characteristics of the political smear. Only a truly rugged Republican individualist like Mr. Nixon would contend to the contrary.

It is not enough, however, to be able to recognize a political smear when it emanates from Mr. Nixon. It is also desirable to be able to recognize political comments which do not come within the definition of a smear. And perhaps a good way to do this is to list a few of them.

Thus, it was not a smear when Harry Truman charged in the 1952 campaign that Mr. Nixon had paid with his votes in Congress for the \$18,000 expense account he accepted from California supporters.

It was not a smear when, on the eve of the 1952 election, the Democrat, official organ of the party, falsely and by innuendo attacked the integrity of Mr. Nixon's mother, father, and brother. And since this was not a smear, no responsible Democratic leader can be linked to the attack merely because no one of them saw fit to repudiate it.

It was not a smear when Mr. Butler's predecessor, Stephen Mitchell, accused President Eisenhower in March of 1954 of having made "an unholy political alliance with Senator McCarthy for the purpose of the next election."

And of course it was not a smear when Mr. Mitchell, in one of his blasts at the Dixon-Yates contract, implied that the President was trying to steer some easy money toward his golfing friend, Bobby Jones.

Why do not these observations and others like them come within the definition of a political smear? The answer is obvious: A political remark becomes a political smear only when expressed by a prominent member of the opposing political party; never when expressed by a prominent member of one's own political party.

Perhaps there are those who will not be satisfied with this explanation. If so, one can only suggest that they should receive Mr. Butler's current lamentations with the proverbial grain of sait.

Hon. Frank Thompson, Jr., of New Jersey

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the Fourth District of New Jersey is indeed fortunate in having acquired as its Congressman Frank THOMPSON, of Trenton. Mr. THOMPSON has long been a leader in the State of New Jersey and served in the capacity of minority leader of the State assembly. I think it is appropriate to call the attention of the Congress to the high caliber of his work by inserting an editorial which appeared in the Trentonian on January 5. I would also like to point out the well-deserved tribute which is paid in this editorial to Mr. Thompson's predecessor, ex-Congressman Howell:

HON. FRANK THOMPSON, OF NEW JERSEY

Congressman-elect Frank Thompson becomes Congressman Thompson down in Washington today, with many of his friends and supporters on hand to give him a send-off on his new career. We'd like him to know that he has our best wishes on this momentous occasion.

We believe that the new Representative

We believe that the new Representative from the Fourth District, comprising Mercer and Burlington Counties, is most suitably qualified for the high post for which he has been chosen by the voters, and we have every confidence in his ability to carry out the new duties he now undertakes.

At the risk, however, of belaboring nonessential facts, we must observe that it is obvious that the new Congressman takes office at a time when the district he represents is climbing near the top of the heap in industrial importance.

Mercer's rise in that category is well known. Burlington is right up there too, as a series of articles in the Trentonian has revealed. To Thompson, then, will fall the task of seeing that this increasingly important segment of the Nation is not overlooked in Washington. Particularly in legislation affecting the

deepening of the Delaware River will we have to depend on him to see that all questions

we hope, too, that he will continue the interest shown by his predecessor. Charles R. Howell, in the development of the Delaware Valley, Federal aid for schools, culture and many other matters of equal import.

While writing of Thompson and Howell, it comes to mind that we owe the latter a vote of thanks for his weekly report which the Trentonian has been pleased to publish. It was singularly well put together and highly informative. We are happy to know that THOMPSON intends to carry it on with a weekly report of his own, and again we shall be happy to present it.
We don't, of course, mean to imply that

we expect his reports to start rolling in next It will take him a while to get his feet on the ground, and whenever he finds time to start writing his column, we'll be

glad to get it.

In this matter, as in all others, we are confident that Congressman Thompson will acquit himself nobly.

Newspaper Flays Commonwealth

EXTENSION OF REMARKS OF

HON, E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. BARTLETT. Mr. Speaker, not long since the Alaska Weekly under the editorship of Wilbur Irving gave editorial space to suggestions made to the newspaper that in the poll it has been taking seeking to determine Alaskans' preference as to political status that commonwealth be added to the ballot. The newspaper replied to this vigorously and emphatically in true frontier and true American spirit in these words:

We have been urged, at some length if not by a great number, to accord the question of an Alaskan commonwealth space in our ballot on the statehood issue.

We are not going to do any such thing. In fact, we hope that this will be the last space we must devote to serious discussion of such a ridiculous proposition.

It is beyond the power of the Congress to diminish by one whit or tittle the legal status of an integral part of the United States of America. Any measure which would deny the people of Alaska representation in Congress-even the voteless representation they now enjoy-would do violent injury to the Constitution.

Such a measure could not be sustained in the courts, as two of the best lawyers in the United States Senate not long ago pointed out. Senator Cordon, a Republican, and Senator Clinton Anderson, a Democrat, both raised the issue of constitutionality when the commonwealth was proposed.

Alaska is an incorporated Territory of the

United States. Some have hopes that Alaska soon will join the sisterhood of States. Others fervently hope Alaska will remain a Territory. Whatever happens, Alaska will remain a part of America, owned by Ameri-

cans and peopled by Americans.

There is nothing better than to be an American. There could be nothing worse than to be an ex-American, paying no taxes to America, sending no representative to the Congress, denied any voice in the affairs of America.

We say to those who dream-fantastic as the dream may be-of taking Alaska out of America, we say this: your nightmare is not for us. Go, go to Russia, go to the land where a constitution is nothing but a scrap of paper. Or go to Argentina or Poland or any of the other poor, raped lands where men who have no respect for law and order duly constituted by the people have found it possible to bring their nightmares to a brief reality.

The years are long since the first Red October, but they will seem as fleeting in the eyes of history as the years since Munich must have seemed to a swine named "Hitler," trapped, dying, and on his way to hell. Some day, and the long years are shortening with every passing day, we, shall witness the destruction of communism and the liberation of the enslaved millions beneath the Red banners. There can be no such thing as a peaceful coexistence with the evil forces of oppression, any more than there can be a degradation of an American by his relegation to commonwealth citizenship.

America is in the fore in the battle for freedom, as she ever has been wherever the cry of liberty was raised. Every American wants to do his part in that battle.

No thinking American wants to slink off, relieved of the privilege of sharing the burden, denied the right to representation, for-

bidden to speak his piece.

No; Alaskans are Americans and Alaska is America. They are one and the same, now and forever, and the only good thing that can be said of the ridiculous commonwealth suggestion is that its very utterance proves that freedom of speech is still one of the rights of any American, no matter how lacking in commonsense.

Preaching Competition

EXTENSION OF REMARKS

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

SMITH of Mississippi. Mr. Speaker, under unanimous consent, I

include the following editorial from the Memphis Commercial Appeal:

PREACHING COMPETITION

A few days before President Eisenhower asked Congress to authorize lower tariffs through the reciprocal trading method an unusually fine presentation of the virtues of competition appeared in the New York

It was an advertisement in which more than half the page was used to picture an automobile of 1905 vintage, with brassbarrel lamps, straps to the windshield corners and a buggy top. The big type said, "How do you like the 1955 model?"

In smaller type we read, "That's probably what today's cars would look like if it weren't for competition.

"Competition makes things better, newer, cost less. Competition for your patronage gives you a wider choice, gives you more for your money.

"But competition is more than a way of doing business. It's a way of life.

"Freemen compete with each other, using ideas and points of view. The best one wins, for the benefit of all."

The reader is then told how Swiss watchmakers compete among themselves and sell their watches in competition for the market in the United States. Since the end of the war the Swiss have sold \$425 million worth of watches and watchworks here, and the Swiss have bought here \$1,300,000,000 worth

of our automobiles, movies, medicines, chem-

Icals, machines, and other products.

It is the advertisement of the watchmakers of Switzerland, but it is silent on the most pointed point of recent relations between the United States and Switzerland. The United States raised the import duty on Swiss watches by 50 percent last July.

President Eisenhower has an otherwise good record of resisting pressures for protective tariffs. But this one action has done severe damage abroad to our preaching of competition as the best way of life.

Benefits to a Massachusetts watchmaker and to the reelection campaign of a Senator from Massachusetts are trivial compared to protests of businessmen, including the business of putting cases on Swiss watchworks

in the United States.

The President is being asked to reverse his action. His voice would be stronger on behalf of low tariff principles if he removes Swiss watches from the controversy.

But whatever the President does about it, or Congress does about reciprocal trade, we are indebted to the Swiss watchmakers for a clear picture of the competition in which we take so much pride.

Dillydallying on School Needs

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an article written by Columnist Doris Fleeson, in the Evening Star, January 13, 1955. This article contains undisputed facts concerning the desperate situation confronting our school system today which is depriving the children of this country of free public education.

The article follows:

DILLYDALLYING ON SCHOOL NEEDS-MRS. HOBBY PLANS LONG STUDY OF CLASSROOM SHORTAGE WHEN ONE TELEPHONE CALL WOULD GET THE FACTS

(By Doris Fleeson)

When Oveta Culp Hobby took office as Secretary of Health, Education, and Welfare 2 years ago, a survey of United States educational needs which Congress had ordered made was on her desk. It showed that an appalling shortage of classrooms and teachers existed and would continue to exist unless immediate steps were taken.

Today the survey has been brought up to

date. It shows that despite real effort by most States, the shortage of classrooms is even bigger than it was. In the face of this, more than a million children entered school for the first time last year, and the census figures show that this enormous influx will continue for at least 6 more years.

Secretary Hobby's solution so far consists of plans to call a White House conference in 1955 to discuss the problem. The facts which will be put before it could be obtained with one telephone call, they are so well known to educational authorities.

The cause of the swollen school enrollment, of course, is the increased birthrate which came with the war and cold war. The American children who are being deprived of their birthright of free public education are the children of the men and women that President Eisenhower and Mrs. Hobby herself, as head of the Women's Army Corps, commanded in World War II.

In his state of the Union message, the President indicated that his heart and conscience had been touched by the situation. He said that the unprecedented shortage of schools required positive affirmative action now and promised to submit a program February 15.

This is a change of mood at least on his part. But the various commissions and committees so far appointed to make recommendations appear on their records to be opposed to anything resembling a cash program with Federal funds.

Because this is so, 30 Senators have sponsored a bill to appropriate \$500 million annually for the next 2 years for school construction. In its expenditure the States would be fiscally liable to the Federal Government but States and localities would remain in full control of all aspects directly affecting the education of the children.

The group is anxiously awaiting the Eisenhower program. They hope he sees fully as great an emergency in the schools as in the highways for which he is soon to recommend a 10 year, \$100 billion program.

Whether he does or not, they will fight for their bill. They propose to bring home to the American people the fact that American educational standards are going steadily down just at the time when the demands of society are the greatest they have ever been.

Senator Lister Hill of Alabama is chairman of the Labor and Public Welfare Subcommittee which will conduct hearings on the bill. Joining with him in sponsoring it are most of the northern Democrats, the Democratic whip, Senator Clements, and seven other southern Democrats. North Dakota has furnished both Republican sponsors, Senators Langer and Young.

It is believed that many other Republicans are only waiting for the White House nod to get behind an immediate school program.

Interested Senators have frankly given up expecting help in health, education, and welfare from Mrs. Hobby. They find her bright and charming personality, but a States rights budget balancer politically.

They are nonplussed on two counts. They had planned with masculine fortitude to restrain her womanly emotions as a defender of the rights of women and children, the sick and the aged. They had expected to suggest to her the limits of her Cabinet authority as they have to so many male members of Presidents' Cabinets. This has not proved necessary.

The 72d Anniversary of the Civil Service Act

EXTENSION OF REMARKS

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BOLAND. Mr. Speaker, this week marks the 72d anniversary of the Civil Service Act. After a long, hard struggle, advocates of a merit system finally saw their efforts crowned with success upon the signing of the Civil Service Act on January 16, 1883, by President Chester A. Arthur

Mr. Speaker, the longtime, career employee, newly appointed employees from competitive civil service lists, personnel trained, educated and skilled in their particular tasks form the backbone of

an efficient, economical government. It has often been said that devoted, faithful government employees—men and women who have earned their positions through civil service examinations—are the Nation's bulwark against internal deterioration of the management end of democracy.

We should maintain constant vigilance to insure that the civil service system is protected against abuses. It is the duty of the Congress to strive to improve the system.

There is an obligation upon the department and agency heads to see to it that civil service employees are treated in accordance with the intent of the law and the intent of the Congress. Sometimes, I fear, there is a tendency on the part of some Government officials to attempt to circumvent the law. Particularly is this true in the matter of the shifting and transferring of long-time career personnel. Partisanship should not play a part in personnel policies. Consideration for the good of the service and the Government itself should be the only motivating forces in effecting transfers and reductions in force.

Mr. Speaker, under unanimous consent, I include these remarks, an editorial from the Springfield (Mass.) Union entitled "Civil Service Week" and an editorial from the Washington Evening Star entitled "Civil Service Anniversary," and an article by David L. Perlman, Federal Merit System Had Humble Start:

[From the Springfield (Mass.) Union of January 19, 1955]

CIVIL SERVICE WEEK

On January 16, 1883, President Chester A. Arthur signed the Civil Service Act, which had enlisted the support of both political parties. This has been designed as National Civil Service Week, sponsored by the American Federation of Government Employees.

Commenting on the passage of the bill 72 years ago, the association's news service says: "It is interesting to note * * that news-papers of the time credited the pressure of public opinion rather than reform sentiment among politicians for the passage of the bill. Public sentiment had been outraged by the slaying of President Garfield by a demented job seeker."

Whatever the main root of its origin, the civil service has become a valuable part of our national governing system. While popular opinion sometimes holds the service as a concentration of Uncle Sam's help in the city of Washington, Government employees are distributed widely throughout the country, with only about 10 percent of our Federal workers in the Washington area. Civil service workers are part and parcel of all major communities in the land, and of a good many minor ones.

While the civil service is not perfect—both from the outsider's point of view and that of the civil service worker—it is not difficult to imagine the chaos that would result with every change in administration if we had no large backlog of trained men and women who enjoy a reasonable tenure of their jobs and who perform them without regard to the political complexion of any administration.

The civil service has proved a stabilizing influence in Government employment and, to a great extent, has eliminated the evils of the old spoils system. The fact that it is vigorous and flourishing after 72 years is proof of its persisting importance as a merit system in our Government.

[From the Washington Evening Star of January 19, 1955]

CIVIL SERVICE ANNIVERSARY

It was 72 years ago this week that the Federal Government launched an uncertain experiment, the substitution of merit for politics as a standard for personnel selection. Even the advocates of the reform were none too optimistic that the undertaking would be successful. David L. Perlman, editor of the Government Standard, organ of the American Federation of Government Employees, quotes in an article elsewhere on this page an editorial comment of the Star that was indicative of the restrained hopes of those who were fighting the spoils system. The editorial, referring to passage of the original civil-service law on January 9, 1883, said: What the bill may accomplish depends largely upon the President. He is really invested with power enough to make it a fair success or a total failure."

Fortunately, President after President has supported the merit system and Congress after Congress has strengthened it, as weaknesses became apparent or developed under the stress of a growing Federal establishment. The program has stood up under the open or covert efforts of patronage interests to make inroads in the career field, the most recent of which have occurred under the present administration. But, when the showdown came, the President usually has stepped forward in defense of the integrity of the merit plan. President Eisenhower is no exception. Although some of his aids seem to have been slow in getting the word, he has made it plain that he will tolerate no tampering with the civil-service principles established in 1883. It is no exaggeration to say that the system launched so uncertainly so many ears ago is more than the fair success which the Star hoped for.

[From the Washington Evening Star of January 19, 1955]

FEDERAL MERIT SYSTEM HAD HUMBLE START (By David L. Perlman)

(EDITOR'S NOTE.—The author is editor of the official publication of the American Federation of Government Employees and has written this article in connection with the 72d anniversary of the signing of the Civil Service Act.)

On January 16, 1883, the friends of civilservice reform were beginning to wonder if they had, perhaps, been premature in celebrating the end of the spoils system in the Federal Government.

Just a week before, the House of Representatives had rushed through final passage of the civil-service bill—a bill that bore the name of Senator George H. Pendleton, of Ohio, but had actually been drafted by Dorman B. Eaton, leading spokesman for the reform movement.

The civil-service bill had passed the Senate by a resounding 33-to-5 vote, although the number of absentees were disappointingly large. When it reached the House, there were a few halfhearted efforts to recommit or amend the bill, but its supporters kept up a steady chant of "Vote! Vote!" until, after a mere 1-hour debate, the Pendleton bill passed without a change.

Since President Arthur himself had called for passage of a civil-service law, the reformers considered that they had every right to celebrate. But then came the disconcerting news that several top administration officials had challenged the constitutionality of the measure and were urging the President to veto it on the ground that it infringed upon his constitutional power of appointment. This issue was to be the chief topic for discussion at the Cabinet meeting on January 16.

As it turned out, the fears of the reformers proved to be groundless. The Evening Star of that date tells us that, at the Cabinet meeting, "The tenor of the discussion was favorable to the signing of the bill in its present shape."

Later that day, President Arthur affixed his signature. The merit system was to get

its first trial in this county.

For more than a score of years, distinguished but isolated voices had been raised from pulpit and lecture platform against the corruptness of the spoils system. "practical" politicians brushed aside this criticism with a mocking reference to "snivel service reformers."

But when President James A. Garfield was shot down by an assassin's bullet in July 1881, in the old Pennsylvania Railroad depot-where the National Gallery of Art now stands—people were no longer amused by jokes about the "snivel service" movement. demented killer, Charles J. had been one of the thousands of jobseekers who had poured into Washington for the inauguration with claims of political service to be paid for by public office. To the man on the street, Garfield was a victim of the spoils system.

The congressional elections of 1882, which saw the defeat of several of the most outspoken opponents of civil-service reform, were the handwriting on the wall so far as Congress was concerned. Civil-service reform now became top-priority legislation.

The less starry-eyed of the reformers, however, were more restrained in their elation at

the passage of the Pendleton bill.

That the battle for civil-service reform was not over-that it had, in fact, just begun-was made very clear in an Evening Star editorial following the passage of the Pendleton bill.

Since both the Democrats and the Republicans have, at various times, claimed credit for the enactment of the first civil-service legislation, it is interesting to read these comments from the editorial, dated January 10, 1883:

'The truth is that there was a good deal of insincerity in the support and passage of the bill, and it pervaded both parties about alike. The Democrats sincerely wanted the bill beaten. Since the November elections their hopes of success in 1884 have risen to the highest degree, and Democratic leaders knew that their followers look forward to the offices with an eagerness and a hunger born of over 20 years' expulsion from the public crib. But there was a public sentiment in favor of a reform in the civil service which Democratic Congressmen feared to

dcfy.
"With the Republicans, there was just as much insincerity. They regarded the measure as one of policy rather than of principle. In the event of Democratic success in 1884. the law could serve to keep Republicans in office."

Not too hopefully, the Star editorial concluded: "What the bill may accomplish de-pends largely upon the President. He is really invested with power enough to make it a fair success or a total failure."

The new law was to take effect on January 16, 1883, 6 months after it had been signed by the President.

Only a comparatively few positions were specifically placed in the competitive service under the initial act. But the President had wide freedom to add other groups of jobs by Executive order.

The spoils system did not die overnight. Three months after the passage of the act. the classified columns of the newspapers still carried listing such as these:

Wanted: A position in one of the departments; will give \$25 down and \$5 monthly. Address S. T., Star Office.

Wanted: A gentleman of experience will pay \$100 to anyone who will secure him a

position in one of the departments. Address in confidence, Integrity, Star Office.

Meanwhile, the first Civil Service Commis-

sion, headed by Dorman B. Eaton, the most prominent of the reform leaders, moved into its first temporary offices. Even by the standards of those days, it was a modest beginning for a new agency. The first quarters were the front and back parlors of a private resi-dence at 612 14th Street NW. The rent, including maintenance, heating and light, was \$3 a day. When, some weeks later, more suitable offices became available at the Department of Agriculture annex, the Commission's first two employees, John T. Doyle and Matthew F. Halloran, moved the Commission's belongings in a pushcart.

The first civil service examination was given in July 1883, for clerkships paying \$1,000 a year. During the next 6 months, 489 appointments were made from competitive

registers.

From these humble beginnings, the merit system spread slowly but steadily throughout the Government. Sometimes gains would be made when an outgoing President placed groups of employees under civil service to try and protect them from dismissal in the new administration. But as turnover brought about the need for replacements, the replacements would come from civil service registers.

Even more important was the growing realization that the merit system meant

good government.

By 1893, Theodore Roosevelt, in one of the last letters he wrote as a Civil Service Com-

missioner, could say:

"As a matter of practical experience, every Cabinet officer whom I have seen in Washington has, before the end of his term, come to the conclusion that if there was any bureau in which he needed special efficiency, he had to put it under the civil-service law.

Science and Progress

EXTENSION OF REMARKS OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. UDALL. Mr. Speaker, on December 31, last, Dr. Vannevar Bush, president of the Carnegie Institution and one of our preeminent scientist-statesmen, delivered an address to the American Association for the Advancement of Science at Berkeley, Calif. Although it is lengthy I am placing this address in our RECORD, as I feel it ranks as one of the significant public utterances of recent years. With keen insight and great wisdom, Dr. Bush examines the basic problems of our time as a scientist and citizen who is deeply imbued with our finest traditions. His comments deserve the widest readership, and leaders in and out of government might well give heed to his counsel.

The address follows:

Every man is entitled at one time in his career to declare himself regarding the idea of progress. It is an idea that in some of its aspects has been earnestly discussed by many men for over three centuries. And as usual in the case of debated subjects, the dispute turns largely on the matter of definitions. What is progress? How can it be measured? Is it a historical fact? If we have progressed, are we bound to continue progressing in the future?

When we speak of progress, we may have in mind several different conceptions of the word. Bury, in his classic Idea of Progress, traces the changes in its content and emphasis through the 17th, 18th, and 19th The idea is not an old one as ideas go. It had no place in the thinking of antiquity. Some ancient Greek and Roman writers held with Hesiod that the course of history was one of slow but steady decline from a long-past golden age. The Hebrew tradition of the fall reflects a similar point of view. Others among the Greeks and Romans believed that human history and the future of mankind followed a cyclical pattern, making no significant progress in any constant direction. Cities and empires were known to have risen and clined. Science and philosophy had flourished and faded, and flourished and faded again.

Through most of the Middle Ages the conditions of life were depressing, and men turned for their hope away from the disappointments and uncertainties of earthly existence to dwell on a roseate dream of life after death. Material improvements were sought and achieved, but their achievement was slow and unimpressive. Knowledge was looked upon as something revealed to men of great faith, to be learned by the study of accepted texts-the scriptures, the church fathers, Aristotle, the schoolmen. It was a revolutionary suggestion of Roger Bacon, and one that had no great influence in his time, that the phenomena of nature should be studied by first-hand observation rather than through received authority.

The Renaissance brought a spirit of renewed earthly joy and enthusiasm, which at first drew its inspiration from the great men of antiquity but gradually turned its eye to the present and the future and became, in the Age of Enlightenment, a spirit of hopeful expectancy. . Francis Bacon, noting the dramatic achievements of a few centuries-gunpowder, the printing press, the mariner's compass-regarded science and all intellectual effort as a utility, justified only as it contributed to "the endowment of human life with new inventions and riches." He saw no limit to the possibilities of science and fully expected those possibilities to be realized. But he did not regard their fulfillment as inevitable or assured by the laws of nature.

Eighteenth-century philosophers commonly accepted progress as the normal course of without making a particular point of the Idea until the Marquis de Condorcet, in the midst of the French Revolution, wrote his Historical View of the Progress of the Human Mind, explicitly setting forth the idea that human progress is continuous and will go on until human perfection is achieved. This became the common attitude of thoughtful people in the early years of the 19th century. It runs through the thinking of most of the Romantic and early Victorian poets, the scientists, and the phi-It drew strength from the rationalists, deists, unitarians, and universalists, who reacted with confidence in the perfectibility of man against the dour fatalism of the Calvinistic teaching that man is essentially corrupt and beyond redemption except through the unpredictable, seemingly capriclous, grace of God.

As the 19th century advanced, the idea was elaborated and bolstered with new evidence and arguments. The innumerable advances of science and invention, the overthrow of despots and growth of constitutional liberty throughout western Europe and America, the adoption of humanitarian reforms-all could be pointed to as visible evidence that progress was a fact. And the principle of biological evolution (both Lamarckian and Darwinian) provided an argument of analogy that made progress seem very much like something founded in the nature of things.

Darwin voiced the idea temperately in the following words:

"As all the living forms of life are the lineal descendants of those which lived long before the Silurian epoch, we may feel certain that the ordinary succession by generation has never once been broken, and that no cataclysm has desolated the whole world. Hence we may look with some confidence to a secure future of equally inappreciable length. And as natural selection works solely by and for the good of each being, all corporeal and mental environments will tend to progress toward perfection."

Even before the publication of the Origin of Species, Herbert Spencer had used the evolutionary analogy in his Social Statics, and in the course of the next three decades he carried the argument much farther than his scientific contemporaries were willing to do. He held that "Nature in its infinite complexity is ever growing to a new de-velopment" and further that "The ultimate development of the ideal man is logically certain, as certain as any conclusion in which we place the most implicit faith; for instance, that all men will die." The human progres that he envisioned was in all phases: In the minds and bodies of men, who, according to Spencer, would continue their biological change ever toward higher forms; in knowledge; in material facilities and conveniences; and in political and social structures. He regarded it not as conditional upon the deliberate efforts of men. but rather as an inevitable law of nature. Men's conscious actions might contribute to it, but those conscious actions would be only a secondary result of man's own progressive improvement.

The assumption of Darwin and Spencer that all evolution must be progress was of course only an assumption. But it was generally accepted by most of their contemporaries despite the criticism of Huxley in his later years. In the generally hopeful temper of the late 19th century the whole Spencerian dogma was eagerly taken up, with or without its claims of reason, by all classes of people in England and the United States. The prevailing mood of our society before the First World War was one of complacent expectation that all things would improve perpetually. Retrogression, at least, was unthinkable.

But the First World War shook our optimism, the depression shook it further, and the second war nearly destroyed it. Now, though we may still hope that our race will go forward in progress, we are confronted with facts that take all the former exuberance out of our hope, reducing it almost to a wish of despair. This is especially so with regard to moral and political affairs. For who can have confidence in humanity's future when he looks at events of the past 20 years? Belsen and Buchenwald were poor exhibits of humanitarian progress by standards recognized in the 19th century. And it is difficult to see much to choose between the erratic tyranny of the Czars and the systematic tyranny of the present Russian Government, with its purges and brainwashings. Our wonted spirit of optimism has given way largely to a spirit of gloom, and some among us seem to be gradually moving toward a definite philosophy of pessimism.

In these circumstances it is perhaps well that we should look more closely at the idea of progress, take stock of the realities, and formulate a reasoned position as free as possible from both despair and wishful thinking.

Let me begin by distinguishing some of the elements of progress that we are considering. How can the fact of progress be judged or recognized? What does the word mean before it is expanded into Bury's "idea of progress"? As it is used in this phrase and as I am using it, the word carries a connotation not only of movement or even of movement in a constant direction, but of movement in a direction that is intrinsically good or desirable. Its meaning cannot be derived from experience or reason; for it is based solely on a dogmatic ethical assumption as to what constitutes the good or desirable, toward which all actions and all change ought to be directed.

Attempts have been made to define the word in such a way as to escape the element of dogma and give it a semblance of universality. But all such attempts have inevitably failed. Many writers have already pointed out that the measures of progress popularly applied to biological evolution are arbitrary. Man may, have evolved from the primordial ooze, and this may be accepted as good if we assume that it is good to have complex life on earth, but this again is an arbitrary assump-How many other species have evolved to a certain level of adaptation in relation to a given environment, only to fail of adaptation to a superseding environment? Why cannot the same fate be in store for human We may grant that the evolution of man has been a local triumph in the universe, and yet doubt whether his further evolution is bound to lead to further triumph. We may say that evolution follows a pattern that tends always toward heterogeneity and complexity, and complexity may for a time But in the long run have survival value. how can we be sure that complexity will not prove fatal? Survival value cannot be appraised before the millennium, and therefore to define progress in relation to it is meaningless.

I shall be dogmatic at this point and state some of the standards of value that I have accepted for judging progress. I have nothing new to add, I can merely reiterate what has been said many times, and, having done so, add my comments on its meaning for the great problems we now face. I believe that it is good for mankind to gain knowledge and understanding without regard for their utility in relation to other ends. also believe that it is good that our knowledge, for whatever reason acquired, should be used to improve man's health and increase his comfort and happiness. And from these primary standards I derive certain secondary values. It is good to preserve the individual freedom of all men for free men alone can think freely or freely acquire knowledge, and freedom is a part of the comfort and happiness toward which we legitimately aspire. It is good also to have peace, provided it is not bought at the price of greater values, for peace in ideal circumstances contributes to our comfort and happiness and in some degree to our freedom. But on the secondary level of values we must often make difficult choices. We must sometimes forego a measure of our earned comfort and happiness in order to avoid losing all of it. We must make sacrifices to sustain and defend the freedom of our institutions, the right to continue our experiment in democratic government and refine its underlying principles. We must sometimes even be willing to go to war for these reasons.

There is a risk in the pursuit of knowledge that must not be blinked at. partial knowledge and limited wisdom we can encompass our own destruction without meaning to do so Fear of such self-destruction underlies all our thoughts and acts today, and with reason. But this fear often becomes distorted, being centered almost wholly on A-bombs and H-bombs because of their spectacular nature. There are other weapons that could prove just as deadly. Had there been no A-bombs or H-bombs, the danger would not be notably less. For if the nations of the earth continue to devote a large part of their productive efforts to the building of weapons, and to marshal for the purpose all the potentialities of science, engineering, and industry, they can create the

means, whether of one sort or of another, which when fully exploited will be capable of erasing whole populations. Without the A-bomb, chemical warfare, as it was developed, though held in reserve, during the last world war, could have a terrible effect. Biological warfare could be far more terrible. New diseases created for the purpose and introduced among an unprotected population by an attacker who had acquired immunity to them could bring back the horror of the great plagues that once swept over the earth. The deliberate blighting of crops and herds could produce unprecedented famine. And as we now advance in finding chemotherapeutic means for the treatment of mental disorders and drugs that exert control over human emotions, these very means, in the hands of ruthless dictators, may constitute one of the greatest threats of all

Some people in their unbalanced fear accuse the physicists of having brought the world to its present plight through the development of A-bombs and H-bombs. It is believed by some that physicists have a conviction of guilt, and some physicists by their own utterances have given grounds for this belief. But the guilt, if it is to be so regarded, must be shared by many who were not directly involved in developing the Every step in the advance of our knowledge that preceded the discovery of ways to release atomic energy contributed to the final result. If the result was a crime, then Newton must be counted as one of the arch criminals and Einstein as an accomplice. Nor should the scientists of the free world be held peculiarly responsible, for the general course of science has rendered the result inevitable; our scientists merely hastened the time a little and made it possible for us to determine the place and circumstances of the first release of atomic energy. We are fortunate that they were the first to succeed. For their success gave a temporary advantage to the free self-governing peoples of the world. Had Hitler's scientists solved the problem of exploding an atomic bomb early in the war, we might now all be under the Nazi's heel, with extermination camps ready to dispose of any group or nation that rebelled. Had the Russians found the solution at the end of the war, while we were still unarmed with atomic weapons, the sweep of their armies would not have stopped in the Balkans, the Baltic, and Czechoslovakia; and we should now face a huge totalitarian state bent on world conquest with all the industrial power of Europe at its command.

We sometimes hear that the natural sciences in general have outrun the social sciences and that the balance must be restored if we are to cope with our great new danger. It is too late in the day for any such remedy. We should, indeed, give every practicable support to social science and hope that some day it will produce answers to many of our human dilemmas. But the test is upon us now and will not wait. We must grapple with it, using the systems of social relation that we have and such wisdom as we can muster. Whether we come through the ordeal will depend upon whether we are sufficiently mature to map out a wise path and adhere to it. Looking for easy ways, mysterious formulas, or scapegoats will not help.

The dogmas that I have stated are not presumptuous ones. They are dogmas of humility. They do not pretend that we know all the answers. On the contrary, they recognize that we are still comparatively ignorant and very much confused. In our scientific endeavors we have correlated some of our simpler experiences, and this has led us into contradiction and confusion. We have hardly begun to correlate those experiences that involve the emotions. We see but through a glass darkly. Yet the race is young. In a thousand years we may un-

derstand more and be able to substitute dogmas that are more satisfying to our souls than the simple ones I have been propounding. Perhaps, indeed, in a thousand years men will abandon hope entirely. But let us not now, in blind anticipation of what they may then think, abandon hope for them.

We know vastly more than our ancestors did of what nature's forces can do, but we can hardly claim to have achieved any true or profound understanding as yet. Our theoretical explanations of observed phenomena have changed completely in the past 3,000 years. How can we say whether they have advanced or not, since they are not measurable by any ultimate standards? They can be judged only according to the degree to which they seem to be consistent with our accumulated experience and the range of experience which they encompass. We place increasing emphasis upon the pragmatic test of whether our theories work, and are little concerned with whether they express an absolute truth, or whether there is such a thing as truth to be expressed. The corpuscular theory of light served for a time until new observations seemed to require its abandonment in favor of the concept of waves passing through ether Now we have revived the corpuscle under the new name of quantum, and find it useful as a means of rationalizing certain phenomena that could not be rationalized under the wave theory. We use both theories without attempting to reconcile them with each other. When we deal with the nucleus of the atom we work with a bizarre formula and care little whether it has a model to go with it.

Professor Dingle aptly states the case regarding theory in his essay Some Reflections

on the History of Science:

"Amid all the changes of theories and pictures and conceptions, the relations remain and steadily accumulate. Franklin found that lightning was a manifestation of the electric ether revealed in laboratory The electric ether has disapexperiments. peared, and other theories of electricity have in turn succeeded it and disappeared also, but the relation between lightning and laboratory sparks remains. Maxwell established a relation between light and electromagnetic oscillations. His ether also has gone, but the relation stays. All permanent advances in science are discoveries of relations between phenomena, and the factor in science that shows a steady uninterrupted growth is the extent of the field of related observations. World pictures are indispensable for progress but even the most satisfying has no hope of immortality."

We have progressed in our scientific knowledge and have the power to progress further. But I see no law of nature that makes such further progress inevitable. For the present we are limited only by our will to go ahead and our ability to preserve a world environment in which the search is possible. There probably are inherent limitations to our human mental capacities and to our conceptions of science that will eventually impede our further conceptual progress. We have come generally to question whether there can be any scientific certainty.

There never was, indeed, any true basis for certainty; but when we were in a more ontimistic mood we sometimes allowed ourselves to suppose that there was. ent tendency of scientists to emphasize uncertainty is symptomatic of the times; it is perhaps their subconscious reaction as their former roseate vision of endless progress is dimmed by the louring aspect of the present state of world affairs. The great generalizations of Heisenberg and Gödel have but stated the fact more explicitly and completely than it had been stated before, and led us to see more clearly some of its implications. The inductive method of science. from which have emerged its great triumphs, can yield only a strong probability of truth

in a restricted area. No matter how many confirmatory experiments may be made, or how closely they are in accord with a hypothesis, there is no guaranty that the next similar experiment will not contradict it, and no basis for its extrapolation into regions where test is impossible. Man may find order among his experiences and in so doing gain control over nature for his own ends, but he cannot in this way acquire certainty. Even the deductive method is severely limited, as Gödel has shown. No system, logically based on a set of premises, can be demonstrated to be free from contradiction without stepping outside of that system.

As we, then, accumulate generalizations to bind together the facts of experience into useful formulations, as we establish hypotheses and test them by experience, are we indeed coming closer to reality? We cannot know. We can gain mastery over the course of events and thus control our subsequent experience with a high probability of success. But we cannot say that we have arrived at truth with any more assurance than when we specify truth by dogma, without all the paraphernalia of experiment, logic, and mathematics. Thus science is, in these days, becoming more humble in its assertions.

We may feel that the ordering of our observations of the heavens by Newton gives us a grasp of the swinging of the planets about the sun that is closer to reality than the system of Ptolemy with its spheres, deferents, and epicycles, even if the latter were refined to be in full accord with observation, as it could be. We may feel that, having added Einstein's refinements, we are still closer to reality. But this is a feeling only, a faith if you will; and what constitutes the truth is not demonstrable by logic of any sort.

Yet there is more than mere utility in the endeavor to systematize the evidence of our senses, and this we may forget when the limitations of science are emphasized. The extension of our observations into space, the translation of our bindings into cosmological hypotheses, is pursued with intensity and satisfaction; and the motivation is not to learn a bit more about the nucleus of the atom just to make more powerful bombs or even to provide a new source of energy so that civilization may continue after it has exhausted its oil and coal. The musings and speculations of one who thinks in terms of receding galaxies or of primordial explo-sions are far different in content, though perhaps not in nature, from the ponderings of the peasant who sees the stars glued to a celestial sphere rotating over his head. they better or of a higher order? Have they possibility of coming nearer to grasping eternal truths? This, too, we cannot know. We have only the evidence of a powerful, inner urge to pursue the path of inquiry, to learn more in the sense of extending and systematizing our observations and experiments over a wider field, to grasp more in the sense of greater generalizations-not so that we may be more prosperous, but so that our spirits may have a freer rein in those aspirations which transcend the mere mechanisms of existence.

The limitations upon our understanding have not yet, at any rate, begun to cramp our progress. Who can say that they are not themselves merely the expression of the limited view that we have thus far attained? We have not reached the boundaries of our finite capabilities, we have only proved for a time that the assumption of our fathers that they are boundless is probably false. We must go on until we can go no farther, for it is not in our inquisitive nature to abandon the quest for knowledge merely because we are told that we shall never know all that can conceivably be known or know anything with certainty. Must every adventurer be assured success before he will take a step forward? We are all born to die, and yet we spend every waking hour of our

lives in striving as if we were to live forever. We may observe historically that man's progress has been intermittent and has alternated with retrogression; but observing this we do not sink back from effort in despair; it is not in our nature to do so. And the search for knowledge and truth has its daily rewards unrelated to any ultimate achievements.

Without any presupposition, then, of the inevitability of progress, we may reasonably expect each day to learn more and accomplish something in a material way that will add to the comfort or convenience of our These same material accomplishliving. ments will bring us new and more terrible instruments of death. But this fact will not deter us from further scientific inquiry. Our simple survival is not worth so much that it is to be purchased at the cost of intellectual stultification. Nor would the suppression of dangerous inquiry save us. Although the achievements of science may, indeed, throw us back into barbarism, the abandonment of our search for knowledge and material betterment would only make vegetables of us.

There is no certainty in either science or The science and technology that have carried us so far toward physical fort and prosperity may blow us back with an atom blast to barbarism, to wars and pestilence; to a world in which the pressure of population on primitive resources is controlled only by recurrent war and famine; to a world that offers only a tinsel glory for a few built on a pyramid of misery for the many. The application of science to warfare may put an end to the surge of scientific progress that began with Galileo. We may, indeed, throw ourselves into a war of extermination. Or, in an excess of caution, we may throw away our dearest freedoms in false and narrowly conceived measures of defense. Either way we lose utterly. The way to peace and continued progress is not clear. But neither confusion nor pessimism will justify inaction while there is so much that can and ought to be done. We can strive to work our way out of the confusion and not be panicked by it into rigid immo-bility. We need not be dismayed by the bility. We need not be dismayed by the uncertainty of the outcome. We can gamble cheerfully on the course suggested by our best judgment today, and play the next turn according to our better-or perhaps only different—judgment of tomorrow. And there is a chance that we may continue our achievements in the realm of physical well-being and escape the worst dangers that we now so We may reach the end of the wars that have been a scourge to man ever since he began to make tools.

In world affairs, as nearly as I can judge, we are headed for the moment toward a stalemate; and this is probably the best situation that can now be hoped for. The world will remain for a time evenly divided, its halves poised for mutual annihilation. Secondary wars will continue with restricted means, as in Korea and Indochina. The great bombing fleets will be held in leash. Always will be the danger of their being present unleashed by some mad action or by simple accident. Our nerves will become increas-ingly taut, and we shall be tempted to seek the delusive relief offered by totalitarian government. authoritarianism, obscurantism, thought control. We shall be ever threatened by the panic of fear. It is not a pleasant outlook. But I see no better one in

the near offing.

We can at least strive to avoid mad actions and pray to be delivered from blind accidents. We can, in fact, do more than pray. We can all of us, whatever our special calling, keep informed about the course of public affairs, recognize that they are of personal concern to us, study public problems, and through the constant pressure of an enlightened public opinion prevent those who govern us from lapsing into carelessness. We

can by our indirect influence as well as by voting at the polls see to it that firebrands do not come into power. But let us not try to conjure away our fears by propitlatory Witch hunts or by fatuous acceptance of the promises of political messiahs or the dazzling spectacle of the man on a white horse. We heed alert vet sober leaders who can and will think their way through the problems that confront us, who can judge wisely and act decisively. We can have such leaders if we refuse to settle for less. Remember the adage of Plato's Republic that the punishment of Wise men who refuse to take part in the government is to live under the government of unwise men.

The stalemate that I envision, however, Will not be a true one if it is allowed to rest only on the equal striking power of the opposing forces. We must, of course, have striking power equal or superior to that of our enemy. But equal striking power does not constitute an equilibrium of forces When one side is limited in its use of such power entirely to retaliation. And our side is so limited and must remain so. For the one thing above all others that distinguishes us from the enemy and makes him an enemy is the fact that we do not have a totalitarian form of government capable of making a surprise attack. Our enemy has such a government and will not be deterred from making a surprise attack by our mere threat to retaliate, if he has a reasonable hope of destroying at one stroke most of the forces that we must rely on for sustained retallation. Had the Japanese been as nearly matched to us in military strength as the Soviet alliance is, they would probably have won the war in the Pacific. The only stalemate for us is one in which we have striking power superior to the enemy's and defenses that are strong enough to balance the inherent advantage our enemies must always have of striking first. At the very least we must protect our essential retaliatory means from destruction before they can be used. We have not thus far, in planning for defense, taken all the necessary possible measures to prevent such destruction. And, unless the military corrects its thinking soon, there is real danger that the stalemate upon which we depend for relative peace will prove to be altogether illusory.

This is-not the first crisis in human affairs, although it is by all odds the most intense we have yet gone through and the fastest paced one. Yet a generation may suffice to resolve it. And the outcome will depend on how we react under almost intolerable strain. Society does not wish to commit suicide, nor does any part of it wish to do so: The question is whether it will commit suicide in spite of itself. If we can but weather this storm I believe that we may fairly hope to build a world in which there will be no more wars of any kind. The problems that cause wars-population problems, problems of access to resources-all such problems could conceivably be settled to everyone's advantage by other means than war, and science can contribute in an important way to their solution. The world's resources can be more effectively utilized and made more accessible to people by improved means of transport. The wild growth of populations can be curbed. Available materials that are not now made use of can be brought into profitable use just as has been done in the past with petroleum, natural and the magnesium gas, bauxite, Water. New sources of food may be found in organisms specifically developed to in-crease the total amount of the world's food supply.

Our future progress depends on how well free peoples have learned to govern themselves. The test is not one of how fast peoples who have been under a foreign yoke until recently will now establish democracy or succumb to the wiles of demagogs or the tyranny of dictators. The test comes primarily in the great democracles, with experience in parliamentary processes and the operation of courts, under a new type of threat and a gnawing fear. The test in this country is whether we can truly maintain our freedoms and guard our way of life against threats from without, against subversion within, and against our own errors and aberrations. Our recent performance in this regard is not encouraging.

The great asset of free countries in the present struggle is their freedom. The great disability of dictatorships is that they are always permeated with suspicion and distrust, conspiracy, personal spite, the deflection of justice for sinister ends, timidity in the expression of honest opinions. In a free world men may disagree and maintain their mutual respect; they may urge unpopular courses of action and be heard; it is assumed that they are loyal and seeking the best for their contry and their fellows unless they are proved to be traitors by due process in independent and impartial tribunals. In a police state men express the current party line; and, if they misjudge it, they disappear.

Here is an enormous advantage for the United States if it is kept unimpaired. It insures that the whole course of Government. our relations with other countries, our milltary policy, will undergo the full scrutiny of uncoerced public opinion. The advantage extends even into minor matters. When a new weapon is being secretly planned about a table, when the relative priority of alternative technical or strategic programs is being considered, our system assumes that the junior participants who have honest to contribute may express them thoughts without fear of retaliation from powerful men who think otherwise, or who have opposing vested interests. This great advantage freedom to dissent makes the country genuinely strong in many ways. It must not

Our enemy relies chiefly on the weapons of penetration and subversion to weaken us that later he can destroy us. objective is to steal our secrets. Among the thousands or even millions who have access to secret information there have been a few. a very few, traitors. We must guard against such traitors with all our skill and determination. But the importance of their acts has been exaggerated out of all reasonable proportion. Without their help we tell the world, voluntarily, nearly all we know; and our enemy has only to read and listen. In technical articles, in advertisements, in budget presentations, in the release of testi-mony, in open court hearings, we disclose to the enemy our technical plans and programs, the essential characteristics of new airplanes and weapons, the location and equipment of our military bases and our factories for producing military items. freely print critical dissections of the technical controversies that arise over the explicit development of our major weapons. Skilled analysts assemble scattered information and synthesize it into speculative accounts of what is happening in areas of There is very little military development. left for an enemy espionage system to find out, and it can concentrate on that little with the full background handed to it on a platter. If we are honestly determined to keep the enemy ignorant of our plans and designs, we must, indeed, be careful to keep both the traitor and the spy out of our councils, laboratories, and factories. But. we need much more to draw a clear line between the information which the electorate must have for its reasoned judgment, and the technical and military information which is not necessary for that purpose; and having drawn the line we need to strictly to it. Until we do this, we are protecting, at great risk to our operations, only a small part of the information that should be protected. But this first objective of our enemy's actions is today less important to him than his other objectives.

His second objective is to penetrate our organizations and influence our decisions. There is not the slightest doubt that this was done successfully in the days when we were more gullible than we now are. It is difficult to recapture the atmosphere of the immediate postwar period, when we were a pushover for attempts of this kind. Russia had been our ally, a difficult one to be sure, but often a loval ally under stress. Remember that when we landed in Normandy, we would have been highly vulnerable if Russia had concluded a separate armistice, or even relaxed its pressure, so that the full weight of German arms could be brought to bear on us. It might perhaps have been in Russia's interest thus to prolong the struggle and stand aside until the nations of the West had become exhausted.

After the war there was a strong hope that we could live in peace and understanding with our former ally. After all, Russia had plenty of land and resources and needed a generation in which to build industries and raise its standard of living. There was validity in our purpose to ease tensions and further good relations. It was some time before the free world realized that it had demolished one threat only to be faced with another, far more sinister and far more skillful in its operations. In the interim there was penetration into many organizations by men who took their orders from the Krem-Much harm was done by these men, with their own strange ideas of the future; undisciplined, arrogant men, who did not hesitate to undercut their superiors and their colleagues or to connive with a foreign power against the Nation. The danger from such men is much less today, for we are now alert, and we are no longer gullible. efforts still persist, but they are much less successful and are concentrated on auxiliary organizations rather than on the center of government. To combat their threat we must be relentlessly vigilant. But the change of attitude that has occurred in the last decade, the clear realization among loyal members of our various organizations, from Government bodies to labor unions, has rendered the efforts of those who would penetrate and influence our decisions and acts in favor of the enemy ineffective except in minor ways.

The third objective of the enemy is the most important one. It is to spread confusion and distrust among us. In this purpose he has been most successful and is more successful today than ever before. In fact, he has been so successful that he need hardly try further; we are carrying on the process now without his prompting, and the process grows by what it feeds on. We have a system for the clearance of persons to do secret work, which seems almost calculated to destroy their reputations by innuendo and charges based on spite. We have adopted a principle, abhorrent to our own best tradition, of establishing guilt on the basis of simple associa-We have men who contributed much to the war effort now placed in jeopardy because of the expression of unpopular opinions. We have useful men denied the opportunity to contribute to our scientific efforts because of their youthful indiscretions. Worst of all, we have the evil practice of ruthless, ambitious men, who use our loyalty procedures for political purposes. Suspicion and distrust are rampant in the land. We are on the verge of abandoning some of our most treasured freedoms; we have nearly lost our greatest advantage over the enemy in the current struggle-our mutual regard and trust as a people.

The enemy's actions in the cold war have been uncommonly successful. Their impact has been most severe on the scientific com-

munity, and there are several reasons for this. Scientists occupy a key position in regard to those secrets which should be most strictly kept. They have always been more involved in international relations than most men, for science is by its very nature international in character. Scientists are highly individualistic; otherwise they would not be scientists. Concentrating in one field, they are sometimes exceedingly naive in others. When we dreamed of a world of understanding to put an end to recurrent wars, there was a greater portion of gullible men among them than among most other groups. there were traitors among them, though excedingly few, who were capable of doing and did great damage to us. It was inevitable. therefore, that much of the hysterical witch hunt should have been concentrated on the scientific profession. Yet there is no place where it could be more disastrous to our national interest. In Russia today the scientist is respected and honored, too much so no doubt. In this country the scientist is under attack, viewed with suspicion; and young men hesitate to enter the profession or, once in, to participate in military programs because of the hazards to their reputations and careers. We had better reverse this trend if we wish to compete on even terms with the enemy.

Just as soon as this is said there are always several rejoinders. One of these is that the scientists seek special privileges. do not. To seek a restoration of the principles of the Bill of Rights in all the procedures of government is not to seek special privilege in this country. To urge a revision of our present security system to remove its defects, which are applicable to scientists, lawyers, diplomats, and all others alike. is not to seek special privilege. There should be an end, for all who labor in the interests of the country's safety, of trial on the basis of unsupported charges, of actions by officials of Government which destroy reputa-There should be a complete and final end of the use of the security system to discredit those who disagree. There should be a complete removal of the system from politics. To assert these things is to seek privilege, but only the privilege of all to live in a country which continues to be free.

A second rejoinder is that scientists will refuse to serve unless the system is changed to suit their wishes. It is true that many individual men shrink from entering Government duty under present conditions. A father who got caught in a Communist gathering when he was 20 and foolish will shield his sons from the ordeal of seeing him pilloried. Retiring persons to whom strife of any sort is emotionally impossible will avoid the hazard. Men in vulnerable positions, where a whispering campaign, or even a series of strange inquiries among their friends and associates would place their careers in jeopardy, may pull their punches and go along with proposals which they disapprove rather than stand up and be counted. All this is happening and is doing great harm to our national effort. But scientists in general, in Government, in industrial laboratories, in universities, working on military programs, are hard at work as usual, and are devoting their most conscientious efforts to the good of their country, sometimes at considerable risk to themselves. will be no scientific strike. There scientists of the country, like all other pro-fessional groups, place the good of their country above their personal comfort or their personal fate. Among scientific groups today there is sadness and discouragement. They work assiduously, but they do not have the enthusiasm and confidence that they once had. They are making great technical progress in many fields, and they will continue to do so. But they yearn for a leadership in this country which would restore the old atmosphere in which there was a

close-knit bond of mutual confidence and respect between them and the military, in which they could do their part toward the country's preservation, anonymously and without thought of personal gain, but without threat to their reputations as loyal workers.

The great question, as we try to envisage the future, is whether this madness of ours is a passing phase, or whether it will grow until the free world transforms itself into a replica of the captive world it opposes. If the latter is the outcome, the struggle will be over, for it will then not matter which tyranny prevails. The idea of progress then will no longer have any meaning. The question for us is whether we can conquer our fears, not abandoning them but rendering them sane and realistic, or whether our fears will feed upon themselves until we throw away our freedom in a wild attempt to preserve it.

There is a great threat from overseas. But the threat here at home is, for the moment, This country has been the greater one. through similar phases before, not as intense or dangerous, but bad enough. After the First World War we had an interval in which the guarantees of the Bill of Rights were disregarded by those in power, we had witch hunts, and we saw spooks in every shadow. From this we recovered without must permanent damage. The situation today is much more threatening. If all people knew the wide extent of the threat—which goes far beyond the few spectacular cases make the headlines-if they undestood better how closely it fits into our enemy's designs, and how successful those designs are proving, then there would be a return to reason in a hurry. One thing we need to learn is that the enemy alone stands to gain from the spread of suspicion and distrust among us, and it is in our interest to create mutual confidence. One thing we need especially to learn is that a vigorous system for throwing out the Communists in our midst must be paralleled by vigorous executive action to detect those actions which are inspired by spite or attempts at thought control, to see that they are suppressed before they do real damage, and see that they backfire promptly on those who instigate them. Finally, we need to learn that the use of star-chamber proceedings for political purposes is dangerous in the last degree to the very foundation of a democracy.

I have spoken thus far of three elements of progress—the progress of biological evolution, the progress of knowledge and understanding, the progress of technology with its attendant dangers of self-destruction. There is one other form of progress that is often questioned but upon which I base my own strongest hopes. I refer to progress in the ethical conceptions and conduct of men.

How are we to judge of progress in this field? With respect to knowledge and understanding, I have already dogmatically stated my standard of values. It is good for mankind to advance in knowledge and understanding and to use his knowledge for the promotion of human welfare. I shall state dogmatically my acceptance of another standard of value by which I am willing to judge the very dogmas of the past. It is good for men to love and respect their fellow men and deal not only justly but alkindly with one another.

By this dogmatic standard, as I have previously suggested, we may see little evidence of a steady ethical progress in the last 150 years. But we can most certainly see much progress if we look back over the whole span of recorded history. We still lie, cheat, and steal as they did in the age of which Homer sang; but we do not write epics glorifying the wiles and tricks of unscrupulous national heroes. Dishonesty and unscrupulous behavior on the part of our leaders and statesmen may still pay temporary local dividends, but they lead at

last to censure and in some cases to more substantial punishment and permanent disgrace.

The ethical codes subscribed to if not followed by all liberal and thoughtful men today, regardless of their religious faiths, are more humane than they were 6,000 years ago. Contrast the stern code of Draco with our present mild laws—mild, in the opinion of some, to the point of softness. Contrast the primitive ideal of conduct in the Song of Deborah, glorifying Jael, who enticed the fleeting Sisera into her tent and there drove a tent pin into his head, with the Sermon on the Mount. The ideal expressed in the Golden Rule, which we all yearn to follow, is from the point of view of peaceable human relations superior to the older rule of an eye for an eye and a tooth for a tooth.

We are sometimes depressed by the fact that men, however fine their ideals, are now and have always been governed in large measure by evil, selfish impulses. Yet, if we stop to consider, we have made some small progress even in our behavior. Most of us have moved perceptibly away from the primitive xenophobia that hates all outlanders and strangers. We are not so callous to human suffering even as our European and colonial forebears of the 16th and 17th cen-Mutilation and the pillory have passed out of our lexicon of punishments. No one would say with Defoe that a bankrupt who falsifies his declaration ought in justice to be hanged as a felon, or would regard the theft of a sheep or a shilling as a capital offense. We are not yet gentle in our relations with one another. But neither are we so savage as once we were. If we are at times discouraged, we must consider that the whole era of civilization has been but a moment in the largely unwritten history of mankind. On the whole, I believe, men feel more secure in their relations with one another than they did in the very early days when every man carried a club, or later when they substituted swords and daggers. Perhaps this is just an evidence of improved police protection. But it is progress of a sort. We are not, indeed, visionaries when we strive for harmonious relations among all nations of the world. Our children may live to see its advent.

In speaking of progress I have avoided the question of ultimate goals; the goals with which I have concerned myself are only those of men for their own and a few future generations. Can we suppose that for the ultimate goal of the cosmic drama man and man's works will have any significance? The species may long have been extinct before the ultimate, if we can in fact conceive of an ultimate, is reached.

I am thinking of a much smaller drama in which man is the hero. If we may hope that men will within the next generation and a reasonable number of succeeding generations become better and happier than they are, according to our present standards of judging what is better and happier, this hope is good in itself and is in no way diminished by the thought that men may never become perfect by those standards or that their standards of judging will change. We cannot wish for what we cannot imagine.

Indeed it is a grim world, and the future for the moment looks dark. We reconcile ourselves now to the loss of that sense of certainty which we too often falsely enjoyed, and we have lost the exuberance with which we once hailed a vision of neverending progress. We struggle in confusion to maintain the privileges that were won by our fathers and that have been ours. do we need to be glum about it all? The birds still sing in the trees; music still has the power to move us and to bring back happy memories. It is no new thing for man to confront perils in his upward struggle. Life has always been hazardous, civilization has always been threatened, our individual deaths have always been an inevitable certainty. But men have faced uncertain futures before with courage and even
a light heart. Life, whatever else it may
be, is not dull. We are privileged to share
together in a great adventure, the very hazards of which should draw us closer together.
With determination and wisdom our sorry
old world may yet become a happy place to
live in, where wars are no more, and where
the spirit of brotherhood dominates all we
think and do.

The Commentator

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the Record, I wish to insert the following editorial entitled "The Commentator," by W. K. Kelsey, which appeared in the Detroit News on January 13, 1955:

THE COMMENTATOR (By W. K. Kelsey) POSTAL METAPHYSICS

Argument about postal rates, at least in the United States, seems destined always to enter the metaphysical realm. When President Eisenhower says that "the services performed by the Post Office Department are of measurable value to their recipients," and bases on that theory a design for higher postal rates which he then admits to be subject to correction, he throws reason out the window.

Like the deputy of Achala, Gallio, the average citizen cares for none of these things that bother the President and Postmaster General Summerfield. They are called to his attention often enough, but they will not worry him until he finds the first-class postage rate boosted to 4 cents an ounce.

Then he will ask why a one-third increase is levied on the letterwriter, when he is already more than paying the expense of handling the first-class mail, and when the entire deficit of the Department in fiscal 1954 was only 15 percent. If the services performed are of measurable value to their recipients, how has that value been increased to justify an upping of the rates in the one classification which already makes a profit?

The answer is that it is imperative to subsidize newspapers and magazines, chiefly the latter. Second-class mall is far from paying its way. If it were compelled to do so, periodicals would raise their prices, shifting the extra cost to recipients. That would surely prove unpopular. The real question then is whether second-class mail be subsidized from the general revenues of the Government, or by the senders of first-class mail, who are already paying more than the service they receive costs.

FIRST-CLASS POSTAGE

Having made this argument against what seems to be a wholly illogical position taken by the President and the Postmaster General, the Commentator will now weaken if not destroy it.

There was a time when most first-class mail consisted of private letters, on which postage was paid not by the sender but by the recipient. This was a boon to the addressee; he was generally glad to pay for a letter he could identify as being from a relative or a friend, and he could refuse one that looked like an invoice.

With the invention of the adhesive postage stamp, prepayment became the custom, and business began to use the postal facilities with increasing frequency. Today it is probable that business communications far exceed private letters. The cost of sending these business matters becomes a cost of trade, compensated either through the price of goods sold or not at all. So when you receive by first-class mail a bill from your favorite store, you are probably paying a part, though a small one, of the postage.

When one considers how the costs of mall service, except to the private and personal letterwriter, are capable of being passed on and spread, how can one believe that the services "are of measurable value to their recipients"? They are of value to the national community as a whole; but it is doubtful if they are of measurable value even so, because whatever their cost they have become utterly essential.

Therefore the logical question seems to be not what shares of cost should be paid by four different classifications and a number of other services, to keep each approximately solvent, but how the whole bill can best be

THE DEFICIT PROBLEM

When the proposition is put that way, the answer becomes easier. The postal service can be made to pay by increasing by one-third the rate of its only highly profitable activity, the first-class mail, and by raising other rates as much as the traffic will bear. The alternative is to continue running on an annual deficit, and having it paid by the taxpayer to the present tune of about two-thirds of 1 percent of the budget.

To a businessman like Mr. Summerfield, acceptance of the principle of continuing postal deficits is bad. It may lead to a careless disregard of costs, not during his administration, but when some dirty Democrat takes over. On the other hand, a too rigid economy in an effort to balance the postal budget can reduce services, lower efficiency, and make the administration unpopular. Therefore the Department should break even, and the way to make it break even is to increase the first-class rate, letting the cost to the people fall on whom it may.

Either you side with the administration theory, or you don't and to the Commentator it's six of one and half a dozen of the other. A 4-cent rate might boost his annual postage bill \$5 directly, and a small amount indirectly; but eventually it might take a few cents off his income tax, or it might improve the service given him, though not to the extent of 33½ percent. He is quite satisfied with "the privacy, security, and swift dispatch of letter mail," etc., as they are, and he thinks Mr. Summerfield is performing miracles.

Case of the Gas Consumers

EXTENSION OF REMARKS

HON, BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. O'HARA of Illinois, Mr. Speaker, in view of another anticipated legislative

drive by the gas interests my colleagues from gas-consuming States will find interesting the argument of Hon. Joseph F. Grossman before the Federal Power Commission—docket No. R-142—in consideration of principles and methods to be applied in fixing rates to be charged by independent producers for natural gas sold in interstate commerce for resale.

Mr. Grossman, rated as one of the outstanding authorities of the Nation on municipal law, is the special assistant corporation council of the city of Chicago in public utilities matters. Following is his argument of today, January 13, 1955, before the Federal Power Commission:

Before concluding the arguments yesterday, Mr. Harry Begley, assistant attorney general of the State of Illinois, appeared in behalf of the Illinois Commerce Commission and urged regulation of rates by this commission applicable to independent producers of gas on the basis of the value of the gas in place. Before proceeding with my statement, I want this Commission to know that Mr. Begley does not represent the views of the consumers of gas in the city of Chicago. Mr. Begley represents the Illinois legal concept of rate regulation based upon its statutory law, which requires a fair value rate base in fixing just and reasonable rates for the utilities in Illinois. That is not the criterion established by this Commsson under the Natural Gas Act as construed by the Supreme Court of the United States.

The city of Chicago is served by the People's Gas System which was represented here by Mr. Clarence Ross. There are approximately 1 million customers in Chicago, who consume about 400 million cubic feet of natural cas per day.

natural gas per day.

The position of the city of Chicago is stated in four brief paragraphs filed in this proceeding, which I ask the indulgence of your honorable body to read:

"City of Chicago respectfully submits that when any commodity or service is dedicated to public use and subject to legislative control and regulation the rates and charges for such commodity or service, if determined by competitive bids and offers, violate the fundamental principles of public-utility regulation.

"The very reason and purpose of rate regulation by authority of law is to substitute reason and justice for power incident to virtual monopoly of resources or privileges impressed with the public interest. Hence, the price of gas demanded by producers having a virtual monopoly of the source of supply in a given field upon which existing pipelines depend for public service in interstate commerce is not a lawful standard for rates and charges subject to regulation by the Commission.

"The field price for gas adopted by the Commission in the Panhandle Eastern Pipeline case before the United States Supreme Court decision in the Phillips Petroleum case is nullified by the Commission's assumption of jurisdiction to regulate independent producers as defined in rule 174B.

"The Commission should resort to the 'rate-base approach' in determining a fair and reasonable return for independent natural gas producers as well as for other natural gas companies subject to the Commission's jurisdiction."

We did not specify the kind of rate base which should be applied by this Commission because historically, regulation under the Natural Gas Act has been on a net investment rate base.

In the majority opinion, in Phillips Petroleum Co. v. Wisconsin, it was said:

"Regulation of the sales in interstate commerce for resale made by a so-called independent natural gas producer is not essentially different from regulation of such sales when made by an affiliate of an interstate pipeline company."

We know of no case wherein a separate or different rate regulation approach was applied to producers of gas affiliated with interstate pipeline companies.

From the beginning of the discussion in this proceeding, we have heard from producers of gas, from bankers who have a stake in financing gas producers and from pipeline companies who purchase gas for resale in interstate commerce. Their cry is that the only practical means available to this Commission in fixing just and reasonable rates for gas sold by producers is to accept the price and conditions of sale governed by competition in the field of operation.

Some of those advocates have even asserted that the commission should not enter upon an investigation of the propriety of the price agreed to by the producer and purchaser, both-of whom are natural gas companies under the rule in the Phillips Petroleum case, but that such investigation should be instituted only upon complaint of a party affected, and that the burden of establishing that the price and conditions of the contract are unjust and unreasonable should be on the complaining party.

Indeed, the principle of competition in the purchase and sale of gas produced in a given field has been so stressed that the producers who claim the inviolability of their contracts of sale from the continuing power of regulation by the commission should have the right to increase their price for gas by renegotiation of old contracts to the current prices prevailing in the field offered by pipelines who seek a source of supply to satisfy their customer demands. In other words, the competitive factor which would govern the price would be the potential demand of ultimate consumers, or the maximum price which the traffic in natural gas can bear.

These are shocking concepts of regulation of business affected by the public interest and violate the fundamental principles and practices of rate regulation by public service commissions. The basic reason assigned for the departure from the long-established methods of price regulation by legislative authority in an administrative commission, requiring a reasonable return on the investment devoted to the public service, is that independent producers of gas are not the beneficiaries of a Government grant or franchise, protecting them from competition, and therefore are not subject to regulation as to service and rates. That is an argument which may properly be addressed to the legislative branch of the Government and not to the commission, which is governed by the act of Congress, as construed by the Supreme Court in the Phillips case.

The so-called independent producers of gas who sell it in interstate commerce are natural gas companies subject to the same legal obligations and regulations by the same commission, for the same purpose, under the rules and practices applicable to all other natural gas companies within the purview of the Natural Gas Act.

Integrated natural gas companies who produce, transport, and sell gas in interstate commerce are subject to the burdens of regulation, which are no different than the burdens of natural gas companies who are called independent producers of gas for sale in interstate commerce, and no different

than the burdens of interstate pipelines who purchase their gas from independent producers. Each producer who sells to such pipeline, and each pipeline who buys from such producer, must secure a certificate of convenience and necessity from the commission to assure a certain quantity of gas supply from a source described, to a pipeline named for sale in interstate commerce to local distributors, in the quantities allocated by the commission for consumption in the territories served by the distributors.

By the process of certificates of con-venience applied for by independent producers and interstate pipelines, the producers and pipelines are integrated just as effectively as natural gas companies, who own or control through a corporate affiliate both gas resources and pipelines. As to the gas com-mitted by certificate of convenience, the producer has relinquished his independence and is subject to the same principles and methods of rate regulation as integrated natural gas companies. They are entitled to a reasonable return on their investment in the integrated facilities devoted to the service. It is the function of the commission to fix the reasonable investment which constitutes the rate base and the total cost of each service, including a reasonable rate of return. These elemental factors cannot be determined in a vacuum, as in a proceeding in which we are now engaged. They must be based upon the facts in each case when the question of the rates of each is properly before the commission.

It would serve no useful purpose for anyone to speculate on the details of establishing the cost of service properly apportioned to the production and transmission of gas sold in interstate commerce whether they are integrated by corporate control or by certificate control. It is sufficient at this time to say that the consequence of the decision of the Supreme Court in the Phillips case is that a rate base must of necessity be established to determine a reasonable return on the investment in producing and gathering properties used and useful in furnishing gas for sale in interstate commerce.

That is obvious from an unchallenged statement in the dissenting opinion of Justice Douglas in the Phillips case.

"If Phillips' sales can be regulated then the commission can set a rate base for Philips. A rate base for Phillips must of necessity include all of Phillips' producing and gathering properties; and supervision over its operating expenses necessarily includes supervision over its producing and gathering expenses. We held in Colorado Interstate Gas Company v. Federal Power Commission (324 U. S. 581), that the Commission's control extended that far in the case of an interstate pipeline company which owned producing and gathering properties and so it had to be, if regulation of pipelines that owned their own gas supplies was to be effective."

It will be noted that the statement of Justice Douglas is in argumentative form supporting his dissent from the majority opinion in support of the power of this commission to regulate sales in interstate commerce made by so-called independent natural gas producers. Since the final judgment of the court was that Phillips' sales should be regulated by the Commission, the first sentence of the above quotation must be reconstituted to conform with the judgment of the court as follows:

"In regulating Phillips' sales the Commission should set a rate base for Phillips."

It has been argued that the rate base approach is not adaptable to a commodity

as if it were property devoted to public service such as a railroad, a telephone system, an electric utility, or a manufacturing gas plant; that the cost of natural gas at the source must be determined by supply and demand and competition for the available supply. A supply of natural gas at the source is no different than a supply available for distribution to consumers. Should the competitive principle be applied to a retail distributor of natural gas where there are 100,000 or more applicants for space heating gas, as in Chicago, with a limited supply available?

The interest of the distributing companies, it appears, conflicts with the interest of the pipeline companies and the interest of the pipelines conflicts with that of the producers only to the extent that their respective profits may be affected. The retail distribut-ing utility is also concerned with its own regulation by State commissions. Their own problem is to secure a value rate base, and therefore they advocate value consideration for their suppliers to be consistent with their own interest, provided that all costs based on value of the service can be passed on to their consumers. This commission, however, must consider the interest of the ultimate consumers, as well as the investors, at any stage of supply by natural-gas companies, We who represent the consumer interest have a problem in common with this commission and believe that the only fair ratebase approach is the net investment of each of the companies in the chain of supply to the consumer.

Aside from conflicting opinions at the State level as to the economic justice of the fair-value rule in rate regulation of services and commodities affected by the public interest, the universal experience is that a cost standard for such regulation is factual, less difficult to ascertain, more reliable, and more stable for both investors and consumers than a fair-value standard which depends upon fluctuating supply and demand, competitive factors, appraisals, and controversial opinion evidence.

Some Industries Do Need Tariff Protection Against Competing Products of Low Wage Foreign Nations

EXTENSION OF REMARKS

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. MACK of Washington. Mr. Speaker, we want to increase the flow of international trade to promote international economic strength and well-being of all nations including our own. Tariff reductions in some cases may contribute to that end. In some industries, such as the automotive, where products are made largely by machines, American industry can out-produce at lower costs any foreign competitor despite the low wages that prevail in many foreign nations.

All industries, however, are not in this fortunate and favorable economic position. Where American goods are the

product largely of man-hours of labor and not of machines, American goods cannot compete with the low wages paid

labor in foreign nations.

The Committee for Economic Development reports that the annual wages and social benefits paid by British industry to each employee in 1951 averaged only about 32 percent of what American industry paid. The Belgium figure was 37 percent; in West Germany and France, 29 percent; in Italy, 17 percent; in Japan, 10 percent.

The oyster, the crab, and the edible nut industries are examples of domestic industries which cannot compete with foreign low wages. The harvesting and processing of canned oysters and crab is done mostly by hand labor and machine processes play but a minor part in the production of the finished product. The canned crab and oysters come mostly from Japan. Thus, in selling price it is largely a case of oriental labor versus American labor and with oriental labor paid only 10 percent what American labor receives, it is obvious that the American crabbing and oyster industries cannot survive without tariffs or quota limitations to protect them.

The same is largely true of the ediblenut industry, where 6 to 7 years of cultivation and care are required before a nut tree begins to bear and where the harvesting of the nuts eventually must be done not with machines but by hand

labor

Another danger in encouraging increased crab imports is that Russia now, due to the Yalta treaty, owns and controls some of the best crabbing waters. Russia cannot ship her crab into the United States directly. She should get it into the United States via Japan by the process of selling fresh crab to the Japanese and letting them can it or by selling Japan crab-fishing rights in Russian waters.

On the danger of Russia getting her crab into the American market, if tariffs on crab are reduced, the Seattle Times, one of the largest metropolitan dailies in Washington State, recently said:

IT MIGHT HELP RUSSIA

Among issues due to be discussed next month in Washington, D. C., in proposed revisions of United States customs duties on imports from various countries, is a slashing of the tariff rate on imports of canned crabmeat from Japan. The Pacific Coast crab-canning industry is particularly concerned

over one aspect of this proposal.

The Japanese now are sending this country virtually all of their crab pack. As a result of the war, Japan lost much of its former crab-fishing area to Russia. Imports of crabmeat from Russia in the United States are barred. But a reduction of the present duty, in the opinion of men in the trade, could have the effect of starting a backdoor deal, under which Russian crabmeat, denied direct entry, would reach this country by way of Japanese canneries.

Members of the Washington congressional delegation, Republicans and Democrats alike, appear to be well informed as to this issue and have presented their views to the Tariff Commission. If there is indeed a serious likelihood that Russia would be the real beneficiary, this factor assuredly should be considered by our negotiators. CANNERY UNION PROTESTS

Cannery workers of whom thousands are employed in the American crabbing industry of the Pacific, the Atlantic, and Gulf States and Alaska are fearful of losing their livelihood if tariffs on canned crab are reduced at the coming Geneva Trade Conference.

Mrs. Esther C. Cooper, president of the United Packinghouse Workers of America, CIO, Local 553, of the seacoast communities of Grays Harbor, Wash., under date of January 15 wrote me as

DEAR CONGRESSMAN MACK: Our jobs as workers in the crab industry are most certainly threatened by this latest plan to remove the tariff on Japanese canned crab which enters our United States markets.

The canneries of the Gravs and Willana Harbor areas, as well as Puget Sound, and for that matter the entire State of Washington have not been working at peak production. We who earn our living in this industry will definitely be injured if we are permitted less working hours through a further tightening of market conditions, and a really disastrous condition if the tariff is reduced or removed.

Our field analysis reveals that the American crab industry now gives direct employment to an estimated 34,000 people not including brokers, salesmen, and employees in industries supplying cans, cartons, equipment, and materials of all kinds. When you consider that each worker represents 2.5 persons in the family unit the impact affects a great many persons. Most of us who work in this industry are directly employed in small coastal towns where fisheries are the only means of livelihood. With conditions such as they are at the present moment and danger of a further letdown in the market for American processed crabmeat we see a closedown for not less than three major packing companies in our own immediate

May we urge that you assist us in every way possible with the Secretary of State and the President in protecting our jobs and families. This matter is due to be considered at the foreign trade-agreement negotiations to be held in Geneva, Switzerland, and immediate action will be needed before the representatives leave for that meeting. We are depending upon you to speak for us since we, ourselves, cannot be present. We trust you will give us your best efforts as

vou always do. Yours very truly,

ESTHER C. COOPER, President, United Packinghouse Workers of America, CIO, Local 553.

God Help the Poor Majority

EXTENSION OF REMARKS OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. DAVIS of Georgia. Mr. Speaker, the editor of Southern Advertising and Publishing has forwarded to me a copy of an editorial carried by that magazine in its June 1954 issue.

This article is entitled "God Help the Poor Majority."

Editor Porter is one of the millions of people outraged by the political and sociological opinion of the Supreme Court in the school cases, and recognizes, as so many others recognize, that the Supreme Court is endeavoring to usurp legislative functions which it in fact does not possess.

Under unanimous consent. I insert herewith a copy of the editorial mentioned:

GOD HELP THE POOR MAJORITY

Let's turn for a moment or two from the working and eating business of advertising and check into the social situation. It was on the social hinge that the Supreme Court appeared to swing the decision that separate schools for Negroes and whites were bad for the egos of the Negroes. No point was raised that the egos of the whites suffered. therefore no need for alarm is cited there. The whites are not developing inferiority complexes. Not yet. Reading the opinion as handed down by

Mr. Chief Justice Warren leaves us with the feeling that the real issues were either skirted or unweighed. Everyone knows that recently issues have been fanned by the Society for the Advancement of Colored People, and aimed at the South. The Supreme Court is a learned body and our last resort on matters of law. But when it hedges its findings about with such words as "feeling of inferiority," it appears to the lay mind to have gone into some other field than the law. For the sake of clarity, let's call it

sociology.

This opinion is, we would estimate, about 50 years too late. Educational facilities are now being provided for the Negro. Hundreds of millions of dollars are being poured into his educational program. This money is now available and being spent in the South. And let it be remembered that 50 years ago we were poor folks in this Southland, whites and blacks. We had no money for schoolsbut now we have money and nowhere under the sun are finer cohools being built for Negroes. Any Negro that has a bruised ego because he has to get his education in these schools has a tender ego indeed. The average Negro today knows this, many so express themselves.

No ruling of any court can ever equalize all factors bearing on mankind. There is no point of protection at issue, but that word pops out of the decision at every weak spot. There was a great racket created a short time back about the lynch laws. It also came too late-there has been no lynch problem in the South for a generation. Why is it that the Supreme Court has overlooked the fun-damental law that the States have rights to tax, build schools, supervise education? What part of the Constitution gives the power of education to any other source?

No enlightened white person in the South, or elsewhere, denies to the Negro protection under the laws or privileges of education. But no decision of any court can equalize social status. Why not make it a crime or misdemeanor to send out a wedding invitation list that does not name some Negro who would like to attend, but who feels that he is snubbed because of his color? Do not say such is farfetched or not relevant. He can claim that it gives him a feeling of inferiority to be overlooked, left out, snubbed.

The opinion cited great records set up by Negroes as proof of their right to education. That right has not been questioned for many years, and the point is not well taken. Those records were made from the existing facilities and in the conditions that the court decried. We think this question is more fundamental: there are forces that work against all men.

black and white, seeking great success. Many things have to be overcome. Those who look for inequalities can see inequalities, those

who look for opportunity, see it.

There is no new law involved. The judiciary was conceived to rule on the law with its right hand on the Constitution. Such experienced jurists as Oliver Wendell Holmes, William Howard Taft, Charles Evans Hughes Louis D. Brandies weighed the issues-and then the educational facilities of the Negro were much worse. But they saw that solutions were in sight, and they evidently saw that much strife and turmoil might be avoided by allowing the historical stream to flow rather than to blast in the channel.

It might be about time to organize a society for the advancement of the white

Ambassador Jefferson Caffery

EXTENSION OF REMARKS OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. WIGGLESWORTH. Mr. Speaker. under leave to extend my remarks in the RECORD, I include the following article from the New York Times of January 9, in reference to Ambassador Jefferson Caffery, who is retiring after an outstanding career in the diplomatic service of over 44 years.

RETIRING CAFFERY HONORED BY EGYPT-UNITED STATES ENVOY WINS RECOGNITION FOR MAJOR ROLE IN ENDING CAIRO-LONDON DISPUTES

Carro, January 9 .- Jefferson Caffery, retiring United States Ambassador, received official recognition tonight for the major role he has played in improving relations among Egypt, the United States, and its allies.

The 68-year-old Ambassador, senior career diplomat in the United States Foreign Service, has been instrumental since 1949 in promoting settlement of disputes over future of the Anglo-Egyptian Sudan and the Suez Canal Zone that had embittered relations between Egypt and Britain and hence with most of the Atlantic alliance powers.

On the eve of his departure, the Ambassador and his wife were honored at a dinner given by Premier Gamal Abdel Nasser, attended by most members of the Cabinet and ruling Revolutionary Command Council.

Mrs. Caffery was awarded the Order of Perfection, the highest Egyptian decoration granted to women. The Ambassador, unable to accept a foreign decoration while still a United States official, received from the Premier a bronze statuette of the Egyptian sun god Ra dating from the 26th dynasty, about the 7th century B. C., found at the village of Mehiya in lower Egypt.

Mr. Caffery, an enthusiastic amateur arche-

ologist, spent much of his last day in Egypt's capital taking a last look at recent major discoveries. In the afternoon he drove Gizeh to inspect the newly revealed stern of the funerary bark of the Pharoah Cheops.

Mr. Caffery, a native of Louisiana, entered diplomatic service in 1910, served in 14 capitals in the Far East, Europe, and Latin America, and has been chief of mission for 29 years, probably longer than any other United States diplomat. He was Ambassador to France from the end of World War II until he was named to his present post.

Ambassador and Mrs. Caffery will go to Alexandria tomorrow for further official receptions, then will board ship Tuesday for Italy.

Our Federal Officials Should Have Better Pay

EXTENSION OF REMARKS

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the current issue of the Saturday Evening Post:

OUR FEDERAL OFFICIALS SHOULD HAVE BETTER PAY

How much are leaders worth, in terms of dollars? How much should the richest nation in the world pay for statesmanship? The 84th Congress has to decide, for almost the first item in its order of business is the long deferred proposal to raise the salaries of Federal judges, and of Congressmen themselves.

The Hoover Commission recommended this increase; a Democratic and now a Republican President have urged it; editorials endorsing the salary raise have appeared in more than a thousand newspapers throughout the country. Leading columnists, radio commentators, labor-union groups, agricultural organizations, bar and professional associations, all have favored it. No substantial public opinion has been heard against

But Congressmen, by our constitutional system, are in the peculiar position of having to fix their own salaries, and time and again they have shied away from voting themselves increases, for fear of a cry of looting the Treasury. And because of a long custom, dating from the first days of the Republic, by which Federal district judges are paid the same salary as Congressmen, the whole judicial establishment of the United States is suffering from the same serious, almost critical underpayment that Congressmen endure.

The last Congress, anxious for public support, provided for the appointment of a nonpartisan Commission of leading citizens, drawn equally from labor, business, agriculture, and the professions. Under the chair-manship of Bernard G. Segal, chancellor of the Philadelphia Bar Association, this Commission made a full exploration of the standards by which a government should set sal-aries. What kind of people do we want for judges and Congressmen? the Segal Commission asked. And then it inquired, how much salary or income are such qualified people commanding in private life?

The Chief Justice of the United States, they discovered, receives only what a moderately successful lawyer in a middle-sized city might make. Private industry, for tasks less important to the Nation than Congressmen must discharge, often pays salaries 2 and 3 times greater. Union officials, successful professional men, junior executives in business, men from among whom we should find our public leaders of today and tomor-row, cannot become Congressmen except at Lawyers, an impossible financial sacrifice. however qualified, cannot ascend the bench unless they are willing to lower drastically their standard of living.

The Segal Commission heard a young Federal district judge in California say that he will have to quit the bench because he cannot support his wife, two children, and a third child soon to come, on a judge's salary. If he should die, his widow would receive no survivor's benefits, and his income permits only the smallest insurance program.

They heard the able and respected John C. Knox, chief judge of the Federal district court for the southern district of New York, probably the busiest Federal court in the land, tell of his financial struggles since he went on the bench in 1918. In all his 37 years, he has never had enough money to live on, has had to teach and write when he could to keep up his insurance and educate his daughter. New York State judges. even New York city judges and municipal judges in our larger cities, receive higher salaries than he does. And though he has refused appointment to State benches because of his lifelong experience in Federal jurisprudence, now, in his later years, he is unable to afford a nurse to care for his invalid wife, and must do nursing duty himself after his day's work in court is over.

The commission discerned that the day is long past when a Congressman could earn a living in a private business or profession while serving his constituents. Congress nowadays is a full-time job, 7 days a week, every week in the year. Congressmen must maintain 2 homes, usually 2 offices, pay most of their travel expenses, bear many costs which a corporate employer would pay for its executives. Their expenses have increased with the enlargement of their work, but their salaries have remained the same through the whole period of recent inflation, and have grimly decreased in buying power.

In its elaborate, searching report, Segal commission recommended a scale of increases necessary to bring the salaries of judges and Congressmen into line with the practice of the Nation in all fields. The total cost of these recommended increases would be only \$7,500,000. But the 83d Congress, facing an election, failed to act.

Now the election is over. The public is aware of the necd; what the lawyers call the "last clear chance" is here. The 84th Congress, in its 2 years' existence, will spend more money for more purposes than any other body of men on earth. Commonsense and public interest alike require that they should devote a tiny fraction of their appropriations to making the major jobs of statecraft in a free nation financially possible for the men best fitted to hold them.

Crime: A National Problem

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. ANFUSO. Mr. Speaker, I have long been aware of the fact that organized crime is a cancerous growth upon our society and our way of life. In recent years, since the end of World War II, this situation is assuming alarming proportions in all parts of the country. The most deplorable manifestation of this problem is the growth of juvenile delinquency, the rise in the number of youthful criminals, and the serious offenses committed by them, which makes it a problem of grave national concern.

For many years I have studied the question of juvenile delinquency and the great menace it means for our youth. Coupled with that, I have given a good deal of thought to the means of effective crime prevention. In fact, back in 1936 I founded a crime prevention institution in New York, which is still in existence and is doing a noble job in my home city.

We all know that crime is not confined to any particular race, or nationality, or religious group. It is a social disease which results from many causes, such as poverty, slum housing, poor environment, neglect by parents, lack of family discipline, breakup of the family unit, and emotional disturbances. Juvenile delinquency, youthful criminals, teenage drug addicts, and the like are the outward manifestations of this social disease

We should seek to know the social conditions which breed and encourage this situation to grow. I have felt for a long time that society is to blame for the large crime rate, and I am also of the opinion that our Government has been derelict in dealing with this problem from a preventative standpoint. What is wrong with our educational system that it is helpless in eradicating this evil when our children are still in an impressionable age? What is wrong with the neighborhoods and the communities in which we live that our young people are influenced by evil forces? What is wrong with our home life, our discipline, our associations? Where have we fallen down on the job of raising the young generation to be law-abiding, responsible, and dignified citizens?

These and many other questions are perturbing our serious-minded citizenry. There are many among us who raise this question: We are spending many hundreds of millions of dollars to fight crime and criminals by means of large prosecuting staffs, huge police forces, the courts and penal institutions, but what are we doing to prevent crime and to curb juvenile delinquency? True, we have had some investigations, we have had some well-meaning conferences, but the crime rate has not fallen off. The problem goes far deeper than that.

Police protection is not enough. Arrests and court warnings are not enough. Even jail sentences are not enough to curb this evil. This is a long-range problem which must be dealt with from a long-range point of view, if we seriously aim to protect our youth and to eradicate the evil of crime from our midst. It must be given nationwide attention through all media of information, the press, radio, television, the movies, also through our churches, schools, organizations, unions, and various public and private agencies and institutions. The American public must be aroused to this menace which is threatening our youth and is affecting us all.

I believe that Congress should give leadership and guidance to our people in dealing with the problem of crime. An aroused congressional interest in an anticrime campaign would be a valuable resource for all agencies and groups, for parents and teachers, for church leaders and Government officials, who are interested in checking the growth of crime and reducing it to a minimum. Congress has a responsibility to the people to do all within its power to seek a solution of this problem.

Mr. Speaker, in order to get to the roots of this problem, I am introducing two pieces of legislation. The first is a

resolution calling for the creation of a fact-finding committee of five members of the House of Representatives to conduct, without regard to politics, a full and complete investigation and study of the causes of crimes committed in violation of the laws of the United States and of other crimes affecting the national health, welfare, and morals, and the methods of preventing such crimes. This investigation should include examinations of criminal records, a study of Federal and State penal institutions for the purpose of recommending new legislation to the Congress, an analysis of the relationship of local neighborhoods and schools with the causes of juvenile delinquency, and other factors which the committee may deem appropriate.

The other piece of legislation is a bill which is designed as supplementary to the resolution. The bill calls for the creation of a Bureau of Crime Prevention in the Department of Justice as a permanent agency to conduct a continuous study and investigation to seek methods for the prevention of crime and curbing juvenile delinquency. It requires the Bureau to establish an office in each State and to cooperate with State and Federal agencies in initiating crime-prevention programs.

I am convinced that the future of our country depends on how well we raise our youth and prepare them for the responsibilities of citizenship. We live in a time of great stress and tension at home and abroad. It is imperative that we imbue our youth with an appreciation of our way of life, our communities, our institutions, and everything that is positive and constructive. We must make it crystal clear to them that crimes committed against society will affect their own future lives and undermine all their opportunities to become useful members of society. We must make them understand that they themselves will be the greatest victims of their criminal acts and that they stand to lose most.

The dollars we spend today for seeking ways to prevent crimes may be paid back a hundredfold not only in saving money which goes into fighting crime, but even more so in helping our youth become better citizens tomorrow. I urge the Congress to approve these measures as soon as possible so that immediate action can be started to deal with this problem.

Foreign Trade

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Lawrence Sunday Sun, Lawrence, Mass., December 12, 1954, which I am confident is worthy of the consideration of the House and the American people:

THE WOOL OVER OUR EYES

On display for the Christmas season in stores in this region is a toy Santa Claus made of paper and clay and standing some 6 inches tall. It is a reasonable facsimile of the American conception of the appearance of Kris Kringle.

This toy is manufactured in Japan. It is shipped across the Pacific Ocean, then across the United States. The worker who made it had his wages out of it. The manufacturer made a profit. The shipping charges and tariff fees were pald on it. The American importer made a profit on it, and the stores in which it is sold in this country must make a profit on it.

Yet, this toy Santa Claus can be purchased over the retail counter here for 4 cents.

How abysmally low must be the standard of living of the Japanese worker to permit such a transaction? On the face of that, what could be closer to slavery?

But let us not stop at the toy Santa Claus. Let us get into the subject of woolen blankets, the material for which is one of the principal items of production of our shrinking New England textile industry.

Perhaps justifiably so in the light of world conditions, the United States is going overboard in its effort to assist in the rehabilitation of Japan. We need friends in the Orient. So it is now proposed to slash tariffs on a long list of items made in Japan so that they may be imported into this country for sale to Americans who are fabulously wealthy in the eyes of our Asiatic neighbors.

Included on this list is woolen blankets, and negotiations will start in February to open the gates to a floodtide of woolen blankets made in Japan to compete with the American product in the open market.

We do not know how much a made-in-Japan woolen blanket would cost in the United States. On the basis of the aforementioned toy Santa Claus, we can pretty well guess—and the guessing isn't difficult in contemplation of the fact that Japanese textile workers are paid 14 cents per hour.

We need not review the plight of the woolen industry in New England, and our situation is duplicated in all other textile-manufacturing areas of the country. Now a plan is afoot to strip us of even that measure of business which comes from the manufacture of blanket material.

American business depends for its survival upon the wages earned by our workers. When a foreign-made item undersells a domestic item in our market, it affects the income—the very jobs—of thousands of American breadwinning taxpayers.

Playing both ends against the middle is an old political practice. It pays off for a while, but it is never conclusively successful. Our American workmen are in the middle in this scheme of international trade, which obviously was born in that impenetrable sanctum of diplomacy from which came the deal that brought the Korean war to a stalemate—and left our Army in the middle.

The people of the United States spend millions of dollars each year just to sustain the American practice of opening the polling places so that our citizens can vote for those they think can best run the country.

When the elections are over, the schemers, the carpetbaggers, the string pullers move in and take hold of the elected officials, with the result that major decisions are reached in so-called smoke-filled rooms far from the hue and cry of the people, and beyond the reach of the ballot box.

If selling American industry, American labor, the American family, and the American standard of living short is good, sound diplomacy, then either we, the people, or they, the string pullers, must be mentally unbalanced.

It is time—or has the opportunity passed beyond recall—that we built a fire under our elected governmental officials in Washington and at least have them make an earnest effort to save the jobs of thousands of American woolen industry workers which are now threatened by this incredible proposed tariff deal.

A Bill Designed To Encourage Private Insurance Organizations To Experiment in Providing Broader Voluntary Health Insurance to More People

> EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. WOLVERTON. Mr. Speaker, I am introducing today a health bill, H. R. 2533, entitled "A bill to improve the public health by encouraging more extensive use of the voluntary prepayment method in the provision of personal health services." This bill is substantially identical to H. R. 8356, 83d Congress, in the form in which that bill was reported favorably on July 9, 1954, by the Committee on Interstate and Foreign Commerce-House Report No. 2106.

H. R. 400, which I introduced on January 5 and which has the same title as this bill, is substantially identical with H. R. 8356, 83d Congress, as originally introduced by me in the form in which that bill was recommended by President

Eisenhower.

The present bill, H. R. 2533, provides for the establishment of a health reinsurance program in the Department of Health, Education, and Welfare. It creates a reinsurance fund and authorizes an appropriation of not to exceed \$25 million to provide advances of working capital for the fund. The fund would be built up over a period of time from reinsurance premiums and from earnings of the fund. Reinsurance would be available on a voluntary basis and upon payment of a reinsurance premium, to private insurance companies, voluntary nonprofit health associations, such as Blue Cross and other organizations offering prepayment health insurance plans. The proposal is designed to encourage private insurance organizations to experiment in providing broader voluntary health insurance to more people.

The bill also provides for technical and advisory information services to health

service prepayment plans.

The bill H. R. 2533 differs from H. R. 400 in that H. R. 2533 incorporates certain provisions, which were adopted by the Interstate and Foreign Commerce Committee in reporting favorably H. R. 8356, 83d Congress, to meet questions raised by various witness in the course of the committee hearings held during the 83d Congress. The most important of such questions was based on the fear that the bill could be interpreted to permit some degree of Federal regulation of the health-insurance industry. The bill, H. R. 2533, seeks to remove any and all fear in that respect.

The central philosophy of the bill is one of building on our existing system of voluntary insurance and of providing supporting services and a financial backstop for private effort toward the expansion of prepayment protection. The bill, if enacted, would not of itself directly provide insurance coverage for individuals. Its goal is the removal of obstacles to the extension of coverage for broader ranges of benefits and to additional groups of people.

The Whittier News

EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. HILLINGS. Mr. Speaker, the Whittier News is celebrating its first year under new ownership. On January 15, 1955, in an editorial, this newspaper outlined some of its policies which I wish to commend to the Members of this body for consideration. I am happy to join the citizens of Whittier in extending greeting to the Whittier News on this anniversary

The editorial follows:

A year ago today President Eisenhower was asking Congress for coverage of an additional 10,000,000 persons under social security. Whittier College-Community Symphony Orchestra was preparing for the second concert of its season. The Western Powers had broken off their talks with the Russians on a site for a Big Four Foreign Ministers' meeting. A spectacular auto crash on the Santa Ana Freeway in Rivera left a driver critically injured. A change in the ownership of the Whittier News was announced.

The foregoing paragraph is designed among other things to note that among many anniversaries taking place now, one involves

Whittier's daily newspaper.

The owners who assumed operation of the News a year ago are deeply grateful that they have had the opportunity to move into this community. Their welcome has been warm and cordial. Their sojourn has been pleasant and their experience rewarding in many ways.

A natural consequence of any change in ownership of a newspaper is that other changes follow in its wake. The News, during the past year, has tried to improve its looks and to make itself more readable. It has tried to expand its news coverage and better its service to advertisers and readers alike. Its circulation has been rising steadily; a sound test of community acceptance.

Many folks have told the News that they

like most, if not all, of the changes that have been made. Others have been frank to say they did not like them. Some have liked the News editorial policy; some have not. Some have said the News doesn't carry enough news; others have said we should have left out some that we have carried.

The News staff feels that as long as the newspaper draws criticism (or praise) from both sides it is performing with a sense of responsibility. It will never please everyone.

A year ago, today, this column included

"The News will not always be right but it will always strive to be.

"It will not always please everyone but

tt will never stop trying to do so.
"Its stand on some questions may not be popular but it knows that its readers will grant it the right to differ; a right, too, of theirs which it will jealously safeguard."

During the past year the News has operated to the best of its ability under the guidance of those principles. It will keep on doing so in the future.

A year ago this column also pledged:

"The News, under its new ownership, will try at all times to be a fair newspaper, a decent newspaper, and a dignified part of the community.

The News considers it vital to present all sides of any controversy within the limitations of its news space and to reserve for the editorial page those opinions it may have on the events and personalities of the day."

The News has undergone several tests of that policy and, itself, has been embroiled in controversy because it abided by that policy. It is still sound and sensible.

And as the year 1955 unfolds for this growing area the News is glad to note this anniversary, glad to look forward to another year of work in, and for, Whittier, and glad to be a part of Whittier.

Attacks on Nixon False and Reckless

EXTENSION OF REMARKS OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Rothwell Brown, from the Albany (N. Y.) Times-Union of January 12, 1955:

ATTACKS ON NIXON FALSE AND RECKLESS (By George Rothwell Brown)

WASHINGTON .- The false and reckless leftwing and New Deal attacks on Vice President Nixon have assumed the appearance of organized intimidation, to impair his availability as the running mate of President Eisenhower in 1956, and to weaken his leadership in the precariously controlled Senate.

The grudge against him is twofold. The Democratic Party is smarting from the vigor-ous thrusts at them in the congressional campaign of 1954 when he was by all odds the most effective speaker on the Republican

Nixon was largely responsible for stopping what the Democrats had boasted would be a victory of landslide proportions, and keeping it down to an edge so thin that but for the political apostasy of Wayne Morse, of Oregon, the GOP would have controlled the Senate in the 84th Congress by the tiebreaking vote of the Vice President.

OLD FEUD

But the feud goes back farther than that, to the presidential election of 1952, when Nixon was a tower of strength to the Elsenhower ticket. The Democrats are out to frighten the Republican Party into dropping Nixon in 1956, compelling it to nominate & vice presidential nominee without Nixon's national following.

Some Democrats, taking note of Washington rumors that in the event Ike should choose not to run for reelection the nod would go to Nixon, are understandably anxious to knock down so formidable a Republican Presidential possibility.

They are even trying to make out that DICK NIXON is juvenile.

"He was picked as a campaigner for his youth," said T. James Tumulty, Jr., new Democratic "baby Member" from New Jersey, "and I think he has proved his immaturity."

It so happens that Vice President Nixon, now just entering his 43d year, is almost exactly the age of Theodore Roosevelt when he presided over the Senate as Vice President of the United States.

TAKES OFFENSIVE

It's about time the Republican high command took the offensive in defense of their Vice President. He is the whipping boy now because the New Dealers thus far have found no way to attack Eisenhower's legislative program, to much of which they are committed.

But if they knock down Nixon, the President will be the next target for the snipers.

Not only are the Democratic allegations

against Nixon grossly exaggerated, as anybody can prove to his own satisfaction by reading his last year's campaign speeches hard-hitting but strictly hewing to the line of truth-but he kept well within the limits of the bitter indictment of the Roosevelt and Truman administrations in the Republican platform on which Eisenhower, Nixon, and a Republican Congress were elected in

The Democrats are now denouncing Nixon for charging that the Democratic Party for 20 years was soft toward communism. Would they have him repudiate the platform of his own party? Here are a few statements from that platform, which the people endorsed at the polls:

"We charge that they have shielded traitors

to the Nation in high places.

"By the administration's appeasement of communism at home and abroad it has permitted Communists and their fellow travelers to serve in many key agencies and to in-filtrate our American life. When such infil-tration became notorious through the revelations of Republicans in Congress, the executive department stubbornly refused to deal with it openly and vigorously. It raised the false cry of 'red herring' and took other measures to block and discredit investigations,"

Knott's Berry Farm

EXTENSION OF REMARKS

HON, JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks I would like to insert an article on the Knott's berry farm which appeared in the Indpendent-Press-Telegram, Long Beach, Calif., on

January 9, 1955. Knott's berry farm, which is located in my congressional district, is known not only to people in southern California but throughout the United States. I am sure this article will, for many, bring back memories of a wonderful holiday in California.

When I first knew the Knott family, faith, courage, and dreams were its main possessions. To see the dreams unfold into a great enterprise has been an inspiration to me and a true example of the American way of life. I am proud to know the Knott family and to pay tribute to the accomplishments and educational and entertaining attractions the Knott's berry farm has to offer to the American people.

The article follows:

KNOTT'S BERRY FARM BECOMES ONE OF SOUTH-LAND SHOWPLACES

Take 900 courteous, efficient employees: add two parts organization, one part seriousness, three parts fun, then throw in a ghost town, haunted house, antique railroad, stageline, and hundreds of western relics.

Mix in flavoring from all corners of the land, add a shot of Hollywood glamor, garnish with a dash of mischievousness, brown well under a gentle sun, and spread over 200 picturesque acres of southern California.

You come up with the happy recipe for the phenomenal success of one of the Nation's fastest growing and most famous institutions-Knott's Berry Farm and Ghost Town in Buena Park. From Los Angeles it may be reached by driving out the Santa Ana Freeway to Buena Park (right 2 miles on High-way 39). From Long Beach go east on Seventh Street to Highway 39, then north to the farm.

TWO MILLION PER YEAR

Precedent shattering statistics and records are made to be broken and they are commonplace at Knott's. Seventeen hundred and fifty people can sit down to dinner at one time, 45,000 are fed per week, adding up to 2 million customers a year; 40 acres of free parking can accommodate 4,000 automobiles; 7 dining rooms are utilized at one time; at least 10,000 people are fed on a average Sunday, etc.

This fabulous enterprise, soon to celebrate its 35th birthday had its birth in 1920 when Cordelia and Walter Knott and their small children arrived here in an old model T Ford and rented a farm with a tiny roadside berry shed on it.

In 1927, the Knotts bought 10 acres on time and Mrs. Knott made berry pies, jams, hot biscuits, etc., for sale to customers. This activity helped pay the land commitments, but the depression years were rough ones.

In 1934, Mrs. Knott tried chicken dinners. She did the cooking and the girls served. There were eight dinners the first day but that was the turning point. The years ahead were busy ones with an ever increasing number of dinners.

THEN EXPANDED

By 1946, the war was over and the boys and girls were home again. Son-in-law Dwight Anderson, started the steak house, and sonin-law Ken Reafsnyder, took over the duties of the preserving kitchen. The chicken restaurant now seated 880 guests and the steak house 450.

Today, the growth has been awe inspiring. In addition to Mr. and Mrs. Knott's duties, the rest of the family pitches in and hold important posts. Russell Knott has a share of the overall management, son-in-law Ken Oliphant has taken over the preserving department, daughters Marion and Toni operate the sportswear and children's shop, daughter Virginia runs the gift shop, Dwight still has the steak house, and Ken operates the Ghost Town and Calico Railroad as well as heading the purchasing, maintenance, and public relations departments.

BUILDS GHOST TOWN

A major problem of how to entertain the, waiting diners was solved in unique style by Walter Knott. An extensive ghost town was built among the giant eucalyptus trees on a part of his 200-acre ranch. Here are faithful reproductions of buildings and activities of every phase of life in the gold days of the

Through the crooked streets of the old town visitors with wide-eyed youngsters in tow will see a 4-minute showing of Wagon Train Panorama depicting t the Wagon Train Table 1. When the such as Walter Knott's mother; the gold mine, where visitors pan real gold in the sluice box to keep as a souvenir; covered wagon rides; a visit to Sad-Eyed Joe residing in the local hoosegow; the barbershop where characters like Handsome Brady and Whisky Jim hang out; hangman's tree; the wagon camp offering free entertainment in the manner of old-fashioned camp grounds, including square dancing, stories, and music.

Our Little Chapel by the Lake; the Indian Village on the Island; a stagecoach ride through the farm; the general merchandise store; the haunted shack by the rail-road track; the Calico Railroads, and many more fascinating facets of a bygone day.

Be Thankful

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following poem entitled "Be Thankful," which I received from Mr. Henry Kravetz, a former resident of my congressional district:

BE THANKFUL

(By Henry Kravetz, commissary department, United States Naval Hospital, Chelsea, Mass.)

Be thankful for the church bells Proclaiming the glory of, Creator, Creation. For the Nation's faith in God, For the gospel that redeems, And brings salvation.

Be thankful for the privilege To worship God, the way Your forefather's did. Remember the lands where the faithless Command, offend, outroot, destroy, Seed, and creed.

Be thankful to a land That gives you more, Than your daily bread. You own machines, limousines, Protected, sheltered, clad, And well fed.

Be thankful to a system Where you are not, forever poor. No new orders-Dictation! Starvation! Just a sound government, A home that is sure.

Be thankful you are in America Where all are equal, free, Upon your highlands, lowlands, cities, farms, Where pasture, bush, sprout and glee. This is your vineyard Americans. Your family fig tree.

Be thankful to your flag, Wherever you may be. On foreign soil, in the air, Or out to sea. Old Glory is your pincer, no whip for ye. America is your paradise. Be thankful to Thee.

New Smear Attack Won't Hurt Nixon

EXTENSION OF REMARKS

HON, GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the January 16, 1955, issue of the New York Journal-American, New York City, N. Y. The author of the editorial is entirely accurate in his observations that slurs and smears will not, in any way whatsoever, detract from the superb record of the Vice President. The editorial entitled "New Smear Attack Won't Hurt Nixon," follows:

New Smear Attack Won't Hurt Nixon (By William Randolph Hearst, Jr.)

I was on the move quite a bit during the past week, flying from here to Palm Beach and then over to New Orleans to speak before the annual meeting of the American Roadbuilders' Association and stopping off in Washington for a visit on the way home.

From what I picked up in Washington, and from some of the news stories and columns I've read in the past week, it's clearly apparent that a brand new smear campaign aimed at Vice President Nixon is now underway.

Practically the same cast of columnists and editorialists who kept up a running barrage at Joe McCaethy for 4 years have now trained their guns on Dick Nixon.

It seems that Dick's big crime is that he stressed the Commies-in-Government issue in the last campaign, this being an issue whose very mention throws the left-wing pundits into a tizzy.

The charge is made that, in effect, Dick Nixon called the Democrats the "party of treason," which he never did. What he did do was to point out that through either blindness or laxity, a dangerous infiltration of governmental agencies took place during the last two Democratic administrations.

Of course the Democratic Party is not the party of treason and its many distinguished leaders as well as rank-and-file voters who support it on Election Day have a right to resent such a label.

But many of these very same Democrats are the ones who feel the worst about the penetration of Washington offices by Communists during the Roosevelt and Truman regimes

It was a great Democrat named Al Smith who popularized the expression "Let's look at the record," and a look at the record in the matter of Communist infiltration is enough to make any patriotic Democrat feel bad.

Let's run off a few of the names that come to me at random and see if Dick Nixon or any other Republican hasn't a valid case in denouncing Democratic laxity or blindness or both: Alger Hiss, Harry Dexter White, Julian Wadleigh, Lee Pressman, John Abt, Nathan Gregory Silvermaster, George Ullman, Judith Coplon, Virginius Coe, Edwin Smith, and many others whose names escape me at the moment.

Those are just the ones we know about, being either confessed Soviet agents or proven by substantiated, uncontroverted testimony to have played the Commie game while occupying governmental positions during Democratic administrations.

ASLEEP AT SWITCH

I'm not trying to rake over old scores or sores, but you can't get away from the

conclusion that somebody was asleep at the switch in Washington between 1933 and 1952.

What makes the present furore all the more ludicrous, the Vice President's comments were in the form of campaign oratory as he swung through the West urging the election of Republican candidates.

Now Americans have traditionally supported tough, hard-hitting campaigns in which the rival candidates and parties took out after each other in the most forceful manner possible and brought up issues most calculated to embarrass the opposition.

The Democrats kept harping on the Hoover depression for almost a generation and never let the voters forget that the Teapot Dome scandal happened in the midst of a Republican administration.

The Republicans have a live issue in the Commies-in-Government question, and I can't blame the Democrats if they seek to belittle it as much as possible in the hope of making voters forget it ever happened.

But to act like they've been maligned because Dick Nixon gave them a hard time on the Communist issue is not in keeping with the American tradition of fighting campaigns as vigorously as possible and then letting bygones be bygones when the votes have been counted.

Here in New York, for instance, the Republicans got very rough with Averell Harriman about some ancient financial troubles which everybody had forgotten but the Republican research staff. It was poor politicking, because the material was old and not particularly significant.

But I'm sure Governor Harriman isn't sitting in Albany brooding about the remarks of Tom Dewey and IRVING IVES. And, so far as I can see, Harriman has never apologized for some rough campaign remarks about IRVING IVES.

HASN'T BEEN FORGIVEN

Vice President Nixon has taken the newest smears in stride, having been through similar experiences when he was exposing Alger Hiss. They tell me several Washington correspondents have never forgiven Dick for putting the finger on their old chum, Alger.

President Elsenhower spoke up stanchly for his associate at his weekly press conference, and National Chairman Len Hall also met the challenge squarely. Tom Dewey emerged from the White House with the statement that Elsenhower and Nixon would again be the Republican ticket in 1956. All over the country other Republican leaders echoed Tom Dewey's prediction.

The net result of the new assault on Vice President Nixon, from a political standpoint, was to solidify his position as Ike's running mate and closest political associate.

The leftwing attacks have developed into a boomerang, because they practically guarantee his renomination as Ike's partner 2 years hence.

DICK NIXON has chosen not to dignify his detractors with a reply, confident that the record speaks for itself. I think he is right in ingoring them.

So far they've only succeeded in making him a bigger light in the Republican firmament than ever before.

Health Insurance

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. HOSMER. Mr. Speaker, as in the past, this body will be dealing with the

problem of health insurance and reinsurance. While governmental and legislative machinery have been grinding inconclusively on the subject, professional men and citizens in my home community of Long Beach, Calif., have acted on their own initiative.

After 2 years of planning by a group of Long Beach physicians and their lay advisers, the Nation's first "full payment" health insurance plan allowing patients a choice of doctors and hospitals is now in effect for 600 employees of the Independent Press-Telegram Publishing Co. and their dependents. More than 1,300 persons, representing 95 percent of the newspaper's employees and their families are covered by the Long Beach plan which attracted national attention in the medical and health field when it was announced recently.

The plan's backers claim it is one of the most complete medical-surgicalhospital insurance programs ever devised, and describe it as "private medicine's answer to the critical problem of rising health care costs."

Underwritten by California Physicians Service—the familiar Blue Shield Plan—the new program guarantees beneficiaries that more than 1,000 participating physicians in the Long Beach area will accept the plan's fee schedule as full payment for all surgical and medical services in the contract.

Cost of the program for Independent, Press-Telegram employees is shared equally by management and participating employees. Beneficiaries of the plan may use any hospital or any physician although the "full payment" guaranty applies only to participating physicians. Both medical and osteopathic physicians and surgeons have cooperated in the plan.

The unique program was developed and is directed by a nine-man board of local physicians elected by 300 participating Long Beach doctors. Dr. Orville Cole heads the Board and serving with him are Drs. Gordon Bateman, Ben Parks, Robert Helms, Arthur Buell, Sam Woolington, Maurice Rosenbaum, William Burns and John Cottrell.

Dr. Cole believes the plan will serve as a pilot plan for other medical units across the country. He states that for the present it will be offered to employee groups of 25 or more, but that a similar program for, individuals may be offered later.

Technical problems in initiating the program were handled by Jake E. Hanstein of the Don Berry Insurance Agency.

As More Foreign Textiles Come In More American Jobs Go Out

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include

the following radio address I delivered over WMEX, Boston, Mass., on Saturday, January 15, 1955.

The address follows:

One of the first objectives of the administration at Washington is to convince Congress that the Trade Agreements Act should be extended. This sounds harmless. Most people agree that two-way trade is the best way to promote all-around economic progress and thus lessen international sions, assuming, of course, that we are dealing with civilized nations. The Communist nations fail to qualify, because they cannot be trusted. Neither trade nor aid nor anything else will satisfy them-only conquest.

In our efforts to help our allies and to strengthen the free world, we have embarked on a program called reciprocal trade, which the President wants to extend.

When that program, however, strikes at those few American industries that are suffering from a depression it becomes altogether too generous. When it makes dangerous concessions that worsen the position of the fishermen, watchmakers, and textile operatives, all basic to the economy of Massachusetts, we must oppose it. Too many of the people employed by these industries

we cannot, therefore, support a policy that would not only prevent them from getting their jobs back again, but might even increase unemployment in the affected in-

Take the textile industry, for example. That makes one of the three basic necessities of life, cloth for clothing. For generations New England was the undisputed home of In recent years a number that industry. of mills have closed down or have moved away. Employment has declined by 268,000 jobs. In New England alone, there has been a 48-percent drop in this type of employ-

ment since 1951.

The textile industry is not only one of the large employers of American labor, but employs a higher percentage of the workers in the areas where it is centered. Hundreds of mills are located in small towns, forming typical one-industry communities. In many cases they are the sole or principal source of income. Textiles provide 1 out of 6 manufacturing jobs in New England. In Massachusetts, 1 out of 7. In Rhode Island, 3 out of 10. Workers who are displaced by domestic or foreign competition either remain unemployed or are forced to take lower-paying jobs. For the middle-aged and older people the chances of getting other employment in or near their hometowns become remote. The Bureau of Business and Economic Research of Northeastern University recently completed a study of 1,705 displaced New England textile workers. Less than half were able to find other jobs, and of this number two-thirds were earning less pay. It was hoped that new and so-called growth industries would absorb them, but the study concludes that, and I quote, "workers dis-placed are not being absorbed in large num-"workers disbers by the industries which have been expanding in this area."

Wage and compensation differentials, varying from 20 to 30 percent, have enabled the Southern States to siphon much textile business out of New England, leaving us with the problem of chronic unemployment. This has meant hardship to workers, communi-

ties, and stockholders.

In view of this, it is difficult to understand why the administration should favor opening the door to an invasion by foreign textiles manufactured at low wages with which we could not possibly compete.

A comparison of our wages with those of other major textile-producing countries shows how completely the American industry would be ruined by these differentials.

Gross hourly earnings of the textile industry in France are 39.3 cents per hour. In

Great Britain, 45.4 cents. In Italy, 24 cents. In Japan, 11.9 cents.

The textile-wage level in the whole of the United States exceeds that of Japan by 976 percent.

In the Northern States, principally New England, the rate is 1,085 percent higher than that of Japan.

Low-priced foreign goods, even though imported only in small quantities at the start, would so cut sales and depress prices as to put many more mills out of business. This would deliver a crushing blow to an industry that has been struggling to survive a serious depression. It would, under these circumstances, contradict the very arguments put forth by the administration to justfly its so-called free-trade policy.

To encourage Japanese and other-nation imports would encourage production in lowwage areas. This would retard improvement in technology and productivity and would freeze low standards of living. A worldwide competitive struggle based on lower wages and lower standards of living in textile industries will pull down the strength of the United States and the free world.

One wonders if the unrealistic planners at Washington are considering the final sacrificial offering-that of opening our domestic market to the slave-labor products of the Communist empire under the illusion that this coexistence would bring peace. It could only bring disaster to the United States. As the New York Herald Tribune commented in part, on January 3, 1955, and I quote: "The depression in textiles in the early part of 1954 was one of the worst the industry has experienced. One of the big factors worrying the textile industry as the new year opens is what the Government intends to do. about reducing tariffs on textiles and wearing apparel. The Government aim of making tariff concessions, particularly on textile products, in order to aid the economy of Japan, has thrown a real scare into all sections of the textile industry.

"Textile leaders point out that competition from the Japanese textile industry is begin-ning to hurt, and the threat of sharply stepped-up competition through lower tariffs at a time when the industry is just beginning to emerge from a prolonged depression could have disastrous effects. Just prior to World War II, they point out, Japan was dominating the world textile market and was pushing not only the United States but

England onto the ropes.

Textile leaders admit the necessity stabilizing Japan's economy to prevent that country from falling under the influence of Soviet Russia, but they point out that the United States textile industry is not an 'expendable' industry. All sections of the in-dustry have filed strong protests with Washington against any tariff action which would harm the American textile industry."

Time and again New England Representatives in Congress have asked for some relief, some assistance for our hard-pressed textile

industry.

No one disputed the facts concerning empty mills or mills operating at a loss or chronic unemployment in textile commu-

Yet Washington remained strangely indifferent to our problems.

Now the administration proposes further sacrifices by our weakened textile industry instead of constructive help.

Some American industries, in order to secure foreign markets for their products, would sell out the domestic market in the United States for American textiles to foreign competitors.

How did this economic treason develop? Article I, section 8, of the Constitution of the United States delegated to the Congress the regulation of foreign trade through adjustment of the duties, imports, or excises, commonly called tariffs.

This constitutional power was held by Congress until June 12, 1934, when the President prevailed upon Congress to amend the Tariff Act, thereby surrendering that power to the executive branch of the Government,

"Emergency" was the reason given to justify this transfer without benefit of constitutional amendment.

As emergency after emergency was used to secure extensions of this power grant to the President, a dangerous precedent was established.

The American watch industry was almost smothered by concessions made to Swiss-Other defenseless American watchmakers. industries were placed on the auction block of reciprocal trade.

At the same time we were giving billions of dollars taken in taxes from American workers to modernize the production plants and labor skills of other nations that now demand the right to undersell American products in our own home market.

There is, of course, some justification for strengthening the economies of our allies, but there is also a limit to such giveaway

programs.

It was never intended by the American people that they should be required to give up their own jobs just to provide export markets for foreign goods in the United

Or to sell out an important segment of the New England economy, just to provide foreign markets for certain other favored American industries.

Or to enable big business, which has gone international, to maintain production plants abroad, taking advantage of low-cost foreign labor to produce goods which are then shipped back for sale in our domestic market, undercutting American manufacturers and American workers.

Unfair competition is no solution for our own problems or those of our allies.

How would the automobile industry react if we proposed the following trade swap?

That certain foreign nations be permitted to manufacture, export, and sell Americanmodel cars in the United States for \$2,000 and less in exchange for an American monopoly in the manufacture and sale of planes, radios, TV sets, and household appliances in those countries.

No; this is not the way. Neither is the contemplated sell-out of the American textile industry or any other in-

Reciprocal trade is justified only to the extent that it is constructive and not destructive.

New England must rally to oppose extension of the Trade Agreements Act, to save our textile industry from extinction.

The Constitution of the United States and

the textile communities of New England are not up for surrender.

We urge the executive department and the Congress to reject economic appeasement that betrays our own people.

The United States Junior Chamber of Commerce

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. BENTLEY. Mr. Speaker, on the occasion of the 35th anniversary of the United States Junior Chamber of Commerce, I would like to make the following remarks:

Tomorrow will mark the 35th anniversary of the founding of the United States Junior Chamber of Commerce. This organization, made up of young men aged 21 to 35, have made an outstanding contribution to the communities of the Nation. This organization's success in arousing the civic consciousness of our young men and the excellence of their leadership training program is widely recognized.

The citizens of Michigan are proud of the fact that we have 105 active jaycee chapters with a membership totaling over 5,000 members. Their record of accomplishment in many fields of civic endeavor is one to be proud of. We are especially proud of the fact that one of the most outstanding national presidents was Prof. Paul Bagwell, of Michigan State College. Knowing the record of our Michigan Jaycees, it is a pleasure for me to congratulate the national organization on the occasion of its 35th anniversary.

Some Reflections on Politics and Government

EXTENSION OF REMARKS

HON. PAGE BELCHER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BELCHER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following speech which was made by the Honorable Ross Rizley, Assistant Secretary of Agriculture, to the Tulsa Chamber of Commerce, November 18, 1954:

When it was announced that I would speak here, one of your members is reported to have said: "That fellow Rizley? What's he running for now?"

May I hasten to assure you that I do not propose either to point with pride or to view with alarm today. While I must confess to some personal sadness over certain events which occurred on a very recent November 2, I am not here to advance any particular accepted meaning of the word.

It has been my privilege over a period of many years to participate in politics and government—in my county in the senate of my native State of Oklahoma, in Congress, and in the executive branch in Washington. It has been a rewarding experience—rewarding in friendships and in the sense of satisfaction which comes from being a part of the greatest government ever devised by man anywhere.

Through these years I have known the elation which comes with the first election to public office and the bitter disappointment which goes with political defeat. Looking back, I have a strong feeling that every politician needs to be taken to the woodshed by the voters now and then for his own good.

"Spare the rod and spoil the politician," might be offered as a revised version of the old adage.

On the whole, there are certainly greater rewards than disappointments in politics and government—that is, if you leave out the matter of financial reward. Our public officials, for the most part, are woefully underpaid by comparison with people holding jobs of similar responsibility in private business. Moreover, I see little real hope that

the situation will be corrected in the immediate future. The stumbling block is the fact that the people who must vote government pay raises—members of State legislatures and of Congress—are also elective officials. Any legislator who votes to increase his own salary is likely to find his opponent making a political issue of it at the next election—but willing enough to accept the higher salary if elected.

When I first went to Congress, the salary was \$10,000 a year. It is now \$12,500, with an additional tax-free expense account of \$2,500. When you consider, however, that the buying power of the dollar has been cut in two while taxes have skyrocketed it becomes apparent that a Member of Congress today has far less real take-home pay than he did even 12 or 15 years ago.

On the present congressional pay, it is impossible for a Senator or a Representative to maintain residences in Washington and in his home State, to support his family and to educate his children. This largely limits service in Congress to those who have some degree of financial independence.

Some of our more prominent legislators collect sizable fees as paid speakers. But even this avenue is closed to the freshman Congressman whose name is little-known outside his own district.

Other legislators reach the break-even point through farming or ranching, through family-operated businesses or through law partnerships. Still others—and the number is steadily growing—are people who turn to politics as a sort of hobby after they have reached financial independence.

I recognize there is a widespread belief that many Congressmen add to their income from other sources such as graft and bribery. It just isn't true. I could count on the fingers of one hand the crooks who managed to penetrate Congress during the years I served there. And I might add that they were brought to justice.

Congress jealously guards its own integrity. I know that the men and women there today, regardless of political party, are as honest, as dedicated to our form of Government, as any representative group of Americans. Certainly they are not without their individual weaknesses and faults. Neither are we who elected them. And if we do not always like the reflection we see in the mirror that is Congress, let us remember it is our own reflection.

But I was talking of higher pay standards for Government servants and now I find myself moralizing. Some years ago I was discussing a pending pay-raise bill with one of my colleagues in the House.

"I could certainly use the money," he told me. "But I don't like the argument that the higher pay would attract the services of better qualified men."

I know personally of a number of cases where able, conscientious men, who genuinely liked government service, have resigned to accept better paying pobs in private industry. They had to choose between government and the welfare of their own families.

It is becoming increasingly difficult to recruit qualified people for top Government jobs. Here it is not only a question of pay. Many men would make the necessary financial sacrifice but they rebel at the prospect of abuse, criticism, and vilification which often go hand-in-hand with some of our most important Government positions.

There is another important aspect of this financial question as it relates to elective offices. That is the high cost staging an effective campaign.

The advent of radio and then television completely revolutionized American political campaign tactics. Gone is the day when a politician can limit his activities to shaking a few hands, kissing the traditional quota of bables and passing out a pocketful of personal cards. I look back on those days with more than a little nostalgia, and a degree of sadness, too, when I reflect upon the fact that some of those beautiful Oklahoma bables whom I kissed must have grown up to be Democrats.

Yes, we are in a new era of political campaigning. The successful candidate of today must use every available means of reaching the public. He must use all of the old, conventional approaches plus television, radio, highway billboards, and even skywriting. To add a dash of the superspectacular he may even descend upon his audiences via helicopter. Any day now I look for some inventive campaigner to come drifting down from on high in a red, white, and blue parachute to the strains of the Star-Spangled Banner. I may even vote for him.

Now all of this takes money. A tremendous amount of money. It means that a man who would be governor of one of our great States or a United States Senator must be prepared to spend tens of thousands of dollars, or have friends who are prepared to spend it for him. It means too that the candidate and his friends must be prepared to wink at—yes, even make mockery of—the statutory limitations upon campaign expenditures.

Now here is the curious contradiction in this situation. The new media for reaching the people have made it possible for a candidate to place the issues before the public as never before. Voters are in a position today to know more about the candidate and his views than at any time in the history of political campaigns. That is all to the good. An informed electorate is the greatest bulwark of our Republic. At the same time, the very cost of bringing his message to the voters is enough to prevent most of our citizens' from becoming candidates for office in statewide and national elections.

Somewhere in this broad land of ours today there may be a boy who has the making of another Abe Lincoln. Unless he has had the foresight to pick a father who struck it rich—as Lincoln certainly didn't—this youth might be well advised to choose a career other than politics.

I do not pretend to have the solution to this problem. Yet, I believe it is one which deserves more careful thought and study than it is getting. It goes to the very heart of our system of representative government. Certainly, I would not restrict the complete presentation of campaign issues which is made possible by our effective, if costly, mass media. At the same time, I am deeply disturbed at this other trend which, if unchecked, will bar so many able citizens from becoming candidates for public office.

We should modernize our obsolete limitations upon campaign expenditures, fixing realistic ceilings, and then vigorously enforcing them. Today, our Federal election laws permit a candidate for the United States Senate to spend a maximum of \$25,000 on his campaign in the more populous States. There is no limit whatever upon the amount that his friends may spend in his behalf through other channels. In Oklahoma, we cling to the legal fiction that a senatorial candidate may speed no more than \$3,000 in a primary contest.

In actual practice, we know that a quarter of a million dollars, and even more, is frequently spent in behalf of a single candidate in contests for governor or United States Senator in many States. Here, in Oklahoma, no candidate for either of these offices could hope to ride through a hotly contested primary and then a general election unless he and his friends were prepared to spend in the neighborhood of \$200,000. On that basis, politics is hardly a poor man's game.

It has been suggested that private-campaign contributions be abolished, with the Government allocating certain amounts to the political parties for campaign expenses.

This raises new questions. Would such a program prevent the formation of new political parties in the future or would the Government handouts encourage the organization of numerous splinter parties? Would it encourage countless candidates to file for office with the sole view of collecting a campaign expense check? How could it be effectively applied to primary elections where we now often have a dozen or more candidates for a single endorsement?

Certainly, the objections to such a system are formidable. The defects in the present system are glaring, too. Here is a field in which the chamber of commerce and other organizations could be of tremendous service; studying, discussing, and working toward improvements in our election laws and

Now I would make it very clear that I have no prejudice against wealthy men in political office. Both parties have a sizable number of them. My own observation is that they vote as conscientiously on public issues as their less affluent colleagues. Yet, I confess some amusement when I hear one of them railing against the forces of entrenched wealth. And among the politicians with inherited fortunes I have yet to see one who looks really comfortable in those preelection news photos shaking hands with

a workingman or pitching hay.
Since my boyhood days on the Panhandle of Oklahoma this world of ours has spun around quite a few times. Empires have The world balance of power has toppled. shifted enormously. We have had more wars than I like to think about and far less peace that the people of all lands yearn for. The Nahave seen depressions and booms. tion has gone through a technological revolution on the farms and in the factories.

Since 1900 our population in this country has approximately doubled. In just the 15 years since before World War II started we have increased our agricultural productive capacity in America by some 45 percent. On the same acres we had 15 years ago we have a quarter of a million fewer farmworkers. In this same 15 years we have increased our steel production capacity by 40 percent. In this same 15 years we have doubled our electric power capacity, and in less than those 15 years we have discovered this whole new uncharted area of nuclear energy.

Yes; we have enjoyed remarkable growth as a nation. And perhaps the most amazing aspect of that growth has been in our own

Federal Government.

Back in 1899 there were 208,000 employees of the Federal Government, and it cost just \$605 million to run the whole show. Even as recently as 1931 there were only 617,000 Federal workers, and the annual cost of Government was \$3.6 billion. By 1953 Government employment had soared to nearly 2.5 million, and Federal cash outlays for the

year totaled almost \$75 billion.

Some of our individual Government agencies have grown from comparatively small establishments to vast bureaucracies. In 1899 the Department of Agriculture had slightly less than 3,000 employees. It spent just \$3.5 million. By 1931 this agency had more than 28,000 employees and spent \$311 million. In 1952 there were more than 78,000 employees of the Department of Agriculture. Expenditures for the year exceeded \$3.2 billion.

Further evidence of the growth and hugeness of the Department of Agriculture are inventories of merchandise on hand, including approximately 1 billion bushels of wheat, million extra bales of cotton, one-half billion pounds of cheese, approximately the same amount of butter, also large quanti-ties of tung oil, linseed oil, cottonseed oil, and innumerable other items, including onequarter million gallons of turpentine. rent for just storing our inventories cost the taxpayers \$720,000 every 24 hours. And this amount is just incidental to maintaining and operating a business that employs 67,000 people plus and the tens of millions for the many and various programs of the Department

The Department of the Interior, which had 20,000 employees and spent \$65 million in 1931, had nearly 59,000 employees and spent \$590 million in 1952.

These figures dramatically point up the gigantic growth of our Government and the tremendous centralization of power in Washington. It seems that almost everybody talks about big Government, but, as has been said about the weather, nobody does anything about it.

I would not venture a guess on how big our Government might eventually become. Of one thing I am certain, however. It will never be any bigger than the people them-selves want it to be.

It is easy enough to blame the executive or the legislative branch of the Government for the creation of new agencies and the enlargement of others. If you want to be strictly partisan about it, you can just point to the other political party as the culprit. To be perfectly fair about the matter, while it is true the greatest expansion in Government came about during the last 20 years, my own political party is not without some responsibility. Only this year we created a new Department of Health, Education, and Welfare. I frankly admit that some of us have demonstrated the ability to spend a Federal dollar just about as fast as our predecessors.

Nevertheless, the real responsibility rests primarily with the people themselves. Individually and collectively citizens are constantly demanding more and more services of government-more social security, more public works, more and better highways, more educational aid, and more and bigger subsidies. Yet we are inconsistent enough to call for reduced taxes and expenditures at the same time.

I well remember a letter one of my colleagues in the House received some years ago. It ran something like this: "Dear John: The people of this district are beginning to wonder when you are going to do something about cutting taxes and reducing govern-ment expenditures. There are also plenty of rumblings here about getting us a new Congressman if you don't get some action pretty quick on that appropriation for the Goose Creek Dam."

If Congressmen sometimes seem to age a bit prematurely, it could well be from at-tempting to please constituents such as this one.

Another Congressman friend of mine has managed to retain his youthful appearance during nearly 20 years in the House and at the same time has built up quite a reputation as an advocate of strict government economy. He has consistently opposed lavish Federal spending-in the other fellow's district.

Any time the people of this Nation decide they want less government in their lives, they can also have lower taxes and a balanced budget. Until that day they are unlikely to have either, regardless of which political party is in power.

In recent weeks we have been deluged in print and over the air waves with predictions as to just what voters would do on election The pundits, the pollsters, and the political prognosticators had a field day-as they do every 2 years. As usual, many of them missed the mark rather widely. I wonder how any pollister or political pulse-taker could be bold enough to forecast the results in many contests which ended in virtual dead heats.

I hadn't been in Washington very long before I learned that an expert is just any ordinary country boy who happens to be more than 300 miles from home. Another thing that used to confuse me as a freshman Congressman were these informed sources authoritative sources who were constantly being quoted on national affairsalways in a most pontifical tone.

I can reveal to you that an informed source is very often just an average individual who likes to read his guesses in print. An authoritative source is a little different. He owns a pair of spats which lend a certain

dignity to his predictions.

All in all, I have enjoyed my years in government and politics. If I have reminisced too much, it is because I look back upon that experience with so much real pleasure. As I indicated at the beginning of my remarks. I have no burning message to leave with you. It is a privilege to have this opportunity to visit here in Tulsa again. I thank all of you for that opportunty.

Higher Postal Rates and Pav

EXTENSION OF REMARKS

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, last year President Eisenhower proposed, and Postmaster General Arthur Summerfield stanchly supported, a combined postal pay raise and postal rate increase measure. This represented a responsible, reasonable program. Unfortunately, Congress did not heed the President's advice and passed a measure unacceptable to him. Knowing the President to be a responsible and honorable man who would not approve the bill submitted to him, a few of us warned the House of the inadequacy and irresponsibility of the pending measure. Twenty-nine of us voted to sustain the President's sound position in opposition to the bill which passed the House. For this we were subjected to political opposition by the leaders of some employee groups, who sought to punish us by defeating us in the 1954 campaign.

These leaders were wrong, and the President was right in 1954. The President has substantially reiterated his proposals in 1955. This time I trust that Congress will, after careful consideration, approve the major portions of the President's pay-raise and postal-rate proposals.

As the editors of the Milwaukee Journal conclude in the editorial which I insert herewith, the President is definitely on the right track:

HIGHER POSTAL RATES AND PAY

Last August the election-bound Congress voted a 5-percent pay raise to 1,500,000 postal workers and other Federal employees. Wisely, President Eisenhower vetoed the bill, because Congress had failed to vote higher postal rates to cover the higher postal pay. The President, however, promised to submit to the new Congress an equitable salary measure tied to higher postal rates.

In his Post Office Department message Tuesday, Mr. Eisenhower made good on his promise. But he went far beyond just that. He recommended a wholly new policy under which Congress would cede to a special commission the power to adjust postal rates so that the deficit ridden Post Office Department "henceforth * * * shall be self-sup-

porting."

You might say Congress asked for it. Not just the last Congress, but all Congresses that have failed to provide for adequate postal revenues.

With an accusing finger obviously pointed at the legislative branch, the President reminded Congress that in the 9 prosperous years since World War II post-office deficits totaled more than \$4 billion, exceeding the combined deficits of the 156 years up to 1945.

Is there, after all, any logical reason why businesses and private individuals who use the mail should not pay their just share of the cost? As the President says, appropriating tax funds to meet whopping deficits (even though the operating loss has been cut from a \$727 million peak in 1952 to \$399 million in 1954) is "neither equitable nor reasonable; it is neither good business nor good Government." And if Congress falls to adjust rates shouldn't a commission be directed to do the job under broad authorization from Congress? Congress could well devote major attention to seeing that the postal service is efficiently and economically operated.

Pending creation of a rate commission, the President wants higher rates for first-class (letter) mail, second class (magazines and newspapers), and third class (mostly advertising matter). As the Journal has consistently argued, there is no valid reason to continue fat subsidies to newspaper and magazine publishers and businesses that use the mails to promote their products.

The pay increases for postal workers will total \$129 million a year—roughly a 5-percent increase. But employees will not get an across the board raise such as Congress voted. A new salary schedule will be introduced regrouping employees so that salaries will more nearly correspond with responsibilities.

Last year Postmaster General Summerfield proposed such a salary schedule and ran into bitter opposition from the powerful postal workers' unions. Such opposition will probably develop anew on the salary question, and Congress may be cool toward relinquishing its rate-setting authority.

Still, the President is definitely on the

right track.

Nixon's Campaign Bears Fruit

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the Record, I wish to insert the following editorial entitled "Nixon's Campaign Bears Fruit," by Fulton Lewis, which appeared in the Monroe (La.) News-Star on January 12, 1955:

NIXON'S CAMPAIGN BEARS FRUIT (By Fulton Lewis)

Washington.—The leftwing's continued carping complaints against Vice President Richard M. Nixon are proof positive, if any further proof was needed, of the effectiveness of his campaigning last fall.

ness of his campaigning last fall.

NIXON was the one top Republican who kept alive in 1954 the outstanding issue which did the most to defeat the Democrats in 1952—that party's softness toward com-

munism. Politicos agree generally that Nixon did more to hold GOP losses in 1954 to a minimum than any other one man.

For this, the lefties would like to cut the young Vice President down to size, hoping they can eliminate or minimize his influence in next year's presidential campaign. Without him, they feel there would be much more chance of getting through the 1956 campaign without the same issue being raised again—an estimate in which they probably are right.

One of the silliest anti-Nixon blurbs yet

One of the silliest anti-Nixon blurbs yet offered was served up by the pinko New Republic. Discussing the Californian's forthcoming good-will tour of Latin America, it

"They are sending DICKEY NIXON down to Latin America on a good-will tour, but that isn't the real story at all. What the administration is doing is to get the all-American boy out of town to improve relations with the Democrats. It is a good-will tour all right, in that sense, but as much as anything to improve the White House relations with the Congress.

"Speaker Sam Raysurn threatens to refuse to sit down at the same table with Nixon who raised the Communist-smear issue in the fall election. It's going to be hard for the administration to know what to do with the Vice President in the next 2 years. A good deal of foreign travel is indicated."

I may have read more inane poppycock some time during years gone by, but offhand I don't recall when.

Despite the efforts of liberal pundits to make it appear that President Eisenhower's opinion and respect for Nixon are on the wane, the best available information is to the contrary. White House intimates report that the Vice President's advice still carries as much weight as that of any other individual, and that the President still regards Nixon as one of his most valuable effective aides.

It was for exactly that last attribute that Nixon was chosen for the Latin American good will tour, plus the fact that the United States still is reaping the benefits of the effective international public relations job he did on his 1953 tour of Asia.

I found on my own trip to Japan and Formosa just last month, for example, that people in that part of the world still are talking of the homey charm, the tact, and the sympathetic attitude of the Nixons, Dick and the enchanting Pat, more than a year later.

As for the Vice President's campaign tactics, Mr. Eisenhower himself has paid public tribute to the effective role he played in preventing GOP losses last November from being greater than they were

greater than they were.

All Republican Party leaders in private conversations say that without Nixon's indefatigable stumping, as well as his success in finally convincing the President that he himself had to campaign actively, the Democratic victory might well have been a complete rout rather than the narrow squeak that it was,

When the lefties complain about the Nixonian tactics, what they are saying is that they think the Truman-Acheson policies toward Communists and communism were proper and effective. They dislike having the voters reminded that those policies allowed communism to engulf a half billion persons, as well as permitting scores of Red-tainted individuals not only to stay in Government jobs but even climb high up the Federal employment promotion ladder to positions of top responsibility.

If Rayburn and other Democratic leaders dislike having the "soft to communism" tag applied to their party, their most effective redress should be to clean out its leftwing leadership which fostered the policies meriting the tag. The ADA and the CIO still pretty much dictate its policy nationally and

in some areas, like New York and Detroit, locally.

The anti-Nixon campaign is just getting well organized. Rest assured that it will get worse before it gets better.

Our Strongest Weapon

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. WIDNALL. Mr. Speaker, on January 13, 1955, Miss Gertrude Carraway, president general of the National Society, Daughters of the American Revolution, delivered a fine address to the 29th Women's Patriotic Conference on National Defense at the Statler Hotel in Washington.

The talk contains so much of the fundamentals of patriotic dedication and love for America that it can be read with real benefit by everyone. Earnest and sincere thought is provoked by the content of her message.

Under leave to extend my remarks, her address follows:

OUR STRONGEST WEAPON

(By Miss Gertrude S. Carraway, president general, National Society, Daughters of the American Revolution)

It is an honor to address this patriotic conference. Years ago I had the privilege of attending some of your earliest meetings, when you helped blaze the trail against pacifism and communism. Then like voices crying in the wilderness, those warnings have been vindicated.

Now more than ever we need patriotism and patriotic gatherings. As has been said, "The only thing for evil to win is for the good to do nothing."

This is an era of danger, tension, confusion. There are serious threats to our national security: termites from within, boring under our structure of government; and enemies from without, seeking its conquest.

Actually we are at war: a conflict of ideologies, between a doctrine which eliminates God and individualism and our moral philosophy which embraces religion and the dignity of man.

Nuclear weapons are being made which could destroy cities and residents, civilization itself. Planes can circle the globe more than twice as fast as sound. Guided missiles may be unleashed against distant pinpoint targets.

These are important for our defense. We must be adequately prepared militarily for any emergency. It is the best insurance for peace. Our foes understand the language of force.

But material prowess is not enough to win either a hot war or a cold war of economic, industrial, and political rivalry. Our strongest weapon is not the gun, plane, or bomb; it is a patriotic spirit in the minds and hearts of our people, based on zeal to preserve the American way of life.

This dynamic morale has consistently proved its value: in exploring and settling uncharted coasts, plains, and mountains; whining the Revolution and other wars; building thriving businesses; developing miracle medicines and utilities. It can remain our bulwark, if we meet the perils of this period with similar bravery, ingenuity, and honor.

America has long held significant meaning as an idea and ideal, a land of opportunity, with a chance for all to get ahead, become what we make of ourselves. Immigrants have flocked to our shores to share unsurpassed benefits. Our priceless heritage has captured the imagination of many dominated peoples. It is still the hope of the world.

However, besides too many citizens who are soft on communism we have here today too many who are soft on Americanism. Patriotism has been wrongly criticized as narrow minded and old fashioned. Blinded or intrigued by erroneous propaganda, illusion or delusion for the millenium, unrealistic Utopians would sell our birthright for a mess of pottage.

Stronger advocacy is needed for our individual enterprise, patriotic endeavor, religious trust. This is the safe and sane course which has made our Nation so great, outranking others, with the highest standards of living in the world, and, despite mistakes and failings, the best government on earth, the freest and finest in all history.

Americanism is creed, philosophy, a way of life. It is faith, belief that man, with God's help, is capable of self-rule. We must accentuate it in every way possible, become as vigorous and-enthusiastic in fostering and publicizing it as our enemies are in operating against it.

Based on eternal principles of freedom, justice, and mercy, it is timeless—just as essential in this age as in the past. On its preservation and extension depends the future of America.

If it is perpetuated, our own people must understand it better. How can they be active for it if they are not aware of its advantages? Many schools fall to teach American history, the Declaration of Independence, and the Constitution. Fortunately, improvement is being noticed along this line. Each of us can assist.

Our form of government is not sufficiently studied. It is unique in that it is not a democracy but a representative Republic, upheld by cooperation, not coercion; the considered the governed, the state being considered the servant, not the master, of its constituents, with rule by law rather than men, checks and balances being so contrived that none of the three separate branches tan assume dictatorial control.

If we were all more familiar with its functions it could be more efficient. There would not be so many attempts to pass unconstitutional legislation. Nor would there be so much readiness to exchange it for untried, unwise schemes.

Numerous problems are still unsolved. No government, no human is perfect. But it is the best yet devised. As we have surmounted previous difficulties, so we can overcome future challenges with the same spirit.

When Washington faced apparently hopeless defeat at Valley Forge, he knelt in prayer. A year after the U. S. S. Arizona was sunk at Pearl Harbor, the United States flag was raised proudly over its hull.

In these days when so many persons want something for nothing, the self-reliance and self-sacrifice of older patriarchs are necessary to sustain self-government.

Statesmen of the hardy caliber who built this Nation should be emulated, abiding by principles instead of expedients, laboring for the next generation rather than the next election, for the general welfare, the greatest good to the greatest number and the least harm to the least number.

Most of all, we need more loyal citizens, girded with moral armament, who put the public weal above private interests. The strength of a republic depends on its constituents. Indeed, a republic is its constituents.

During the past quarter of a century our standard of living has risen 40 percent, a splendid gain; but our patriotic and religious

advance has not kept pace. Just as we test jets and bombs, so we should pay attention to our strongest weapon of defense: practicing, teaching, and preaching better Americanism. We keep our guns clean and powder dry, available for any call; likewise, we should cherish the spirit of America, in order to pass on to posterity, bright and untarnished, "freedom's holy light."

It is imperative to be good Americans, not content to rest upon our laurels but eager to interpret them as stepping stones to further progress; to do what we can to promote better citizenship, prevent crime and delinquency; and to show, by example and precept, that, compared with foreign isms, Americanism has sounder theory and stronger appeal.

If our people are well grounded in its fundamentals, if we know how our land has become powerful, if we are grateful for our blessings and sincere in love of community and service to country, no treason or disloyalty can find soil fertile enough to take root. There would be no cause to fear the Communist menace, if we build up resistance by becoming imbued with Americanism.

In addition to being thus our strongest weapon of defense, this crusading spirit can be our cardinal weapon of offense.

Too long has the United States been on the defensive. We should now assume the offensive in the cold war. An ideology may be defected by a better ideology.

be defeated by a better ideology.

Our systems are far superior to those of the Reds. They have come through with flying colors in our own land, relying on ballots, not bullets; evolution, not revolution. Our case is much more valid, but it is misunderstood abroad. Not yet has it been fully presented to the world. The pen can be mightier than the sword. We must prove in word and deed the preeminence of free enterprise. Godless communism can be overcome by a psychological counteroffensive with our religious and political concepts.

It is late, but not too late. The situation is critical, but not hopeless.

Washington lost battles, but never lacked determination and vision, finally winning the war—and the peace. From him we can derive inspiration to aid in securing for mankind all the blessings of liberty.

Such purpose for positive action, with providential care, can bring the will to do, the courage to dare, the discipline to persevere, the stamina and integrity to triumph.

vere, the stamina and integrity to triumph.

Our leaders have concentrated primarily
on financial gifts and sharing our technological know-how with other countries. We can
not buy international friendships. Our Nation may be feared for its strength and
courted for its money, but its material patronage is not always judiciously used or
appreciated.

Meanwhile, we have lost ideologically. Half the world has fallen to communism. It has been spread forcefully and forcibly.

Only 2 percent of the Poles are said to be Communists; only 5 percent of the Chinese. Yet, their historic areas have been pulled behind the Iron Curtain, whose fanatical conspirators have the avowed ambition to conquer the whole world, including our own United States. It is high time to halt this disastrous march.

Ruin looms if we overtax and overborrow. We can help others who are worthy to help themselves, but not spread ourselves so thin over so much outside territory that our economy will be strained, especially when so many things are needed at home. It is feasible to carry out a policy of good neighbor or partner without being lavish or becoming submerged. Our old slogan should be readopted: "Millions for defense, but not one cent for tribute."

America must be kept strong and solvent. Who would answer our plea, if our national safety was endangered? Even allies cannot always be counted on in crises.

What other peoples would probably prefer to monetary bounties for their governments, some of which are communistic or socialistic, is more hope for personal liberty, such as is enjoyed in America. If we want to win friends and influence people, we should stress that we have freedoms and they can have them, too, if they toil earnestly for them.

In our favor is one paramount point. More even than freedom from went, there is a universal hunger for freedom of speech and conscience. This innate craving, like national pride, cannot be forever repressed or suppressed by oppression.

For centuries civilization has moved forward through this spark in personulities. Those really wanting to be free have usually won, not only because in time they rise to oppose tyranny but also because as individuals they can be more successful than automatons or slaves executing despotic

Human facultles form more potential might than minerals, oils, and atoms. More effective than any rifie is the man behind it. If he is infused with a firm conviction in a righteous cause, he is more invincible than a mouthpiece transmitting the commands of a dictator. This is advantageous for our side, even though our opponents outnumber us 8 to 3, because of the inherent, indomitable desire of men to be free.

Washington predicted that a prudent use of liberty under the Constitution might induce every nation which is yet a stranger to it to adopt it. So long as glows our flame of freedom under God, it will shine as a magnetic beacon to all liberty-loving peoples everywhere. It can even pierce an Iron Curtain.

This is not to be construed as a prediction for the early overthrow of Soviet authority. They are too overwhelmingly entrenched and fortified, with methods which cannot be easily subdued. The 3 percent who are Communists in Russia have subjugated vast majorities to weakness and inertia.

But men do aspire to be free agents. This yearning accounts for such valor as that of the Pollsh pilot who took risks and flew westward to recover the freedom lost under the iron heel.

An elderly immigrant from a satellite country wrote as a main reason she was thankful to be in America: "I can go to bed every night without being afraid."

An American journalist asked a Hungarian newspaperman if he could write what he pleased. "Yes, of course," was the reply, "but only once."

Soviets expect to capitalize on our divergent opinions. That is our prerogative, but they consider them our main weakness. Instead of so much destructive criticism, bickering, debunking, defeatism, we should utilize constructive credos, affirmative approaches in presenting a united and resolute national front.

Lenin advised his followers to "postpone operations until the moral disintegration of the enemy renders the delivery of the mortal blow easy." Decay from within has caused the downfall of other nations. We cannot let the Communists achieve their aims through our decay or disunity.

Instead of promising voters so much, we should emphasize their duties, the fact that each right entails an obligation, giving as well as getting, urging incentive, hard work, and thrift instead of doles, handouts, subsidies. The Biblical injunction warns: "To whom much is given, of him much is also required."

We must educate for good citizenship, teaching a sense of responsibility, to do what we can for ourselves, instead of the current tendency to let someone else do it or have the Government do it. Abundance for all can no more be guaranteed than good health. But, liberty is more precious than security, equality of opportunity than regimentation.

Our constitutional government will not be lost immediately. There is reason to fear that its freedoms may be chipped away little by little, so that the loss may pass almost unnoticed at the time.

The main danger is having them undermined through infiltration by Trojan horses, fifth columnists, fellow travelers, or impractical sympathizers. As our predecessors had to be vigilant, so do we to insure against spies, saboteurs, socialistic or fascist trends and treaty powers which might circumvent the assets making our Nation so outstanding.

That is why Congress should ratify an amendment to our Constitution to prevent treaties or executive agreements with unconstitutional provisions from becoming the supreme law. This would safeguard the rights of Americans and our duly elected representatives to pass our own domestic legislation, preserving the Constitution as envisioned by its framers.

Nor should our country join any world government or partial world government. Proposals for revisions of the United Nations Charter to turn that organization into a limited world government should be opposed. We must not lose our hard-earned national sovereignty, barter away our bequest of independence, by becoming a vassal province in a world or regional state.

Likewise the NATO Status of Forces Treaty should somehow be revised so that our Stars and Stripes may resume its timehonored duty of defending those who defend it on foreign soil.

Benjamin Franklin asserted: "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety."

Congressional investigations should be continued. They do not threaten our libertles; they try to protect them. We investigate theft and murder, why not espionage and treason? The FBI, with whose superb work we should cooperate, cannot always expose subversion as can congressional committees.

Fifth-amendment invokers who misuse the freedoms under our Constitution should support the Constitution in its entirety. Something is awry when a witness at one hearing can hide behind the cloak of this amendment 244 times; another, 250 times. Those accorded the privilege of this safety value should merit it.

True Americans should at all times be willing to take loyalty oaths. We often recite our religious creed. Frequently we express our love for friends. Why not for our native land?

James Russell Lowell was asked, "How long do you think the American Republic will endure?" He replied, "So long as the ideas of its Founding Fathers continue to be dominant."

Woodrow Wilson declared, "Our whole duty for the present, at any rate, is summed up in the motto, 'America First.'"

This is not isolationism. Some may mistakenly call it that. It is realistic and practical, enlightened self-interest. It is right to love our country best, to put its welfare foremost. It is the only one to which we pledge allegiance, the only one that protects, trains, benefits us. In turn, we owe it our protection, pride, and devotion.

America is great. It is our mission to keep it so.

Our way of life excels all others. Let us maintain it, strongly and surely, with confidence in ourselves, trust in divine guidance.

This spirit forms our most powerful weapon. Here we must stimulate for it more implicit faith. Elsewhere we should arouse for it more ardent fervor.

Americans are famed as salesmen. Let us undertake to sell, at home and abroad, our most important product. It is humanity's best hope.

The St. Lawrence Seaway

EXTENSION OF REMARKS

HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following text of a speech delivered by David I Mackie, chairman, Eastern Railroad Presidents Conference, before a joint meeting of the Lexington Group and the American Historical Association, Commodore Hotel, New York City, December 28, 1954:

The assigned description of the facility we are considering is the St. Lawrence seaway. I will adhere to this phrasing, although it is not accurate. As a description of the 27-foot channel which has been authorized, "seaway" is a euphemism.

For more than half a century the idea of a seaway has been opposed and supported with vigor by powerful economic and political interests. Many of their arguments—both pro and con—have been irrelevant. Some have been misleading.

I believe that while the seaway is obviously advantageous to Canada (especially the port of Montreal), its value to the United States is, to say the least, doubtful.

A 27-foot waterway has been sold to the American people on the false bases that (1) our Great Lakes cities will become ports for oceangoing ships in world trade; (2) the waterway is necessary to move Labrador iron ore to inland steel mills; (3) the waterway is essential to national defense.

The St. Lawrence already is, or contains, a navigible waterway. From the ocean to Quebec a 35-foot channel prevails—it is 32½ feet deep from Quebec to Montreal. West of Montreal to Ogdensburg, N. Y., there is a series of locks and canals with a limiting depth of 14 feet. The available depth of Great Lakes connecting channels is 21 feet upbound and 25 feet downbound. Great Lakes harbors vary up to 26 feet.

Authorized plans for the seaway we are discussing call for a 27-foot channel between Montreal and Lake Erie. They call for nothing more.

Because of the need for clearance under a vessel's keel, ships using a channel must draw less than the channel's depth. Three feet of clearance is generally agreed upon. Allowing 3 feet for clearance, a 27-foot channel can accommodate vessels drawing no more than 24 feet.

A 27-foot depth for the St. Lawrence was first recommended in 1926 by a majority of the Canadian section of the Joint Board of Engineers. Even in 1929 the 27-foot depth was found inadequate for oceangoing vessels. The Brookings Institution, in a 672-page study of the project, concluded that "85 percent of the faster cargo vessels now entering American ports" and "81 percent of the cargo vessels and all the tankers engaged in the intercoastal trade" would not be able to use the seaway.

Brookings said: "A channel depth of 33 feet is a minimum requirement if the St. Lawrence Waterway is to serve the purposes for which it is advocated." They also found (in 1929) that "the trend in ocean shipping is toward larger and deeper draft vessels."

The Brookings prophecy proved accurate. According to information supplied by the United States Department of Commerce, as of the first of this year 90.8 percent of all American oceangoing ships had a draft greater than 24 feet.

Not a single seagoing ship now under construction in American shipyards has a draft of less than 24 feet. The two ships now being built in England for the specific purpose of moving Labrador iron ore have drafts of over 30 feet.

There has been much controversy over the question of what percentage of America's oceangoing fleet could transit the waterway under economic (although not necessarily full) load. These arguments are irrelevant.

The same United States Army engineers who have consistently advocated a 27-foot depth for the seaway, this year sought and obtained congressional approval to deepen the channel of the Hudson River from New York City to Albany from 27 to 32 feet, on the ground that such deepening is necessary to "eliminate a bottleneck that long has hampered oceangoing ships." This year Congress also authorized deepening the Delaware River from Philadelphia to Newbold Island to 42 feet, and from Newbold to Trenton to 32 feet.

The United States Army engineers also recommended increasing the depth of the Houston Ship Canal to 36 feet, saying that the present channels are "not adequate to accommodate, fully and safely, the present merchant fleet."

At Mobile, the same Army engineers recommended deepening bay and river channels from 32 to 40 feet in order to make Mobile a "first-class port."

Wherever any project other than the seaway is involved, the Army engineers clearly recognize the need for channels 32 to 40 feet deep.

All of our important seacoast and gulf harbors have depths of 30 feet or more, with most of them in excess of 35 feet.

The seaway was sold to the American public as a foreign trade route, opening up all the ports on the Great Lakes to foreign commerce. It will be, actually, not much more than an extension of the present Great Lakes waterways, of use primarily to Great Lakes vessels which were not designed for sea duty. Now let's look at the iron ore argument.

On February 22, 1951, Oscar L. Chapman, then Secretary of the Interior, testifying in support of the St. Lawrence seaway, told the House Committee on Public Works: "Unless we build a deep waterway from Montreal into the Great Lakes, I do not see how we will be able to meet our national iron-ore requirements 5 years from now." The last full year before Secretary Chapman issued his warning, Lake Superior ore production was 79.9 million tons. Three years later—three-fifths of the way toward the Secretary's deadline—production was up to 96.5 million tons.

Seaway proponents have tried to prove that open-pit, high-grade Mesabi ore is rapidly running out by the device of dividing the known estimate of ore reserves by the annual consumption of ore. But known estimate is not and does not purport to be a true showing of reserves. It is nothing more than a Minnesota tax rolls figure, revised yearly as additional ore is proved. Once a mining company drills and proves ore, it is put on the Minnesota tax rolls and the company begins to pay taxes on it. Naturally the companies have been reluctant to prove up more ore than they need in the immediate future. From 1946 through 1953, 491 million tons of Mesabl ore were shipped. During the same 8 years, the known estimate shown by the Minnesota tax rolls dropped only 130 million tons. This proves the impropriety of attempting to appraise the ore reserves by means of Minnesota tax roll figures.

Open-pit, high-grade Mesabi ore is not the only Great Lakes source available to American steel mills.

The Steep Rock mines in Ontario, which were brought into production in 1944 by United States interests, are producing a million and a quarter tons of high-grade ore a year at present. The chairman of the board

of Steep Rock Iron Mines Ltd., the company developing this field, has stated that the areas under development can comfortably support an annual production of upward of 15 million tons of high-grade order for an indefinite period. This statement is highly significant in view of the initial planned production in Labrador by the Iron Ore Co., of Canada, which Mr. George M. Humphrey testified would be adequate to make their investment of \$200 million pay out-namely 10 million tons a year.

Pellets made from taconite, a low-grade ore wrich can be concentrated into usable form, are now being produced commercially in Minnesota. Taconite may well prove more important in the future than either Labrador or Mesabi high-grade ore. The supply is almost inexhaustible—about 95 percent of the Mesabi Range is taconite. Taconite pellets are of more uniform consistency than natural ore. Already, United States steel companies have invested about \$500 million in taconite development.

Reserve Mining Co., a major taconite producer, estimates that its ore lands alone can annually supply 10 million tons of high-grade concentrate from taconite for 50 years. Reserve is owned outright by Republic Steel Co., and Armco, 2 of the 5 steel companies interested in the development of the Labrador ore field.

Dr. William O. Hotchkiss, former president of the Michigan School of Mines, in 1951 told the House Committee on Public Works that "nearly three-quarters of a billion tons that were not known in 1920 have been added to Mesabi ore reserves." Dr. Hotchkiss concluded that available reserves in the Lake Superior region totaled 7,700,000,000 tons, enough iron ore to supply 100 million tons a year for 77 years. Because the full potential of taconite has not yet been approximated, this estimate may well prove low. Even 77 years isn't forever. But it's a lot longer than Secretary Chapman's 5 years.

The steel companies have not shared the pessimism of seaway proponents. In the period after World War II, Great Lakes steel mills undertook the greatest expansion in their history before any assurance existed that the St. Lawrence seaway would ever be

dredged.

An ore emergency, then, does not exist. But high-grade Labrador ore does, and it

will and should be mined.

Labrador ore lies east as well as north of the United States. Both the field itself and Seven Islands-the site of the southern terminus of the new Quebec, North Shore & Labrador Railway-are approximately 400 miles east of New York City. The natural American outlets for Labrador ore are therefore the mills located in the eastern part of the United States. Labrador ore can reach these mills economically and quickly either by ship from Seven Islands to Philadelphia and Baltimore, or by ship from Seven Islands to Montreal and then southward by

The natural American outlets for Great Lakes ore on the other hand are the steel mills on the Great Lakes and in and near Pittsburgh.

Seaway proponents advocate shipping Labrador ore west to the Great Lakes at the some time Great Lakes ore is being shipped east to mills in Maryland and eastern Pennsylvania. Cross-hauling like this doesn't make sense to me. What does is shipment of ore from each production area to its natural market. Such natural-market shipment is unaffected by the St. Lawrence

The five major steel mills in eastern Pennsylvania and Maryland—at Bethlehem, Morrisville, Steelton, Swedeland, and Sparrows Point-alone annually consume more than the expected early Labrador-field production.

One of the major arguments used to sell the seaway to the American people was its

purported value as an instrument of national defense.

The seaway is supposed to offer an additional shipping channel to augment transportation in time of war. But the seaway will be of no use to anyone during the 41% months of each year when ice closes it to all commerce.

Reliance upon the seaway for wartime shipping would mean either that America's armies would be supplied in spurts, or that the railroads and east coast ports would have to take over the traffic in the winter months. Where are the railroads and ports going to find the standby equipment and extra personnel for this seasonal traffic? I imagine nothing more extravagant of a nation's resources, strained to the limit by war, than the alternating seasonal use of duplicating transportation facilities.

We are also told that the seaway would permit the construction in Great Lakes shipyards of oceangoing warships, trans-ports, and cargo vessels. But a single bomb dropped by plane on any one of the seaway's 15 locks or near its dams, not only would close the seaway but also would bottle up ships on the Great Lakes-in service or under construction-for the period needed to repair or rebuild the damaged facilities. That might take a long time.

What about costs and the claim that the

seaway will be self-liquidating?

United States Army engineers' estimates of costs of a 27-foot channel from Montreal to Lake Erie are \$174,950,000 to Canada and \$88,074,000 to the United States. Annual carrying charges, including amortization over 50 years and interest at 3 percent, are estimated at \$14,612,000.

These figures are low. For one thing. they're predicated on December 1952 cost levels, and the construction cost index has gone up 9.15 percent since then. For another, Army engineers traditionally underestimate costs.

If no other factors were involved (and many are), the \$14.6 million would be the least the seaway had to earn each year to pay for itself.

Seaway earnings will be determined by the scale of tolls charged, and the tonnage carried.

The tolls have not been set. Even the bases of determining them have not been agreed upon.

The amount of traffic is not known. In 1941, the United States Department of Commerce forecast an eventual 10 million tons of annual American seaway traffic. In 1950, when trying to prove that the seaway would be self-liquidating, Commerce, without a further detailed study, upped its figure to the fantastic and unsubstantiated prediction of 57 million to 84 million tons. The Engineers think the seaway might "attract during its economic life traffic of the order of 50 million tons and more." Only last of 50 million tons and more." Only last week, the St. Lawrence Seaway Development Corporation estimated 36.5 million

Ten million tons? Thirty-six million? Fifty million? Eighty-four million? Which figure at what toll rates will produce \$14.6 million a year?

The validity of the largest of these estimates should be weighed in the light of testimony of Under Secretary of Commerce Walter Williams, delivered before a subcommittee of the Committee on Foreign Relations of the United States Senate on May 20, 1953, that the traffic ceiling of the Welland Canal (with channels improved to a 27-foot depth) "seems to be about 50 million tons, and comparisons of costs with revenues should be limited accordingly."

The larger revenue traffic estimates include the 10 million tons that now move through the existing 14-foot channel without charge. Obviously, traffic which has been using a free channel is not going to move over to a 27-foot toll channel if the free channel is continued. As recently as August 17 of this year L. B. Pearson, Canada's Secretary of State for External Affairs, wrote in a note to the United States: "The Canadian Government reserves the right to decide whether and in what manner it will continue 14-foot navigation works through the International Rapids section.

But that isn't all.

You will remember that the proposed seaway stops at Lake Erie. On the three upper Great Lakes west of Erie are many inland cities anxious for a share of the seaway's promised bonanza. These cities cannot participate even in 27-foot shipping until the channels connecting the upper lakes are deepened. And Great Lakes cities-lower and upper alike-will require deepened harbors.

There isn't the slightest doubt that both channels and harbors will be deepened. At the close of the 83d Congress, bills had already been introduced calling for deepening the upper Great Lakes channels. Various organizations have already started drives for improving Great Lakes harbors to 27 feet.

No one is sure exactly what the channeland-harbor deepening will cost. Preliminary paperwork estimates indicate irreducible minima of \$100 million for the channels and another \$100 million for the harbors.

That isn't all, either.

I believe it is self-evident that the seaway is as certain to be deepened beyond 27 feet as it is to be extended west of Lake Erie. To mention only two reasons: Many legitimate objections to a 27-foot waterway do not apply to one with a deeper channel; and more than a half century of propaganda in favor of a true seaway for oceangoing vessels has developed momentum.

No one knows to what depth the channel will eventually be constructed. Thirty-five feet is the figure most often mentioned. To my knowledge, no one has estimated the cost of deepening a 27-foot channel to 35 feet. However, we do have incomplete, but illuminating, estimates of the cost of deepening the present facilities to 35 feet. For the United States it is \$959,159,000 more than the cost of constructing a 27-foot channel. For Canada it is \$536,752,000 more. The total is \$1,495,911,000 more for a 35-foot than a 27foot channel.

This billion and a half dollars includes nothing for deepening Canadian harbors; no correction for price rises since 1950, the year on which most figures are based; and no allowance for the historical inaccuracy of engineers' preliminary approximations.

The represented cost of the seaway is \$263,-024,000. As we have just seen, realistically there must be added upward of \$200 million for deepening upper-lake channels and the harbors on all 5 lakes to 27 feet. When and if the channel is eventually deepened to 35 feet, there must then be added an unknown sum that will almost assuredly fall somewhere between one and two billion dollars.

therefore submit that present seaway plans are an attempt to get a foot in the door or the nose of the camel under the tent.

Most of the facts I have developed were, of course, known to my country's Congress and President before the former passed and the latter signed this year's seaway bill. One might conclude that favorable congressional action on the seaway after more than a half century of debate confirms Dr. Hare's position and refutes mine.

Such a conclusion would be logical-but, I believe, false.

Congress didn't pass S. 2150 because the historic arguments against the seaway suddenly lost their validity. The case against the seaway was no stronger-or weakerwhen the several Congresses rejected it than in 1954. The major difference lies in the fact that, by 1952, Canada had decided to go ahead on its own. The 83d Congress acted as it did because it thought-mistakenlythat by so doing it was obtaining some meas-

ure of control over the seaway.

I need hardly remind you, who are historians, that the accomplishment of a political result does not prove the arguments presented in favor of it. In the case of the seaway, nonexistent advantages didn't sudblossom-and disadvantages didn't suddenly evaporate-merely because the United States Congress showed itself susceptible to chauvinism.

Obviously the United States did not gain control of the seaway by authorizing the expenditure of \$105,000,000. The Canadians have, and will continue to have, complete control and domination over the effective use of the St. Lawrence by reason of the fact that its exit and six-sevenths of its course lie wholly within Canadian territory.

The seaway appears to me in all sincerity to be an egregious error from the American viewpoint. But we have irretrievably em-barked upon its construction. There can be no question but that it would be less expensive to build a 35-foot seaway in the present river than to build a 27-foot waterway first and deepen it later to 35 feet. Perhaps the time has come for sincere advocates of a true seaway realistically to admit its necessary costs and frankly advocate building a 35-foot channel now. It seems to me sheer idiocy to waste time and money on a hybrid 27-foot concoction of questionable value which even before construction is commenced is obsolete and outmoded and is certain to be deepened as soon as the first hundred-million-dollar shock wears off.

And now if you'll permit me to mangle a metaphor and a simile, I'll conclude. Even though seaway proponents have gotten the nose of their camel under the tent, I'm not going to act like a dog in the manger.

Smears Against Nixon Boomerang

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. HOSMER. Mr. Speaker, when a man is unjustly accused, generally time and public discussion bring forth the truth and the attack boomerangs on the The political history of our accusers. Vice President, RICHARD NIXON, is almost classic proof of this. Time and again as a Congressman, as Senator, and now as Vice President he has borne the brunt of vicious attacks. Time and time again his attackers succeeded only in destroying their own causes.

From many newspaper stories and remarks in this RECORD, I gain the impression that the pattern is being repeated again. In further support of this observation I am setting forth a recent column by Larry Collins, Sr., the editorial columnist of the Long Beach Independent newspaper. For many years Mr. Collins has been an able observer and reporter of the political scene.

The article follows:

It is evident Vice President Nixon is to be the whipping boy for the Democratic attack in next year's campaign. It is charged by the Democrats that Nixon questioned their loyalty during the campaign last year. He is called the smear artist because he carried the fight into many States.

It is rather strange to hear men like WAYNE Morse call Nixon a smear artist because he carried the fight into many States.

Morse's main objection is that Nixon called some of the Democratic candidates, including himself, leftwingers. Morse likes to call himself the leading liberal in the Senate. That is certainly being a leftwinger. But it does not mean he is disloyal or imply that he is a Communist.

By the same reasoning we would consider Nixon a rightwinger. But that does not imply that he is a reactionary. Nixon was critical of the coddling of Communists and leftwingers who played with and supported Communists in Government. The records are clear that this did occur.

The people should remember how Mr. Truman referred to the Alger Hiss case as a red herring. If they recall the Truman campaign in 1948 they will find it hard to recall a more demagogic smear campaign. Unfortunately there are demagogs in every political party. But the speeches of Vice President Nixon stick to the facts. If they were con-sidered smears by some Democrats it must be recognized that telling the truth is actually a smear of some men. But they provided the material.

When listening to Senator Wayne Morse on Meet the Press, we heard him sneer at President Eisenhower. But when asked if he opposed the President's foreign policy, he admitted he did not. He could only say that the President was doing everything for big business and nothing for the common people. But he overlooked the extension of social security, efforts by the President to amend the Taft-Hartley law, and overall tax reductions that have occurred.

It is apparent the Democrats do not want anything done to Taft-Hartley. It is their prime approach to labor union leaders who want the law repealed. But it is equally apparent the rank and file members of unions like the law as it is. Labor unions have had their greatest social securities since that law was enacted. They have had fewer strikes and their living standards are at the highest in the history of workers in the

Nixon will be the target of all the leftwing Democrats, because he is a conservative. He is a hard and fearless fighter with great ability as a speaker. When it comes to what we call the American way he is more liberal than any of the leftwingers, who would have big government rule the people rather than have government the servant of the people. These are factors which should be remembered as the bitter fight against Nixon is waged during the next 18 months.

The Feasibility of Blockades

EXTENSION OF REMARKS OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. UDALL. Mr. Speaker, in the long run it may be found that the greatest virtues in the present cold-war period in our history were patience and devotion to calm reason. William R. Mathews, veteran editor and publisher of the Arizona Daily Star, of Tucson, Ariz., has these virtues, and from time to time he gives expression to them in editorials which are often widely quoted. I present herewith two of his recent editorials calling to task some of the blustering, belligerent men in public life who seem bent on dividing our counsels and confusing our policies:

[From the Arizona Daily Star of January 9, 19551

THE FEASIBILITY OF BLOCKADES

The repeated demands for a blockade of Red China made by Senators Knowland and McCarthy, by Commander Collins of the American Legion and numerous other military and political leaders, forecast that this subject will grow as a controversial public issue.

The idea of a blockade makes a popular appeal as an easy way to meet the threat we faced in the Orient. Blockades have been used many times in forms that range from a mere show of force and the seizure port, to the extreme form of an armed blockade that shuts up ports of an enemy. confidence with which it is recommended as a way to deal with Red China fails, howto take into account the experiences of the past, and ignores entirely a new historical development: the coming of the Age of Continents, when some governments control continents.

In the light of history it is necessary to distinguish between the seizure of a port of a weak adversary and the imposition of a blockade against a powerful nation, All blockades have the common purpose to impose a political decision on an unwilling, but defiant, weaker power. When Britain sent warships to China in 1841, to Egypt in 1881, and to many weaker nations, she used this show of force to win political concessions. By this classic use of sea power she built her empire.

When Britain declared a blockade on Napoleon's France, and more recently against Germany and her allies in World Wars I and II, she did so to reduce the capacities of her enemies to wage war. The use of the naval blockade by the North against the South in our Civil War contributed mightily to the ultimate victory of the North. In none of these circumstances did the blockade alone win a war. In each it had to be accompanied by a simultaneous land campaign. Hence there are limits to which the blockade or show of force can be counted upon to win a political decision.

In this connection, serious troubles have always arisen with neutrals. Britain's blockade of Napolen's France contributed seriously to provoking war with us in 1812. It also helped to unite the French people behind Napoleon. Britain's blockades of Germany in World Wars I and II would have involved us in war against her had we not been in sympathy with her action. A blockade of China's widely separated ports can be counted upon to cause much trouble with neutrals as small as Portugal and Indonesia and as large as Britain and the Soviet Union.

To this record must be added Japan's failure in China. What was once called the China incident spread into a major war in 1937 with the landing of millions of soldiers in China, and war ultimately with the United States, Britain, France, and the Soviet Union.

A peaceful blockade, such as Senator Mc-CARTHY recommends, calling for nonintercourse by those nations receiving ald from us, would amount to nothing more than speaking loudly and threatening with a feather duster. It would fail to shut off more than a trivial amount of commerce.

No neutral is bound to respect any blockade unless it is accompanied by a declaration of war. Without such respect it will be ineffective. One conducted under the auspices of the United Nations with the United States providing nearly all of the warships, could be helpful by eliminating much of the trouble with neutrals.

These experiences should be sufficient to warn us about the complications that always develop out of a blockade of an entire nation. To these must now be added the new historical development—the rise of two great powers controlling continents, the United States of America and the Soviet Union, and the prospective rise of two others—China and India.

Modern land and air transportation has done this. Whereas, prior to 1800 there had been little improvement in land transportation since the time of the Caesars, transportation by water had made enormous progress. The discovery of the keel by the Vikings made possible ships of sail that could tack against winds and thus penetrate to the farthest ends of the earth.

Development of political power followed the sea lanes. Just as the Hanseatic cities of Europe grew and thrived on seaborne commerce, so did the subsequent development of most of the other great cities of the world. If they were not ports, they were located close to seaports, such as London and Paris, and had rivers to use.

The application of steam to land transportation provided new arteries of life in the great undeveloped land masses that are today the Soviet Union, the United States of America, China, and India.

The strength of these new and great powers has its roots in the new advantages that their vast land areas provide. They are relatively invulnerable to invasion, blockade or retailations by bombardment. They possess a large proportion of the raw material and food necessary for their large populations, and can be nearly economically self-sufficient. Such advantages, when combined with the political power that comes with the organization of their enormous numbers of people, make two of them—the United States and the U. S. S. R.—dominant powers of the world, while China rises to new importance.

No nation nor coalition of nations can attack any one of them successfully, as Germany learned in the Soviet Union and Japan found out in China. Britain had to give up

India largely for the same reason.

Any blockade of China not only faces all of these contingencies of the past, but also this new historic development of the age of continents.

[From the Arizona Daily Star of January 13, 1955]

AN ALARMING PRECEDENT

The spectacle of the Chairman of the Joint Chiefs of Staff, Adm. Arthur W. Radford, emerging from a luncheon meeting with President Eisenhower on Monday and declaring in a public statement that if all other measures fall, the United States should support a blockade of Red China, dramatizes the conspicuous role that the military of the United States have come to occupy in high policymaking.

Never before, until the past few years, in all of the history of our country has the military dared to speak out publicly on high policymaking. In former years we would have considered such conduct on a par with what used to be called Prussian militarism. We participated in the trials and subsequent hanging of German military officials whose only crime was recommending, counseling, or participating in the decision to make war.

Yet here we have the Chairman of our Joint Chiefs of Staff publicly recommending action which only a few days previously, in Honolulu, he said meant war.

This is a far more serious matter than this one incident. The alarming part about it is that it fits into a growing pattern of conduct which challenges the past traditions of our country. It marks the rise of militarism, the dominance of the military over our civilian government. And it was not so long ago we were fighting wars to end the militarism of our principal enemy.

Throughout the history of our country, until recently, the military maintained a tra-

dition of silence on public issues. They had a respected duty to give their advice to their civilian superiors, who acted as the responsible spokesmen. They should give their advice in the same way today, but they should not not speak out publicly their own views on high political policy.

The precedent involved is a fundamental one. In past history it has set the foundation for the building of a military government, and the subsequent eclipse of freedom.

So here we are in one breath talking about the free world and liberation of the enslaved. In another breath our top military leader emerges from luncheon with the President and calls for action that means war if what appears to be a two-sided dispute is not settled our way.

All that the Communist leaders behind the Iron Curtain have to do to prove to their people how warlike we are is to quote such a public statement verbatim, and thereby undo in a twinkling the work of our so-called crusade for freedom.

The fact that Secretary Dulles spoke out in calm words to reassure the country that our policy would be one of slow to anger, does not alter the fact that the threat of this precedent still remains unchallenged.

Filbert Growers Ask More Time for Tariff Hearings

EXTENSION OF REMARKS

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. MACK of Washington. Mr. Speaker, there are in the States of Oregon and Washington about 1,000 families who make their livelihood by the raising of filbert nuts. It requires many years to bring one of these nut orchards into a bearing state. Every orchard therefore represents a tremendous investment in time, money, and labor.

If anything happens that undermines the prosperity of nut raising, the growers lose not only a year of profits. They must abandon their orchards, cutting them down in order to go into some other activity. They lose all of the investment made in effort and money to get the orchards into a production stage.

It is this possibility of sacrificing years of labor that causes nut growers generally to be greatly concerned in tariff rules and regulations, for the nut growers, chief competition comes from low-wage foreign nations which, like our own, have large nut crops.

Hearings have been set in a new reciprocal trade bill known as H. R. 1. This bill may have a bearing on the entire future of the American filbert-nut industry and all persons engaged in it. The nut raisers want a chance to be heard on this bill. The hearings have been speedily called on H. R. 1 and the nut growers fear may be quickly ended. They fear they may be denied a chance to be heard. The nut growers should be given that opportunity. The hearings should be long enough so that they and those of all other interested industries may get their viewpoint into the record.

The Congress or any of its committees should not proceed so fast that it is un-

fair to any industry or the people engaged in it.

A typical letter, deploring the haste with which hearings on H. R. 1 have been called, is the following one which I have received from John E. Trunk, general manager of the Northwest Nut Growers. Mr. Trunk's letter follows:

Hon. RUSSELL V. MACK,

House of Representatives, Washington, D. C.

DEAR MR. MACK: While we have been anticipating the introduction of legislation advocating the lowering of tariffs, we find ourselves totally unprepared to cope with the haste in which this has been done during the current session of Congress.

Very much to our surprise, the Cooper tariff bill, H. R. 1, is the first to be introduced
at this session, and even more alarming is
the fact that hearings are scheduled to start
on Monday, January 17. This notice is so
short that we are simply not able to prepare
and present our case.

The congressional delegations from Oregon and Washington have always stood solidly behind the efforts of our filbert and walnut industries in resisting tariff reductions and the ultimate destruction of our business. I am confident we will have the same wonderful support from you and the others during this session. Apparently it is going to be a rugged fight, but we had better win it or we are going to be out of business.

Probably the best immediate service which you can render to us is to get the hearings on H. R. 1 delayed until the nut industry can prepare itself for an adequate presentation.

Sincerely yours,
Northwest Nut Growers,
John E. Trunk,
General Manager.

EXTENSION OF REMARKS

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the New York Times of January 19 entitled "Our Fiscal Pilots":

The President's annual message on the budget, delivered to the Congress yesterday, contains one short and happily phrased statement of philosophy that will remain with many readers after the myriad of other words and the regiment after regiment of accompanying statistics have become a blur. It reads: "A liberal attitude toward the welfare of the people and a conservative approach to the use of their money have shaped the budget."

The story of the budget over the past 2 years has been the story of an administration which was pledged to a balanced budget struggling to make good on that promise in the face of a downward readjustment in the economy stemming from the end of the fighting war in Korea and the leveling off of the rearmament effort. In this situation the administration found itself being sniped at from one direction or another whatever step it decided to take in the field of fiscal policy. But, surveying the results of its activities in this area as it is possible to see them in the new budget, one is impressed with the fact that, while the administration has been compelled at times to reduce speed of its program, and even go out of its course, it has never taken its eyes off that objective.

The evidence on this point, even after 2 short years, is irrefutable. Consider, for example, what has happened to Government spending, which must be the focal point of any budget-balancing program. From \$74.3 billions in 1953 it has been reduced each successive year. In the budget recommended yesterday for 1955-56, Mr. Eisenhower put spending at \$62.4 billions, or \$11.9 billions under 1953. Since the President foresees revenue receipts of \$60 billions, this would make the prospective deficit for the coming year \$2.4 billions. That would be the smallest deficit incurred since 1951, and would compare with the \$9.4 billion deficit bequeathed to the Eisenhower administration by its predecessors in 1953.

Again, consider the figure for total cash receipts and expenditures anticipated in the year 1955-56 (better known as the cash budget). This version of the budget (which is customarily employed in measuring the net impact of the budget on the economy in terms of inflation or deflation) reveals a prospective surplus of about \$600 millions, compared with deficits for 1954 and 1955 of \$2 billions and \$2.4 billions, respectively.

Finally, there is the test of budgetary intentions and budgetary progress to be found in the President's recommendations for appropriations and authority to incur obligations. It is testimony to the determination with which the budget problem has been attacked that, for the third consecutive year, 1956 is expected to produce a budgetary picture in which new authorizations will be under estimated current revenue receipts.

Critics who have chided the administration with failing to balance the budget, on the one hand, or balancing the budget at the expense of human welfare have, of course, been merely committing assault and battery on straw men set up for the purpose. The important thing is that the budget has in fact been brought under control; and in the sense that recurring and increasing deficits had been a threat to the integrity of the dollar, that threat, with the prospective balancing of the cash budget for 1956, has been eliminated. If the administration, as critics of the left have charged, had been inclined to balance the budget at the expense of jobs and public welfare, it could have accomplished it last year.

Last year the administration turned back to the public \$7.5 billions in taxes, the biggest tax reduction in a single year in the Nation's history. For the coming year, with business on the upbeat, the administration has decided just as judiciously that taxes should be held where they are, though this means asking extension for another year of corporate income taxes and certain excise taxes scheduled to be reduced next April 1. In short, what we have been witnessing over these last 2 years has been a demonstration of fiscal navigation by pilots who not only know where they are going, but who also are thoroughly aware that in navigation, unlike geometry, a straight line is by no means always the shortest distance between two points.

Modern Supercarriers

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. PELLY. Mr. Speaker, on Wednesday, January 19, 1955, the Washington Post and Times Herald carried an article by John W. Finney, of the United

Press, quoting the distinguished Democratic chairman of the House Appropriations Committee, the gentleman from Missouri, as recommending the scuttling of the new so-called supercarrier.

The gentleman from Missouri is quoted as saying he "does not approve of expenditures of enormous sums on aircraft carriers when authorities say that no one carrier will be afloat for more than 10 hours after war is declared."

Who the authorities referred to are, I do not know, of course, but I am sure they do not include any GI's, those Amercan authorities who thanked God for the overhead protection of carrier-based naval planes in the recent uphappy Korean police action. Nor could they include former General of the Army Omar N. Bradley, because shortly after his retirement as Chairman of the Joint Chiefs of Staff, he wrote an article in the August 29, 1953, issue of the Saturday Evening Post in which he said:

One of the enemy's first major efforts, in case of war, might be to destroy our retaliatory power by knocking out the air bases from which out atomic planes can take off. The location of most of these bases is well known. Carriers are also vulnerable, but their location, as they range the seas is hard to keep track of. They can be here today and 800 miles away tomorrow. The knowledge that planes from such carriers can join in the atomic attack must be a powerful additional deterrent to any totalitarian leaders who are thinking of starting a world war.

General Bradley referred to the primary Navy mission keeping, sealanes open.

But he added:

In my opinion, the primary mission of the big carriers is shifting toward strategic air attack.

Mr. Speaker, I just wonder what authority would dare to recommend the risk of scuttling the aircraft carrier—just what authorities would jeopardize our military strength by such a policy. If no one carrier would be afloat 10 hours after war is declared, just what would have happened in the meantime to our nonmobile land airbases. The location and dispersal of carriers over the oceans would not be known to the enemy and it is conceivable that the carriers might be the only means of landing aircraft left to us 10 hours after war was declared.

Aircraft carriers, as I understand it, form the backbone of our strategic sea defense and attack force. Modern carriers are capable of delivering the most powerful atomic bombs on long-range missions at faster than 700 miles-anhour speed. The Navy's supersonic planes combat ceiling is higher than 40,000 feet; they can carry all the latest type of weapons, bombs, and airlaunched missiles. The carrier force is mobile, flexible, and supportable and can operate on 70 percent of the globe.

Maybe the H-bomb will be used in the next war; maybe it will not. In either case, the carrier is our best hope of being able to transport land troops and support the world system of land airbases we have established throughout the world.

Thus far in history, it has been command of the sea which preserved national freedom; now it may be command of the air over land and sea and maybe under the latter.

Peace in southeast Asia or peace throughout the world cannot be preserved by guided missiles alone nor by capacity for mass destruction abroad. Localized warfare of slow, sinister expansion and infiltration requires mobility and manpower. For example, a revolution in Central or South America or a remote part of the world could not be met by B-47 bombers. One aircraft carrier or a "killer unit" dispatched to a trouble spot with a few marines may put out a fire before it gets started.

God help this great Nation of ours if we discard our basic strategic offensive and defensive weapons, the aircraft carriers, and decide the next war, of necessity, will be an H-bomb air war with the destruction of all civilization and no land or sea forces needed.

President Eisenhower on the advice I am sure of our best military minds has recommended continuation of the program of constructing modern aircraft carriers capable of handling larger, heavier and faster planes. If you scuttle this carrier program, you scuttle the Navy. Moscow and Peiping would like that. Those are the only authorities I know of who want our aircraft carriers scuttled.

Now I do not question the sincere desire of the gentleman from Missouri to curtail Federal appropriations. The gentleman, moreover, is entitled to his views as to the type of offense and defense this country can afford. But I hope the gentleman will not close his mind to recommendations of our best military brains, including the President. The Appropriations Committee and this Congress realize I hope on the aircraft carrier "humanity with all its fears, with all its hopes of future years, is hanging breathless on thy fate."

After Us, the Deluge

EXTENSION OF REMARKS

HON. BRADY GENTRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. GENTRY. Mr. Speaker, in his 1952 campaign, the President delivered numerous telling blows against great public debt, deficit spending, and irresponsible fiscal policy.

Then in his first state of the Union message 2 years ago, following his election, the President repeatedly expressed his great concern regarding the financial condition of our Government. Early in that message he stated:

Our immediate task is to chart a fiscal and economic policy that can reduce the planned deficits and balance the budget.

A few paragraphs later in the same message, the President stated:

The first order of business is the elimination of the annual deficit. Later, in the same message, the President, still sorely troubled by the financial condition of our country, said:

A balanced budget is an essential first measure in checking further depreciation in the buying power of the dollar.

The President could not get this burdensome problem off his mind. Only a few paragraphs later, in the same message, he said:

If the budget is balanced, the tax burden that today stifles initiative can and must be eased.

The President, in that first message 2 years ago, still had not concluded with the problem which he then must have felt was the most important confronting him and our country. Again he said:

The national debt is now more than \$265 billion. In addition, the accumulated obligational authority of the Federal Government for future payments totals over \$80 billion. Even this amount is exclusive of large contingent liabilities so numerous and extensive as to be almost beyond description. * * The present authorized Government debt limit is \$275 billion. The forecast presented by the outgoing administration with the fiscal year 1954 budget indicates that before the end of the fiscal year and at the beginning of demand for payments during that year the total Government debt may approach and even exceed that limit. Unless budget deficits are checked, the momentum of past programs will force an increase in the statutory debt limit.

The President neither exaggerated nor unduly emphasized the true condition of the Federal Treasury. Every Member of Congress knows-in fact, all the people of our country know-that there were compelling reasons for the great concern expressed by him. The banks of our Nation then had, and still have at the present time, Government I O U's in their listed assets equal to four and onehalf times their combined capital stocks, surpluses, and undivided profits. The insurance companies of our country held in their portfolios at that time, and still do, twice as much in Government I O U's as the amount of the combined capital stocks of all the insurance companies of our Nation. Government I O U's then comprised, and still do today, a great portion of the life savings of a large percentage of our citizens.

Did the Government have the money to pay these debts 2 years ago? No. Does the Government have the money to pay our astronomical national debt, or even any part of it, today? No. All the Government has is the authority to levy taxes against the people of our country and require the people to take up their own I O U's with any savings they still may happen to have. Taxes, high as they are, still do not come close to paying even our current yearly expenses, much less anything on our debt. Meanwhile, more and more of the savings of our people and our institutions are being taken by the Government and our debt continues to grow because of actions by the Chief Executive and the Congress.

So, the situation today is just as urgent, in fact it is more urgent, than it was during the 1952 campaign and at the time the President delivered his ringing denunciation of deficit financing and

unwieldy public debt in his first state-ofthe-Union message. It is more urgent because we owe more money than we did then. It is more urgent because we are now increasing this debt at a time when the President himself says we are at peace. At the time the President was repeatedly stressing his great worries about our financial status and saving it must be corrected, we were in the midst of a costly war and the opportunity to make the correction was not as great as it is today. Even though we have not been engaged in a fighting war for almost 2 years now and the time would seem to be ripe to put our financial house in order, the President's fears of yesterday, the expressed pledges of his platform of 1952, and even the record of the first 2 years of his administration seem to have been forgotten.

It is sad to relate, therefore, that we still have deficit financing, the national debt continues to soar, the savings of more and more people and institutions are being expended and given away throughout the world, and the idea that the Government can do everything for a citizen better than he can do it for himself is to have even greater emphasis.

On the 6th of this month, the President delivered another state-of-the-Union address to the new 84th Congress. I heard it in person and I have since read it three times. On each successive reading I became more amazed. You will not find in this message even a bare mention of our overpowering public debt. It is as silent as the tomb regarding it. Can you imagine a President devoting almost an hour to the exposition of the state of our Nation and making no mention whatever of the deplorable fact that \$280 billion of the savings of our people is represented solely by I O U's which the Government cannot pay because it does not have the funds, a debt that even now, in a period proclaimed by the President himself in his message to be one of peace and prosperity, is being allowed to increase every single day? would seem that, by all odds, some of the most salient passages in a message to the Congress on the state of the Union should concern its financial condition.

And, what does this recent state of the Union message say about balancing the budget, that nightmare which concerned the President so greatly in the campaign of 1952 and in his state-ofthe-Union address 2 years ago? Here is the one small mention:

Government efficiency and economy remain essential to steady progress toward a balanced budget.

You may search this message high and low but this one light touch will be found to be the only fleeting reference to the deplorable fact that this Nation of ours still is not able to live within its income.

The President's address, couched in lofty phrases as all such messages are, shows why our financial situation was not even discussed, after enunciating very fine principles of Government, it becomes a promise of something for everybody, a vast grab-bag designed to kill everybody with kindness. It recommends more and greater Federal activities. It makes it certain that more

deficit financing and more debt will be the order of the day and that more and more layers of government will be placed on the backs of an already tax-burdened people. It will add to a Federal bureaucracy already so vast that just its civilian employees' salaries now amount to \$10 billion annually, an item that alone devours more than \$200 in taxes yearly from each American family. This one item now costs the taxpayers 14 times as much as it cost to operate the entire Government of this Nation, including the Army, Navy, and Marine Corps, as late as the year 1916.

What recommendations are contained in this message which make more deficit financing, more debt and more fiscal irresponsibility a certainty? Among many other things, it recommends reinsurance of health insurance and public housing, both of which are pure, unadulterated socialism. If these adornments of the welfare state are to become permanent, full-grown cancers on our body politic, we can forever say goodbye to responsible fiscal management and embrace deficit financing and overpowering public debt as permanent fixtures of our economic life. A survey already made shows that it would cost the Government more than \$100 billion in additional taxes on our people to give public housing to those who are claimed to be entitled to it. No one knows how much in additional, onerous taxes the Congress would finally have to take from the taxpayers if reinsurance of health insurance also becomes a malignant appendage of our Government.

This message clearly indicates that we are to have an entirely new injection of the opiate of paternalism in the educational field. Where are we to get this money? The Treasury is completely bare. Are we to take more of the people's savings and issue them more Government certificates of credit in order that Washington will get credit for being a benefactor of education? What is to happen to the oft-repeated pronouncements of the last 2 years that invasion of States rights was at an end? We cannot make this appropriation today without making it yearly hereafter because, once given, it will be repeated because of public clamor. Certainly the States should not submit to this malign approach and be coolingly seduced while surrendering their inherent rights. The offer of Federal funds for education on a large scale would be a deception because the Federal Government actually cannot give anything to the States which it does not first get from the States. When the Federal Government starts giving the States bouquets, you can be assured that they were first plucked from the States' own gardens. It is worthy of note, however, that a large part of the plucking is used by the Federal Government in costly bureaucratic administration, the States getting back only a residue. Would not the Government now do well to put its own financial house in order and cease its prostitution of the rights and authority of the States through the subterfuge that it is giving them something?

The state of the Union message did not set out the details regarding what was desired in foreign aid. But the budget message this week stated that it should be the same as last year, approximately \$5 billion. You will recall that more than \$50 billion of American taxpayers' money has been lavished on foreign nations throughout the world during the last few years, especially in Europe. Europe is prosperous today. Her production is almost twice as great as it was when World War II commenced. Both her unemployment and public debt are much less than our own. While we have 3 million unemployed and are increasing our debt. there is no unemployment in Great Britain and France and Britain's budget is balanced. There are more than \$10 billion of our aid today in the pipeline for foreign nations, including Great Britain and France, which they have not yet been able to spend because of the vastness of our extreme generosity. While we are still being requested to give even more to Europeans, we are to concentrate on massive aid for the hundreds of millions of Asiatics in order to demonstrate our bigness of heart and our great regard for their well-being. This will, of course, require billions more of our taxpayers' money and, even worse, billions in additional debt for future generations to try to pay. This proposal seems to make a piker of Henry Wallace who made the suggestion several years ago that we should try to furnish milk to the Asiatics. a suggestion for which he was generally ridiculed.

The President's state of the Union address advised us that the National Advisory Committee on Highways had recently reported to him, advising what should be done with reference to highways. The President will transmit his recommendation to Congress on this subject on January 27. Since the Committee appointed by the President has had meetings with various groups in support of its plan, it is indicated that the President approves it and will recommend it.

There are approximately 720,000 miles of highways in our country which have been accepted by the Federal Government as worthy of Federal aid under the constitutional prevision making roads a Federal responsibility. Thirtyeight thousand miles of these highways constitute what is usually known as the strategic or interstate system. These 38,000 miles are our main highways and carry approximately one-seventh of the total traffic. Because of the great sum the President probably will recommend to be spent on these 38,000 miles, it is worthy of note that in the period of 1916 to 1955-the entire life of the Federal Bureau of Public Roads and of organized highway construction in our country-there has been expended by the Federal Government on the full 720,000 miles of the Federal aid system the sum of slightly more than \$7 billion. Of this amount, less than \$2 billion was expended on the strategic system of 38,000 miles. It is obvious that the President is correct when he says that the past and present rate of contribution by the Government will never result in good highways for that part of our highway sysernment.

The plan of the Advisory Highway Commission provides for the establishment by Congress of a new Federal corporation which, without income or assets, would issue \$25 billion in 30-year bonds. Regardless, the United States Treasury would be obligated to pay the bonds, with interest. Interest would approximate \$12 billion. If the bonds are actually liquidated in the 30-year period, a very unlikely possibility, the \$25 billion expended on roads would therefore cost the taxpayers \$37 billion. It is unlikely, however, that \$25 billion in highway value would be realized. Since the \$25 billion is to be put under contract in the short period of 10 years, it is most likely that contract prices would soar. The Government will be fortunate to receive as much, say, as \$23 billion in road value for the \$37 billion they will cost.

The absolute necessity for still another Federal agency with reference to this program is not entirely clear. It may be felt by some that this method makes it appear that the national debt is not being raised by the amount of the bonds. It is unmistakable that this plan will increase the national debt \$25 billion, and, with other deficits proposed by the President in the budget, will carry our great debt to well beyond \$300 billion. The Government and its citizens cannot escape any of its full responsibility under this proposal even though it is possibly open to the charge that it would make it easy to have your cake and eat it, too. No financial gimmick has ever been devised which will do that. Financial legerdemain will not eliminate the stark reality that the adoption of this proposal places an additional \$25 billion mortgage on the taxpayers of our coun-

If the Congress is to adopt the proproposed method in building highways, it is certain that its action would open the floodgates of pressure for it to utilize the same method in doing all manner of things, a proposal already advanced with respect to educational support in a leading article last week in the Christian Science Monitor. It could mean that financial irresponsibility would run riot. as some may think has already hap-

The Commission's plan is astronomical in cost and a radical and dangerous departure from normal governmental practices in problems of such great magnitude. In any event, Congress should give critical apraisal to all its aspects before adopting it. We could secure \$12 billion more in road value by spreading the construction over 30 years, rather than by doing it through the use of bonds over a 10-year period. We would also avoid raising our enormous debt by \$25 billion at one fell swoop. The saving of this \$12 billion, at the loss of some time, would seem to be worthy of serious consideration because the need for more and better highways in our country is almost without limit.

It is easy to see that we do not have to go on forever incurring deficits, rais-

tem which, by its very nature, is of ing taxes, and increasing burdens on our greatest concern to the Federal Gov- people each year. There admittedly is much attraction in spending vast sums of money in doing something for a lot of people regardless of the desperate measures necessary to get the money. But there are times when sound judgment dictates that Congress should not further extend the credit of our Government. Has that time not arrived? Is it not here right now? If we are willing to forego foreign aid for just 1 year, the budget can be balanced. If we will also reject reinsurance of health insurance, public housing, school construction, and cultural appreciation as proper fields for Federal Government activities while in our present straitened financial circumstances, we can soon reduce taxes.

We do not have one dime in the Treasury with which to comply with the President's many requests for additional Federal activities requiring additional expenditures. We can only do these things by further threatening the solvency of our Nation. With a Government debt today of \$7,000 against each and every American family, with our Treasury al-ready drowning in red ink, with a current budget amounting to more than \$1,400 in yearly taxes for each family in our Nation, these are extremely dangerous things to do. If we will resolve not to support so great a concentration of bureaucratic power, we will begin living on our income and the people will take heart that we are to have responsible fiscal policy. Even though it might not be considered dynamic, it would be a constructive thing for our country and its people. If given a fair trial, it might even be found to have some political attraction, the native intelligence and commonsense of our people being what it is.

In our service here in behalf of the people, would it not be well to remember the words of eternal wisdom uttered by a great statesman and President, Woodrow Wilson, when he said:

A concentration of governmental power always precedes the death of human freedom.

Tariff on Swiss Watches

EXTENSION OF REMARKS OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over station WRC, Washington, D. C., January 18, 1955:

RECENT ACTIONS WITH RESPECT TO TARIFFS ON SWISS WATCHES

Tonight I would like to discuss with you a matter which is vitally essential to the well-being of the Nation as a whole and my own Fifth District of Maryland in particular.

I am referring to a healthy and expanding system of world trade, without which the United States cannot maintain a share of world markets essential to our economic growth and rising standard of living. eign markets are indispensible not only for agriculture, but also for our mass production industries.

Other countries cannot be expected to open their markets wide for American-made goods when protective tariffs prevent them from earning enough United States dollars with which to pay for purchases of United States goods. As the world's principal trading nation, it is up to the United States to take the lead in a movement for mutual reduction of trade barriers.

I was heartened by the President's liberalized proposals in the field of foreign trade and tariffs as outlined in his trade message to the Congress last week. I was particularly pleased that the President recognized tobacco as one of the agriculture products dependent upon foreign markets for high levels of income. For most of the \$10 million worth of tobacco exported annually is grown in southern Maryland.

However, I was dismayed to read in the press a few days later that the Treasury Department had issued an order establishing further restrictive regulations on Swiss watch imports, contradictory to the stated objectives of the President's liberal foreign-trade

program.

My concern over this action is readily understood when it is realized that the Swiss are the largest purchasers of high-grade Maryland export tobacco. And if the Swiss cannot sell their watches in the United States then they will not have the money with which to purchase Maryland tobacco, as well as cotton and textile products, machinery and vehicles, food products, and the many other items we sell them. Swiss pur-chases of United States products total ap-Proximately \$85 million a year.
You know, someone has said that if you

make a statement often enough even if it be not true, or only partly true, in time it will come to be believed by great numbers of people. This matter of tariffs on Swiss watch imports, it seems to me, falls into that

category. So, let's start at the beginning and get the whole story.

In 1936, as part of the reciprocal-trade program, the United States negotiated an agreement with the Swiss Government which, on its part, made certain trade concessions so that American-made goods could be more readily sold in Switzerland.

As a result, trade between the United States and Switzerland flourished. Since 1936, the United States has sold to the people of Switzerland one-half billion dollars more of our products than we have purchased of Swiss products. Anyone can see at a glance how beneficial this arrangement has been for the farmers, workers, and industries of the United States. It has been particularly beneficial to southern Maryland which depends upon tobacco as a cash crop and the fine Swiss market these tobacco farmers have enjoyed has made a good price on the whole for all Maryland tobacco.

In addition, our trade with Switzerland has resulted in excellent friendly relation with that country and has become a world symbol of the advantages of reciprocal-trade arrangements with the United States.

The adverse effects of the administration's action to increase barriers against the import of Swiss watch movement are too obvious to recount. American farmers, industry, and Prestige have and will suffer substantial damage while the domestic watch industry will profit little, if anything from this action. Trade with the Swiss is under a reciprocal agreement. It stands to reason that this action will result in a reciprocal removal of concessions granted on our own exports by the Swiss.

Now let's examine the claim by domestic watchmakers that they have suffered serious injury from increased Swiss watch imports. The Tariff Commission looked into this matter last year but falled to come to a unanimous agreement. Only 4 of the 6 Commissioners agreed that the United States watch industry was being damaged. The two dissenters said there was no evidence that Swiss watch movements are being imported in such increased quantities, actual or relative, as to cause or threaten serious injury to the domestic industries producing like or directly competitive products.

It is remarkable to note that every domestic watchmaker except one imports movements and markets them under his own trade name. Therefore, it is somewhat ironical that the domestic watch industry should claim injury from an increase in imports for which they themselves are primarily responsible. It should also be noted that the increase in duties affects a class of watch imports that is not competitive with domestic watch production.

The claim of injury is not supported by the financial condition of domestic watch manufacturers. The industry is thriving and enjoyed in 1953 its biggest financial year.

The Treasury Department weighs heavily on the defense aspects in raising new trade barriers against imported Swiss watches. rationalizes that the move is necessary because the domestic watch industry is vitally essential to national defense. If a nation cannot achieve an adequate national defense without a productive watch industry, as is claimed by United States watchmakers, why then are we so apprehensive of the military might of Russia? Everyone knows that Russia had no watchmaking industries. Yet we recognize Russia as a potentially powerful military foe. However, we do have a healthy watch industry. The American total sales of this industry averaged in excess of \$90 million between 1946 and 1950 and rose to a record high of over \$150 million in 1953. This increased production certainly isn't losing essential jobs for the watch industry that are necessary to meet defense needs. But the domestic watch industry isn't the only source of skilled precision workers. An attempt has been made to give the impression that only the watchmaking industry has the skills which can manufacure time fuses and other precision devices used in the manufacture of weapons for our Armed Forces.

There are four domestic watchmaking companies in the United States. However, data assembled by the Senate Armed Services Committee shows that there are a whole host of other companies not engaged in the manufacture of watches capable of producing time fuses. In fact, the figures show that the companies not engaged in watchmaking have produced substantially more time-fuse devices than the domestic watch industry. I do not mean to say by this that a healthy watch industry is not a good thing. We have always had it and still have such an industry. Indeed, during the 18 the reciprocal trade agreement between Switzerland and this country has been in effect our domestic watch industry has grown, expanded its plant, increased its capital worth, paid dividends, and enjoyed unparalleled success in the domestic watch market. It has made valuable contributions to and occupies an important position in our national defense.

Increasing trade barriers on Swiss watches constitutes a serious blow to our position of leadership in the free world. The accelerated trade offensive by the Russians, with the trade blandishments that have been offered our allies, has proved alarmingly successful. A considerable number of trade agreements have been signed between the East and the countries of Western Europe. It is noteworthy that the Communist press in Western Europe has recently begun a propaganda campaign directed at the Swiss watch industry. This propaganda has stressed the unreliability of the United States market and the desirability of trading with the Soviet bloc. The fact that Rus-

sia does not have a watchmaking industry emphasizes the strategic implications of the Soviet trade offensive.

I hope that I have been able to give you the other side of this matter in a manner which will dispel what I believe to be created misunderstanding of the facts.

This is a most serious matter. It affects our leadership in the free world. It affects the economic well-being of a large segment of our population. It should be given careful consideration by the administration,

On March 15 the Tariff Commission is scheduled to report to the Congress as to the proper and orderly way to handle the problem of revision of customs classifientions. The Office of Defense Mobilization has established an interdepartmental committee to recommend ways in which the skills of precision workers necessary to national defense could be secured. No action should be taken until these reports are available.

The President's policy on foreign trade has been clearly defined. We can only hope that all the branches of his administration will act consistently to bring about its accomplishment.

The Broken Record

EXTENSION OF REMARKS OP

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Telegram-News, Lynn, Mass., Sunday, October 3, 1954:

MCCORMACK REVEALS BROKEN GOP PLEDGES

This is the time of year when the voters are deluged with political propaganda by the candidates either seeking reelection or endeavoring to replace those now holding office.

It is the time of the year when voters will be promised everything under the sun by some of the candidates. It behooves the voters to listen, read, and then reach their own conclusions.

But how many times can the voters be fooled? Two years ago the Republican administration promised the people everything. They knew right well they would never keep the promises, and they never did.

Congressman JOHN W. McCORMACK, former majority leader in Congress, and one of the outstanding Americans in public life, is a man who can be trusted. He has won the confidence and respect of the people of the Nation. He is a national figure. When he utters a statement you can be certain of the truth of it.

Congressman McCormack listed the broken promises and discarded pledges of the Republican administration in a recent speech. He has the facts, and the record of the GOP administration is an open book.

Among the many promises was President Eisenhower's personal and specific pledge to the people of Lawrence. It was a promise that the labor-distressed city would get Government contracts to provide jobs for the unemployed. Congressman McCormack points out that conditions in Lawrence are worse today than 2 years ago,

Vice President Nixon visited Massachusetts last week asking for votes, and while in this State he said: "An administration is known by the pledges it keeps." Congressman Mcissue.

The veteran Congressman then listed 14 broken promises and discarded pledges by the Republican administration.

Some of the pledges include: The great crusade, liberation of enslaved peoples, baianced budget, lower national debt, greater prosperity, lower living cost, and unemployment. These were either broken or forgotten.

No man is more highly regarded for truth and veracity in the Halls of Congress than Congressman McCormack. He is able, brilliant, and an intelligent leader. He is a man of his word. He keeps his pledges and promises.

Congressman McCormack is the leading Catholic layman in the country. He is loved and respected by all faiths, creeds, and colors. His service to mankind is written on the pages of the Congressional Record.

No man could accomplish so much for the betterment of the people without assistance. In his case, Mrs. McCormack has been an elevating influence in the great work. She has given up an operatic career to join with her husband in the service of the people. She has been honored by Archbishop Richard J. Cushing and Pipe Pius XII.

Mrs. McCormack received the Papal Medal for zealous interest in war-stricken China. She is only the second American woman to receive such an award. She has also received many other honors.

Congressman McCormack will continue to work for the people of this Nation with increased zeal until victory has been achieved over those who make promises and then either break or forget them.

You can't fool all the people all the time.

The Dairyman's Self-Help Plan

EXTENSION OF REMARKS OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. WESTLAND. Mr. Speaker, today I have introduced for appropriate reference a bill to provide an adequate, balanced, and orderly flow of dairy products in domestic and foreign commerce; to stabilize prices of milk and dairy products; to impose a stabilization fee on the marketing of milk and butterfat; and for other purposes. Favorable action on this bill, which contains proposals for a dairyman's self-help plan, would, I believe, be definitely in the public interest. Enactment of this program would mean, among other things:

First. Relieving the taxpayers of the burden of the price-support program for dairy products.

Second. Getting the Government out of the dairy business and permitting the dairy farmers to operate their own program of price stabilization, surplus proposal, and production stabilization.

ITS BENEFITS TO CONSUMERS; TO PRODUCERS

For the consumers it would accomplish the aims of present laws-the maintenance of a stabilized continuous and adequate supply of milk and dairy products at fair prices. More than that, it would protect the consumers from unduly high prices caused by either, first, a shrinking of present dairy sup-

CORMACK immediately joined him in that plies, or, second, arbitrary overpricing of milk or dairy products.

For the producers, it would mean stabilized prices at levels to provide a fair return commensurate with the cost of

ITS ADVANTAGES OVER THE PRESENT PRICE-STIPPORT PROGRAM

Under the existing Government pricesupport program dairy products are supported at percentage-of-parity figures determined within certain limits by the Secretary of Agriculture. The support prices are maintained through the purchase, by the Commodity Credit Corporation, of dairy production which is in excess of that required by current trade outlets. Surplus stocks acquired by the Government are disposed of in various domestic and foreign channels mostly in giveaway welfare programs or at loss

Under the proposed self-help program dairy product prices would also be supported-but not at Government expense. Compare the results under the two programs under conditions in 1954.

First. Under the present Government price-support program, support prices in 1954 were set at 75 percent of parity. Prices to farmers dropped. As a result dairy farmers, by and large, have increased or intend to increase their production to compensate for lower returns. Milk production in 1954 was an unprecedented nearly 124 billion pounds. Estimates for 1955 indicate continued production at this high level.

Second. Under the self-help program price supports conceivably would have remained at 90 percent of parity. At these price levels there would not have been the incentive to compensate for lower returns by higher production, Farmers' prices would have been higher by 60 cents a hundredweight. The cost of this program would have been borne by the producers. It would have cost them about 23 cents per hundredweight if all of the surplus production had been a total loss. But they would have had a net gain of 37 cents per hundredweight under their own program.

Under the self-help plan the trend toward greater production would have been minimized; the cost to the taxpavers would have been nil; the cost to the producer would have been much more than offset by higher net returns.

MECHANICS OF THE SELF-HELP PLAN

The self-help program would be financed by the collection of a stabilization fee-somewhat in the nature of a license fee-from each producer on his volume of milk or butterfat.

The size of the stabilization fee would be specifically limited to the proportionate amount required to run the program each year. In times of excessive surplus production, the fee would be high and would serve as a means of production control. When production became in line with demand, the amount of the fee would be very small. By relating the amount of the fee directly to the cost of the program farmers will each year pay their proper share of the cost of maintaining an improved market for that year. This has many advantages. It is flexible, it is in line with the general principle of cooperative marketing, and it very promptly and directly reflects in the farmers check the extent of surplus production and the degree of his cooperation in getting supplies in line with demand

The program would be operated by a Federal Dairy Stabilization Board consisting of 15 members appointed by the President from nominees selected by milk producers. The Board would be authorized to borrow up to \$500 million from the Commodity Credit Corporation to get started. All sums actually borrowed would be repaid with interest. It is not contemplated that any Government funds will be used after the board gets established, but the borrowing power would remain in effect as a backlog which could be used in an emergency.

Appointment of a Federal Dairy Advisory Committee of 12 would be authorized. In selecting this committee the Secretary of Agriculture would give equal recognition to representatives of, first, manufacturers, processors, handlers, and distributors of milk and dairy products: second, consumers; third, other agricultural commodities or programs that may be affected by the dairy stabilization program; fourth, foreign nations that may be affected by the policies and operations relating to imports and exports of milk and dairy products; and, fifth, other interests which the Secretary determines are directly concerned with the operation of the act.

PROGRAM SAFEGUARDED AGAINST ABUSE

The self-help program is designed to be self-policing as to abuses in its administration. Furthermore, supervision by the Secretary of Agriculture would be provided by a section similar to section 2 of the Capper-Volstead law under which the Secretary would be empowered to intervene should the operations result in undue enhancement of prices.

As for the self-policing features, and as far as the consumer is concerned, the success of the program must depend largely on the effective merchandising of milk and dairy products. Prices would have to be kept in balance with the prices of other foods to maintain sales volume. Theer simply is no possibility of the board maintaining prices which are too high in relation to the prices for other foods.

The program is equally self-policing from the producer viewpoint. Producer prices would have to be reasonably related to returns from other agricultural commodities. If the board should attempt to set producer prices too high, a shift to increased production would occur. The increased cost of disposing of the surplus would be charged to the dairy farmers. The fact that the same farmers producing the surplus would have to pay the costs of its disposal would make it impractical for the board to maintain producer prices at an unreasonably high level.

The proposals and objectives of the self-help plan are such that Congress should carefully consider the proposed legislation. The dairy farmer represents the largest single segment of farming and

20 percent of the total farm income. This bill represents a move on the part of this group to obtain, finance, and direct its own price support and production stabilization program. This, I believe, is an objective within the American concept of free enterprise and individual determination of economic welfare.

The Need for a Realistic Tariff Program

EXTENSION OF REMARKS

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include an editorial.

The editorial referred to appeared in the Press-Democrat, published in Santa Rosa, Calif., on Thursday, January 13, 1955, and is strictly in line with my own thinking to the effect that we must establish a realistic foreign trade program.

The coastal area in the northern part of California and in my congressional district produces a great amount of crabs which are sold in the fresh and canned form. At the present time 60 percent of the canned crab being consumed in the United States is produced in Japan, and imported at a price which has practically stopped the processing of crab on the west coast. The price of crabmeat has been driven to such a low point that it is almost financially impossible for domestic fishermen to operate and to catch a natural resource in our Pacific coast waters.

It is possible that the tariff rate on this product is presently too low. To reduce the tariff would force the termination of this industry, displace thousands of workers, and make useless millions of dollars invested in facilities now in use.

Tariff rates should not be used in international politics but should be based entirely on economics. The above mentioned editorial follows:

EQUITABLE TARIFF LAW DIFFICULT TO ARRIVE AT

Action of Representatives Hubert Scudder, of California; Walter Norblad, of Oregon; and Russell Mack, of Washington, in preparing to fight tariff reductions on imported crab meat pointed up one of the major difficulties in trying to stimulate world trade.

Obviously, foreign nations cannot buy merican goods unless they sell things in the United States to earn American dollars. In the case of Japan, which is the principal supplier of crab meat to the American market, and which would benefit from a tariff reduction, that country is in dire financial straits. It is virtually barren of raw materials. It must manufacture and export, or else perish. Sea foods are one of the few raw materials it can obtain without purchasing with foreign money.

It is equally obvious that there is a point below which American fishermen cannot comepte with the Japanese. That point probably has been reached right now. Redwood Empire crab fishermen are at work, but the prices they are receiving are not going to make any of them rich. Sonoma County

processing plants are not handling crab, for the reason that they cannot pay even the existing low prices for crab and come out.

Wine-growers of the Redwood Empire face the same problem.

The ideal tariff is one which permits free competition between foreign and domestic producers of any product. Producers of the Redwood Empire heartily favor such tariffs.

There is no common sense, and no justice, in tariff rates so high that they create monopolies for American producers. And there is no common sense, and no justice, in rates so low that American producers are forced out of existence.

Nixon Under Attack—Intimidation Object of Big Smear

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the San Diego Union of January 12, 1955:

NIXON UNDER ATTACK—INTIMIDATION OBJECT OF BIG SMEAR

The vicious smear attacks against Vice President Nixon involve not only a man but an important political principle.

When the lies and innuendoes are pushed to one side, the attack against the Vice President simmers down to the question of whether a political party and its leaders should conduct a hard-hitting campaign, or whether they should talk only in terms of sweetness and light.

The Democrats have underway what Republican National Chairman Leonard Hall calls a highly organized campaign to besmirch the Vice President of the United States.

The leaders of both parties have studied the record and know that what Mr. Nixon said and what he is accused of saying are two far different matters.

Those who now attempt to smear the Vice President accuse him of hitting below the belt by discussing internal subversion.

Mr. Nixon did discuss the gains made by the Communist Party during the Truman regime, when many of our most valued secrets were stolen. But he also emphasized his belief that the Democratic leadership was loyal. His criticism was that the Democratic chieftains failed to recognize the seriousness of the problem and showed little ability in dealing with it.

ability in dealing with it.

Mr. Nixon recalled the Truman "red herring" remark to prove the point. And he discussed the progress made under the Eisenhower security program. The security-risk figures supported his argument here. But he was called a liar and was accused of something called a "numbers game." What non-

The Vice President did not spare the facts. But he did not smear.

Had more Republicans campaigned in 1954 with the vigor shown by Mr. Nixon, the election results conceivably would have been different. The records prove the Vice President's effectiveness, and they show that the voters want more than a few nice compliments. They want the issues discussed.

The Democrats know the effectiveness of a hard-hitting campaign. Those who now criticize applauded in 1948 when Mr. Truman

accused the Republicans of aiding Moscow as he ignored many facts in a successful but free-swinging vote drive.

The present campaign has a 1956 target date. If the Truman party leaders can "get Nixon," they will intimidate the Republican Party. If the man who dared voice the facts is smeared seriously enough, others will hesitate to discuss the issues."

When the American people will look closely, they will find that those who now cry "smear" against Mr. Nixon have muddy faces

The Views of the Brotherhood of Railroad Trainmen on Reciprocal Trade Agreements

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. VAN ZANDT. Mr. Speaker, the following editorial on reciprocal trade appeared in the January 17 issue of the Trainmen News, the official publication of the Brotherhood of Railroad Trainmen. The editorial reflects the sentiment of the average railroad employee who views with alarm the flood of foreign residual oil which is putting coal miners and railroad employees out of work.

The editorial follows:

WE'RE FOR THIS ONE

While President Eisenhower's recommendations to Congress dealing with the domestic problems of health, housing, and labor law reform were generally inadequate and disappointing, his position on foreign policy deserves the full support of Congress.

Who can quarrel with Mr. Eisenhower when he says that in the free world's struggle with communism, the security of all nations, including our own, is largely dependent on economic strength, which is in turn dependent upon internal productivity and on high levels of international trade.

In today's complex world, no nation can be economically self-sufficient, the President observed.

To encourage international trade, he has asked Congress to extend for a 3-year period a liberalized reciprocal trade agreements act which his own GOP-controlled Congress last year limited to a year. This would give him authority to reduce tariffs as the needs arise to promote this country's buying and selling with other countries.

We are opposed, however, to using such authority to permit the entry into this country of products produced under substandard wage and labor conditions or where slave labor conditions prevail, such as in Venezuela, for example, where an iron-fisted dictatorship prevents free trade unionism. At pressent, Venezuela residual oil is coming into this country to compete with soft coal as boiler fuel and is further contributing to an already sick coal industry, putting miners out of work and railroad men, too. We're with the United Mine Workers when it comes to objecting to this kind of reciprocal trade application.

This, however, is a matter of administration and does not weaken our support for the overall goals of the President's trade program which is actually only an extension of the policies of Franklin D. Roosevelt.

If we expect to sell automobiles and the millions of other products which this country makes best to the countries which need our goods, we've got to make it easier for them to sell us the goods that they best produce. As the Chicago Sun Times observes, foreign economic policy should not be a political football. It should be nonpolitical and no more controversial than the multiplication table.

The reciprocal trade program, properly and wisely administered, will mean expanded trade which in turn means more work for United States labor, and for us, more beans for brakemen, as the BRT's national legislative representative frequently puts it.

Stockpiles of Crude Rubber

EXTENSION OF REMARKS

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. AYRES. Mr. Speaker, at this particular time, I feel that the following letter from Mr. John Collyer, chairman of the board of the B. F. Goodrich Co., to Dr. Arthur S. Flemming, Director of the Office of Defense Mobilization, is of the utmost interest. Under unanimous consent of the House, I include it in today's RECORD:

DECEMBER 31, 1954.

Dr. ARTHUR S. FLEMMING,

Director, Office of Defense Mobilization, Washington, D. C.

DEAR MR. FLEMMING: It is our belief that now, when all Government expenditures are being critically examined, the appropriate departments of Government should bring up to date all facts relating to the Government's strategic stockpile of crude rubber.

Calculations made from published nonclassified figures indicate that the United States Government now owns within our country's borders more than 1,200,000 long tons of crude rubber having an estimated cost of \$825 million. If so, the Government stockpile plus private stocks in the United States now total more than 1,300,000 long tons. This, coupled with capacities for the production of man-made rubber in the United States, would, we believe, take care of our country's military and civilian needs during an all-out war of 6 to possibly 8 years' duration. In making this statement, it is assumed that the stocks of rubber would not be destroyed or the plants crippled by enemy or other action

pled by enemy or other action.
On October 27, 1948, a special committee from the rubber-manufacturing industry presented to the Government a study of possible crude rubber requirements in the event of a major war. At that time it appeared that if we were to accumulate Government and private crude rubber stocks in our country of 800,000 long tons, such would be adequate for any foresecable situation, excepting possible enemy or other destruction such stocks and of the man-made rubberproducing facilities. This strongly suggests that the Government could reduce expenditures by promptly eliminating any further additions to the stockpile and could, by disposing of such excess quantities as are determined to be in the national stockpile, recapture a goodly part of the Government's huge investment in crude rubber. Savings in the costs of warehousing and rotating the then smaller stocks would also result.

It seems to us that the questions which should be answered by Government are:

1. What is the proper stockpile level in the light of current military knowledge and

planning, and considering the advancing state of rubber technology? In this connection, it is our understanding that today the Armed Forces of the United States are adequately equipped with most types of finished rubber products, that pipelines are full, and that additional quantities of some finished products are being stored against future needs.

2. How can the present stocks be reduced to a lower level in line with real national defense needs without violating the letter and spirit of the international commitments of our State Department relating to governmental management of the crude rubber stockpile?

The accompanying memorandum gives certain comments and estimates relating to crude rubber stockpile policy.

Yours sincerely,

JOHN COLLYER, Chairman of the Board, B. F. Goodrich Co.

THE UNITED STATES GOVERNMENT'S CRUDE RUBBER STOCKPILE POLICY COMMENTS AND ESTIMATES

1. The Government's tonnage goal for a national defense stockpile of crude rubber was established prior to Korea, before the cold war rearmament program was established, and before the development of current military knowledge, thinking, and planning on atomic warfare.

2. Calculations made from published nonclassified figures indicate that more than 1,200,000 long tons have now been accumulated within our country's borders against the stockpile goal. This, together with private stocks held in the United States, gives us an estimated amount of crude rubber exceeding 1,300,000 long tons. The Government's investment of public funds in the stockpile is estimated to approximate \$825 million.

3. During 1945, the last year of World War II, rubber products manufacturers were able to supply products of satisfactory quality to our military forces and for essential civilian uses with an average materials ratio of only 13.3 percent crude rubber to 86.7 percent manmade rubbers. The quantity of crude rubber now in this country, including private stocks, is adequate for an all-out war of 6 to possibly 8 years' duration, employing higher ratios of crude rubber to manmade rubbers than in 1945 and after reserving a minimum stock of 150.000 long tons to enable a rapid postwar reconversion to a peacetime economy.

4. In the event of war, manmade rubbers would rapidly replace crude rubber for many essential uses. At the time the stockpile goal was established, several of our manmade rubber-producing facilities were in standby condition and our inventories of manmade rubbers were relatively low. The stockpile goal, therefore, included provision for enough crude rubber to maintain essential rubber products manufacturing during the period when the manmade facilities were being reactivated, and being brought up to capacity output. Today most of our man-made rubber-producing facilities are in operation and their output can be expanded quickly. The quantities of crude rubber originally deemed necessary to maintain essential production at the outset of a war should therefore be substantially less than originally calculated.

5. The purpose of accumulating a national stockpile has been, of course, to insure adequate supplies in case our country was cut off from the major crude rubber growing territories as we were during World War II. Then the Japanese took over areas which had previously supplied us with more than 90 percent of our crude rubber needs. Despite that fact, we were able to import into this country during the 3 years and 8 months of World War II a total of 540,000 long tons

of crude rubber. We suggest that a realistic stockpile goal should recognize the probability that some of the crude rubber affort at the outbreak of hostilities and some of the quantities which would be produced in Africa and South America during a war would be brought into this country.

6. There have been important technological developments in manmade rubbers since the crude rubber stockpile goal was established. The output of the superior cold GR-S has increased greatly, enabling manufacturers to produce better products with higher proportions of manmade rubbers.

7. Because crude rubber is an agricultural product subject to deterioration, the Government's stocks must be regularly inspected and rotated, by sales and replenishment, to maintain adequate quality. The continuing costs of this stockpile maintenance operation are substantially higher than those for maintaining stocks of nondeteriorating materials.

8. There exists in the United States today a large stockpile of finished rubber products, available and ready for use, that did not exist at the time the stockpile goal was established. We understand that our Armed Forces are adequately equipped with most types of finished rubber products, that pipelines are full, and that additional quantities of some finished products are being stored against future needs. Further, there is an existing huge supply of unused mileage in the tires on civilian automobiles and trucks, now greater in number than ever before. Other civilian rubber products are in ample supply. Thus, our requirements of raw crude rubber for original supplies of military and essential civilian products are less than when the stockpile goal was set.

Interstate Compact To Conserve Oil and Gas

EXTENSION OF REMARKS

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. VURSELL. Mr. Speaker, today I am introducing a joint resolution which, if passed by the House and Senate, will extend and renew for a period of 4 years, from September 1, 1955, the Interstate Compact To Conserve Oil and Gas. The language of this resolution, in substance, is identical with a like resolution which was passed 4 years ago, and which has been renewed by the Congress in past sessions covering a period of about 20 years.

The purpose of this resolution is to give the States the authority to more fully cooperate and to enter into a compact, the purpose of which is to conserve oil and gas by prevention of physical waste thereof from any cause.

For the past 20 years under the Interstate Oil Compact Commission, which was formed in 1935 and dedicated to the conservation of oil and gas in the United States, the States have cooperated in a manner that they have not only preserved the fundamental rights of local self-government, but have greatly contributed to the conservation and proper use of the vast natural resources of oil and gas, to the end that the work of the commission has contributed most mate-

rially to the development of one of our great industries, one that is most vital not only to the economy of our Nation but to national defense.

From the beginning of this organization in 1935, it has extended to the point where the governors of 22 States have become members of the compact commission.

Gov. William G. Stratton, of Illinois, at the annual meeting in the latter part of 1954, was elected chairman of the Interstate Compact Commission.

The Interstate Oil Compact Commission under the Interstate Compact To Conserve Oil and Gas is the administrative agency organized to follow out the functions of the compact. The commission consists of one representative from each member State. Under most of the State statutes, the governor is named official representative with authority to appoint a substitute or assistant representative.

The success and accomplishments of the Interstate Oil Compact Commission clearly demonstrates the practicability of voluntary cooperation between the States in the solution of mutual prob-

lems.

Formed and existing for the sole purpose of conserving and protecting irreplaceable natural resources, the compact has grown and expanded without precedent in the Nation's history.

Now in its 20th year, this cooperative advisory body is without power of compulsion. Yet it has been aptly called a bulwark against Federal control and pointed out as an example in self-rule. The expression of its objective—"the purpose of this compact is to conserve oil and gas by the prevention of physical waste thereof, from any cause"—has been referred to as "the most powerful 21 words in American industrial life today" and as "words which have changed the course of an industry."

The interstate compact to conserve oil and gas provides a forum for interstate cooperation to prevent avoidable waste of oil and gas, to further efficient practices in oil and gas production and to preserve to the States fundamental rights of local self-government.

I feel sure the Members of the House will want to help continue the great work and the vast benefits the Interstate Oil Compact Commission has brought to the economy of our Nation by giving this resolution their unanimous support.

Irrigation Takes Some Risk Out of Farming

EXTENSION OF REMARKS

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. GATHINGS. Mr. Speaker, I believe that Members of the Congress will be most interested in the ground working of Public Law 597, enacted by the 83d Congress, which was passed by the Con-

gress to enable greater productivity and provide greater water facilities programs throughout the Nation.

At the time the law was adopted—and I am pleased to say that the measure was one of those I worked hard to get passed—it was my thought that the legislation would have a profound effect on the future of our Nation. In addition to the great importance in promoting conservation work, the program would assist also in facilitating long-needed land-use adjustments. I believed that the law would aid in bringing about desirable uses of acres diverted from the production of surplus crops, as well as relieve the danger of drought conditions.

The law has been most beneficial, although the long-range program still needs much work. On the 400 million acres of cropland, surveys of the Soil Conservation Service indicate that erosion is still proceeding at a serious rate on about 200 million acres—about one-half of the total. Most of the grass-lands are producing only about half of their potential capacities.

The soil, water, range, and forest resources of the United States are the foundation blocks in the structure of the national economy. From this base comes food, clothing, paper, and other fiber. How well these resources are protected and improved in the years ahead shall determine the standards of living of our Nation's citizens in the towns and the cities as well as our rural business-

With this intention, the Congress enacted Public Law 597. I think that a recent article published in the December issue of the Progressive Farmer and written by Mississippi County Agriculture Agent Keith Bilbry will be of especial interest to those Members who sponsored this law, as well as all the other Members.

I might add that Mr. Bilbry has been a leading agronomist in the State of Arkansas for a number of years, having given 17 years to the study of agriculture and its problems. Mr. Bilbry is also an authority on the adoption of irrigation programs, and his article illustrates the advantages as well as some of the problems our farm citizens have encountered in moving their lands under systems of irrigation and water-control programs.

Mr. Bilbry, in the article, tells the story of the growth of irrigation in Mississippi County. As statistical information background, I might state that in north Mississippi County in 1951 there was very little irrigation practice. As of August 1, 1954, more than 7,000 acres had been placed under irrigation.

Mr. Bilbry's article identifies these practices specifically:

[From the Manila Sentinel of December 24, 1954]

KEITH BILBRY ARTICLE ON IRRIGATION

How did your crops turn out this dry year? It may be a sin to tell you this, but north Mississippi County farmers who irrigated this year harvested bumper crops.

For instance, Earl Wildy cut 34.4 tons of silage per acre and gathered 94 bushels of corn per acre. He irrigated twice.

E. M. Regenold watered some Fox cotton 3 times and expected to harvest between 800 and 900 pounds of lint per acre. M. J. Koehler harvested about 90 bushels of rice per acre from his first rice crop.

Earl Magers and Mr. Wildy had beautiful Sudan-grass supplemental pastures for their Hereford cattle when farmers without irrigation couldn't even get Sudan to sprout.

Ora Hueter netted \$800 per acre from strawberries that had been irrigated.

Irrigated soybeans show promise of profitable increase on Jack Lewis' farm, as well as on Mr. Magers' farm. Mr. Regenold expects a pretty good soybean yield following wheat due to irrigation.

Mr. Wildy carried more than one animal unit per acre all summer on irrigated fescue and clover and Sudan pastures. This is his third year to have such good pastures by irrigation.

We took 325 farmers on a six-stop countywide irrigation tour this summer. Because of the interest, I think this was the best single-phase educational job I have had the privilege of doing in 17 years of extensionservice teaching.

In addition to the fine crops, farmers saw sprinkling and furrow irrigation, use of siphon tubes, gated pipe, and different-size sprinklers from No. 20's to the big No. 90's.

They saw water sources—lakes, streams, ponds, and wells.

They saw 16-inch wells, 12-inch wells, 4-inch wells, and even a series of four 2-inch wells which had been tied together.

They saw power units—14-horsepower gas engines, tractors, and pumps, 135-horsepower motors, engines removed from self-propelled combines, as well as 60-horsepower electric motors.

Should another dry year come, then North Mississippi County farmers may spend more than \$4 million on irrigation equipment. They are fed up with 3 years of near crop failures on \$22 up to \$500 per acre land.

failures on \$22 up to \$500 per acre land.

H. C. Knappenberger, a Green Brier Ridge farmer, was the first to irrigate in North Mississippi County—1950 and 1951. This was more or less experimental. The operative furnished part of sprinkling equipment,

In May 1952 James L. Gattis, extension service agricultural engineer, and I held an irrigation demonstration and school on the Earl Wildy farm. Five farmers bought necessary systems and irrigated 215 acres that year.

Ten more farmers irrigated a total of 900 extra acres in 1953.

Thirty-nine more farmers were watering 6,500 more acres by August 1 of this year.

Fifty-four systems were in use August 1 on 7,300 acres of land. In September new systems were going in each week, even though the main irrigating season was over.

All of Mississippi County in Arkansas is delta land with a high water table. Water rises in wells to from 6 to 10 feet of the surface. Most wells are about 110 feet deep, none more than 135 feet. The 2-inch and 3-inch driven wells are 24 to 28 feet deep. There are also several year-round streams or drainage ditches.

At present, 25 farmers are pumping from ditches, 3 from lakes, 5 from big 12-inch to 16-inch wells, 7 from 4-inch to 6-inch wells, 7 from four 2-inch pump points, tied together, and 7 have small systems operating from 2-inch and 3-inch wells.

Investment costs for those having ditch or lake water seem to range between \$38 and \$45 per acre. When wells are dug, the total cost rises to the \$55 to \$85 per acre range.

At present, 92 percent of our irrigation is by sprinkler system, 6 percent by flooding, and 2 percent by furrow.

As farmers learn of the relatively new gated pipe, more about land leveling, and to use consulting engineers in planning a system, there will be more furrow irrigation used.

J. W. Rayder is boring a 16-inch well while I am writing this article. It is too late for this year's cotton, corn, and soybeans. I asked him, "Why not wait until next year?" Mr. Rayder said, "I spent \$1,200 on vetch seed last fall and never got a cent's worth of benefit. I am going to get vetch up this fall. I've got 50 head of cattle and no pasture. They are going to have small grain pasture this winter."

E. M. Regenold, president of the First National Bank, in Blytheville, told more than 325 farmers on tour of his farm, "I'm afraid we are going to be forced to irrigate some. I'm trying it on rice, cotton, and soybeans this year, as you will see."

Mr. Regenold showed a field of highly

fertilized, well matured Fox cotton that had been watered twice. It really "took their

He demonstrated the use of gated pipe in furrow irrigation. The crowd was told that irrigation by gated pipe, where possible, was about half as expensive as sprinker irriga-Mr. Regenold explained that he spent about \$50 per acre leveling this land so fur-

low irrigation would be possible.

Most farmers know that fall-seeded alfalfa and pastures are preferred over spring seeding, but it has just not worked in recent years, due to extremely dry weather. Some of these systems will be used this fall to insure fall-seeded pastures, alfalfa, winter cover crops, and small grains.

The recent new Federal law making it possible to borrow money from the Government to install irrigation, and repay over a long period of years, has increased interest by many times.

Norman Speck keeps asking, "When can I apply for the loan? I want to be one of the first on the list. Three years straight with-

out water is enough for me."

Fant Windham said, "You know I have been talking to you about irrigation for years. Maybe this loan will help me do what I've wanted to do for a long time."

Irrigation is no picnic. It will not solve

all your problems. It might not even be profitable for you. To increase yields is one thing, but to increase net income or profit is another. An investment this size demands your serious study and planning. It is hard work to irrigate, to move pipes around in the mud in 100-degree weather.

Earl Wildy told us on tour, "As near as I can tell, it's costing me \$3 in labor and fuel to put 2 inches of water on an acre." This is his third year to water cotton, corn, alfalfa,

pasture, and Atlas sorgo.

Mr. Wildy and Mr. Regenold both found they could cut fuel cost on their 95-horsepower engines by shifting gasoline to pro-

Jack Lewis and his father watered 220 acres with \$8,200 worth of sprinkler equipment (\$37.25 per acre). Mr. Lewis said, "It's costing me \$3.50 in fuel and labor to put out 2 inches of water per acre."

D. C. Wright said, "I watered 90 acres of cotton twice, 2 inches each application. 4 inches of extra water has cost me \$5.50 in

labor and fuel."

Advantages of supplemental irrigation may include: (1) higher yields; (2) likely higher net profits; (3) stand insurance in spring; (4) feed insurance for livestock; (5) better returns from fertilizers; (6) stand insurance on fall-seeded crops; (7) more work per year

Irrigation's disadvantages may be: (1) much higher capital needs; (2) really hard labor; (3) increased insects, disease, and boll rot; (4) delayed harvest and lower grades; (5) reduced mechanical picker efficiency; (6) good drainage, a first and absolute requirement, increases cost; (7) some years it may not be needed or used.

Mr. Speaker, I think that this article illustrated in a graphic manner the growing value of the law we adopted and we

can be pleased with the manner in which our farm businessmen are using their efforts to improve their land productivity and building a better agricultural econ-

The Need for Standby Controls

EXTENSION OF REMARKS OF

HON, PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. RODINO. Mr. Speaker, I rise to remind this House that we have a great need for legislation authorizing standby controls. Today the newspapers and the news broadcasts are stressing coexist-There is general agreement that the danger of war is less than it was a few years ago. For this less warlike atmosphere we all are genuinely thankful.

Without in any way minimizing these peaceful developments, I want today to call your attention to the terrible situation we would find ourselves in if all this should suddenly change. Our economy is operating at top speed. We are turning out all kinds of civilian goods and substantial quantities of military supplies. A sudden outbreak of war would not catch us entirely unprepared. In the military field we would be better prepared than in any earlier peacetime period. In the civilian field, however, we would be far from ready for such an emergency.

One has only to look back to the Korean situation to realize what may result from the lack of standby controls. After inflation set in and supply shortages developed, a system of controls was adopt-These controls were adopted too late, however, to prevent a general price rise of 20 percent and many dislocations in civilian supplies. It should be obvious to anyone that our civilian economy is becoming more intricate and more complex with each passing year. It also should be evident that dislocations in the civilian economy surely will be greater than ever before if we have another outbreak of war.

It is with these things in mind that I call your attention again to the fact that we do not have standby controls which would automatically go into effect if an emergency occurred. Are we going to continue to drift—then, if an emergency occurs, enact legislation after much of the damage has been done to our civilian economy?

You are all aware, I am sure, that there are still many tensions in the world. The Formosa situation is a most dangerous one. The program to rearm Germany has its dangers. Unrest continues in the Middle East and in Africa. In view of all these tensions it seems to me it would be the course of wisdom to provide now for any emergency by en-acting legislation which authorizes standby economic and supply controls for our civilian economy.

The United States Junior Chamber of Commerce

EXTENSION OF REMARKS OW

HON. ROBERT T. ASHMORE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. ASHMORE. Mr. Speaker, 35 years ago tomorrow the United States Junior Chamber of Commerce was organized at a meeting in St. Louis, Mo. Prior to this date, a number of local junior chambers of commerce had been in existence in the Midwest, but no successful effort had been made to form the group into a national organization, until Henry Giessenbier, of St. Louis, called a meeting of delegates from the several local chapters for the purpose of creating a national organization. At this meeting, Henry Giessenbier was elected president and later a constitution and bylaws were adopted.

From the beginning, membership in the junior chamber of commerce was limited to young men under 36 years of age. The fundamental principles adopted by the organization were so basically sound that the movement has spread to more than 2,750 communities in the United States with a membership of more than 200,000 young men. Today, it is international in scope with more than 3,500 chapters in 52 countries and an overall membership of approximately 300,000. There are chapters in every State of the Union, including Washington, D. C., Alaska, and Hawaii, with a national headquarters building in Tulsa, Okla., worth \$350,000, employing a fulltime staff of 50 people. Before World War II, it was said that the junior chamber of commerce had spread to the four corners of the world and, like the British Empire, the sun never sets on it. Now, the membership is larger than ever before, notwithstanding the fact that all clubs behind the Iron Curtain are no longer in operation.

I am convinced that one of the primary reasons for the phenomenal growth of this wonderful service organization is the fact that it is composed of only young men. Due to the youth of its membership, many worthwhile projects have been undertaken, and accomplished, that other service clubs would not have attempted. It is a medium of expression for the ideas and ideals of young manhood, and through it young men are given an opportunity to serve their communities unselfishly, and at the same time gain experience in civic affairs and general leadership.

Another reason for the great success of the Jaycees is the fact that the organization was founded and promoted entirely through volunteer efforts. National headquarters has never had a paid organizer. All extension work has been carried out by the various local chapters. The spirit and enthusiasm of a Jaycee chapter in one city almost invariably spreads to a nearby community, and in this way, the movement has become worldwide.

The official definition of the organization is, "A junior chamber of commerce is a constructive action organization of young men who devote a portion of their time to community service in the public interest, developing young men as leaders in their community."

By helping their fellowman, Jaycees help themselves. Through service as young men, they become better equipped to render even greater service in the fu-

Today, I salute all Jaycees-the finest organization exclusively for young men in the world.

National CIO Protests Veterans' Cuts

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter addressed to the President of the United States on January 13, 1955, by Mr. L. S. Buckmaster, chairman of the committee on veterans' affairs of the Congress of Industrial Organizations.

I believe it is an excellent summary of the need to improve rather than curtail veterans' benefits for the welfare of the Nation as a whole:

NATIONAL CIO PROTESTS VETERANS' CUTS

CONGRESS OF INDUSTRIAL OGRANIZATIONS, CIO, Washington, D. C., January 13, 1955.

Hon. Dwight D. EISENHOWER, The White House,

Washington, D. C.

DEAR MR. PRESIDENT: As chairman of the committee on veterans' affairs of the Congress of Industrial Organizations, I am writing at this time to urge you to rescind your action of January 1 which greatly curtails the benefits to which veterans will become entitled after January 31.

This action will affect, under existing laws and military recruitment practices which we can expect to continue for some time, no less than I million American citizens a year for an extended period ahead, and therefore should not be taken lightly or without full consideration of the various principles and consequences involved. We do not believe that, under present circumstances, such action can be squared either with the needs of veterans, or with the wishes of the American people as a whole.

In fact, your action runs directly contrary the principles of the resolution on "Veterans," which the members of the Congress of Industrial Organizations adopted at the 16th constitutional convention of the CIO in Los Angeles last month. I am enclosing a copy of this resolution for your information, but I want to point out here in sum-mary that the whole emphasis of the CIO's viewpoint is that, rather than curtailment of previously existing benefits, new legislation which liberalizes, improves and extends veterans' benefits is required, if the men and women who are serving this Nation in its Armed Forces are to be treated with the justice they descree upon their return.

As our convention declared, "Veterans Presently being discharged from service and

returning to civilian life have found unemployment, inflated living costs and inadequate wage levels, a critical shortage of lowcost homes, inadequate rent-control laws, which have combined to place the veteran along with all other working men and women of the Nation in a position of increasing in-ability to supply for themselves and their families the necessities of life." There has been no substantial change in the national economic picture since this resolution was adopted that leads us to believe that the same conditions do not prevail today. Our convention further declared, and the CIO still strongly believes, that "the returning veteran is entitled to full restitution and protection against the loss of any of his rights, benefits, and opportunities, which he may have been deprived of as a result of his absence from civilian life."

Particularly at a time when the profits after taxes of business have risen even higher than the year before, and are at or near the highest point in our history, there can be no excuse for curtailing benefits to veterans, since they are generally part of that segment of our economy most in need of expanded purchasing power and income. The benefits which your order will deny to veterans after the cutoff date include, besides the much-needed, beneficial and publicly approved college scholarships, such things as mustering-out pay up to \$300, special veterans' unemployment insurance, and the special low-interest loan guarantees on homes, farms, and businesses, all of which are important protections to ease the readjustment to civilian life of men and women called upon to sacrifice normal peacetime living for the good of their country. The loss these benefits will only serve to further curtail purchasing power in that part of the economy which most needs increased in-come at this time if we are to prevent a depression and put our national economy once again on the road to expansion.

We also protest against those curtailments of benefits imposed by your order which deny veterans special hospital privileges and pensions for ailments not due to military service, and which put compensation payments for service-connected disabilities on a peacetime basis, which is 80 percent of the wartime The very fact that, in issuing your order, you recognized that the unusual needs of the Nation still prevent you from ending the state of national emergency proclaimed in 1950 indicates that the present economic picture is still under severe strains and that there is no justification for expecting veterans injured in military service, or otherwise ailing, to have to pay any less for care than those previously released. These special hospital and compensation benefits were written into law to protect disabled veterans from the identical hardships and higher costs they still will have to face today if they are in need of medical care. Instead of such curtailment, the CIO believes that there should be an enlargement of Veterans' Administration hospital facilities and services for veterans, and a continuation of outpatient treatment and dental care for persons presently returning from the Armed Forces identical to that granted World War II veterans.

We also believe that, rather than the curtailments you propose, a broad program of new legislation is needed which would bring pensions for all disabled veterans and their dependents up to current increased cost of living conditions, provide more liberal and effective loans to veterans for the purchase of homes, businesses, and farms, and improve veterans' unemployment compensation and benefits. We further believe that legislation for a Federal bonus for all World War II and Korean veterans, based upon the principle of adjustment of service pay in the light of living costs, should be enacted im-mediately, if our Nation is not, by neglect, to treat unfairly millions of men and women to whom it owes a tremendous debt of gratitude for their patriotic service and sacrifice.

We believe, too, that improvement, rather than curtailment, of veterans' benefits would benefit the Nation as a whole, by contributing to the realization of our goals of maximum employment and maximum purchasing power as set forth in the Employment Act of 1946.

Sincerely yours,

L. S. BUCKMASTER.

FPC Control of Natural Gas

EXTENSION OF REMARKS OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. FISHER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include two editorials; one from the January 9, 1955, issue of the Houston Chronicle and the other from the January 11, 1955, issue of the San Angelo (Tex.) Standard-Times. Both of these editorials deal with the implications of the Supreme Court which gives the Federal Government the authority to fix the price of natural gas where it is produced and gathered for market-an encroachment upon the rights of the States to deal with a subject that is obviously intrastate in character. The two editorials follow:

[From the Houston Chronicle of January 9, 1955]

FPC CONTROL WILL CUT SUPPLY OF GAS, DAMAGE ALL CONSUMERS

When the Supreme Court ruled that the Federal Power Commission has the authority to regulate the price of gas at the well, if the gas is destined for interstate transmission, it opened a new avenue of Government regulation which should be as alarming to the consumers as to the producers of gas. It should be alarming also to State oil and gas regulatory bodies, to State legislators who do not want their legislative prerogatives infringed upon and to all who believe in the perpetuation of States rights as guaranteed by the United States Constitution.

The consumer in the nonproducing State might wonder what Federal price-fixing control of gas means to him. He might even think he can get cheaper gas by having the Federal Government control the price of it. He is wrong. When any commodity is in short supply its price goes up even under Federal regulation. Other things happen to affect the consumer when the supply is Persons wanting gas and expecting to get it soon will be disappointed, because the available supply will go to present users. There is a case of this kind now in the courts, where the city of Chicago is trying to force some Texas gas producers to supply new users in Chicago. When the supply becomes

short, even present users may be rationed.

The question naturally arises, "Why would the supply become short?" There are two answers. First, it costs a great amount of money to drill wildcat wells to find new gas pools, from \$100,000 for a well on land \$1 million in coastal waters, where a number of discoveries are being made. No one is going to take such a huge risk where the price of his product is regulated at a fixed rate, probably lower than the field prices set by supply and demand. Naturally, when exploration drops, present supplies dwindle. The second answer is that independent producers will sell their gas for use wholly within the State, to avoid Federal regulation. The transmission lines won't be able to get a sufficient supply of gas to pipe to non-

producing areas.

This would hurt industrial plants of the North and East, as well as the household consumer. Plants which needed a big sup-ply of gas for fuel would be induced to move to gas-producing States, which in turn would adversely affect the economy of the areas in which they are now located.

State regulatory bodies would have their powers taken over by FPC, even to conservation authority, which traditionally is a State function. For example, most of the gas which goes into the transmission lines is "residue" which comes up with oil and was burned in flares before a use was found for it. FPC can't control the gas unless it controls the oil. The next step by FPC will be control of oil.

As far as that goes, why not also control all production that is in some way connected with interstate movement—and what isn't? Under the same principle, FPC can control the price of gasoline for airplanes, crossties for railroads, cotton for dresses, and all other types of production.

The 84th Congress will act on legislation to amend the Natural Gas Act. Congress should pass a bill to clearly and firmly prohibit the Federal Government from controlling the producing, gathering, and local distribution

[From the San Angelo (Tex.) Standard-Times of January 11, 1955]

GAS RULES AT WELLHEAD BELONG WITH STATE AGENCY

The question of the right of an arm of the Federal Government to regulate the price of natural gas at the well is to come before Congress at the present session.

It is an important decision for consumers and producers alike. A commission in far-Washington (the Federal Power Commission) has been given authority by the Supreme Court, rather than the Congress, to pass upon the peacetime price of gas produced from a well on a farm in the re-mote areas of the Nation. It is an anomalous situation. The Federal Power Commission not only did not want this authority but refused to exercise it until ordered to do so by the Court in the Phillips case.

The fact that oil is produced with gas and that oil producers may be regulated as well as gas producers, under conceivable extension of this new authority, has forced some oil companies to shut in their wells. In Sutton and Schleicher Counties, within the last year, Clarence Norsworthy, of San Antonio, an active independent operator, has capped several gas wells which he completed as producers in these counties at a cost of \$60,000 to \$65,000 each. Other oil Other oil producers have done the same thing. a situation is not to the advantage of gas consumers, gas producers or the owner of land from which gas can be produced.

Only a few years ago you could ride by night from Big Lake to the New Mexico line and always be within sight of a gas flare. Not only was there no market Texas for an appreciable percentage of the gas produced in this State, but apparently none anywhere else.

There is still an amazing amount of gas flared on leases and lost forever. In recent years the long-line gas-transmission companies have provided a market for Texas gas by transmitting it to the North and East. Their ingenuity and investments gave consumers throughout the Nation a clean.

efficient fuel enhancing the wealth of Texas and other producing areas.

The Texas Railroad Commission has pioneered in the regulation and conservation of oil and gas in the Nation. Proration first was established in Texas. Texas has cut its production with more severity than other States in its effort to keep supply and de-

mand in balance and eliminate waste.

The present members of the Federal Power Commission by refusing to undertake the precarious task of setting a price on natural gas at the wellhead must have realized it was a job they could not accomplish in equity

Congressman John E. Lyle, Jr., of Corpus Christi, who did not seek reelection last year, summed up the situation well in an article in the November 5 issue of Public Utilities Fortnightly, advocating amendment of the Natural Gas Act of 1938. He said:

The Congress intended this act to provide Federal regulation in that area which was beyond State control, and only in that area. There was no thought, no idea, and certainly no necessity for giving to an agency of the Federal Government control of natural gas at its source; that is, over the producing and gathering phases of the industry. Nor was there any idea of necessity for Federal control over the distribution of the product when it reached the consuming area. These phases of the industry were, and are, suffi-ciently regulated by appropriate State

The long-line transmission companies are public utilities and should be regulated by the FPC and other appropriate regulatory bodies. So far as we know, no one would advocate, not even these companies, that they be freed from operating in conformity with the rules of these regulatory agencies.

If the long-line transmission companies are also gas producers they should be required to take their own gas rates ability with other producers in a given field or area at no more than the posted price in the field. Their gas-production facilities should be neither favored or discriminated against as to price or volume.

Gas-transmission lines have plans for investing \$1 billion in new lines in 1955. are taking natural gas to every corner of the Nation. Texas is the largest gas-producing State, and all of us have a vital interest in not thwarting the growth of this industry by artificial barriers set up by those who revel in regulation.

Last year 600 trillion cubic feet of gas was added to the national reserve. If consumers are to be supplied with gas we need to encourage development of sustained reserves on a continuing mounting scale. We must build

adequate pipelines to carry it.

We think the Texas Railroad Commission is capable of protecting every public interest touched by the gas business as far as it affects this State. The regulatory bodies of other States can do the same with producing and distributing companies in their respective States. The Federal Power Commission can regulate the utility features of the transmission lines. Congress needs to define the field of regulation between the State and Federal regulatory authorities.

But producing gas in Schleicher or Sutton Counties is not interstate commerce. ington is not the place to administer this feature of the oil and gas business. It can best be done by the States.

We believe every member of the Texas delegation in Congress will vote to make crystal clear the intent of Congress that the Federal Power Commission is not the agency to set the price of gas at a well or to muscle into a wide variety of price controls over oil distillate and minerals.

A Rough Business

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. AYRES. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following article from the Wall Street Journal of January 17, 1955:

A ROUGH BUSINESS

The Democratic Party, which has numbered among its prominent men such rough and tumble contestants as the late Charles Michelson and Harry Truman, cries in in-jured innocense that it was smeared by Vice President Nixon during the campaign.

It reminds us of a story which we heard years ago from the lips of an historic Democratic figure, William Jennings Bryan.

Mr. Bryan told of the man who remarried a few weeks after his wife died. The neighbors in the small town were incensed and one night they assembled at the man's house beating pans, blowing horns, and making other noises which were not in any way intended as approbation.

The man came to the porch and addressed

the people on his lawn:

"Aren't you ashamed to come here and make all this noise so soon after my wife died?"

To get back to Mr. Nixon, he is accused of saying that the Democratic Party was soft on communism. Mr. Nixon says he did not say that. What he did was to cite some of the past associations of some people who were running for office.

Well, we know of no one who believes that being a Democrat is synonymous with treason. Surely Mr. Nixon does not. But it is still certainly a matter of record that when Communists were allowed to infiltrate the Government offices, it was under a Demo-cratic administration. That is just as undeniable as the fact that when the Republicans were previously in office there was an economic depression.

The Democrats developed the Republican misfortune to their own benefit and it is unlikely that the Republicans will cease to call attention to the fact that the Democrats might have been more careful about Com-

The campaign against Mr. Nixon is quite patently directed to more than one end.

The Democrats naturally would like to have people quit talking about Communists who were in the Government. It is still a potent political issue. And if they can silence Mr. Nixon, they will have discouraged others who might like to exploit the

Also, Mr. Nixon is a considerable Republican figure. He is an effective campaigner. an able legislator, and in the field of politics gives every sign of knowing which end is up. It would be smart if the Democrats could discredit him by fastening upon him the reputation of indulging in tactics less than honorable.

Furthermore, there is a leftwing in American life, not all of whom are Democrats but some of whom are. And these few some-times seem to wield a disproportionate influence in Democratic councils—at least they make more noise per head than other Democrats. Some of these gentlemen have a record of a past emotional investment in communism. And they have not forgotten that Mr. Nixon was the man mainly responsible for running down Alger Hiss.

As we intimated at the beginning of this essay, this business of politics is a rough business at time, and that being so the attack on Mr. Nixon is not an unexpected development. If things were turned around the Republicans would probably be doing what the Democrats are now doing.

But politics is also a tricky business. And one of its pitfalls is that by attacking a man you may build him up when you think you are tearing him down. We wonder if the Democrats have thought that they may be building up both Mr. Nixon and the issue of communism.

Defense of the Principle of Racial Segregation

EXTENSION OF REMARKS

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I am pleased to submit herewith a newspaper account of an address by Dr. G. T. Gillespie, a distinguished Mississippi educator and clergyman. This account appeared in the Jackson (Miss.) Clarion Ledger-Jackson Daily News on November 7, 1954, and includes the full text of Dr. Gillespie's address:

A temperate, scholarly and documented discussion of segregation, delivered by Dr. Guy T. Gillespie, distinguished Presbyterian minister and educator, before the Synod of Mississippi in Jackson the past week, is a statement of great significance in the current discussions of segregation, particularly as related to schools and churches.

In response to requests, it is printed in full text, emphasizing two major points: Segregation may be defended on Biblical grounds, and is not "un-Christian." Segregation is not necessarily discrimination.

Dr. Gillespie, for more than 32 years president of Belhaven College, presented this carefully prepared "Defense of the Principle of Racial Segregation."

"The problem of race relations is not new. It is as old as civilization. Whenever in the history of the race two peoples of significantly different characteristics have come in contact with each other, or have sought to occupy the same area, a problem of race relations has inevitably developed. The closer the contact, and the more nearly the numerical strength of the two groups has approached equality, the more difficult and acute the problem has become.

"The problem of racial relations throughout the world today has been greatly accentuated by the rapid development of modern means of communication and transportation, which have brought all the peoples of the world into much closer contact than ever

"The problem has also been complicated by the worldwide spread of Kari Marx's doctrine of internationalism and the classless society, combined with the vigorous propaganda of Soviet communism to bring about a world revolution and the breakdown of all national and racial distinctions and to effect the complete amalgamation of all races.

"The Anglo-Saxon and English-speaking people have steadfastly opposed and resisted the mixture of their racial stock with that of other peoples, especially where the physical and cultural characteristics were widely dissimilar, and wherever they have gone, around the world, they have consistently instituted and maintained a pattern of segregation, which uniformly provided an effective check against the process of amalgamation, and which has preserved the racial integrity of the English-speaking peoples of the world.

"The race problem in America arises inherently out of the concentration of large masses of the Negro race in areas predominantly Anglo-Saxon in racial type and in culture, and where the principle of racial segregation has been generally, if not uniformly, upheld by legal, social, and moral sanctions.

Comparatively little of the opposition to the principle of segregation has come spontaneously from the pureblood Negroes, or from the masses of the Negro population; more strenuous opposition has come from the Negroes of mixed blood, who have migrated from the South to northern cities, and who bitterly resent the tensions and discriminations to which they find themselves and their families subjected in their efforts to secure recognition in northern communities. It is not without significance, however, that a very considerable part of the violent agitation against segregation stems from sources outside the Negro race, and outside of America, and coincides with the worldwide movement for racial amalgamation which has its fountainhead in Moscow.

"Here therefore is the crux of this whole problem of racial relations, whether we face it in America or in the world at large; it is essentially a choice between the Anglo-Saxon ideal of racial integrity maintained by a consistent application of the principle of segregation, and the Communist goal of amalgamation implemented by the wiping out of all distinctions and the fostering of the most intimate contact between the races in all the relations of life.

"Laying aside all sophistries concerning so-called civil rights, human brotherhood, or social equality, and the purely academic question as to racial superiority or inferiority, let us not evade the issue, nor close our eyes to the stark reality, but face it frankly and courageously; here in America, if we believe that the welfare of both the white and the Negro races would be promoted by preserving the integrity of each race, then we must maintain some effective and equitable form of segregation; if we believe that the welfare and happiness of both races would be promoted by intermarriage and the development of a race, then all we need to do is to let down the bars of segregation in the homes, the schools, the churches and in all areas of community life, and let nature take its

"But before we commit ourselves and our Nation, finally and irrevocably to this fateful choice, let us recall and weigh carefully some pertinent considerations which may be offered in defense of the principle of segregation.

"1. SEGREGATION IS NOT THE CHILD OF RACE PREJUDICE

"In recent years the much abused term race prejudice has been associated indiscriminately with the principle of segregation in the effort to discredit it by implying low origin and bad associations. The difficulty and the injustice in this connection results from the confusion of race prejudice and race pride. Race prejudice is indeed a blind, unreasoning, fanatical emotion which issues in race hatred and inhumanity, and is essentially destructive and immoral in its end results. Race pride on the other hand is a rational, normal, positive principle, and is essentially constructive and moral. Pride of race, like love of home and love of country has been one of the mightiest forces making for human happiness and progress.

"Indeed, these three principles are indissolubly linked together in the hearts of men and in the experience of the race, and must stand or fall together. Surely it is not merely a coincidence that the forces which are battling to break down race pride, which they mistakenly identify with race prejudice, are the same forces which are insidiously seeking to undermine and destroy the love of home and the love of country in all the lands upon which their baleful shadow has been cast.

"2. SEGREGATION IS ONE OF NATURE'S UNIVERSAL LAWS

"In all nature, the herd instinct prevails to a greater or less degree, and all living creatures are drawn together in larger or smaller groups by certain affinities based upon common physical characteristics. Animals, by instinct, mate only with their own kind, perpetuating their own species and transmitting their natural or acquired characteristics to their offspring. No intermingling or crossbreeding with animals of widely different characteristics takes place except under abnormal or artificial conditions.

"The old adage 'birds of a feather flock together,' only expresses a fact of common observation and universal experience. There are many varieties of the bird family, but under natural conditions, so far as known, bluebirds never mate with redbirds, doves never mate with blackbirds, nor mocking-birds with jays. The fact that man also is a gregarious animal and that human beings everywhere and under all conditions of life tend to segregate themselves into families, tribes, national or racial groups, only goes to prove that all human relations are regulated by this universal law of nature.

"The recognition that man is not only a creature of instinct, but that he is also endowed with reason and conscience, whereby he is able to perceive and appreciate the significance of the larger unity of the race and his obligations to all members of the human family does not nullify or repeal the basic laws of human nature, but does provide for him a moral code under which he is obligated to exercise his freedom with due regard for the rights of his fellows.

"3. SEGREGATION TENDS TO PROMOTE PROGRESS

"It is an elementary principle of livestock breeding that improvement of type comes only through the careful selection of breeding stock, and the rigid separation of animals of dissimilar or indesirable characteristics. The phenomenal development of the racehorse, the drafthorse, the beef and dairy breeds of cattle, furnish impressive evidence that segregation promotes development and progress, and that it may be continued almost indefinitely by the consistent application of the principle; whereas the intermingling of breeding stock results invariably in the production of 'scrubs' or mongrel types, and the downgrading of the whole herd.

"The same principle applies with equal force to the process of human development. It is a noteworthy fact that down through the centuries the most conspicuous advances in human progress have been made by those peoples, who by reason of circumstances or by deliberate preference have been isolated to a great extent from other nations and races over long periods of time, and thus have been left free to develop their own peculiar genius and distinctive characteristics and culture.

"From the days of Abraham, approximately 2,000 years before Christ, the Hebrews, by divine command, became a segregated people, separated by traditions, customs, religion, and by strict codes of ethics, physical and social hygiene from their cultural heritage even down to our own day, and they have not only achieved the highest moral and spiritual development of all the peoples of the earth, but have made an invaluable contribution to the moral and spirit-

ual progress of mankind. In spite of many shortcomings, and in spite of being both the exponents and the victims of bitter racial prejudice the Hebrew people like the waters of the Gulf Stream in the midst of the ocean have achieved a mission and a destiny which would have been impossible had they abandoned the principle of segregation and become integrated with the nations which hemmed them in on all sides centuries ago.

"In a similar manner the Greeks, by reason by geographical situation and other circumstances, enjoyed for centuries comparative isolation from other peoples of the world whom they designated as barbarians. By reason of this separation they preserved with remarkable success the purity of their racial stock for hundreds of years, and succeeded in developing a physical vigor and vitality, and intellectual acuteness, an artistic perfection, and a political idealism which made Hellenic culture the pattern and inspiration for all western civilization.

"In modern times the most conspicuous example of the truth of this principle is found in the remarkable record of the British people. Insulated in many ways from the other peoples of Europe and of the world in their island homes, the British developed a vigorous racial stock and a virile and homogenous culture, and have persistently refused to integrate their bloodstream or their cultural heritage with those of alien or widely different racial types.

"Although numerically insignificant as compared with other peoples, the British have nevertheless made greater achievements in every field of human endeavor, and have made an immeasurably greater contribution to the total intellectual, social, economic, and moral welfare of mankind than any other people in ancient or modern times.

"Still another impressive and perhaps the most pertinent illustration of the proposition that segregation tends to promote progress, is the amazing record of the Negro in America, and particularly here in the South, where the two races have lived side by side in approximately equal numbers in many areas, under a system of segregation, more or less uniformly maintained since the close of the Civil War. Despite the dire poverty and disorganization of the postwar period, the false leadership of unscrupulous whites and the charlatans of his own race, and the many cruel injustices which he suffered at the hands of dishonest landlords, callous public officials and the much-publicized mob violence, the southern Negro has somehow managed to acquire a greater number of homes, farms, banks, and other properties, has achieved a higher standard of living, and today enjoys larger educational and economic opportunities, is happier and better adjusted, than can be said of any comparable number of his race at any time in their history or in any part of the world today.

"4. SEGREGATION DOES NOT NECESSABILY INVOLVE DISCRIMINATION

"Whenever two individuals or groups of widely different physical characteristics are brought into close contact, it is likely or even inevitable that some discrimination should occur, especially where the situations are competitive; but such discrimination is a spontaneous human reaction and cannot be charged against the principle of segregation.

"As a matter of fact, segregation, by reducing the number of points of contact, tends to lessen friction and tension, and especially if there is clear recognition on the part of both races that the chief reason for segregation is the desirability of preventing such intimacies as might lead to intermarriage and the amalgamation of the races, then the chief occasion for misunderstanding and discrimination is removed.

"Assuming the development of racial pride in the Negro race to the point where he would be as zealous as the white man in safeguarding the integrity of his race, and that both races would cheerfully accept some effective form of segregation as the only effective means of achieving that end where the two races live side by side in large numbers, there would seem to be no insuperable difficulty in working out plans which would provide "separate but equal" opportunities and facilities for both races, which would avoid any suggestion of discrimination, and would promote the largest possible harmony and cooperation between the races.

"5. THE PRINCIPLE OF SEGREGATION MAY BE DEFENDED ON BIBLICAL GROUNDS AND IS NOT UNCHRISTIAN

"While the Bible contains no clear mandate for or against segregation as between the White and Negro races, it does furnish considerable data from which valid inferences may be drawn in support of the general principle of segregation as an important feature of the divine purpose and providence throughout the ages.

"Concerning matters of this kind, which in the inscrutable wisdom of God have been left for mankind to work out in the light of reason and experience without the full light of revelation, we dare not be dogmatic but we do well to examine with open mind some of

the more pertinent references.

"1. The first separation (Genesis 4: 11-26): A mark is placed upon Cain, and he is separated from the other branch of the human family, represented by Seth and his descendants. From Cain were descended men of great vigor and inventive genius, from Seth were descended men who began to call upon the name of the Lord, and were evidently those elsewhere referred to, as the Sons of God.

Demoralization resulting from intermarriage (Genesis 6: 1-7): The promiscuous intermarriage of the Sons of God, that is, the descendants of Seth, with the Daughters of Men, who were apparently the descendants of Cain, resulted in the complete breakdown of family life and such widespread immorality and wickedness as to provoke the Lord to destroy the earth with the flood. A possible though not necessary inference from this tragic story is that the intermarriage of dissimilar groups, whether the differences be moral, cultural or physical is not conducive to the preservation of wholesome family life, or to morality and therefore is contrary to the purpose and will of God.

"3. New divisions after the flood stemming from sons of Noah (Genesis 9: 18-29): After the flood, the 3 sons of Noah—Shem, Ham, and Japhet—became the progenitors of 3 distinct racial groups, which were to repeople and overspread the earth.

"The descendants of Shem migrated east-ward and occupied most of Asia; the descendants of Japhet migrated westward and ultimately occupied the continent of Europe, while the children of Ham moved generally southward toward the Tropics and occupied the continent of Africa, and possibly southern Asia and the islands of the Pacific.

"This brief record, the accuracy of which has not been successfully disputed by the anthropologists and ethnologists while affirming the unity of the race, also implies that an all-wise providence, has determined the times before appointed, and the bounds of their habitation. Which same providence by determining the climatic and other physical conditions under which many successive generations of the several racial groups should live, is thereby equally responsible for the distinct racial characteristics which seem to have become fixed in prehistoric times, and which are chiefly responsible for the segregation of racial groups across the centuries and in our time.

"4. Origin of linguistic differences (Genesis 11: 19): This indicates that the confusion of tongues, which took place at Babel, with the consequent scattering of the peoples, was an act of special divine providence to frustrate the mistaken efforts of godless men to assure the permanent integration of the peoples of the earth. Incidentally, it indicates that the development of different languages was not merely natural or accidental, but served divine purpose, in becoming one of the most effective means of preserving the separate existence of the several racial groups.

"5. Abraham called to a separated life (Genesis 12-25): Abram, later changed to Abraham, was called to separate himself from his home and his kindred in Ur of the Chaldees and to live as a "stranger in a strange land." Under divine guidance and blessing he and his household lived peaceably with the inhabitants without mingling with them socially or intermarrying with The covenant of circumcision instigated by God provided a sign or seal, which was to distinguish and set apart in a most significant way the "seed of Abraham," or the Hebrew people from all the other peoples of the earth throughout all generations. Many incidental circumstances, such as the refusal of God to allow the son of Hagar, the Egyptian bondwoman, to become the heir of the covenant promise, the great care exercised by Abraham to secure a wife for his son Isaac from among his own kindred rather than from among the Canaanites, and a similar concern manifested by Isaac and Rebekah concerning wives for their sons, all emphasize the importance which is attached to the principle of segregation, and doubtless paved the way for the emphasis given to it in the Mosaic economy and in the subsequent history of Israel.
"6. Prohibitions against the mingling of

"6. Prohibitions against the mingling of diverse things (Leviticus 19: 19): According to the law delivered to Moses, the cross-breeding of diverse strains of cattle, the planting of mixed seeds, and the mixing of v.ool and linen in a garment were forbidden. We are not told the reasons for this curious law, but it seems impossible to escape the conclusion that if such intermixture of diverse elements in the lower orders of animal and plant life, were unseemly and contrary to the divine purpose, the same principle would apply with even greater force with respect to human relations.

"7. The warnings of Moses against intermarriage with other peoples (Deuteronomy 7: 3): Moses strictly warned the Israelites against allowing their sons and daughters to intermarry with the pagan peoples with whom they came in contact, under the penalty of bringing upon themselves the divine wrath and judgment. This warning was emphasized repeatedly, and was specially burned into the consciousness of the nation by the terrible penalties which were inflicted upon those who committed whoredom with the daughters of Moab at Baal-Poor (Numbers 25: 1-8).

"8. Ezra's condemnation of mixed marriages (Ezra 9-10): After the return of the Jews from the Babylonian captivity, it was discovered that great numbers of the prominent Jews had taken wives from among the heathen people of the land. This caused Ezra to rend his clothes and tear his hair, and cry unto God for mercy upon the sinning nation. The drastic steps which were taken to purge out this evil practice, emphasized anew the vital importance which was attached to the preservation of the purity and integrity of the racial stock by the leaders of the nation and by their divine ruler.

"9. The attitude and teachings of our Lord (The Four Gospels): There is no question but that the emphasis placed by Our Lord upon the love of God for the whole world (John 3: 16, and other passages) was intended in part at least as a rebuke to the

bigotry and intolerance of the Jewish leaders, and to counteract the attitude of contempt and indifference which the Jewish people as a whole manifested toward the Other peoples of the world. Likewise His declaration as to the supreme worth of the human soul (Matthew 16: 26) and His last great command to His followers to go into all the world and make disciples of all nations (Matthew 28: 19-20), make it abundantly clear that the redeeming love of Christ knows no limitations of class or condition or nationality or race, but like a mighty river sweeps across every natural or artificial barrier to bring the water of life to the thirsty souls of men.

"He used the story of the Good Samaritan to rebuke the smug complacency and nar-rowminded prejudice of the Jews, but He did not ignore or denounce racial distinctions, nor did He set plans on foot to abolish them and to bring amout amalgamation of the Jews and the Samaritans, or of any other races. As a matter of fact, in sending out the 12 on their first gospel mission, He directed them to go 'only to the lost sheep of the house of Israel' (Matthew 10: 5-6) and in dealing with the Syro-Phoenician woman He takes particular care to emphasize the different status of the two races before granting her request. The Golden Rule, as proclaimed by our Lord, must unquestionably be applied to the field of race relations as well as to all other human relationships. At the same time no reasonable interpretation of this great principle requires to do unto or for, the individual or the race, for the sake of some fancied benefit or momentary satisfaction that which we have reason to believe will in the end imperil the stability of the social Order and the future welfare of the race.

"10. The attitude and teaching of the Apostles (the Acts and the Epistles): The gift of tongues at Pentecost was undoubtedly a prophecy that the Gospel should be Preached to all nations and that every people should hear the Gospel in their own languages, but it gives no hint that all linguistic, national, or racial differences are to be wiped out in the Gospel dispensation.

"Peter's vision on the housetop in Joppa, his subsequent visit to the home of Cornelius, the Roman centurion, his baptism of the household after they had received the Holy Ghost, and his statement that "God is no respecter of persons," marks the removal of the Jewish traditions and prejudices which barred the entrance of the Gentiles in the household of faith, and sets the pattern for Christianity as the new religion for all nations and all the peoples of the earth.

"Paul, the apostle to the Gentiles, naturally had more to say concerning this question than any of the other New Testament writers. In his notable speech to the Greeks at Athens, he said, 'God, * * * hath made of one blood all nations of men, for to dwell on all the face of the earth; and hath determined the times before appointed and the bounds of their habitation' (Acts 17: 24-26). Writing to the Colossians he said: 'And have put on the new man, which is renewed in knowledge after the image of Him that created him; where there is neither Greek nor Jew, circumcision or uncircumcision, Barbarian, Scythian, bond nor free, but Christ is all in all."

"In the first passage Paul affirms the unity of the race based upon a common origin, concerning which there can be no difference of opinion among those who accept the authority of the Bible. In the second passage Paul asserts the unity of all believers in Christ, regardless of their racial differences, but this unity is a spiritual relationship resulting from the mystical union of each believer with Christ himself, in which all enjoy the same spiritual privileges and benefits. That Paul had in mind the absolute uniformity of believers in external relations and the wiping out of all distinctions of race,

nationality, social status, sex or cultural heritage, is disproven by the fact that Paul heritage, is disproven by the fact that Paul never ceased to identify himself as a member of the Jewish race, and he made very practical use of his right to Roman citizenship. He recognized the master-slave relationship prevalent in Greek and Roman society and enjoined obedience to the reciprocal duties arising therefrom. He also clearly recognized the status assigned to women by social custom, and denied to women some of the privileges and functions exercised by men in the churches under his supervision.

"11. Preview of the church triumphant (Revelations 4: 7): The seer of Patmos was permitted to behold in wonderful symbolism a preview of the church triumphant, the grand consummation of redemptive purpose through the ages. Before the rainbow-circled throne set in the midst of the heavens, he beheld 'a great multitude which no man could number, of all nations, and kindreds, and peoples and tongues, uniting in a mighty chorus of praise to God and to the Lamb upon the throne. It would be presumptuous indeed to say exactly what this symbolism means, or to rest the validity of any conclusions upon such interpretation; nevertheless it accords well with the whole scheme of creation, providence, and redemption to see in the rainbow which circled the throne a fitting symbol of the spectrum of redeemed humanity made up of the peoples of every nation, kindred, race, and language blended into a beautiful and harmonious unity, and yet each preserving its own distinctive genius and virtues, the better to show forth the infinite riches and diversity of the divine glory and grace throughout the ages to come.

"12. Summary of Bible references: There are doubtless many other parts of scripture which may have some bearing upon this question, but which we cannot undertake to deal with in this discussion. But to summarize the interpretations of the passages above considered the following conclusions would seem to be warranted; (a) Since for 2,000 years the practice of segregation was imposed upon the Hebrew people by divine authority and express command, and infractions of the command were punished with extreme severity, there is certainly no ground for the charge that racial segregation is displeasing to God, unjust to man, or inherently (b) Since Christ and the Apostles taught the love of God for all mankind, the oneness of believers in Christ, and demonstrated that the principles of Christian brotherhood and charity could be made operative in all relations of life, without demanding revolutionary changes in the natural or social order, there would appear to be no reason for concluding that segregation is in conflict with the spirit and the teachings of Christ and the Apostles, and therefore un-Christian.

"6. SEGREGATION IS A WELL-CONSIDERED AND TIME-TESTED AMERICAN POLICY

"Ample evidence is available to show beyond reasonable doubt that segregation represents the best thinking of representative American leadership, and as a time-tested national policy rests upon moral and ethical principles and not upon blind and unreasoning prejudice as has been frequently and loudly charged by some of its latter-day critics.

"The principle of segregation has been incorporated into the constitutions of 17 of the sovereign States of the Union, having been placed there by the people who were most directly concerned, and who were in position to have firsthand knowledge of all phases of the problem. Many other States approved the principle by statutory legislation, and practically all of the States at one time or another have adopted laws prohibiting intermarriage between the white and Negro races. State and Federal courts have uniformly approved these constitutional and statutory

provisions, and the Supreme Court of the United States in an unbroken line of decisions extending down to the early part of the present year confirmed the principle of segregation and established it as a firm principle of American public policy. The Congress of the United States, in the face of tremendous pressure from political agitators and minority pressure groups has steadfastly refused to abolish segregation in the public schools of the District of Columbia or to outlaw it in the States.

"The recent decision of the Supreme Court notwithstanding, there are many concrete evidences that public sentiment throughout the Nation is still strongly weighted in favor of segregation in the public schools or at least of leaving the decision with respect to it, to these States and communities where Negroes constitute a substantial proportion of the population.

"Thomas Jefferson

"Thomas Jefferson, author of the immortal Declaration of Independence devoted much attention and study to the Negro problem. He advocated with great earnestness the emancipation of Negro slaves in America, but he believed so strongly in the physical separation of the races for the welfare of both, that he proposed that the Negroes should be peaceably repatriated in Africa at Government expense. His point of view is clearly set forth in this extract from his Autobiography written in 1821 (vol. I, p. 48), Nothing is more certainly written in the book of fate than that these people are to be free; nor is it less certain that the two races, equally free, cannot live in the same government Nature, habit, opinion, have drawn indelible lines of distinction between them. It is still in our power to direct the process of emancipation peaceably.'

"Abraham Lincoln

"Abraham Lincoln, one of the wisest and farseeing of American statesmen, venerated and almost delfied by the Negro race as their Great Emancipator and unfailing friend, devoted intense study to the race problem over a long period of years. He, like Jefferson, became so thoroughly convinced of the necessity of the physical separation of the races that he considered the most practical solution of the problem was to colonize the Negroes in Africa or the West Indies. actually had made proposals to this effect to Congress and was engaged in working out plans for putting it into execution at the time of his tragic death. In a speech made by Lincoln at Charleston, Ill., September 18, 1858, he said, 'I will say then, that I am not now, nor ever have been, in favor of bringing about in any way the social and political equality of the white and black races . That I am not, nor ever have been, in favor of making voters or jurors of Negroes, nor of qualifying them to hold office, nor to intermarry with white people; and I say in addition to this that there is a physical difference between the white and black races which I believe will forever forbid the two races living together on terms of social and political equality.'

"Again, in an address made to a group of free Negroes at the White House on August 14, 1862, Lincoln said: 'You and we are different races. We have between us a broader difference than exists between any other two races. Whether it is right or wrong I need not discuss, but this physical difference is a great disadvantage to us both, as I think.

* If this is admitted, it affords a reason, at least, why we should be separated.'

"It is perhaps greatly to be deplored that the great plans of Lincoln for the segregation of the races, and for the equitable and permanent solution of the American race problem were frustrated and defeated by his tragic and untimely death. In retrospect we may well count it the greatest disaster which ever befell the South and the Nation. In the providence of God it is still possible that we may yet find a just and wise solution of this great problem in the light of Lincoln's prophetic vision, and in keeping with his patient spirit and the kindly impulses of his great heart. Many other testimonies could be cited from outstanding leaders in American public life to support the proposition, that the only just and wise solution of the American race problem must involve the recognition of the essential differences between the two races, and the necessity of some effective form of segregation which would assure the preservation of the integrity of both races.

"Booker T. Washington

"It was the recognition of this truth which made Booker T. Washington the most influential leader and the greatest benefactor of the Negro race in his generation, and perhaps in the whole history of the Negro race. All would-be leaders and promoters of better race relations in America today, would do well to study his realistic approach to the problem and follow his wise leadership. In a notable and epoch-making address delivered at the Atlanta Exposition in 1895, pleading for cooperation between two races he sounded the keynote of his philosophy, and provided for all men of understanding and goodwill a key to the solution of the problem: It is eminently fitting that this discussion should be concluded with the quotation of his wise words; he said, "The wisest among my race understand that agitation of questions of social equality is the extremest folly, and that progress in the enjoyment of all the privileges that will come to us must be the result of severe and constant struggle rather than of artificial forcing. . . In all things that are purely social we can be separate as the fingers, yet one as the hand in all things essential to mutual progress.' "

The Press and Eisenhower Record

EXTENSION OF REMARKS

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1955

Mr. MOULDER, Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an article entitled "The Press and Eisenhower

Record":
THE PRESS AND EISENHOWER RECORD

(By Anthony H. Leviero, Washington correspondent of the New York Times, in the International Press Institute Report, Zurich)

(Eniron's Note.—New York Times correspondent says Washington newsmen are producing plain, hard facts about administration's work, but editorial pages are being more than kind; cites numbers game, lists other issues begging newspaper attention.)

It required a journalistic campaign to shatter the "numbers game," the term that Washington correspondents applied to the Eisenhower administration's extravagant claims that it was sweeping great numbers of subversives out of the Government.

On this issue occurred perhaps the first concerted change of mood of the press toward the new administration. The tolerant, forbearing attitude toward the new President in his first year gave way to sharp criticism and demands for an honest count.

For more than 3 months the press had to besiege the administration, at White House news conferences and elsewhere, before there was any official admission that the figures were substantially false.

Unfortunately, the numbers game began at the highest level, in a White House statement that 1,456 security risks had been removed. That was last fall. Then a state paper of the President himself, his message on the state of the Union, carried the game forward by raising the figure to 2,200.

HUCKSTERING AND STATECRAFT

It should be said that President Eisenhower merely referred to those removed as security risks. But other high administration officials * * described the growing number of fired risks as traitors, Communists, and perverts indiscriminately.

The press corps, spearheaded by the Washington Post (now the Washington Post and Times Herald), the Washington Star, and the Washington Daily News, cracked the issue, proving that a substantial number of the figures, as well as the name calling, was wrong.

Zealous department officials, trying to do their part in helping the administration to steal the Red hunt away from * * * had served up to the White House figures that included persons who had died, were transferred to other departments, resigned under honorable conditions, or lost their jobs through the reduction-in-force policy.

For the Eisenhower administration the lesson should have been that huckstering does not pay. "Huckstering" was a common expression in Washington in 1953. Newsmen used it to describe the advertising and propaganda techniques that were in vogue.

These techniques had proved effective in the 1952 presidential campaign and the new regime thought it could get away with more, even in statecraft.

WITH EDITORIAL KID GLOVES

This particular aspect of the relationship of the press and the President awakened some proadministration papers to the realization that they would do little good for the country or for the press itself, to say nothing of Mr. Eisenhower, if they persisted in treating the administration with editorial kid gloves.

Among newspapermen much is being made of the fact that editors and publishers are being more than kind to the Eisenhower administration in numerous instances where it has appeared to be contrary to the public interest.

Robert L. Riggs, chief of the Washington bureau of the Louisville Courier-Journal, expressed this attitude as follows in an address at the annual Journalism Week of the University of Missouri's School of Journalism last April:

"I should like to emphasize that I did not say newspapers should be in a constant state of growling, snarling animosity toward public officials. That extreme to which most papers went in their bitter hostility toward Harry S. Truman is as deplorable as the bootlicking sycophancy which they displayed toward Dwight D. Eisenhower during his first year in the White House."

The Indochina situation is an example. Administration utterances on this issue fluctuated violently in the small compass of a couple of months. First the position was that the United States should not get involved in Indochina. Then that it would be a calamity if Indochina fell.

Then there were signs that we would intervene. Vice President Nixon said so in so many words, for one. Somewhere along the line the threat of massive retaliation got into the picture. And then it was plain nothing would be done. Indochina fell, and it is too early to say whether it is the first of the line of falling dominoes.

INDOCHINA POLICY AS A BLUFF

What newspapermen are saying now is that if Mr. Truman or Adlai Stevenson had been the White House, they would have been threatened with impeachment for the huckstered bluff that was our Indochina policy.

Yet few newspapers have given this issue sharp treatment.

Washington correspondents still marvel at the audacity of one of the biggest bluffs. That was the unleashing of Generalissimo Chiang Kai-shek in President Eisenhower's first-state of the Union speech.

Another puffed theme, though this one was fairly well deplored, was the administration's glowing suggestion that the day of liberation for the oppressed under the Soviet yoke might be near at hand.

In the same category may be mentioned the mysterious New Look defense program that was supposed to give the country more security for less money, although it involved the reduction of four divisions of troops. Another was the empty concept of instant and massive retaliation. It proved to be nothing more than a long-standing United States strategic concept in fancy dress.

To return to the domestic scene, President Eisenhower shocked many editors with his personal order directing the Atomic Energy Commission to make a power contract with a particular, private-power company, instead of having the Tennessee Valley Authority supply the additional power.

Many Washington newsmen believe that this unusual act, favoring a particular company at the expense of TVA and the taxpayers, has not received nearly as hard an editorial drubbing as it would have if Truman had ordered the deal

man had ordered the deal.

In the matter of civil service, some of the journalistic specialists in this field recently uncovered decisions that showed the intrusion of the spoils system. The exposure caused some of the decisions to be rescinded.

The Washington press corps, as usual, is coming through with the plain, hard facts of political life in the Capital, but many of the editorial pages haven't caught up.

The Pereyslav Episode in the Cold War

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. FEIGHAN. Mr. Speaker, as many Members know, the Ukrainian nation of some 45 million people is one of the most important of the captive nations behind the Iron Curtain. Being in fact the largest non-Russian nation not only in the Soviet Union but also behind the European Iron Curtain, Ukraine possesses one of the most extensive and heroic records of resistance and opposition to the imperialist Communist yoke of Moscow that deserves the laudatory respect of every true and firm believer in the inalienable rights of peoples to national self-determination and independence.

The tremendous strategic importance of Ukraine in the present struggle is perhaps nowhere more fully appreciated than in Moscow itself. As only part evidence of this, Moscow staged for a period of more than 6 months last year what has come to be known as the Pereyaslav celebration, in which the eternal friendship of Russia and Ukraine and the true independence of Ukraine in the Soviet Union served as the chief propaganda themes

The prime significance of this Pereyaslav episode for the interests and future

of America is clearly shown in an address on The Pereyaslav Episode in the Cold War, delivered last fall by Dr. Lev E. Dobriansky, professor of economics at Georgetown University and president of the Ukrainian Congress Committee of America, before the League of Americans of Ukrainian Descent in Chicago, Ill. The salient excerpts of this address make Worthwhile reading at this time when throughout the free world believers in freedom everywhere are conducting observances of the real independence of the Moravian nation on January 22, 1918. On the occasion of this observance I request that parts of this address be included in the RECORD:

THE PEREYASLAY EPISODE IN THE COLD WAR

Most Americans have probably never heard of the word Pereyaslav. Yet its grave significance to their future, perhaps even to their lives, is reflected in a recent episode in the cold war which, unfortunately, escaped the notice of many of our leaders and Journalists. Actually, only two persons of Public note grasped the full significance and meaning of this cold war operation, and endeavored to inform the American people accordingly. Dr. Harry Schwartz, of the New York Times, an outstanding analyst of the Soviet Union, wrote extensively on the cele-brations of the 300th anniversary of the Pereyaslav Treaty between Russia and Ukraine, and showed the historical distortions contrived by Moscow in its display of unity and cooperation between these two nations. The other person is the Honorable MICHAEL A. FEIGHAN of Ohio, one of the most informed legislators in Congress on the affairs of the Soviet Union, who, at the very beginning of the 6 months' celebration throughout the Russian Communist empire, delivered an important address on the significance of this elaborate show staged by Moscow. In the affairs of humanity, it is usual for only a few to pave the ways of understanding and appropriate action; and in this important instance, a prominent writer and a foresighted legislator combined their energies to leave their marks of contribution which only the future will magnify in their true proportions.

The treaty of Pereyasiav was contracted in 1654 as a military alliance between Ukraine and Russia. As in the numberless cases of recent times, Moscow violated its provisions, and sought to subjugate and annex Ukraine. The record of political rapacity on the part of the old Muscovite princes is substantially no different from that of present-day Muscovy. In traditional style the Kremlin now distorts the Perevaslay event as having marked the organic union of Ukraine and Russia. In its recent theses, distributed and circulated from one end of the present empire to the other, it harps on this fictitious theme, and debases the genuine historic struggle of the Ukrainian nation for selfgovernment and independence with shameless allegations of the reality of national independence in the current framework of the Red Russian empire. The Kremlin speaks of brotherhood, comradeship and equality between these two large East European nations, in the face of all facts to the contrary. It stages elaborate festivals, sports events and indoctrination exercises in commemoration of the falsified Pereyaslav event. Why? Why all this effort, cost and motion over a 6 month period in observance of an event that occurred 300 years ago?

Our official agencies whose job is to answer such questions and to act upon their answers, were, as usual, practically dormant. However, Congressman Frighan delivered a most significant address over the Voice of America on the importance and significance of the Pereyaslay celebration. The prime signifi-

cance of the Pereyaslav celebrations lies in the fact that Moscow is feverishly engaged in the consolidation of its empire as a requisite and necessary step toward the realization of its global objective. For free world consumption it advertises an indissoluble units and unbreakable bonds of friendship between Russia and Ukraine, so that little thought and planning be given to the Achilles heel of the Soviet Union, namely, the ever restive and explosive Ukraine. For Ukrainian consumption it poses as an equal brother, ready and ever disposed to protect the supposedly independent Ukrainian na-tion against "American imperialism." It makes concessions, like the transfer of Crimea to the Ukrainian Republic, as evidence of its good faith and true brotherhood which, its propaganda persistently bellows, cannot be obtained from the West. It seeks a solid nucleus within its vast empire of 92 million Russians and 45 million Ukrainians, and yet in its deep distrust of the latter, and behind this propaganda facade of brotherhood, equality and unity, executes the genocide of the Ukrainian nation under the guise of unlimited opportunities of work and advancement for Ukrainian youth in Central In short, Moscow wants to make sure that Ukraine will not serve as the pivotal point of strategy for the West.

It is an open secret that we are losing the psychological struggle for the loyalties of men on many essential fronts of the world. As concerns the 110 million non-Russians in the Soviet Union, we really have not even begun the struggle for their hope in us. There isn't even a shred of evidence of any fully worked-out and carefully planned policy of our Government toward the Soviet Union and its many enslaved nations. At this stage, where the threat of open conflict is never absent, this may sound incredible to our people, but it is nevertheless true. totally unprepared to deal with a significant segment of mankind, inhabiting the most proximitous areas to the enemy's fortress; and no more conclusive example and illustration of this unpreparedness can be furnished than our official indifference to

the mass Pereyaslav celebrations. This apathy in thought and policy can be laid only at the door of the containment policy which we still maintain today. To many an observer in Washington it appears that Mr. Kennan and his placed supporters enby remote as well as direct control, greater leeway of influence and determination than was the case in the remaining years of the previous administration. The long-run consequences of this situation cannot but be dismal in character for the Nation and the free world. With the inadvertent aid of America's containment policy, Moscow gains through an assortment of Pereyaslavs the time and means for empire consolidation, without which it couldn't begin to contemplate further steps in the direction of its fixed goal—world domination. Herein lies the tragedy of our ignorance on the Pereyaslav episode in the cold war.

Residual Oil Imports

EXTENSION OF REMARKS

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. BYRD. Mr. Speaker, proponents of more liberal tariff laws are appearing before the House Ways and Means Committee this week. In much of the testimony there is total disregard of the eco-

nomic disaster inflicted upon American communities by unwise foreign-trade policies. In subsequent hearings, international oil representatives are scheduled to testify, but there is little likelihood that their testimony will vary fundamentally from the preposterous excuses that have perennially been offered by those firms which ruthlessly subordinate the interests of United States economy and safety to the practice of profit at any cost.

profit at any cost.

The importing oil companies base their defense on a trilogy of deceit. First they dramatize the necessity for imports to supplement domestic production, but all the while they are supplanting the supplies normally provided by this country's oil producers. What is worse, they ship from Venezuela and the Dutch West Indies only a small portion of the yield of gasoline and other higher grade products which we supposedly need, and instead they flood our eastcoast markets with almost half of all the residual oil exported from that area. This residual oil, as you well know, serves only to displace coal, of which the United States has sufficient reserves to last for a thousand years.

In the second place, the importing oil companies stage a fantastic yarn about the need for foreign sources of petroleum in time of emergency, yet they well remember that it was practically impossible to ship oil even in coastwise traffic during World War II. At that time, Germany had less than 60 submarines to operate against our tanker fleet; today Russia is estimated to possess more than 400, many of them the snorkel type. Under the circumstances, how would we be expected to transport oil through dangerous ocean lanes in a new emergency if in the past it was so difficult to send a ship safely from Houston to Philadelphia?

Finally, the representatives of importing oil companies appearing at congressional hearings have since 1950 cloaked themselves in the costumes of benevolent patriots who are conscious of the dangers of too much imported oil and who presume to be willing to cut back shipments voluntarily rather than permit the Government to exercise its constitutional duty in this matter. Yet the record shows that since the first of these sanctimonious roles was assumed, following a record deluge of residual oil imports in 1949, shipments into this country from foreign refineries have increased by upwards of 75 percent.

Mr. Speaker, I say that these conditions should no longer be tolerated. This Government cannot in conscience permit our citizens in West Virginia and other coal-producing States to remain out of work in order that a comparatively few greedy corporations might prosper. It is imperative that we place a quota limitation on residual oil imports and make whatever other tariff adjustments are necessary to protect our domestic industries and workers.

A provision on residual oil is included in the resolution on competitive fuels adopted by the board of directors of the Nation Coal Association in its meeting in Washington last month. Under leave to extend my remarks, I insert this resolution in the Record, along with a resolution on reciprocal trade which the association passed at that time.

Careful study of both these resolutions may go a long way toward helping this legislative body decide upon the course that our fuels policies-immediate and long-range-are to take. The injurious effects of excessive residual oil imports must be neutralized through a quota law. In addition, the Congress must be alert to the threat of bringing natural gas across our borders to the further detriment of the coal industry. Finally, there is the question of whether it is not time to discourage the wasteful use of natural gas, and instead inaugurate a sensible program for the practical utilization of our energy resources.

I respectfully commend these National Coal Association resolutions to your attention:

RESOLUTION ON COMPETITIVE FUELS ADOPTED BY THE BOARD OF DIRECTORS OF THE NATIONAL COAL ASSOCIATION, SHOREHAM HOTEL, WASH-INGTON, D. C., DECEMBER 9-10, 1954

Whereas divergent points of view have been expressed on the advisability of the legislative overthrow of the decision of the United States Supreme Court of June 7, 1954 (Phillips Petroleum Co. case) wherein it was held that the Federal Power Commission has rate-fixing jurisdiction over sales of natural gas by independent producers and gatherers to interstate natural-gas pipeline companies; and

Whereas the Nation's limited natural gas reserves are being rapidly depleted because of the certification of natural gas pipelines without adequate consideration for necessary principles of conservation in the administration of the Natural Gas Act by the Federal Power Commission in the absence of definitive legislative standards designed to channel the valuable natural gas resource to wiser uses; and

Whereas important questions in the fields of safety, States' rights, and conservation make it desirable to determine whether support should be given for the broadening of the Federal power of eminent domain for the purpose of permitting natural gas companies to acquire rights in land for the underground storage of natural gas in order to encourage wiser uses of natural gas; and

Whereas notwithstanding continuous efforts of the National Coal Association as an active intervenor in natural gas certificate cases, the Federal Power Commission has not established policies which would materially lessen the unfair competition to coal from natural gas or direct the wiser use of natural gas, indicating the need for additional legislative standards in the Natural Gas Act; and

Whereas extensive discoveries of natural gas in Canada and Mexico, coupled with the filing of numerous applications with the Federal Power Commission for authority to import great quantities of natural gas to compete with domestic fuels (particularly bituminous coal) on a duty-free basis, gives rise to the need for a public policy with respect to anticipated foreign natural gas competition because of the absence of standards in the Natural Gas Act to guide the Federal Power Commission in the exercise of its jurisdiction over such importations; and

Whereas the flood of residual oil continues unabated, notwithstanding the economic distress and unemployment which have been the end result for the bituminous coal industry because of the importations of this residual product into the eastern seaboard;

Whereas the Federal Government has encouraged successive reductions in the applicable import tariff on residual oil without due regard for the impact of this foreign fuel upon the domestic coal industry; and

Whereas it has been repeatedly demonstrated in congressional and administrative proceedings that coal and railroad industries and their employees have suffered great damage, particularly in the coal-producing areas supplying the eastern seaboard markets, because of the unrestricted importations of residual oil; and

Whereas there is great danger to the Nation's welfare and defense interests in thus encouraging total dependence upon this foreign fuel in the industrially important eastern seaboard; and

Whereas governmental policies have benefited these competitive fuels and contributed to the accelerated displacement of bituminous coal in the overall fuel market, making it impossible for coal to obtain its fair share of the expanding energy market in consonance with the established principles of the American free competitive enterprise system; and

Whereas the public interest, the general welfare, and the Nation's defense potentials are not best served by continued unwarranted attrition against the capacity of the bituminous coal industry to meet the fuel needs of the Nation in time of peace or war; and

Whereas effective action with respect to these problems requires the united cooperation of the coal producers, distributors, dealers, deliverers, users, and transporters, their respective employees, and all other elements of the coal and related industries: Now, therefore, be it

Resolved by the directors of the National Coal Association. That the officers of the National Coal Association are hereby authorized and directed to take such steps as may be necessary to secure recognition by the President, the Congress, and the administrative agencies of the Government that the Nation's best interests will be served by maintaining the productive capacity of the coal industry at a safe level and urge the adoption of such principles as will contribute to the restoration of a fair competitive balance between the industries competing for available fuel markets; and be it further

Resolved, That the office of the National Coal Association, in the name of the National Coal Association and on behalf of its membership, sponsor, seek the introduction of, and support such legislation in the 84th Congress as will best achieve the aims and purposes herein set forth.

Maybe It'll Help

EXTENSION OF REMARKS

HON, ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. JONES of Alabama. Mr. Speaker, a united effort on every front will be necessary if we are to reduce the frightful number of deaths resulting from highway accidents. Training youthful drivers is one way we can make headway. My colleague the gentleman from Alabama [Mr. RAINS] has presented a worthwhile and useful proposal. The bill he has offered is meeting with universal acclaim, which is attested by the

following editorial appearing in the January 10, 1955, edition of the Huntsville Times, Huntsville, Ala.:

MAYBE IT'LL HELP

A bill has been introduced in Congress by Alabama's Representative Albert Rains to remove excise taxes on automobiles furnished by dealers to schools for student driving training, in hopes, of course, that more cars will be made available and more drivers trained.

It's another angle seeking to cut down highway fatalities, and we certainly hope that particular phase of the bill goes through.

As the Gasden Times pointed out last Friday, the value of the excise taxes lost on those cars would probably be made up over and over again in lives, time, and property saved.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commis-sioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall delivered at his residence, 1 at his office, and 1 at the Capitol.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Inaugural Address by Governor Timmerman, of South Carolina

EXTENSION OF REMARKS

HON, STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the inaugural address delivered by Hon. George Bell Timmerman, Jr., on assuming the great office of Governor of South Carolina.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INAUGURAL ADDRESS OF THE HONORABLE GEORGE BELL TIMMERMAN, JR., AS GOVERNOR OF SOUTH CAROLINA

My fellow South Carolinians, I deeply appreciate the honor conferred upon me. I value the opportunity to serve. I treasure the confidence reposed in me.

Realizing the grave responsibilities facing our State and Nation, I assume the office of Governor mindful of your expectations, aware of my own limitations, but determined to measure up to the challenge of our time.

Our State confronts a critical period in its history. I beseech the cooperation and good counsel of the general assembly and of all departments of government, and the interest, support and prayers of our citizens.

Our hope for the future is the attainment

Our hope for the future is the attainment of those ends that will be beneficial to all. My purpose is to be of service. I pray for

divine guidance in the realization of that goal.

In these first moments as your governor, I could not speak further without first recognizing the career of a distinguished South Carolinian. He has received many honors and has served in many capacities. His has been a life-time of service to his State, our Nation and the world. Some 4 years ago, he expressed the humble desire to make South Carolina a good governor; today as he steps forward from that office to continue as an elder statesman, James Francis Byrnes carries with him the respect and the good wishes of his beloved State.

PHILOSOPHY OF GOVERNMENT

I am proud to be a South Carolinian. We are citizens of a State rich in heritage from a commendable past which no amount of misreport can destroy. Our history is a record of achievement against almost insurmountable odds.

I am especially proud of those South Carolinians of old. During those days of Reconstruction and the many difficult years which followed, they demonstrated their intelligence by first recognizing the problems which faced them; and they demonstrated the courage of their convictions in solving those problems.

That history has shaped our philosophy of government.

It is neither the static thinking of the extreme right nor the erratic thinking of the extreme left.

We believe in a government that is responsive to the will of an informed public; in a government that serves its citizens in the priority of their needs by constitutional means.

We believe in a government that shuns the easy politics of expediency and evaluates proposals in the light of their useful potentialities.

We utilize the experiences of the past, and our knowledge of the present, to build a more promising future.

It is within that philosophy of government that we look to the future.

MAJOR PROBLEMS

I cannot predict precisely what it holds for us, except the challenge from our past to meet our problems boldly, with courage and reason.

In our future, however, lie major problems that have their roots in both the past and the present.

One is our economic health; the other, the crisis of our time. One can be solved because it is confined to the facts of dollars and cents. The other is a problem of human equations, for which there is no easy solution.

KEYSTONES

Our efforts to better our economy depend upon our successes in developing our economic potentials.

The keystones for success in building a better and more prosperous South Carolina are agriculture, industry, and education.

Agriculture is the keystone of our economic base; new industry the keystone of opportunity; education the keystone of knowledge.

It is toward continued progress in these fields that I shall direct my administration. Our development in these fields will determine our ability to improve our material and human values.

OUR ECONOMY

The stability of our government depends upon the soundness of its fiscal affairs. We have enjoyed conservative government which is the will of our own people, and attractive to industry and business.

Our State has a sound tax structure, founded upon a broad base, distributed among available sources of revenues.

No general overhaul of our tax structure is needed or advisable, but we should continually strive to improve our approach to taxation and, when financially feasible, give relief to those least able to pay.

The surest way to expand our ability to finance these things that are beneficial is to provide new revenue without additional taxation by raising the income of our people.

Since 1929 South Carolina has led every State in the Nation in per capita income increase. In 1929 our per capita income was 37 percent of the national average. In 1952 it was 67 percent. But our State still ranked 45th in the United States in per capita income. There is considerable room for improvement.

INDUSTRIAL PROGRESS

The key to this is maximum opportunities to increase our citizens' earning power. To provide those opportunities we need new industries with diversification in products and locations, suitable to our farm potential and other natural resources. We need to encourage the development and expansion of locally owned industries, and the further development of our tourist trade into the profitable business that it ought to be.

To encourage new industries to locate in our State, we need to maintain a sound tax structure and a stable government rather than offering concessions which we cannot

afford.

Since the end of World War II, we have witnessed tremendous industrial progress in our State. It now amounts to a total capital investment of approximately \$938 million. It has created about 115,000 new jobs, and new payrolls amounting annually to more than \$277 million, exclusive of the H-bomb plant.

This did not happen by accident. Our industrial development has been encouraged by wise government and prudent men.

We have not exhausted our industrial potential. Our future is as bright now as it was at the beginning. We must work diligently toward further industrial development, especially in those sections of our State where it is most needed.

AGRICULTURE AND LABOR

The encouragement of new industries is also a major factor in promoting a sounder farm economy and a more livable standard for farm families. These industries should be synchronized to our agricultural productivity for the benefit of both industry and our farm people.

South Carolina, of course, wants no industry to exploit our people or our natural resources.

We should guard carefully the rights of labor in all vocations. We can never hope to improve living conditions and opportunities by providing prosperity at the top in the hope that some of it may trickle down. Our economy must be built upward. Every effort must be made to improve the earning capacities and the living and working standards of our people.

Good government does not confine itself to assisting those who are strong of health and mind. Good government must also demonstrate that it has good heart. There are those of our citizens who have lived fruitful lives but who are no longer able to provide for themselves. They are still our citizens and they are our responsibility. We must see to it that the handicapped, the indigent, and the aged receive the comfort and necessities to which they are entitled.

CONSERVATION

With our awareness of responsibility for our human resources goes responsibility for caring for our natural resources. The disaster of a long drought has brought home to us the importance of water conservation. Water is vital to plant life and growth. The rainfall cannot be controlled, but the rain that fails can be; and it should be conserved for use when needed. The establishment of a sound water-conservation program is essential to our development and will minimize regulatory controls by increasing the available supply for everyone.

The demands upon water for agricultural, domestic, industrial, and municipal purposes require a sound water-rights law. It should define water rights in the terms of

modern usage and insure equitable distribution with full protection for all users. Care, however, must be taken to avoid passing a law with provisions which may hamper our industrial progress and the creation of needed opportunities for profitable employment.

Another major factor in our economic growth is the development of our State ports authority. Our ports link our busi-ness and industry with many markets and sources of materials in the Nation and around the world.

The textile industry of the Piedmont may ship its products to foreign markets through our facilities more economically through the ports of another State.

The location of basic woolen industries in the coastal section accelerates the need for adequate facilities to handle imports and exports.

We cannot afford to be "penny wise and pound foolish" with any of our program for new opportunities.

A more immediate financial problem faces us, however. It is a problem of some magnitude, but one which must be solved within specific limitations.

Our forefathers were wise in making a constitutional requirement that the State maintain a balanced budget: that it live within its means. It is sensible government.

To meet the needs of its citizens, our Government expands and improves its services. Along with that, it increases its own

The problem facing this administration and the 91st general assembly, is one of increased obligations in the face of declining revenues.

The present revenue outlook is not as reassuring as a new administration and legislature might desire.

Current collections have been below those for the same period of the last fiscal year.

The recent drought and the devastation of Hurricane Hazel were more than sufficient to impress income unfavorably. A surplus by prior appropriation has gone to recurring expenses, except for the creation of a small reserve fund.

With some shades of doubt, I think it may be concluded that current budget expenses may exceed our current revenue; the reserve fund may be absorbed within this fiscal year; and no surplus may be in the offing for the next fiscal year.

With no surplus impending-the reserve fund diminishing-and our income less than anticipated needs-the legislative task of drawing a balanced budget will not be an enviable one.

There is some encouragement, however, in the present business activity which is brisk. The trend in revenue seems to be turning upward, and with it the immediate financial future looks brighter.

That is one major problem.

EDUCATION

The other is the gravest problem that we as a Government and we as individuals have faced in modern times. It is the impending threat of compulsory social mixing of white and Negro children in our public schools.

Regardless of outside efforts to cripple our educational program, we must see to it that all children continue to receive all of the education we can afford.

In the past 4 years much has been done to provide outstanding school facilities within our laws and within our understanding of the Federal Constitution.

The doctrine of separate but equal schools has been the established interpretation of the Constitution for two-thirds of a century.

In reliance upon that doctrine, our State has made vast investments in separate school facilities for many years. Millions of dollars have been annually appropriated for that purpose.

Within the past 4 years we have accomplished an educational revolution to achieve equality. More than \$124 million has been allocated for school construction and improvements. Two-thirds of that amount has gone to Negro schools.

Our new-school construction is the equal of any and better than most in the Nation. Our building program has substantially equalized school buildings for Negro children. Many of them attend finer schoolhouses than do many white children.

Yet, as meritorious as our school-building program may be, real educational opportunity depends in its final analysis upon the character and quality of teaching.

Children of today receive a better education than their parents received. But there is a need for more good education.

The long future of our State will be influenced by the education of its future citizens. We cannot hope to have the kind of education that we need until our teachers are adequately paid and double shifts and overloaded classrooms are eliminated.

The control of education and training for children is a local matter and has been traditionally the prerogative of the States and their people.

Our law requires that separate schools be provided for the children of each race and that no child of either race shall attend the schools for children of the other race.

This law applies equally to both races at the same time. It does not require that the schools for one race be better than the schools for the other race.

Any statement that our law is inherently unequal is inherently untrue.

This is the law which the Supreme Court of the United States in the school segregation cases says is unconstitutional upon dubious conclusions found in partisan writings that were not a part of the official record of evidence in these cases.

This opinion as it respects our law holds for the first time in judicial history that equality of treatment is discrimination.

The present members of the Court disagree with the Federal Constitution as it was understood when it was adopted by the people; as it was understood when they each took an oath to preserve, protect, and defend it and as it was understood by every court in the land-until the members of the present Supreme Court undertook to change it in an effort to legislate out of existence a social institution that is older than the Constitution itself.

When separate schools in a district are unequal, the remedy is not to destroy the schools or the law, but to require that the schools be made equal.

If the time is near when we in South Carolina will have to choose between no public schools with peace and friendly relations on the one hand, and public schools with hatred and strife and discord on the other, it will be the first time an American State has had to make such a choice.

The effort to interfere with the progressive development of school advantages for children in the South where there are large numbers of each race is no doubt pleasing to the Communists and their fellow travelers. They above all others are sufficiently cunning to see the potentialities for sapping the strength of America with the creation of internal social unrest, discord, and dissention in so large a section of the United States.

White parents do not wish their children to mix in public schools with large groups of Negro children. Most Negro parents do not want their children to mix with large groups of white children. These parental objections are alone sufficient and should be respected.

Our State has discouraged organizations against Negroes, and it is hoped that the best thought and sentiment of the South will continue to do so; but when Negroes combine against whites, it is inevitable that will combine against Negroes and

both races will suffer.

Loyal South Carolinians wil stand firm against any organized effort to destroy the right of parents to choose what is best for their children.

It is tragic to see our educational progress imperiled by those who practice racial isolation in their own lives while professing to perceive from a great distance that our children should be mixed.

They should ponder the words of a famous former President of the United States, who said:

"My own feelings will not admit of this, and if mine would, we well know that those of the great mass of whites will not. Whether this feeling accords with justice and sound judgment is not the sole question; if indeed it is any part of it. A universal feeling whether well or ill founded cannot be safely disregarded."

With profound respect to him, these words of President Lincoln make him what some would call today "a white supremacist." was a great humanitarian with no spark of intolerance, but he was also a realist.

The development of future educational opportunities for Negro children will depend in large measure upon preserving the right of each race to attend their own public schools.

I do not speak of what our State as a government intends to do or of what I, as Governor, may recommend that the general assembly should do. I speak of the inevitable consequences where substantial numbers of each race live in proximity in the event of any attempt to force the children of the two races to mix socially.

But this problem cannot be solved by the cowardly approach of gradualism, which is the essence of discrimination. Gradualism is selective application of the law. It is cowardly because it seeks to minimize opposition by careful selection of a few victims from time to time. It is discriminatory because it seeks to administer the law equally. It is a creeping evil that has no place in the government of a free people.

The only acceptable decree that may be rendered by the Supreme Court in the school segregation cases is one that will recognize the right of individual parents to choose what is best for their own children. The people of South Carolina will not tolerate any tampering with the lives of their children by any agency of the Federal Government.

The great constitutional problem facing the American people is how to curb the authority of the Supreme Court of the United States, which has arrogated to itself the power to change the Constitution without consulting the people-a power it was never intended to have and a power that endangers the future freedom of all citizens.

The Congress of the United States has the constitutional authority to return to the States their rightful and constitutional prerogatives, including the traditional right to regulate their own schools. It could be done by the enactment of legislation curbing the jurisdiction of the courts.

It is the responsibility of the Congress to curb this power for the future protection of all citizens and for the preservation of constitutional government.

The same article of the Federal Constitution which creates the Supreme Court vests the Congress with authority to limit the ap-pellate jurisdiction of that Court and the jurisdiction of all other Federal courts. Congress can exempt from such jurisdiction all cases concerning our public schools, excepting, if Congress deems advisable, cases involving violations of the separate but equal doctrine.

The fallure of Congress to act will require that it share the full responsibility for the current judicial intringement upon constitutional government and upon the freedom of a large segment of the citizens of the United States.

CONCLUSION

My pledge to you is that I shall exert my greatest efforts to preserve the way of life in which white and Negro have learned to live peacefully in close proximity, with ax understanding of the problems of each—a way of life in which each keeps racial integrity—a way of life in which the white majority has increased its efforts yearly to provide true equality of opportunity to the Negro minority in schools, and in all other endeavor, except social intermingling.

Perhaps there is nothing that I can say which might serve to prove to each of you how deeply I feel about the future of our

beloved State and its people.

But in these last words of this my first and Perhaps only inaugural address, I shall attempt to do so.

We must ask God to guide us in the troublesome days ahead. Man alone is neither strong enough nor wise enough. I speak not only of the problem of human relationships in our own State. I speak also of the terrible shadow of war, which constantly overhangs our Nation.

Of one thing we can be certain. You as citizens and I as Governor, only with the help of Almighty God, can meet successfully whatever problems the future may hold.

We must place our trust, our faith, our hope, in Him.

The Complete Situation in Asia

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement which I made yesterday in an address to the Alexandria Kiwanis Club, in Alexandria, Va., in relation to the serious and complicated situation in the East.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY BEFORE ALEX-ANDRIA KIWANIS CLUB, GEORGE MASON HOTEL, THURSDAY, JANUARY 20, 1955

SENATOR WILEY SAYS ASIA SITUATION SERIOUS, COMPLEX—URGES PATIENCE, RESTRAINT

The diplomatic situation which has arisen in the Straits of Formosa is both serious and complex.

This morning, I participated in a meeting at the White House with Democratic and Republican leaders which explored various problems in that connection.

I do not propose at the present time to comment in detail on this subject, but I do want to say that the administration is working hard to protect our own national interest and the cause of freedom, peace, and justice in Asia. Let's give the President and the Secretary of State a chance to work this problem out—in close consultation with the Congress.

Let's think, before any of us, inside the Congress or outside, rushes into print with off-the-cuff solutions to an exceedingly difficult situation.

I should like now to present a few general observations with regard to ways and means

by which we may help assure a just and lasting peace in Asia, and for that matter, elsewhere in the world:

 We can do so only by maintaining the strong western alliance, a dynamic unity among the free nations, including our proven friends in Asia.

This requires careful and continuous consultation among all of them. It requires careful consideration of the viewpoint of each.

We must not ignore the views of others and proceed impulsively and emotionally like a bull in a china shop. We must weigh the interrelated military, economic, diplomatic, psychological factors, including basically United States strategic considerations in the Far East.

2. The second basic principle is that we must and will remain loyal to our allies. I refer, in particular, to the Republic of China. The government of Chiang Kai-shek has been our proven friend. We will, therefore, remain true to our commitments. We will not abandon the Nationalist government.

We definitely do not believe that the people of China should be represented in the United Nations by the Red government at Peiping which has violated practically every international law.

3. A third principle is that we must try to win to our cause the great neutral, un-

committed bloc of Asia.

I do not believe that there is any good reason why there should be a lasting or growing barrier between ourselves and the Governments say, of India, Ceylon, or Burma.

On the contrary, we share the same common aspiration for the sovereignty of peoples for a better way of life for them. We have the same belief in the spiritual worth of the human being.

On the other hand, Red China shares none

of these concepts.

We must make sure, that we do not, by arbitrary, impulsive action push the neutral countries into Red China's orbit. This could have come about, or still could, if the United States were to go halfcocked and to try all by ourselves a military blockade of Red China at this time. Some of the gravest questions of international law would arise in the event such a unilateral blockade were to be attempted.

I previously have stated on several occasions my vigorous opposition to such a block-

ade at the present time.

I have stated that a blockade might result in the immediate death of our own 11 imprisoned airmen. It might cause a wide-open split with our allies. It might overcommit our present naval resources. It might cause the bitterest of differences with the neutral countries. But, worst of all, it might precipitate us into a war with Red China, which is probably something the Kremlin would dearly like.

4. We must continue to work through the U. N., both for the release of our imprisoned airmen and for the furtherance of peace, stability, and freedom in the Far East.

I believe that it is unfair and unwise to characterize the mission of the United Nations Secretary-General to Peking as a failure. On the contrary, I believe that it contributed to progress toward the goal of peace.

We must remember that diplomatic negotiation, particularly with the cagey Communist adversary, often takes a long, long time. We cannot expect miracles overnight. An impulsive blockade could bring chaos overnight, but diplomacy cannot bring order and justice overnight.

5. The next basic principle is that we must contribute further to the inner security and strength of the free nations in Asia; for example, among such splendid friends as the Philippines, Thalland, and Pakistan.

We must help enable them to assure security inside their own borders and at their outer borders. This means prompt ratifica-

tion of SEATO-prompt ratification which must and will come.

At the same time, we must remember that these various countries require greatly expanded programs of technical assistance if they are to assure an ever-higher standard of living for their people.

Guns alone will not save free Asia. In a war of ideas, a war of hungry stomachs, right ideas and full stomachs count far more than

weapons

There must be guns for defense, but there must be ideas for the mind; there must be food, shelter; honest, efficient government; decent sanitation; opportunity for a higher standard of living as a whole.

I conclude with this thought:

Your President—a great President—is acting with care, with discretion, with judgment. He is consulting carefully on a bipartisan basis with the Congress.

Let's give him our faith and confidence. Let's give him the benefit of any doubt; he is entitled to our admiration and esteem. His record of statesmanship, and that of Secretary of State John Foster Dulles, proves that we are in good, capable hands. Let's work with them as a team.

Universal Military Training

EXTENSION OF REMARKS

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Friday, January 21, 1955

Mr. THYE. Mr. President, Mr. C. L. Brown, of Northfield, Minn., is a distinguished businessman who has written an article on universal military training. It is very thought provoking, and for that reason I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Universal Military Training (By Chan Brown)

Having given the subject of universal military training a lot of thought I have come to the conclusion that, personally, I am all for it.

In the past I have always been against universal military training. As a boy in the nineties I saw so many people who came from Europe to get away from having to spend 5 years in the Army that it made me think deeply on this subject.

Also, I have three grandsons who would be affected by this program: One at once, one in 3 years, and one in 9 years. No grandfather ever loved his grandsons more than I do mine. They are fine boys and I want

for them only what is best.

One of the reasons I am in favor of universal military training, I do not want my grandsons to be drafted and cast into a war before they have had proper military training, as has happened to a lot of our boys during the past wars. Many did not know how to fight or how to protect themselves. That was not fair to them.

I do believe, however, there is a far better way than that now proposed in the 6-month program which calls for 6 months consecu-

tive training.

A much better way would be to have 2 periods of 3 months each—I in the summer of the boy's 18th year and the other in the summer of his 19th year.

In this way the boys would not have their schooling disturbed. It might cost the Gov-

ernment a trifle more for transportation but training camps could be set up in each State so that most of the transportation cost would thus be offset.

When the second training period is completed, the boys should be held in the Re-

serve for a period of 5 years.

These boys should be paid well for their time and paid only at the end of the training period, which would give each one a chance to earn and save during their summer months. This, also, will greatly help out the unemployment situation.

The second 3 months' term should consist of more intense training for combat so that our boys would not be sent to war only partially trained. Their schooling would not be interrupted and the ones in the second training period could go on with their higher education or into business without the uncertainty that now exists under the current draft law.

The Nation would soon be stronger, militarily, and the whole setup would be more

fair for everybody.

With this program we would all feel safer about the cloud of communism hanging over our heads.

Every 18-year-old boy who can pass the physical examination should be compelled to be so trained.

All our youngsters now need such training and discipline. It would help solve some of the juvenile-delinquency problems facing

The uncertainty that bothers all our boys from the age of 12 on up to 20 or 25 would be eliminated.

We, the people, will all feel much safer if we know our youth have proper military training, and it would help materially in preventing our being attacked if the world knows we are ready to fight.

The United States Merchant Marine

EXTENSION OF REMARKS OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. BUTLER. Mr. President, one of our foremost citizens is Maj. Gen. John M. Franklin, whose patriotic and valuable services to his Nation constitute a notable contribution to the welfare of the United States. Particularly well-informed is he concerning all phases of the American merchant marine, as he served as Chief of the Water Division of the Transportation Corps, and later as Assistant Chief of Transportation during World War II.

His public statements are entitled to the greatest weight, and because of the timeliness of an address delivered by General Franklin before the National Defense Transportation Association in Pittsburgh, Pa., I ask unanimous consent that some excerpts from his address entitled "Our United States Merchant Marine: A Sound Investment" be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the REC-

ORD, as follows:

At the start of World War II there were approximately 15 million tons of merchant ships of all types under the American flag; at the end of the war, approximately 50 million tons. During 1943 there were ap-

proximately 12 million tons constructing but on January 1, 1944, there were only approximately 250,000 more tons of shipping in the allied pool than on January 1, 1944, because of the terrible destruction by enemy air and submarine. During 1943, the losses of ships by submarine action was 2 percent per month of 10 knot ships and 1 percent per month of 15 knot ships or better.

If it had not been for the passenger ships built under the 1928 act and the 1936 act, it is doubtful if the six American divisions that may well have stopped the Japanese from capturing Australia in 1942 could have been moved, as all the foreign flag passenger ships in the allied pool were in vital service else-

At the peak of the war there were 2,000 ships of 10,000 tons each either at sea or loading or unloading troops and Army supplies alone.

It was not until the spring of 1945 that every decision of the Joint Chiefs of Staff did not have to be edited in the light of shipping capabilities; prior to that available divisions and supplies could not be moved as rapidly as they should have been moved because of lack of shipping врасе.

MISTAKE TO NEGLECT FLEET

It seems abundantly clear to me in the light of those facts that it would be the greatest possible mistake to neglect our American merchant marine, particularly at The Department of Defense this time. budget was \$43 billion in the fiscal year 1953. This huge sum is certainly not being spent to prepare for a possible war in this country.

The Defense Department has deemed that it is just as important to maintain domestic ship construction facilities and know-how in the interests of national security as it is to have a merchant fleet. Otherwise, we would soon become dependent upon foreign countries to keep our merchant marine fleet equipped with modern vessels-as replace-

ments became necessary.

For the 14-year period beginning with the date of the 1936 act and ending December 1. 1951, the net construction-differential subsidies paid on American ships was \$88 million, or an average of \$6,300,000 per year.

How does the American merchant marine benefit the economy of the United States?

COMPETE FOR BUSINESS

Intense competition for freight exists in the steamship industry. The Committee of American Steamship Lines questioned the American flag lines that it represents to see just what the competitive picture is and what the lines were doing to meet it. It was found that 4 American steamship companies compete with as many as 6 to 11 other American lines for business-and 5 of the American lines compete with up to 3 other United States lines.

Foreign competition for cargoes is even heavier. From 14 to 39 foreign lines are operating over the same trade routes as 7 American lines, and from 1 to 6 foreign competitors are faced by 5 American companies.

One of the most effective methods steamship companies have employed to keep their cargo space booked is through the operations of their trade development and promotion departments. This activity is designed to create new international trade by:

- 1. Assisting American businessmen to develop new sales markets abroad;
- 2. Finding new foreign sources of raw materials for American industry;
- 3. Helping foreign businessmen to enter the American market.

CUSTOMER FOR UNITED STATES BUSINESS

Then we should also consider the American merchant marine as a customer of American business. It is one of the best customers of supply firms, spending last year \$7,500,000 for electrical products, \$3,220,000 for china and glassware, \$2,450,000 for linen, to name only a few items. Fourteen million packages of soap and cleansing compounds were sold to privately owned American steamship lines last year.

Ocean travel creates an enormous market for farmers and food processors. lines spent \$97,326,400 for food last year-\$46,500,000 for meat, and \$10 million for poultry.

Salt air and relaxation have an appreciable effect on appetites. The average person aboard ship eats five times more meat per than the national average for landlubbers. The per person consumption of meat aboard ship is 2% pounds per day, while the national average is just under onehalf pound per day per person.

America's railroads, trucks, buses, automobiles, and ships are all vital cogs in the most tremendous network of cargo and passenger mobilization in the world. It is perhaps one of the strongest advantages this country has over Communist Russia, where anything like comparable transportation facilities are relatively meager. And the full effectiveness of one form of transportation is dependent upon the others.

We must rely more heavily on domestic transportation in the years to come, because ultimately the most effective defense against atomic bombings will be dispersion-decentralization of our industry and population centers.

Unfortunately, the public reaction to our technological progress toward push-button warfare is detrimental to the rapid improvements in our transportation system that are required. The H-bomb, the A-bomb, guided missiles, atomic cannon, jet power, and a host of other implements of war that have become reality, have led a good portion of public opinion to believe that our dependance upon the staple commodities of warfare, such as transportation, has been reduced.

The hard, cold facts are that improved railroad facilities, superhighways, airport and airplane development, and more modern ships are all needed right now in the interests of national security.

Ocean transportation becomes increasingly vital as Communist pressure on the free world continues to mount and our treaties with freedom-loving countries expand the defense perimeter within which we are pledged to counteract aggression.

SHIPS OUR LIFELINE

Ships are-and always will be-the lifeline between the fighting front and our production plants. Bulk cargoes-volume of gasoline and spare parts, ammunition and bombs, steel matting and concrete for airstrips, troops for the fighting fronts and the multitude of Items needed to support themcan only be delivered in sufficient quantities by ship, and nothing in the foreseeable future will change this situation.

During the Korean war, more airplanes were used for transport than ever before, and still 95 percent of all the supplies delivered to Korea came by ship.

The Kansas Turnpike

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Gale Moss, general manager

of the Kansas Turnpike Authority, at Kansas City, Mo., on January 6, 1955.

Gale Moss was formerly director of the Kansas Highway Commission, and for the past several years has carried on an expanded highway-construction program for our State. Great progress was made on the Kansas highways during his administration, and under his leadership the new Kansas Turnpike from Kansas City to the Oklahoma line south of Wichita will be completed at the earliest possible date.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

THE TURNPIKE

(Address by Gale Moss, general manager, Kansas Turnpike Authority, before Associated General Contractors of Missouri, Kansas City, Mo., Jan. 6, 1955.)

This is the first time I have appeared before your group and I am very appreciative and greatly honored by your invitation. It is my hope that I can bring some information of interest to you in your field of endeavor.

In Kansas we are just at a point that is most interesting to the construction industry. We are beginning to let contracts for the construction of our 236-mile turnpike project. One letting has been held, one is set for January 11, another for January 19. By the last of this month lettings should be weekly or more frequently until the whole project is under contract.

The turnpike-method of construction of highways is something new to our part of the country on the scale being undertaken in Kansas. In fact, we kept our fingers pretty well crossed until our \$160 million bond issue was definitely set. It was the first of its size west of the Mississippi and we knew our traffic density could not begin to match the volumes existent in the eastern States. Yet, we were able to dispose of our bonds at a higher price and lower interest rate than some eastern turnpike and toll-bridge issues, backed only by anticipated user revenues.

What is the reason for the willingness of investors to put their money, in tremendous amounts, into securities which 15 years ago would have been considered strictly speculative? So speculative they could not have been sold

The answer is probably found in a slight addition to an old maxim: "Nothing is so sure as death, taxes, and traffic." Traffic and the proved willingness of the traveling public to pay to get away from its congestion, is the only possible answer.

The reasons for our present tremendous volumes are these:

122 750 000

____ 10,000,000

United States population:

AUOV	a, 100, 000
1940 13	1,500,000
1950 15	0, 500. 000
	3, 000, 000
Gross national product:	
1945 \$181, 00	0,000,000
1950 240, 00	0,000,000
1954 (estimated) 350,00	0,000,000
Motor vehicles:	
	6, 500, 000
	2,000,000
1950 4	9,000,000
1954 (estimated) 6	0, 000, 000
Motor vehicles produced:	
1930	3, 333, 000
1940	3, 000, 000

1954 (estimated) ______ 12,000,000

No one is ever interested in statistics but
these few give the real reason for our turn-

pike successes throughout the country. By reason of these statistics the population center of the United States has moved, since 1930, from Linton, Ind., 55 miles west and 15½ miles south—in our direction—to near Oiney, Ill. And that is the story of why Kansas has the traffic to finance our 236-mile project.

These, I believe, are the reasons turnpikes, when built, are and will be successful in our area. The next question logically to arise is this: Why the turnpike surge in recent years?

The end of World War II—1945 to now, 1955, 10 years—has seen an increase in traffic volumes that no State has been able to keep up with—even with increased revenues—long range highway planning and increased efficiency of operation and construction methods. There is no criticism of any person, State, or highway department because this situation exists. Money of course is the principal answer to the problem. Taxes of every type are at the point of diminishing returns and, some people believe, would verge on confiscatory if increased.

For example, were we to double the gasoline tax and license tag fees in Kansas which, of course, will not be done, it would take more than 3 years' collections of the new tax to equal the present toll project financing. Of course, if it were to happen the money couldn't possibly be spent on our 236-mile project: The 9,400-plus miles on the State highway system would be entitled to have it spread judiciously along its needy stretches. The sums left for a new alinement over an entirely new route would be nominal.

No one believes the toll road to be the answer to the entire traffic-congestion situation. We know and believe it to be a means of relieving this situation along isolated routes where engineers, expert in the field, find or forecast sufficient toll-paying traffic to make the project self-supporting. We have, we now know, one of such routes in our State. We are investigating to determine whether there are others.

It is our thinking that if a turnpike can be built it should be built in order to release moneys that would have to be used by the State highway commission along the free routes affected, for use elsewhere.

Perhaps it would be well to review for a minute the thinking that has led to the present turnpike movement.

In the first place, until the last 2 years, it had long been the policy of the Bureau of Public Roads in Washington to resist the movement. This policy has been and still is statutory—but there are indications it may be changed. The original Federal Aid Highway Act, 1916, provided "all roads constructed under the provisions of this act shall be free from tolls of all kinds." The language of the law was broadened in the Federal Aid Act of 1921 to provide that "all roads constructed or reconstructed under the provisions of this act shall be free from tolls of all kinds." Since 1921 this has been the basic law and policy.

The Federal Highway Act of 1938 required the Bureau of Public Roads to study and report on the possibility of a transcontinental toll road. The report made indicated that such a road would not be more than 50 percent self-supporting and would not meet the most urgent needs of the Nation.

The 1954 act again instructs the Bureau to make a comprehensive study of all phases of highway financing including particular attention to the possible effects of toll roads upon the Federal-aid highway programs, and the coordinations thereof. This report is due to be made to Congress on February 1,

1955. It will be preceded by the President's address concerning his proposed highway program on January 27. Addresses by prominent Government officials indicate a change may be expected in the policy laid down in 1916 and expanded in 1921.

This change in policy, I believe, can be expected. Considered with the President's accelerated highway program, I believe it can and probably will mean 1 of 2 things:

1. It will result in new highway legislation by the Congress which will permit the use of Federal funds or credits to support marginal turnpike projects; or

turnpike projects; or
2. It will result in the States in which
turnpike projects are built receiving additional Federal moneys, on some formula,
for use on the interstate system of the State
concerned.

The latest indications from Washington are that the second possibility mentioned is most likely to happen.

In either event it would be a move to alleviate the traffic situation in areas which have exceedingly heavy traffic volumes or routes which are considered of prime importance to the national defense or economy. Of this latter classification, Kansas has 700 miles, and Missouri 1.088 miles.

If the interstate system is to benefit from a State's construction of turnpikes then certainly the various highway departments become immediately interested from a financial point of view. As an example of what I mean, consider this: The cost of actual construction of our Kansas project is estimated at \$107 million. Engineering, administra-tion, right-of-way and all other costs except financing raises this figure to \$140 million. If the new act putting the President's prointo law were to provide Federal matching of turnpike construction costs on the present Federal aid formula applicable to the interstate system, 60-40, then the Kansas Highway Department would benefit the extent of better than \$150 million. If the matching formula be as on the primary system, 50-50, it would be \$107 million. If it be a smaller fraction-even 25 percent-it would be better than \$50 million. At any rate, whatever the formula, the State department would benefit so far as moneys for use on the interstate system are concerned.

It will not be long until we will know. If either of the contingencies do happen it can be expected that there will be an additional shot in the arm for turnpike construction over the country.

In the 18 months I have been working on our turnpike project I have learned from other States that there is a general feeling against the Federal Government participating in the toll-road business. There is a fear Federal control following Federal contributions or help. Personally, I do not have that feeling. What difference does it make who assists in the building of highways or who has some say in their design, construction, or operation? The important thing is to build highways, either free or toll. I believe no one would say the Federal-aid programs effective through the years have re-sulted in Federal controls detrimental either to the States or the traveling public. Certainly the Federal act, whatever it be, will not force Federal money upon any turnpike authority that doesn't want it.

Regardless of what the Federal program may be, 1955 has every prospect of being a boomer year in turnpike construction. About half as many turnpike securities in dollar volume are expected to hit the market in January and February as were sold during all of 1954. The 1954 total was \$1½ billion.

Now, I would like to take a few minutes on the pertinent details of our own project in Kansas.

Doing Tricks With Mirrors

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Friday, January 21, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial by Willard Shelton entitled "Doing Tricks With Mirrors," and dealing with the \$100 billion highway program proposed by President Eisenhower, which editorial appeared in Labor's Daily of January 15, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Doing Tricks With Mirrors (By Mr. Willard Shelton)

The Wall Street Journal, an eminently respectable publication, is stirring up a fuss about President Eisenhower's new highway program—not in opposition to the program itself but in disagreement with the trick financing scheme by which it would be supported.

The President suggests that the Federal Government's \$25 billion share be raised through creation of a special corporation that would sell its own bonds to private investors.

Theoretically, this would not be an addition to the public debt, which is now held at a rigid \$281 billion maximum. Actually, the bonds would have to be retired, eventually, from the Treasury, with dollars paid in by taxpayers.

"A man hasn't profited himself a bit—and he can delude himself into deeper trouble," says the Wall Street Journal, "by hiding a debt from himself behind trick mirrors."

From this observation post, the old New Deal idea of establishing a "capital" budget and a separate "spending" budget has always seemed to make sense.

When the Government advances money for a power generating dam or a steam generating plant, for example, it is simply an investment—not really a debt. The money will be repaid to the Treasury, with interest, across a term of years. It will be repaid by the people who benefit from the facilities, not by the general taxpayers.

At the present time, any Government advances to the Tennessee Valley Authority are called expenditures and are added to the public debt. They might more properly be called capital investments and treated exactly the same as a private investor in bonds treats his expenditures for investment purposes—as a savings, not an expense.

One basic trouble with the Eisenhower administration's financial approach is that the President and Treasury Secretary Humphrey lack the candor to say that they would like to adopt wholeheartedly the New Deal idea of splitting budgets into two categories—capital and current spending.

Another basic trouble is that they are trying to pretend that they don't have any new debts when, in fact, their policies are creating enormous Treasury obligations.

The highway program is one example. The Treasury will be in hock for the finances, if the plan should be adopted, but the administration is trying to ignore the fact.

Under Secretary Humphrey and Agriculture Secretary Benson, money for the farm-support program is being borrowed by the Commodity Credit Corporation, not by the Government. The Government's faith and credit are behind OCC borrowings, but the

money is written out of the so-called public debt.

The potential liability of the Treasury has been increased by heavy commitments guaranteeing housing loans. Again, however, the liability is being covered up by trick book-keeping that refuses to admit the guaranty is part of the so-called public debt.

An honest administration statement that it is going to demand certain capital expenditures, which it will segregate from the ordinary spending budget, would be a fine thing.

The present program of increasing Treasury liabilities without putting the Treasury directly behind them simply means that people who borrow from Government-controlled corporations pay higher interest rates—and the taxpayers, in the end, are still stuck.

Pay Raise for Congressmen

EXTENSION OF REMARKS

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES
- Friday, January 21, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Pay Raise for Congressmen," published in the Pittsburgh Post-Gazette of January 10, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAY RAISE FOR CONGRESSMEN

Of all the melodies piped by President Elsenhower in his state of the Union message, none could have come more sweetly to congressional ears than this: "I also urge the Congress to approve a long overdue increase in the salaries of Members of Congress and of the Federal judiciary, and in my opinion this raise should be substantial because I believe it should be to a level commensurate with their heavy responsibilities."

This part of the Eisenhower program seems certain to enjoy full, bipartisan backing, especially the congressional feature. Congressmen are very touchy about voting themselves raises, fearing the scorn of those at home. But the President has graciously given them an out; they can vote themselves a raise and say in truth it was the President's idea.

Actually, they deserve a raise, and a good one. Lawmakers in the House and Senate get a little over \$15,000 a year, practically all of it taxable. That doesn't go far, what with their heavy expenses. They have to maintain two residences; they have to entertain; they have to pay campaign expenses; they have to keep fences mended, which means, among other things, trips to and from home at their own expense; they have to kick in to all sorts of political and community causes. No wonder the New York Times found 2 years ago that the Congressman's pay falls short of his job expenses by at least \$3,000 a year.

Obviously, Congressmen have to get other income. The Times found that 80 percent of the Representatives and 67 percent of the Senators carry on a private business or profession back home or have income from investments. Some Congressmen add to their income—but detract from their legislative time—by writing articles or lecturing.

The Congressman, for all the public's jokes and jibes, is an important man in our society. He ought to be paid accordingly. He ought to get enough to keep well ahead of the dogs of debt, so that he can think more about his legislative job and, above all, devote more time to it. He ought to get enough so that he can more easily withstand proffered bribes—or should we say contributions—by special interests?

Last year, mainly because it was an election year, Congress turned down a pay raise for its Members. This year it should not be so skittish. Every reasonable voter, including the President himself, appreciates that the lawmakers have long deserved a healthy hike in pay.

Our Fiscal Pilots

EXTENSION OF REMARKS

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the Record an editorial entitled "Our Fiscal Pilots," which appeared in the New York Times on January 18, 1955. This editorial points out the steady progress which the Eisenhower administration has made toward balancing the Federal budget.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR FISCAL PILOTS

The President's annual message on the budget, delivered to the Congress yesterday, contains one short and happily phrased statement of philosophy-that will remain with many readers after the myriad of other words and the regiment after regiment of accompanying statistics have become a blur. It reads: "A liberal attitude toward the welfare of the people and a conservative approach to the use of their money have shaped the budget."

The story of the budget over the past 2 years has been the story of an administration which was pledged to a balanced budget struggling to make good on that promise in the face of a downward readjustment in the economy stemming from the end of the fighting war in Korea and the leveling off of the rearmament effort. In this situation the administration found itself being sniped at from one direction or another whatever step it decided to take in the field of fiscal policy. But surveying the results of its activities in this area as it is possible to see them in the new budget one is impressed with the fact that, while the administration has been compelled at times to reduce speed of its program and even go out of its course, it has never taken its eyes off that objective.

The evidence on this point, even after 2 short years, is irrefutable. Consider, for example, what has happened to Government spending, which must be the focal point of any budget-balancing program. From \$74.3 billions in 1953 it has been reduced each In the budget recommended successive year. yesterday for 1955-56, Mr. Eisenhower put spending at \$62.4 billion, or \$11.9 billion under 1953. Since the President foresess revenue receipts of \$60 billion, this would make the prospective deficit for the coming year \$2.4 billion. That would be the smallest deficit incurred since 1951, and would compare with the \$9.4-billion deficit bequeathed to the Eisenhower administration by its predecessors in 1953.

Again, consider the figure for total cash receipts and expenditures anticipated in the year 1955-56 (better known as the cash budget). This version of the budget (which is customarily employed in measuring the net impact of the budget on the economy in terms of inflation or deflation) reveals a prospective surplus of about \$600 million, compared with deficits for 1954 and 1955 of \$2 billion and \$2.4 billion, respectively.

Finally, there is the test of budgetary intentions and budgetary progress to be found in the President's recommendations for appropriations and authority to incur obliga-tions. It is testimony to the determination with which the budget problem has been attacked that, for the third consecutive year, 1956 is expected to produce a budgetary picture in which new authorizations will be under estimated current revenue receipts.

Critics who have chided the administra-tion with "failing to balance" the budget, on the one hand, or "balancing the budget" at the expense of human welfare, have, of course, been merely committing assault and battery on strawmen set up for the pur-The important thing is that budget has, in fact, been brought under control: and in the sense that recurring and increasing deficits had been a threat to the integrity of the dollar, that threat, with the prospective balancing of the cash budget for 1956, has been eliminated. If the administration, as critics of the left have charged, had been inclined to balance the budget at the expense of jobs and public welfare, it could have accomplished it last year.

Last year the administration turned back to the public \$7.5 billion in taxes, the biggest tax reduction in a single year in the Nation's history. For the coming year, with business on the upbeat, the administration has decided just as judiciously that taxes should be held where they are, though this means asking extension for another year of corporate income taxes and certain excise taxes scheduled to be reduced next April 1. In short, what we have been witnessing over these last 2 years has been a demonstration of fiscal navigation by pilots who not only know where they are going but who also are thoroughly aware that in navigation, unlike geometry, a straight line is by no means always the shortest distance between two points.

A Truce in Formosa Strait

EXTENSION OF REMARKS OF

HON, HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. LEHMAN. Mr. President, the Washington Post and Times-Herald of Tuesday, January 18, contained a very penetrating analysis of the Formosa treaty by one of our country's most distinguished commentators on national and international affairs, Mr. Walter Lippmann.

The points made by Mr. Lippmann in his article deserve the most sober study by all of us as we approach the consideration of this vital agreement—the treaty of alliance with Chiang Kai-shek.

I ask unanimous consent that Mr. Lippmann's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW (By Walter Lippmann) A TRUCE IN FORMOSA STRAIT

Whether or not it was planned that way in Peiping, there is a striking parallelism between the affair of the fliers and our proposed security pact with Chiang's government in Formosa. Peiping announced the convictions of the fliers at the end of November, which was just as the negotiations were being concluded in Formosa. Chou En-lai in his talks with Mr. Hammarskjöld seems to have insisted that China felt itself threatened by the American support of Chiang, who, of course, is bound to keep announcing his intention to return to the mainland, While Chou was complaining to Mr. Hammarskjöld about that, Mr. Dulles was showing the Senators an exchange of notes with Chiang's Foreign Minister promising, though not in the clearest language, that Chiang will not invade the mainland without our consent.

This is an interesting situation. Peiping worried that the United States, using Chiang as an instrument and a pretext, is preparing to attack Red China. Washington is worried that Chiang will deliberately entangle the United States against its will in a war with Red China

Is it farfetched to say that the situation is made to order for a constructive action by the United Nations? Why should the United Nations not move to bring about a cease fire in the Formosa Strait, thus ending the last shooting war in Asia? Why should not the United Nations then become the guarantors of the principle that force shall not be used to determine the future of Formosa and the relationship of the two Chinese Governments?

Such a truce under the auspices of the United Nations would reflect correctly the political and military realities. Red China is quite incapable of crossing a hundred miles of water and conquering Formosa. The United States is, in fact, quite incapable of putting Chiang back on the mainland and restoring him to power. A sound agreement in international relations is one which registers, which states in clear language, the real situation. A truce in the Formosa Strait would register the real situation between Red China and the United States. It would change only the propaganda speeches from the other side about the liberation of Formosa by force and from this side about the liberation by force of the mainland.

The truce would in fact give international standing backed with the vast moral authority of the United Nations to the notes which Mr. Dulles has exchanged with Mr. Yeh. In Washington we do not doubt that Mr. Dulles means to hold Mr. Yeh to the letter and the spirit of the engagement. We cannot expect Peiping to believe that. know that most of the uncommitted Asian nations are far from sure that they believe it. And even in Washington many of us would feel better if the engagements not to entangle us in war rested on something broader and more solid than a private understanding between Taipeh and Washington.

The advantages of this approach to the question would be so considerable that it might be well to explore it before ratifying the Formosa Treaty. A truce under United Nations would accomplish all the good that the treaty is designed for. would avoid the disadvantages of the treaty. I do not see how anyone can feel happy about a treaty of alliance which on the supreme question of whether the alliance would lead to war is so unclear that it has to be interpreted by diplomatic notes.

I for one am unhappy also about the indiscriminate signing of alliances with weak and vulnerable and not too dependable states. The right rule, it seems to me, is to give a guaranty to a state like Formosa, not to pretend that you are making an alliance with it. For the relationship is a one-way We must defend Formosa. affair. does not defend the United States. It is better not to make alliances except with countries that are in fact allies.

If, therefore, an international truce were to be negotiated in the Formosa Strait, we should be better off all around.

The strongest reason for skepticism about this proposal is that it looks so favorable to the United States that Red China may refuse This remains to be seen when and if the exchanges, which Mr. Hammarskjöld has opened up so wisely and so well, develop into negotiations for the reduction of the danger of war in Asia.

Editorial Tribute to Former Gov. James F. Byrnes, of South Carolina

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Well Deserved Accolade." published in the Charleston News and Courier of January 19, 1955, in tribute to former Governor Byrnes, of South Carolina.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

> WELL-DESERVED ACCOLADE (By John Temple Graves)

"You can't go home again."

As James F. Byrnes went out of office, the finest thing to be said of this national and world figure is that he could come home again-and did, magnificently.

It is a comment on the Americanism of his home and the Americanism of the man.

Only two others in history have left their homes for such high places-John Calhoun and Woodrow Wilson-and only one came home again, although both held always to home philosophy of States.

Mr. Justice he has been called, and Mr. Secretary, Congressman, Senator, Assistant President of the United States—but he will go to history as Governor Byrnes. That is the fact and that is the philosophy. He will go, too, as a politically disembodied soul, belonging only to his State and country, and dedicated in both names, come who may, against too much government too far from the governed, against federalism gone mad and socialism come creeping.

Regional circumstance—the centripetal force-drew him home at the end as it did Calhoun, and forced upon him the unhappy problem which began for the South when the first Yankee slave trader sold his cargo below the Potomac. He went out of office yesterday with the problem unsolved, went telling his fellow citizens it is their most important, and went with a record of more done for the Negro child's education-and for the white-than any other governor in

South Carolina's history.

Governor Byrnes' school program has already caused \$121 million to be allocated for school construction, with an eventual total of \$200 million. Sixty-one percent has been for Negro schools, although Negro pupils are only 40 percent. Under Mr. Byrnes, the State's part of the public school budget has increased from about \$35 million a year to about \$67 million. A reorganization plan has reduced the number of school districts from 1.200 to 104.

Mr. Byrnes' term will be remembered, too, for broad improvement in the mental hospital and other State institutions, and for continued successful support of industrial development begun under Strom Thurmond.

It will be remembered, also, for the death of the Ku Klux Klan in South Carolina as a result of the antimasking bill he demanded and the rugged enforcement his officers gave the bill when it was passed. Even when the Klan secured private property for its meetings the governor's men made themselves so much in evidence that the leaders began crossing the State line to North Carolina, which brought them to trouble in both State and Federal courts.

His stand for law and order has resulted too in establishment of a training school for enforcement officers.

I think Mr. Byrnes' greatest achievement for South Carolina has been one for the South entire and also for the Nation. That is his leadership against the blind partyism which no longer had any right to exist in the South and which was ensiaving southerners against their own and the Nation's interest. If these States are more free-minded politically than they have been since the Confederate War and, by that token, possessed of more potential political power, James F. Byrnes deserves much of the credit.

Salute, then, to the high heart and fine intelligence and winning charm of a little South Carolinian who, unassisted, has made himself one of the world's big ones, big enough for all the high places and big enough to come home in action to the end!

Eisenhower's Simple Sagacity

EXTENSION OF REMARKS

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of an article which appeared in the Los Angeles Times. The article was written by Mr. Holmes Alexander, a member of an old Maryland family, and is entitled "Eisenhower's Simple Sagacity."

There being no objection, the article was ordered to be printed in the Record, as follows:

EISENHOWER'S SIMPLE SAGACITY (By Holmes Alexander)

On a short-term, day-to-day basis, America's best natural resource for 1955 is Dwight David Eisenhower, the good gray rock to which, as it sometimes seems, the Nation's sanity is anchored.

At this transitional period of his term it's clear that Mr. Elsenhower is a transitional President.

Only a moderate, as he calls himself politically, could have tapered us off the Fair Deal jag; only a public hero with a puritanical conscience would have accepted the popular power now in one man's hands without abusing it; only a five-star military officer would have the nerve and the knowledge to reduce the Armed Forces—as Ike intends to keep on doing—in the face of real danger and of phony danger, the latter raised like a goblin's head by certain Congress people, the military columnists, the munition-makers, and the Pentagon chiefs who year

after year lobby for more men and more armaments.

But the vein of gold in this Elsenhower lode is not his politics, experience, or expert knowledge; it's his personal character.

Just recently I sat alone for 30 minutes or more with a member of the President's Cabinet whom I'm not allowed to quote by name. But he won't mind if I use his words to make this point. This Secretary said:

"This is my last political job. After almost 2 years of it, I'm fed up with being slandered every time I open my mouth; my wife wants to go home, and I want to live where I can see my grandchildren grow up. But, so help me, every time I go to a Cabinet meeting and hear that fellow talk, I'm ready to take everything they can throw at me for another 6 months."

Middle-aged grandfathers like this Secretary do not thrill easily, and the President doesn't use a locker-room pep talk that makes for volatile emotions.

The Eisenhower leadership is of a mature, man-to-man nature. This is the stuff of leadership that sticks with the public, despite what the demagogues think. It is the quality which proved superior to the cranial appeal of Adial Stevenson and the visceral call of McCarthyism.

Ike has got something better than either. He's got, in the race track and not the sociological sense, "class."

Without having Stevenson's education or literary touch or lawyer's skill at reference and citation, Elsenhower is more intellectually capable than Stevenson.

Adiai could beat him on competitive exams and might outdo him in a debate but Ike's mind can go places where Adiai's would be a shivering stranger.

In the field of international politics—of "history in the making" if you will—Mr. Eisenhower is often profound. He thinks, and sometimes he speaks, like a man who views our struggle for the world from the distance of another century.

He is one step above being a statesman; he's a historian. And if he didn't have to calculate how his words look in tomorrow's headlines the President might say things too glaringly true for many of us to face.

Some of his admirers in the internationalist set can't follow like's domestic line. But that's their fault, not his. He comprehends better than most the interlocking aspect of free enterprise and national security.

Rather than add \$100 million to the national debt the President improvised the complicated but unshakable Dixon-Yates contract for attracting private capital into the hydroelectric field. Dixon-Yates was also a means of blocking the domestic "imperialism" of TVA.

Taken with the rest of his program this desocialization move is one of a master who's playing not just this single move but a vast chessboard of coordinated strategy.

Two years of Eisenhower is long enough to see what the startegy is. He himself has defined it as "liberal" toward human problems, "conservative" toward economic ones.

This definition is nowhere near snappy enough to make a slogan or an easily quotable administration adage. But it's so ruggedly true that it can't be beat for summarizing the program which includes: desegregation and States' rights; a new Department of Welfare, and a pinchpenny Department of the Treasury, emphasis on both "peace" and "massive retailation."

In his famed autobiography Henry Adams remarks that General Grant's flatfooted formula for ending the Civil War, "Let us have peace," would have been considered a gem of wit or wisdom had it come from Mark Twain.

That's how it is with many words and deeds of President Elsenhower. They are often so unpretentious, so simple that their penetrative sagacity is missed, more's the pity.

Annual Report of the President of the New Jersey Taxpayers Association, Inc.

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES
Friday, January 21, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the annual report of the President of the New Jersey Taypayers Association, Inc., containing editorials from a number of newspapers in that State.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

YOU WERE THERE—A RECORD OF PERFORM-ANCE—ANNUAL REPORT OF THE PRESIDENT, THE NEW JERSEY TAXPAYERS ASSOCIATION

New Jersey Taxpayers
Association, Inc.,
January 1, 1955.

To the Membership:

Representative government rests upon citizen participation.

Today, however, government is so vast and complex that the individual, although desiring to keep abreast of its many activities, finds that he cannot.

Nearly a quarter of a century ago the New Jersey Taxpayers Association was formed to overcome this dilemma—to study the problems of government and express the interests of taxpayers in the halls of government.

On the following pages you will find the highlights of the association's record of performance in 1954—performance which permitted the taxpayer to amplify his voice so as to reach government effectively at all its levels, Federal, State, and local.

It is equally a record of service to govern-

Through this record, Mr. Taxpayer, when governmental problems were being considered, you were represented.

Through the New Jersey Taxpayers Association—you were there.

GEORGE E. STRINGFELLOW,
President.

GUIDING MUNICIPAL GROWTH

Municipalities in all parts of the State are confronted increasingly with perplexing problems of growth resulting from the rapid expansion of population and industry. After extensive study by the committee on municipalities, the association began publication of a pamphlet series entitled "Guiding Municipal Growth." The first of the series, issued in 1954, provides an introduction to the general subject and a description of pianning and other protective steps. Wide use of these publications is anticipated as a means of avoiding pitfalls and insuring a sound future economy to the State's 567 municipalities, whose combined municipal, school, and county tax levies now total one-half billion dollars.

WATER SUPPLY

When the State administration called public attention to the need for increased water supplies, the association promptly initiated study of the subject. Meantime a number of legislative bills were introduced, whereupon the association called attention to the wide range—from \$60 million to \$150 million—in the cost estimates, and urged legislative caution in authorizing a bond issue referendum until several basic issues had been further resolved. Proceeding then with the association studies, the staff assembled copious data for committee use, including analyses of all the legislative bills, various

descriptive statements, and the only comprehensive bibliography extant of the hundreds of New Jersey studies and reports on the State's water problem from 1894 to date.

SCHOOL AID

Early in 1954 the Commission on State Tax Policy rendered its seventh report, recommending a revised State school-aid program. The association published a digest of this report for its members, public officials, and others. Subsequently the legislature passed and the Governor signed a bill in accordance with the commission's recommendations, increasing school aid by approximately \$30 million annually, and establishing a distribution formula to remove serious and long-standing inequities. The principles upon which this legislation is based largely conform with those advocated earlier by NJTA when it appeared before the tax policy commission.

Legislative approval of the \$30 million increase in school aid constituted, in effect a stamp of official confirmation of association action during the previous year in strongly urging rejection of an earlier report by another commission which had recommended a \$60 million program. This program provided for distribution of State aid upon a formula which the association demonstrated was grossly inequitable and which it therefore opposed.

STATE BUDGET

An association staff representative was regularly present at the executive hearings on the State budget and the legislative hearings on the appropriations bill. Following the 1954 legislative hearings, the association published its regular annual summary of the appropriations measure. This activity offers many opportunities, often upon request, to make constructive suggestions to State fiscal officers and legislators.

When the new State administration assumed office, the staff submitted upon request an analysis of the organization of the executive offices in several comparable States. It also submitted important recommendations relating to capital budgeting and to improved personnel reporting, including its integration with the budget document.

MEDICAL COLLEGE

After studying the 1951 report of the New Jersey Medical College Commission and conferring with various authorities on the subject, the association announced its support of the \$25 million bond issue for the establishment of a State medical-dental college. submitted to the voters at the general election on November 2, 1954. It based this support upon the need to broaden medical training opportunity for New Jersey students, overcome the shortage of doctors and other medical personnel, alleviate deficiencles in graduate and refresher training, open new possibilities for research, and enable greater coordination of training and research programs carried on in medical institutions throughout the State to make generally available the newest advances in medical knowledge.

The referendum proposal was defeated by the voters.

IMPROVING MUNICIPAL BUDGETS

Over a period of years, the association through its committee on municipalities has cooperated closely with the division of local government (department of the treasury) in an effort to improve and make more easily understandable the official forms on which the State's 567 municipalities are required to prepare their annual budgets, now totaling over \$300 million. Based on association observation of local budget problems, this effort has been concentrated during the past year upon a search for simpler terminology and presentation. The association is pleased to observe that the division continues to make significant improvements in the published budget form. Supporting this prog-

ress, the association issued a budget timetable for 1955 for the use of citizens, local taxpayers associations, and others.

INTERGOVERNMENTAL RELATIONS

As a matter of policy the association has long advocated that specific governmental functions should be assumed and financed by the lowest units of government capable of doing so effectively and economically. Consequently it has major interest in the Federal Commission on Intergovernmental Relations and the New Jersey Commission on Intergovernmental Relations," which are now in the midst of studies of the subject. The association, upon request, submitted suggestions to both of these commissions and supplied specific information respecting payments in lieu of taxes, principles regarding grants-in-aid and an extensive intergovernmental relations bibliog-A staff representative took part in a hearing by the Education Subcommittee of the Federal Commission, in cooperation with representatives of the California Taxpayers Association and the Oklahoma Public Expenditures Survey.

FEDERAL ACTIVITIES

In concert with State taxpayers associations in other States, and through the services of its committee on Federal affairs. New Jersey Taxpayers Association continued to urge that the Federal Government (1) balance its budget, (2) reduce Federal subsidies and grants to local government, business, and agriculture, (3) curb Federal competition with private business, (4) postpone any new public works until the budget is balanced, and (5) improve congressional facilities to study the budget. Augmenting its Federal studies, New Jersey Taxpayers Association made frequent use of the tax foundation's Federal research.

New Jersey Taxpayers Association's president personally appeared before a subcommittee of the House of Representatives Committee on Government Operations to urge that the Government get out of competition with private enterprise. His statement received wide press coverage in New Jersey and throughout the Nation. New Jersey Taxpayers Association views on Government competition with private business were also submitted to the Water Resources and Power Task Force of the Hoover Commission.

The Conference of State Taxpayer Association Executives stood squarely behind the move in Congress against increasing the Federal debt limit, which resulted in a temporary increase of \$6 billion instead of a permanent increase from \$275 billion to \$290 billion.

New Jersey Taxpayers Association urged New Jersey Congressmen to support the economy drive for a balanced budget; substitution of flexible for rigid price supports; steps to modernize antiquated congressional voting procedures; placing the postal service on a self-supporting basis; postponement of legislation extending Federal grants in various fields and launching new programs to finance waterpower and reclamation projects, pending completion of studies by Hoover Commission and Commission on Intergovernmental Relations, and support in principle of measures to improve congressional fiscal procedures.

ASSESSMENT ADMINISTRATION

New Jersey Taxpayers Association has been outstanding in its support of improved administration of local property assessment. This year the association published, and the New Jersey Department of the Treasury gave broad official circulation to, the first comprehensive review of progress in this field—progress in which the association had played a considerable part. Currently a representative of the committee on municipalities is represented on a special committee of the local property tax bureau which is consulting on the preparation of a manual for

property assessment throughout the State. At the same time the association continues to be represented on the general advisory committee to the bureau.

INSTITUTIONAL IMPROVEMENT

Having approved both of the State's earlier \$25 million institutional bond issues, the association, through its special committee of engineers, continues to advise with the department of institutions and agencies concerning progress under these bond issues. The bond funds are being administered under a procedural plan adopted by departmental officials and the division of purchase and property (department of the treasury), largely in accordance with association recommendations.

FINANCES OF LOCAL GOVERNMENT

The association's annual publications on (1) municipal and school district finances and (2) county finances have become so widely accepted as standard reference works that their annual publication has become an event of significance. This year for the first time the two publications were combined, bringing under one cover comparative fiscal information concerning New Jersey's 567 municipalities, 549 school districts and 21 counties, thereby enhancing greatly the usability of the information for the thousands of taxpayers, public officials, associations and businesses who rely upon this service.

STATE LEGISLATION

The association reviewed all bills and resolutions submitted to the 1954 legislature, to identify those of primary concern to taxpayers. Appropriate study was then made of measures of particular interest. Information, often upon request, was submitted to legislators concerning a number of these and, depending upon the circumstances, the views of the association were made known to the legislature, the governor, and the public.

SALARY LEGISLATION

When a series of bills was introduced in the legislature to provide mandatory salary increases for legislators and a large number of State and county officials, the association, without taking a position on the merits of the individual proposals, publicized the positions affected and the increased cost. The association took the position that the public should know these facts and the press of the State responded by according the information wide publicity.

At the same time the association recorded its opposition to unsound measures which would have increased State and local salary costs by the salary equivalent of accumulated sick leave, but which failed of enactment. It likewise recorded its opposition to a bill now enacted to provide State-mandated annual increments for all teachers in public schools, as an unsound invasion of rights of local determination.

OPTIONAL MUNICIPAL CHARTER LAWS

Since their enactment in 1950, New Jersey Taxpayers Association has encouraged public interest in New Jersey's optional municipal charter laws. Today a number of municipalities, including the city of Newark, have adopted improved forms permitted under the law, and citizen and official interest in the subject is pyramiding throughout the State. The association has published many informative articles on the charter laws, keeps an up-to-date inventory of progress in this field, and scrutinizes all proposed modifying legislation.

SPECIAL SERVICES

No record of association activities would be complete without mentioning the great number and variety of requests from taxpayers, associations, business firms, and public officials for information concerning the operation and finances of government. Increasingly, taxpayers throughout the State rely upon the association as a source of (1) factual information not easily obtainable elsewhere, and (2) consultation on local governmental problems. Without preempting the fields properly reserved for local action, the association through its informational and consultative services has made possible innumerable improvements in local government operations and finance during the past year.

[From the Jersey Journal] A JOB WELL DONE

Nearly 25 years ago, the New Jersey Taxpayers Association was formed to study the problems of government, and to protect the interests of the taxpavers.

It has done an effective job. Such nuisances as sales and income taxes are-for the present at least-conspicuous by their absence in the State. The association can take a large share of the credit for this.

Not all the taxpayers have approved every thing the group has stood and worked for, but generally speaking it served to influence important and beneficial changes for the man on the street who pays the bills.

In the words of George E. Stringfellow, president, the association has also been of service to the government. The New Jersey Taxpayers Association can rightfully boast that its only goal has been to see that the people of New Jersey get their money's worth.

[From the Paterson News]

The New Jersey Taxpayers Association has turned out a booklet, Guiding Municipal Growth, which should be a must for all governmental agencies plagued with modern expansion headaches. * * * This is a worthy contribution indeed, not alone for the information it provides but because of the challenge it presents to face the grave problems sensibly and constructively.

[From the Bergen Evening Record]

The association's interests pervade every level of government, and its staff has developed valuable skills of analysis and persuasion, useful and used by little people as well as big. It has helped New Jersey to resist so far the income and sales tax. On the other hand, it has not yielded to the temptation, to so many others so overpowerto recommend that taxes be reduced while we're running a government in the red. Its behavior has been thoroughly adult.

[From the Daily Home News]

The annual report of George E. Stringfellow, president of the New Jersey Taxpayers' Association, records a banner year of accomplishment by the association, for the benefit of its members and for the benefit of all the people of the State of New Jer-

It clearly shows that the association has completed another year of energetic and successful effort to help the New Jersey tax-payer get full value for his tax dollar.

[From the Hunterdon County Democrat]

The New Jersey Taxpayers Association has performed a constructive service for rural municipalities in issuing a publication entitled "Guiding Municipal Growth." This publication will aid officials who are being asked by their citizens to tackle problems which grow out of the expansion and movement of population, commerce, and industry. * * *

The booklet has a place in the program of the Taxpayers Association because it can be so readily demonstrated that haphazard growth has almost inevitably brought tax burdens beyond the benefits derived from new valuations. Where proper safeguards have been imposed early enough, both existing and new property have sustained their values while the health, safety, and general appearance of the communities have been Ike's First 2 Years Made a Better U. S. A. enhanced.

[From the New Egypt Press]

The New Jersey Taxpayers Association has issued a booklet which describes the unusual growth of rural communities. . . . All of this means that communities such as ours, are sure to be faced now, or in the near future with very acute problems of greater facilities along every line. * * * We must look away from the past and into the future to plan properly for such demands.

[From the Courier-Post]

The association's information service is of invaluable aid to New Jersey newspapers, which would be lost without it. It is doubtless true, as Stringfellow says, that the cooperative efforts of the association and the press of the State are largely responsible for the fact that New Jersey has neither a sales nor an income tax. That alone would be sufficient justification for the association's existence.

The Courier-Post has frequently differed with the association in the past and doubt-less will in the future. But we think New Jersey is extremely fortunate in having such a privately sponsored organization to battle for the taxpayer and for economy in government. Few States have one that is so effec-

[From the Trentonian]

It may be that most of them don't know it, but when governmental deliberations are going on, the taxpayers of New Jersey are in

Not physically, of course, desirable as that might be, but through the good offices of the New Jersey Taxpayers Association which is about to "wrap up" another year of guarding the interests of people in the halls of government. * * *

* * * President Stringfellow's report is invaluable in many respects. Perhaps the most important is that it gives us a comprehensive view of the many matters affecting our tax moneys which arise during a year. It is comforting, indeed, to know that association valiantly continues to strive for economy in government on all levels-and that it is meeting with at least some success.

[From the Call]

To ease these growing pains and control tomorrow's taxes today, municipal officials will find the NJTA's brochures very helpful. In fact the booklets should be required reading by our future taxpayers—currently our high-school students.

[From the Ridgewood Sunday News]

We should like to recommend Guiding Municipal Growth as a valuable tool for planning boards whose task is to direct growth into desirable channels.

[From the New York World-Telegram] VOICE OF THE TAXPAYERS

The New Jersey Taxpayers Association does remarkable job for the public. It gives the citizens of that State the close participation in their government which they could not hope to obtain as individuals,

The association is the taxpayers' voice in the State capital. It is adviser to the administration, critic, legislative analyst, financial expert, and watchdog of the public interest.

The current report of the president, George E. Stringfellow, spells out the many various fields in which the organization has been active and, more important, effective. It all adds up to fine service in one of the best causes, good government at the lowest possible cost.

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. HOSMER. Mr. Speaker, this is the second anniversary of President Eisenhower's inauguration. The list of accomplishments toward a better U.S.A. during these 2 years is impressive indeed

The country is far better off on all fronts that it was 2 years ago. That is why, from what the public opinion polls show, most Americans seem to have this feeling about those 2 years: "Two down and, I hope, 6 to go."

That is why, in light of the shift in control of both Houses of Congress, thinking Americans have this question about the next 2 years: "Will repeated hostile political attacks occur which 'rock the boat' and hamstring this enlightened forwarding of the best interests of America and all Americans?"

Columnist Gould Lincoln makes the following fine, but incomplete, summary of Eisenhower administration accomplishments during the Republican 83d Congress in his piece in today's Washington Evening Star:

The country has had 2 years of Eisenhower administration, and it's better off. Today is the second anniversary of the President's inauguration.

A remarkable transition has been made from war to peace economy. At the same time, many improvements have been obtained on the international front. Business is good and employment is high, despite the fact there are a few soft spots. dislocation by reason of the transition has been confined to relatively few communities. The stock market's advance is an indication of the people's confidence in the President and his handling of the country's affairs. The production of houses has been greater than ever. Both the savings and the spending of the people as a whole have increased. And there is no sign of depression on the horizon.

In the last year, one of the greatest tax reductions, if not the greatest, has taken place. Notwithstanding the criticism of Democrats that the President has failed to balance the Federal budget, the way has been cleared for such a balance.

Indeed, the President has helped to bring both peace and prosperity to this country and, in considerable measure, to the free world. In the field of foreign relations, he has brought about an end of the war in Korea. And he and Secretary of State Dulles and other representatives of the President have helped materially in a number of international situations which might have blown up to real trouble. The Iranian situation, where the Communists were about to take over, has been ironed out.

OTHER BRIGHT SPOTS

The explosive problem of the Suez Canal and the British and the Egyptians, too, is being settled peacefully. So, too, problem of Trieste, a trouble spot for years. The Communist outcropping in Guatemala has been successfully curbed. An agreement for better international relations, looking to the arming of West Germany as part of the defense against Communist aggression, is

going forward and expected to become a sure accomplishment in the near future. In the countries of the Middle East, too, the real desire of the United States for peace and friendly relations is better understood.

The President has obtained the adoption of a material part of his legislative program, described as progressive-moderate and also as dynamic and progressive, during these first 2 years. Included is a new farm law, providing a system of flexible price supports. This is designed to bring production more nearly in line with consumption and to put an end to the great surpluses of food crops which the Government has in large measure been compelled to take over. The tax structure has been revised, and through great savings to the Government in administration and the paring down of appropriations it has been possible to lessen the tax burden on the people by many billions of dollars.

SOUND PROGRAM

The final 2 years of the President's present term of office are beginning. Mr. Eisenhower faces a Democratic controlled Congress—though the margin of control is thin, both in the House and Senate. His program is now before that Congress and it is expected he will get a considerable part of it. For his proposals are sound and humanitarian. Undoubtedly the President will face hostile political attacks. The Democrats do not relish the idea of building up the strength of a potential Republican candidate for President in 1956. If Mr. Eisenhower can be trapped or hamstrung, so much the better from their point of view.

The Democrats for the most part have given over predictions of depression—temporarily, at least. They have not forgotten, however, that a depression gave them control of the Government for a 20-year period immediately preceding Mr. Eisenhower. They continue to look with interest to the farm vote, and they hope to be able to stir the farmers up against Mr. Eisenhower and

Republicans.

In the last 2 years, the President has retained much of his great personal popularity. The people regard him as entirely sincere and as working for their interest, notwithstanding the attacks made on him by the New Dealers. That he has lost some ground in the South because of the Supreme Court decision desegregating the public schools is true. But if it comes to a showdown between Mr. Eisenhower and Adial Stevenson in 1956, it is by no means certain that the Democrats of the South will rally strongly back of Mr. Stevenson. They understand well that Mr. Stevenson and his supporters are committed to a compulsory Federal FEFC law.

Thirty-second Annual Convention, Oregon Division, Izaak Walton League of America

EXTENSION OF REMARKS

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES
Friday, January 21, 1955

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter dated January 10, 1955, which I have received from Dan P. Allen, president of the Oregon division, Izaak Walton League of America, together with a set of resolutions adopted by the 32d annual convention of the IWLA, held in Portland, Oreg., November 26, 27, and 23, 1954.

There being no objection, the letter and resolutions were ordered to be printed in the RECORD, as follows:

OREGON DIVISION, IZAAK WALTON
LEAGUE OF AMERICA, INC.,
January 10, 1955.

The Honorable Wayne Morse, Senate Office Building, Washington, D. C.

Dear Senator Morse: The Oregon division of the Izaak Walton League of America, at its recent annual convention, considered many problems. The central theme of the convention was youth, and we had as our guests during our deliberations more than 100 young outdoor Oregonians, all of whom were particularly interested in those matters covered by the enclosed resolutions. This is understandable, in view of the fact they will be most directly concerned in future years with our wise management of today's natural resources.

I am sure most of the resolutions passed will be of interest to you. Your attention is especially directed to Resolution No. 1, which asks specific action from the Oregon delegation, and to other Resolutions Nos. 2 4, 8, 12, and 13. Copies of resolutions are enclosed.

When action on any of these problems seems imminent, I will probably write you further. With kindest regards, I am

Sincerely,

DAN P. ALLEN,
President, Oregon Division, Izaak
Walton League of America, Eugene,
Oreg.

RESOLUTIONS ADOPTED BY 32D ANNUAL CON-VENTION, IZAAK WALTON LEAGUE OF AMERICA, INC., OREGON DIVISION, HELD IN PORTLAND, OREG., NOVEMBER 26-27-28, 1954

RESOLUTION 1. MINING STATUTES

Whereas it is considered that the present mining laws in force since 1872 on the public domain and public forests and other public-owned lands within the United States are outdated and inimicable to the best interests of all the people; and

Whereas it has recently once again been demonstrated in the State of Oregon, through wide dissemination of information in connection with the Al Serena mining claims, that in many instances valuable surface and timber rights on such public lands rather than minerals are the real reason for the filing of mining claims. Now, therefore, be it

Resolved by the Oregon division, Izaak Walton League of America, in 1954 convention assembled. That newer revised laws be enacted by the Congress of the United States to provide that surface rights shall be separated from subsurface rights in order to prevent claims from being filed and/or patented mainly for valuable timber, stream, or other surface resources, and that Oregon representatives in Congress be and are hereby urged to immediately introduce such legislation for early enactment; and be it further

Resolved, That the secretary of the Oregon division send copies of this resolution to the Secretary of Agriculture, the Secretary of the Interior, the chairmen of the Senate and House Committees on Agriculture, the chairmen of the Senate and House Committees for Interior and Insular Affairs, and to members of the Oregon congressional delegation.

RESOLUTION 2. RESEARCH APPROPRIATIONS

Whereas the public lands contain important big-game ranges in the West; and Whereas there is an increasing need for

big-game range research; and

Whereas the United States Forest Service has been given authority to do browse-range research, but no funds are appropriated for this specific purpose: Now, therefore, be it

Resolved, That the Oregon division, Izaak Walton League of America, in 1954 convention assembled, request Congress to pass bill for an appropriation for browse-range research by the forest and range experiment

stations of the United States Forest Service, in cooperation with the State game commissions; and be it further

sions; and be it further

Resolved, That the secretary of the Oregon division send copies of this resolution to the chairmen of the Senate and House Committees on Agriculture and Forestry, the chairmen of the Senate and House Appropriations Committees, and to the Oregon congressional delegation.

RESOLUTION 3. MOUNT WASHINGTON AND DIAMOND PEAK WILD AREAS

Whereas the northwest regional office of the United States Forest Service has recommended that Mount Washington and Diamond Peak and the high plateau areas surrounding them be set aside as wild areas; and

Whereas it is a fundamental policy of the Izaak Walton League, at both National and State levels, to favor more rather than less of such areas for the use and enjoyment of coming generations; and

Whereas the two areas in question support only a very limited volume of commercial timber of low quality: Now, therefore, be it

Resolved, That the Oregon division, Izaak Walton League of America, in 1954 convention assembled, express to the United States Forest Service its strong approval of this recommendation, its desire that the proposed areas include comprehensively the scenic and recreational lands around these peaks, and their hope that the recommendation to create these wild areas may be carried out at the earliest possible moment; and be it further

Resolved, That the secretary of the Oregon division send copies of this resolution to the Chief of the United States Forest Service, northwest regional forester, supervisor of the Willamette Forest, the president of the Wilderness Society, the president of the Federation of Western Outdoor Clubs, and others concerned.

RESOLUTION 4. BALD MOUNTAIN PROJECT (ILLINOIS RIVER DAM)

Whereas under power project No. 190, known as the Bald Mountain project, the Coos-Curry Electric Cooperative, Inc., proposes to build a dam in the Illinois River a few miles above its confluence with the Rogue River; and

Whereas the proposed dam would have a maximum height of 100 feet and a length of some 400 feet, and would divert water into a tunnel or canal approximately 9½ miles long; that the tunnel capacity would be 7,500 cubic feet per second, with an average diversion of 1,425 cubic feet per second, and the entire flow of the river could be so diverted; and

Whereas the dam itself would prevent the passage of migratory fish upstream and downstream, thereby raising havoc with the runs of Chinook, sliver salmon, winter run steelhead, cut-throat and resident trout, and would have an overall adverse effect on the fishery resources of the entire Rogue River Basin; and

Whereas fish ladders on a dam of this size would not be satisfactory and would not pass the said fish over the dam due to the long diversion, tunnel, or canal, and the low water left in the main channel of the river; and

Whereas there are 195 miles of accessible spawning area above the proposed dam and the Illinois River is the second in importance of the tributaries of the Rogue River: Now, therefore, be it

Resolved, That the Oregon division, Izaak Walton League of America, in 1954 convention assembled, go on record as opposing the power project No. 190, known as Bald Mountain project; and be it further

Resolved, That the secretary of the Oregon division send copies of this resolution to the Secretary of the Interior, Federal Power Commission, Oregon State Fish and Game Commissions, and the Oregon congressional delegation.

RESOLUTION 5. WATER RESOURCES LEGISLATION

Whereas water is one of our chief resources in the State of Oregon; and

Whereas at the present time our water resources are overappropriated during our late summer and dry season; and

Whereas there is an ample supply available if properly stored and managed; and Whereas the theme of the 1953 conven-

tion of the Oregon division was water and brought forth the pressing need for laws controlling the use of our water resources; and

Whereas the interim committee of the Oregon Legislature studying the future water needs of the State will report to the assembly its findings and recommendations: Now, therefore, be it

Resolved, That the Oregon division, Izaak Walton League of America, in 1954 convention assembled, devote its major attention at the next State legislative assembly to the enactment of sufficient and proper legislation to provide for the use of water to the best advantage to all concerned; and be it further

Resolved, That our legislative committee work in conjunction with the Soil Conserva tion Service, Bureau of Reclamation, State grange, and other agencies that are interested in promoting and safeguarding the proper use of our water resources.

RESOLUTION 6. WARNER VALLEY

Whereas Warner Valley is one of the major waterfowl-producing areas in the State of Oregon: and

Whereas the United States Bureau of Land Management, United States Fish and Wildlife Service, and Oregon State Game Commission have undertaken the cooperative development and management of certain public lands in north Warner Valley to preserve wildlife and recreational values; and

Whereas the private landowners in Warner Valley are developing their lands for more intensive use of the available water supply to the detriment of waterfowl production; and

Whereas the Oregon State Land Board controls approximately 20,000 acres of undeveloped but potentially productive waterfowl habitat in the vicinity of Crump and Hart Lakes in Warner Valley: Now, therefore, be it

Resolved, That the Oregon division, Izaak Walton League of America, in 1954 convention assembled, urge that the Oregon State Land Board should permit the development of its Crump Lake and Petrie Marsh lands in a manner that will benefit nesting waterfowl and permit an adequate flow of water into the north Warner area, or through exchange, sale, or cooperative agreement make them available to the Oregon State Game Commission for development and multiple use by livestock, wildlife, and the public; and be it further

Resolved, That the secretary of the Oregon division send copies of this resolution to the United States Fish and Wildlife Service. United States Bureau of Land Management, Oregon Game Commission, members of State land board, and to the Lakeview Chamber of Commerce.

RESOLUTION 7. KLAMATH BASIN

Whereas the United States Department of the Interior through the United States Fish Wildlife Service is obligated by international treaties to protect and maintain the

migratory bird resources; and

Whereas the upper Klamath River Basin is historically a waterfowl concentration point and seasonally contributes to the maintenance of at least 60 percent of the migratory waterfowl in the Pacific flyway and is a major waterfowl nesting area; and

Whereas availability of food and nesting habitat are believed to be the limiting factors of migratory birds in the Pacific flyway;

Whereas hunting of migratory birds in the Klamath Basin contributes substantially to the local economy and the well-being of citizens of the States of Oregon and California;

Whereas the Department of the Interior through the United States Bureau of Reclamation is considering multipurpose plans for the further development and utilization of the land and the water resources of the upper Klamath River Basin: Now, therefore, be it

Resolved by the Oregon division, Izaak Walton League of America, in 1954 convention assembled, That-

- 1. Development plans for the Klamath Basin should provide for development and maintenance of marsh areas to a degree commensurate with reclamation losses
- 2. Adequate minimum stream flows and minimum pools in reservoirs should be es-tablished to minimize losses of fish and aquatic vegetation.
- 3. Homesteading or other disposal of the present 30,000 acres of public grain land should be denied until the reclamation program provides arable lands in excess of the need for waterfowl feeding areas and public recreation.
- 4. The Klamath Straits unit should have highest priority for retention in public ownership because of the large marsh and water area adjacent.
- 5. The right of the United States Fish and Wildlife Service to develop and maintain necessary refuge lands for waterfowl should be secured by congressional action.
- 6. The efforts of the Department of the Interior to assemble a comprehensive development program for maximum multiple use of the land and water resources of the upper Klamath Basin are commendable.

Be it further resolved, That the secretary of the Oregon division send copies of this resolution to the Secretary of the Interior, Governor of Oregon, the Oregon congressional delegation, United States Bureau of Reclamation, and the United States Fish and Wildlife Service.

RESOLUTION 8, ROGUE AND ILLINOIS RIVER VALLEY LANDS

Whereas much of the public lands of the Rogue River and Illinois River Valleys of southern Oregon have been withdrawn from public entry for power purposes; and

Whereas these lands cannot now be used for any purposes other than for power sites; and

Whereas these withdrawn lands contain much valuable timber and minerals that should be made available to present users; and

Whereas the power sites involved are not now being developed, and their likelihood of being developed is exceedingly remote: Now, therefore, be it

Resolved by the Oregon Division, Izaak Walton League of America, in 1954 convention assembled, Petition the Secretary of the Interior to place as many of the power site withdrawals in the Rogue River and Illinois River Valleys again in the public domain as can possibly be done, with the end in view that the resources these withdrawn lands contain can be wisely used to sustain the economy of the area; and be it further

Resolved, That the secretary of the Oregon division send copies of this resolution the Secretary of the Interior, and to the Oregon congressional delegation.

RESOLUTION 9. WALDO LAKE AREA

Whereas it has come to the attention of this orgaization that the United States Forest Service is presently studying the Waldo Lake area, located in the high Cascade Mountain area of the Willamette National Forest, with a view to determining its fitness for designation as a recreation area; and

Whereas it would be presumptious to appear to prejudge the findings of this study by the Forest Service, but nonetheless pertinent to express approval of such study: Now, therefore, be it

Resolved, That the Oregon Division, Izaak Walton League of America, in 1954 convention assembled, does hereby state:

1. That this body does strongly believe that the Waldo Lakes area should be set aside in some form of restricted area at once:

2. That in the light of present information, it appears it should be designated as a recreational area.

Be it further resolved, That the secretary of the Oregon division send copies of this resolution to the Chief of the United States Forest Service, and to the regional forester of the Pacific Northwest region.

RESOLUTION 10 THREE SISTERS PRIMITIVE AREA

Whereas the regional forester of the Pacific Northwest region of the United States Forest Service has given notice of a proposal to revise the boundaries of the area known as Three Sisters primitive area, located principally in the headwaters basin of the Mc-Kenzie River, approximately 60 miles east of the city of Eugene, Oreg., and to establish it as a permanent wilderness area; and

Whereas new boundaries as proposed would greatly reduce the area, and particularly proposes as a west boundary a line on the creek beds of Eugene Creek and Horse Creek: and

Whereas it is felt there exist in the area to be excluded from the wilderness area certain areas with potentially great recreational value and important scenic, historical, and scientific interest, which values in the long run might far exceed the economic value of timber in the area: and

Whereas numerous outdoor and scientific groups oppose any reduction and many others propose a compromise west boundary of the area to include the Horse Creek Basin intact; and

Whereas there appears no immediate need for the timber in the controversial boundary area: and

Whereas the Izaak Walton League is repeatedly on record favoring more rather than less of such areas: Now, therefore, be it

Resolved, That the Oregon division, Izaak Walton League of America, in 1954 convention assembled, urge the regional forester of the United States Forest Service, Pacific Northwest region, to defer decision on the entire matter until such time as more thorough research may be accomplished, and that, in the event any boundary changes are made, such changes take into consideration the wealth of recreational opportunities which such a wilderness area affords, and the greatly increasing need for such areas resulting from increasing population, and of time and means for recreation, and the decreasing availability of such natural areas, and that when permanent boundaries are established they be of such a nature that future controversies may be avoided; and be it further

Resolved, That the secretary of the Oregon division send copies of this resolution to the Chief of the United States Forest Service and the regional forester of the Pacific Northwest region.

RESOLUTION 11. MINING AND DREDGING LEGIS-LATION

Whereas the present and future welfare of the State of Oregon demands the preservation and protection of the productive capacity of the land and streams; and

Whereas the uncontrolled dredging and mining operations which heretofore have been and now are being carried on in Oregon have destroyed, and will continue to destroy. the productive capacity of the land in that streams and reservoirs, for many miles below the scenes of operations, are so heavily silted that complete destruction of fish food, fish life, and spawning grounds of inestimable value is accomplished, and the land and streams laid waste for sport and commercial fishing and agricultural pursuit; and

Whereas the land and streams are of far greater value to the economy of the State of Oregon than the minerals recovered by such uncontrolled dredging and mining opera-tions, that legislation should be enacted at the earliest possible date, controlling such operations to the greatest practicable extent, and such legislation should have the support of the Oregon division: Now, therefore, be it

Resolved, That the Oregon division, Izaak Walton League of America, in 1954 convention assembled, go on record as being in full support of the two measures proposed for introduction to the next ensuing session of the Oregon Legislature, to wit:
1. Requires all dredging be done in set-

tling basins so that only clean and filtered water shall be returned to the stream;

2. Requiring stockpiling of the soil before dredging, leveling of tailing piles, and replacement of topsoil currently, as the dredging operations proceed; and be it further

Resolved, That the secretary send copies of this resolution to the Governor of the State of Oregon, and Representative Charles A. Tom, Rufus, Oreg.

BESOLUTION 12. UPPER MAIN M'KENZIE RIVER POWER DEVELOPMENT

Whereas the upper McKenzie River is nationally famous as a scenic and recreational area, and Clear Lake and the upper river are possessed of most unusual scenic values, and have been the mecca of tourists and nature

lovers for many years; and Whereas the Eugene Water and Electric Board has available federally generated power sufficient for anticipated requirements and in addition proposes to construct the power facilities at Cougar Dam on the South Fork of the McKenzie, which proposition has the approval of the Oregon division, Izaak Walton League of America; and

Whereas the construction of a generating plant, with the consequent fluctuation of the water level of Clear Lake, would ruin that beautiful body of water from both a scenic and recreational viewpoint: Now, therefore,

Resolved by the Oregon division, Izaak Walton League of America, in 1954 convention assembled, That it-

1. Requests the Federal Power Commission to deny the application of the Eugene Water and Electric Board for power develop-ment on the upper main McKenzie River and to rescind the 1911 withdrawal of this area for power-development purposes; and 2. Commends the United States Fores

Service on its administration of this area for recreational use, and conveys its appro-bation of the work of the Service in preserving this area in its natural state and administering it as a recreational asset; and be it

Resolved, That the secretary of the Oregon division send copies of this resolution to the Secretary of the Interior, the Federal Power Commission, the Chief of the United States Forest Service, and to the Oregon congressional delegation.

RESOLUTION 13. FOREST SERVICE APPROPRIATIONS

Whereas the national forests' recreation facilities are now taxed much beyond their limits of development by overcrowding; and Whereas this overuse is detrimental to

public health and causes serious sanitation problems; and

Whereas the national forests are the homes of many game animals, game birds, and fish, Forest Service has no funds to improve this habitat: Now, therefore, be it

Resolved, That the Oregon division, Izaak Walton League of America, in 1954 convention assembled, urge Congress to pass a bill that will provide for adequate appropriations for the United States Forest Service to properly develop, maintain, and operate the recreational facilities, and to improve the wildlife habitat on the national forests; and be it further

Resolved, That the Secretary of the Oregon division send copies of this resolution to the chairmen of the House and Senate Committees on Agriculture and Forestry, to the chairmen of the House and Senate Committees on Appropriations, and to the Oregon congressional delegation.

RESOLUTION 14

Resolved by the Oregon division, Izaak Walton League of America, in 1954 convention assembled, That it express to its State officers, and especially to its president, L. C. "Jack" Binford, its sincere appreciation for their outstanding leadership in the year 1954.

RESOLUTION 15

Resolved by the Oregon division, Izaak Walton League of America, in 1954 convention assembled. That it express its gratitude for the hospitality, splendid appointments, and organizational efficiency provided by the convention hosts, Portland, City of Roses, Beaver, Sellwood-Moreland, and Air Force chapters, and particularly by the ladies of the Multnomah chapter, and the convention chairman, Henry Kness.

Economies in United States Stockpiling Cited

EXTENSION OF REMARKS OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. MILLER of California. Speaker, here is the second of a series of two articles on the General Services Administration published in the Los Angeles Times.

The first article was put in the Con-GRESSIONAL RECORD of January 20, 1955. ECONOMIES IN UNITED STATES STOCKPILING CITED-GENERAL SERVICES AGENCY CLAIMS

MUCH OF CREDIT FOR DROP IN RUBBER (By Ray Zeman)

(Second of two articles about the General Services Administration, the agency created by the Hoover Commission to cut waste in Government)

When the Army, Navy, Air Force, and American rubber companies were competing on the world market for rubber 3½ years ago, the price of crude rubber shot to 86 cents a pound.

Today it is around 23½ cents. The General Services Administration, created by the Hoover Commission on Governmental Efficiency and Economy, claims credit for much of the drop.

PRICE DRIVEN DOWN

"We became the preclusive buyer for both the military and private industry for years," explains Robert B. Bradford, GSA regional director. "We drove the price down to 40 cents while more than 300,000 tons were imported through California ports. Then we stepped out.

"Now we buy only to rotate our stockpile of crude rubber. It is at 90 percent of what

we want. We are all right on rubber."

Bradford spoke with confidence at the GSA business service center, 1031 South Broadway, as he described stockpiles of some vital materials being stored for any war of a month, a year, or 5 years' duration.

PLATINUM BLOCK TOLD

But he told how the Government is trying to stimulate production of some and is totally helpless on an item like platinum.

"The Russians control all sources of platinum," he explained. "They can raise the price \$100 an ounce any time they want, It is now \$93. It has been up to \$186 within the last 6 months."

Platinum is only 1 of 93 critical strategic materials being stockpiled by the General Services Administration.

The location and size of each pile is secret. The Government has nearly \$7 billion worth of the products—ranging from agar and asbestos to zinc and zirconium-but it won't reveal whether it has enough for a 1-year or a 10-year war.

MATERIALS LISTED

It has copper, zinc, lead, tin, mercury, extra-long-staple cotton, silk, shellac, and It has oddities like quinine, opium, industrial diamonds, hog bristles, and even feathers and down for aviation suits, ski suits, and warm sleeping bags in case war come over the North Pole.

All but the metals have to be rotated be-

cause they deteriorate.

Titanium, the wonder metal is most critical.

"There is plenty of titanium ore but processing is tricky," Bradford said. "A year ago we wanted 15,000 tons. Today we want 115,000.

"NO TITANIUM STOCKPILED

"We're not stockpiling titanium because industry must have it for jobs like the heat-resisting interiors of jet engines. It has a high melting point, high tensile strength, and light weight.

"We're letting contracts to produce it all the time, trying to get the supply up."

The stockpiles of other critical materials are spotted within an overnight run of factories where they might be used. Metals are usually in ingot form so they can be used immediately.

"On the majority of the entire program we're paying the going market price," Brad-We're paying premiums on a few ford said. only to get domestic mines going.

MANGANESE BOUGHT

We're buying manganese now just as fast as men can dig it up in Arizona, Nevada and California.

"Eight pounds of manganese is needed in a blast furnace for every ton of steel to keep the bubbles out. This continent produces only 20 percent of the world's manganese. South Africa and India each provide 40 percent.

"Right now we have 80 percent of what we'll need for several years either stock-piled or being delivered. We need 100 per-cent. We pay slightly more than 10 cents a pound for manganese ore. The world price is 4 cents."

Most of America's tungsten comes from California—in the area near Bishop. Some comes from Arizona and Tonopah, Nev.

Tungsten is a hardening alloy for steel. All machine tools have it. The GSA's tungsten program is 80 percent complete-either in stockpiles or on order. The Eisenhower defense program demands 100 percent.

ORE FACTOR CITED

"If the ore has one-half of 1 percent tung-sten, it's considered rich," Bradford said.

"We're paying a domestic subsidy. Our price is \$63 a short ton. The world price is \$27. We want to stimulate domestic mines.

"We're buying \$2,500,000 worth a month and paying for it within 5 days. We're worried sick about tungsten being smuggled from Mexico to get the United States domestic subsidy. One smuggler has been

Bradford said domestic price-support programs for tungsten, chromite, manganese, and asbestos have permitted western mines to continue operation. The supports protect American producers from dumping of foreign ores.

ALUMINUM HELD O. K.

"We're all right on aluminum," he con-tinued. "Surplus plants sold to Reynolds and Kaiser after the war made the industry more competitive."

Bradford joined Frank A. Chambers, regional director of GSA business service centers, and Mrs. Margaret H. Bayless in telling how the centers like the Los Angeles one at 1031 S. Broadway, are "the answer to 5 percenters."

"All GSA bids of the country are posted on the wall here for examination," Chambers said, "and you don't have to "know Charley" or 'look up Edgar."

In this post-mink-coat era, bids are segregated by delivery points and by many commodity groups, such as paint, food, hardware, furniture, or office supplies.

BIDS KEPT UNDER LOCK

All bids are kept under lock and opened in public. At the time of opening, a long sheet of all bids is prepared and posted. Most purchases are from the lowest bidder, but if any deviation is made, the log sheet explains that the lowest was disqualified for failing to meet specifications or whatever the exact reason is.

Specifications for everything the Government buys are given out free so a manufacturer or distributor knows exactly what is wanted and how the product may be inspected.

If parts are wanted for a Detroit tank arsenal, copies of the Detroit specifications are available in Los Angeles and the bid can be made from here. Washington is bypassed and the 5-percent man is dead, Bradford said.

The emergency procurement service of the FSA buys 3 million different items for all branches of the Federal Government. Pencils, desks, trucks—practically everything in any store or mail order catalog—are wanted at one time or another.

The GSA's central supply service stores 10,000 different items in a Wilmington warehouse for use in this area. If one agency does not need something, it may be stored until another wants it.

until another wants it.

A teletype room in the Federal Building is linked with 53 major cities by 15,000 miles of leased wire.

One military unit may find \$3,500,000 of new field wire can't be used for office telephones and declare it surplus. After 9 months, another military unit is found which wants the same wire.

A shipyard issues a surplus declaration on 3½ miles of seamless, galvanized 3-inch pipe. Another shipyard 40 miles away buys 2 miles of it and the Government saves money on a cost contract.

A Stockton naval supply center was stuck with 187,000 boxes of odd-size mimeograph paper. A deal was made whereby it was traded back to the manufacturer at a discount and a credit was established to apply on future purchases.

It's a strange agency, the GSA. It may buy women's underwear for an Indian reservation, telephone posts for a military base or even snake-bite remedies.

In the dry season its warehouses are on call 24 hours a day, 7 days a week, for forest fire-fighting equipment.

COSTS DON'T RUN UP

In leasing land or buildings, the Army, Navy, Air Force, and other governmental agencies used to find themselves bidding against each other at times. Now the GSA is the only one bidding, Bradford said, and taxpayers' costs don't run up.

The GSA arranges for purchase of some buildings to save rents but at President Elsenhower's request it also spearheaded a drive nationally to get all Government agencies to kick loose all unneeded properties so they could go back on local tax rolls.

HOLE IN GROUND PAYS OFF

The last big thing sold in Los Angeles County was an underground gas reservoir at Playa del Rey.

In 1941 the Reconstruction Finance Corporation had taken it over because industry needed gas in wartime.

The Government got \$763,000 out of it in rental and royalties until a year ago when the RFC rated it as surplus.

"We put it out on bids and got \$2,150,000," said Bradford. "Isn't that pretty good for just a hole in the ground?"

Federal Assistance for School Construction

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. METCALF. Mr. Speaker, on page A231 of the Congressional Record is a discussion of President Eisenhower's statement on Federal assistance for school construction in the state of the Union message by Dr. Edgar Fuller, executive officer of the Council of Chief State School Officers. Dr. Fuller suggests that there might be some significance in the last-minute change of the word "catalyst" to "agent."

In the mimeographed text released immediately before the delivery of the message, President Eisenhower's statement reads:

Without impairing in any way the responsibilities of our States, localities, communities, or families, the Federal Government can and should serve as an effective catalyst in dealing with this problem.

That is, classroom shortage.

In the official version of the message as it appears in the Congressional Record on page 98, the word "catalyst" was changed to "agent."

The use of the word "agent" certainly makes the nature of the proposed Federal contribution uncertain, but present indications are that catalyst is probably the more accurate word. In the budget message sent up to the Congress 11 days after the state of the Union message, the President, on page M56, says:

Concurrently, without impairment in any way of State, local, community, and family responsibility, the Federal Government should serve as an effective catalyst in dealing with the problem of classroom shortages.

In essence, this is the same statement made in the advance releases before President Eisenhower substituted the word "agent" for "catalyst."

Dr. Fuller says that if the function of the Federal Government is that of a catalyst, then it may easily damage rather than assist in the construction of schools

Of course, we will not know the administration's proposal until February 15, when the special message promised by the President will be sent to the Congress. But already indications of the contents of the proposal are circulating among Members of Congress and newsmen. On January 14 Mr. Eric Sevareid described the first tentative reports and his reaction in the following broadcast:

Good evening. In his state of the Union message the President said the country faces grave educational problems; his first really serious recognition of the school situation which is not only grave, but critical and rapidly growing worse; not only in terms of the classroom shortage he mentioned, but in

terms of the desperate teacher shortage, and, in consequence of all this, in terms of the relentless decline of standards and training; the harsh truth is that unless bold and imaginative steps are taken, and quickly, the United States is on the way to becoming an intellectually second-rate nation.

It doesn't look as if the bold steps are going to be taken by the Federal Government, unless the Executive is forced to bigscale action by a group of some 30 Senators supporting a bill for a billion-dollar emergency school construction program over the next 2 years; a bill to which the new chairman of the subcommittee concerned, Mr. Hill, of Alabama, is pledging top priority.

The Presidential scheme to alleviate the educational crisis is due in a special message 1 month from tomorrow. The first tentative reports on its contents reached Capitol Hill and this reporter today, and falled to impress school-conscious legislators who heard them. These reports indicate the President will propose a bonding authority, providing Federal guaranty of State school bond issues, \$25 million in Federal aid to schools in especially distressed districts, sclected by a rigid test of need; \$5 million to continue current studies of the crisis of elementary and second schools, another \$5 million for study of college needs, and a system of college scholarships, involving a total of \$250 millions over a period of several years.

The whole program represents a small fraction of the funds, effort and imagination that have gone into the President's \$100 billion scheme for developing the roads and highways of the country. There is no doubt that when the Secretary of Health, Education, and Welfare appears to testify, she will be severely questioned on the need for any more drawn-out studies and conferences on the school situation. This is one subject on which there is a superabundance of information already; studies of the matter are legion; the Federal Office of Education, in fact, is just completing a study authorized by Congress 2 years ago with an appropriation of \$3½ million.

The facts are at hand; what is required is action. In a capsule, the situation is this: There is an annual school enrollment increase of a million children and the flood will get heavier in the future. Add to this the fact that of the total tax dollar, Federal State, and local, only 8 cents goes to the schools, as compared with 16 cents before World War II; add to it the fact that we are losing teachers each year, not only proportionately, but in absolute numbers.

Some States are making valiant efforts to cope with the crisis. But it is still true that more than a million and a half children go to school in barracks, church basements, rented garages, and the like; that there are children now finishing the eighth grade who have never added school on anything but a part-time basis.

Mr. Eisenhower has long been concerned about the danger of Federal control of educational content. This can be avoided very simply by the terms of the legislation; what is stranger is the popular illusion that the Federal Government traditionally leaves the school problem to the States and localities. In fact, the history of Federal school action goes back to the Continental Congress and includes at least 50 major congressional acts. The Federal Government now finances over 200 educational activities, the largest being the annual three-quarter million dollar program for veterans. The President has a new program for educating soldiers and veterans for which there seems pressing need. But there are many who remain convinced that it is much wiser in the long run to eradicate ignorance and illiteracy at their source And that means a public-school system befitting the most important country in the free world.

This is Eric Sevareld in Washington.

The implication of the catalytic approach is that the Federal contribution will be minute in proportion to that of the States and local districts and that the Federal Government is going to insist on getting back its contribution after the process of school construction theoretically has been accelerated.

Such a program will not begin to reach the real need. It will do nothing for districts that have already reached the limit of their capacity. The Kearns subcommittee last October learned that it is going to take at least \$22 billion to have enough classrooms for our children in 1960. So the appropriation of \$25 million is a minute amount, and the establishment of State authorities to borrow money either from the Federal Government or from private agencies under a Federal guaranty would mean that the Federal Government was going to insist on getting its funds back.

The bills introduced by Mr. Balley and Mr. Kearns—H. R. 15 and H. R. 14—authorizing grants-in-aid for public-school construction should be given immediate consideration. There is no point in awaiting the President's February 15 message. The statements already made indicate that awaiting the President's program will only cause additional delay without any beneficial

results.

Ukrainian Independence

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. ANFUSO. Mr. Speaker, January 22 marks the anniversary of Ukrainian independence. After the Czarist Russian Empire collapsed in 1917, the Ukrainians set up a separate national republic in their country which for centuries had been under Russian domination. The first meeting of the Ukrainian Constituent Assembly met in January 1918, and on the 22d of that month a proclamation on the independence of the Ukraine was issued.

Unfortunately, the Ukrainian Republic was shortlived. By 1921 the country was overrun by the Russian Communists and the Ukraine again became a subjugated nation. It was one of the first and earliest victims of Soviet imperialism and has paid a tremendous toll in suffering and destruction. The Ukraine's national churches were destroyed, the country suffered terrible famines, mass murders, purges, and deportations. Nevertheless, the spiritual and moral resources of the Ukrainian people have not been exterminated, nor has its indomitable desire for national freedom been extinguished after all these years of enslavement and suffering.

The Ukrainian nation numbers some 40 million people and constitutes the largest non-Russian group behind the Iron Curtain in Europe. In the struggle of the free world against communism, the Ukrainians are a most important and potential ally of the Western democracies. They have never stopped their struggle for the liberation of their country from the Communist yoke.

The American people are following with great sympathy the plight which has befallen the Ukrainian people. Their cause is a righteous one. They deserve our support and encouragement.

On the occasion of the anniversary of their independence, we share in the aspirations of Ukrainians everywhere for the early liberation of their country. We extend our greetings and renew our wishes to all Americans of Ukrainian descent that their country of origin, the Ukraine, will soon regain its independence from the forces of evil and tyranny which are in control of it today.

A Reappraisal of European-American Relations

EXTENSION OF REMARKS

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Sunrise in the West," written by Peter Viereck, and published in the Saturday Review of June 12, 1954. The article presents a thoughtful and interesting analysis of American-European relations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUNRISE IN THE WEST: A REAPPRAISAL OF EUROPEAN-AMERICAN RELATIONS

(By Peter Viereck)

This attempt to reinterpret anti-Americanism in Europe reflects some recent travels abroad, during which this writer was lecturing on American poetry and culture at Oxford University and on the Continent. The present interpretations are based on the following article of faith: America and Europe have so much in common that the forces of love—the forces of reconciliation and of a voluntary unity within diversity—are stronger than hate and war.

America owes so much to the Old Worldour Bible, our Dante and Goethe and Shakespeare, our democratic Bill of Rights-that no American material aid can ever repay this spiritual debt. To me, as a poet, and also as a historian, the great writers and artists of Western Europe, yes, and also of Russia, mean so much that I would take Jefferson's saying: "Every man has two fatherlands, his own and France," and change it to read: "Every American writer has two fatherlands, his own and Europe." So when I call Europe's anti-Americanism a major catastrophe, this is not because it criticizes America (we need more criticism to overcome our smugness) but because the Europeans themselves thereby commit suicide. Anti-Americanism in Europe is a luxury that was good clean fun in the 1920's. So was anti-Europeanism in America. But for both of us it is a luxury suicidally expensive today, when Communist armies are poised to strike at some new Korea or Indochina.

One clue to psychological anti-Americanism is found by turning back to the year 431 B. C. and rereading a tactiess and embarrassing passage in the otherwise great speech delivered that year by Pericles, leader of the democratic and commercial empire of Athens; this was during the famous war against Sparta's militarist totalitarian dictatorship:

"We secure our friends not by accepting favors but by doing them. And so we are naturally more firm in our attachments; for we are anxious as creditors to cement by kind offices our relations toward friends. If they do not respond with the same warmness, it is because they feel that their services will not be given spontaneously but only as the repayment of a debt. We are alone among mankind in doing men benefits, not on calculations of self-interest, but in the fearless confidence of freedom."

This quotation of 2,400 years ago with its tone of self-righteous smugness helps explain what ineffective propagandists Americans are and what ineffective propagandists the equally unpouplar Athenians were. "Insufferable" is the only possible word for such Athenian propaganda; it sounded insufferable in precisely the way that America's righteous Lady Bountiful tone sounds insufferable to Europeans today. Every American citizen pays a fat slice out of every dollar to aid the European economy, a fact not widely enough appreciated abroad. Conversely, Americans don't sufficiently appreciate the fact that this aid is merely material, whereas in two world wars the peoples of Europe had to pay with millions of lives.

Let us examine anti-Americanism not merely among Europe's pro-Communist minority. Rather, let us also and especially examine the current increase of anti-Americanism among Europe's very finest citizens: those many idealists and heroes of the recent anti-Nazi crusade who are in no way fellow-travelers of any Kremlin line but who love liberty as much as Americans do, or often even more so. First of all, we have not yet convinced them of America's cultural creativity. Secondly, we have not convinced them of American fidelity to the common sacrament of antifascism which united Europe and America in World War II and which is one of the noblest inspiring passions in the whole history of freedom, Let us consider these two causes in that order.

Cultural prestige means more in Europe than America's narrowly economic or military experts have the background to realize. Even in terms of their own pragmatic, political, noncultural motives (which in this case accidentally happen to coincide with higher things), America needs to make its serious cultural achievements better known in Europe. Or to put the same point in the practical terminology of the teams of know-how experts, America must stage a cultural comeback abroad. Foreign policy and military security may seem remote from mere longhair stuff to a know-how team. Yet our entire Western alliance is subtly poisoned by Europe's disproportionate focus on our worst magazines and films as representing American culture.

Not in order to exonerate our own huck-sterdom but in order to record that Europe's philistia is just as prevalent, let it be recorded that nobody forces Europe to purchase so avidly not the best but the vulgarest Americana, which Europe's masses voluntarily prefer to their own great heritage. In that sense, the hatred of our admittedly vulgar Americana by cultured Europe today is a projection of Europe's secret self-hatred, its hatred of its rootless postwar detachment from its own great past, its hatred of becoming voluntarily even more "Americanized" than our own pluralistic America. For despite current huckster rampages which con-

descend to compare our leading scientists with crooked bank tellers, our pluralistic America does fortunately remain less "Americanized," less crass and materialistic, and more seriously cultured than had seemed to be the case in the Babbitt-baiting, of the twenties.

America is more complicated, both better and worse, than this oversimplified stereotype of the twenties, to which most Europeans still cling. Is is not time, through hundredfold multiplication of such exchanges as the Fulbright plan, to let Europeans revise their stereotype by freely judging, at first hand, America's new artistic and literary flowering? While it would be blasphemous to exchange cultural knowledge merely from the material motive of politicians and tradesmen, yet this crass motive must not obscure the fact that cultural exchange would also strengthen a modest little cause known as truth.

Unawareness abroad of our cultural creativity is a long-range factor; it goes back to the 19th century. Although it ought to have been discarded as an outdated cliché that whole visiting-lecturer clinché about "You Americans with your speed, speed, speed, and your Frigidaires," yet many important Europeans still think Americans are soulless and insensitive machines, a raw soclety of mass-produced healthy extroverts. Traditional American literary figures like Emily Dickinson, Melville, Thoreau, and "bitter Bierce" don't sound like insensitive soulless extroverts. Neither do some of our contemporary quarterlies. Yet I found Europe far more aware of the America of Hollywood and of Mickey Spillane than of this great literary tradition. For example, one French writer asked: "But how on earth can a poet live in America? Whom would he ever find to talk to about anything except lynchings and chewing gum?"

Only freer travel in both directions can correct this impression. In Europe, unlike America, it is not only esthetically put politically essential to be respected by the intellectuals. Listen, for example, to the diary of Heinrich von Einsiedel, "I Joined the Russians." In this diary, what most makes this grandson of Bismarck hesitate to break with communism and to face westward toward America are his following qualms; and please note that they are purely cultural qualms, not political, economic, or military qualms:

"Is Americanism a future worth striving for? Haven't pursuit of the dollar, the conveyor belt, skyscrapers, crime thrillers, the jazz mania done more to demoralize the world and turn man into a mass creature than could a collectivist party dictatorship inspired by a Socialist's ideal? Where is the towering cultural achievement of America which would lend inner justification to the wealth of the ruling classes?"

The second source of friction which good will on both sides can eliminate is the fact that Europeans find America not sufficiently militant against the Fascist evil. This evil ravaged and almost destroyed Europe in World War II; its horrors are, therefore, less easily forgotten by Europe than by an unracaged America. Americans have never been invaded by Germany, but they have suffered death and torture from Communists in Korea. France has not been invaded by Russia, its traditional ally against Germany since 1815, but has been 3 times invaded by Germany in the last century, and has been brutally occupied by Nazi Germans and Fascist Italians. Therefore, although intellectually both the rightest and the leftist forms of totalitarianism are obviously equally dreadful, emotionally history has made Frenchmen dread the rightest form more and has made Americans dread the leftist form more. Unless both Frenchmen and Americans keep in mind each other's historic scars, Americans will increasingly rage at Frenchmen for being soft toward communism, and

Frenchmen will increasingly rage against Americans for being soft toward fascism—or at least toward German nationalism abroad and toward mob conformism at home. In that case there will never be a meeting of minds between Western Europe and America.

The solution is for both Americans and Europeans to drop the outdated concepts of left and right in foreign policy; to drop these concepts not only semantically but psychologically; to drop as meaningless the mischievous notion of choosing a lesser evil between left and right despotisms. For in foreign policy each is but the mirrow image When you stand in front of a of the other. mirror, left becomes right and right becomes left, and the image remains the same. Semantically you will make Frenchmen more emotionally anti-Communist when you show that communism is nothing but Red fascism; you will make Americans more emotionally on guard against thought control when you show that this is nothing but the bolshevism of the right. The metaphor of the mirror image explains why Western Europe's increasing coftness toward the left and America's increasing softness toward the right are inseparable; both must stop simultaneously, or neither will stop. Let us turn to some examples proving that point.

Every time McCarrhy makes a speech

Every time McCarthy makes a speech threatening to sink British boats, Bevan's leftwingers and America-balters gain more adherents. Every time Bevan makes a speech for appeasing Red China and every time French Communists demonstrate against some just, legal, fairminded trial of some guilty American spy, McCarthy and our isolationist Europe-baiters gain more adherents. The great British liberal weekly, the Economist, defines Aneurin Bevan's slanders of America as "a deliberate recipe for striking down the free world's shield." Exactly. And what else but this are McCarthy's slanders of England?

Here is a second example of mirror images. Europeans tend to think (and here, as elsewhere, many American liberal intellectuals resemble the European side of the mirror) that everyone indicted for communism in America is being framed up. Thus they often-to my shock and amazement during recent trips abroad-deemed such proved traitors as Hiss and the Rosenbergs innocent and minimized the proved Communist infiltration in that erstwhile sacred cow, the Institute of Pacific Relations. Conversely, many nationalistic Americans tend to think everyone accused of communism is guilty. Thus some Americans-again to my shock and amazement-impute intentional pro-communism to a past administration which proved its anti-communism by the Truman doctrine in Turkey and Greece, by NATO, and by resisting Communist aggression in Korea. Here the American-nationalist mistake mirrors the European-liberal mistake; the former tends to call everybody guilty indiscriminately, without due process of law; the latter tends to call everybody a framed-up innocent indiscriminately, despite all evidence.

If, for the sake of Western unity, we discard the terms "left" and "right" with what shall we replace them? I suggest using the adjectives "separatists" and "westernizing" to bring out the contrast that really matters, the contrast between suicidal aloofness and Western collective security against the totalitarian aggressor, which alone could have prevented World War II and which alone can save us from world war III. Thus, fellow traveler and appeasement tendencies in Europe on the one hand and isolationist, xenophobic, and thought-controlling tendencies in America on the other hand, are both forms, by my terminology, of the same ism: separatism. 'Westernizing" I define as everything encouraging mutual aid, mutual trade, mutual military, and spiritual defenses in the free world against that ever-hovering

threat (which hangs over us all) of some Moscow-directed Pearl Harbor.

This terminology is more realistic than left and right because it puts together all who opposed the Marshall plan and the Atlantic Pact in the same camp, where they belong. For example, the junior Senator from Wisconsin, who voted against the Marshall plan and against adequately financing our anti-Communist armies in Europe, gets placed by this new terminology in the same camp (the separatist camp) as Nenni, Kingsley Martin, Jean-Paul Sartre, Alvarez Del Vayo, the New Statesman enemies of the Atlantic Pact in London, and its neutralist enemies in Paris and Rome.

In October 1952 the late Josef Stalin made one of the most important speeches of the 20th century. He predicted the Soviets would triumph not merely because of leftwing tendencies in the West but because of the disunity in the West created by nationalist rivalries. Quite diverse examples of such separatist nationalism are neofascism in Italy, nationalist jealousy between France and Germany, and America's high tariffs. If Stalin realized that the West can be destroyed by this tacit alliance of the trust-Russia leftists and the nationalist rightists, then let the West realize it likewise and act accordingly. Here, in the context of Stalin's October speech, is my definition of McCarthyite separatism: McCarthyism is that unwitting tool of the Kremlin criminals which, by replacing genuine anticommunism (that is, a freedom-loving anticommunism) with demagogic pseudo-anticommunism, lends aid and comfort to the real Communist agents (the real Hisses and Fuchses) by falsely accusing of procommunism countless anti-Communists (like Ambassador Bohlen, General Zwicker, Adlai Stevenson, Ed Murrow, Harvard's Pusey, and many others).

In short, the isolationists and McCarthyite separatists of America and the neutralist and fellow-traveler separatists and appeasers in Europe are as identical as a bump and a hollow. Opposing that bump and that hollow, the freedom-loving unity of the westernizers is not merely a temporary material expedient against communism but is rooted the lasting spiritual philosophies which the West has inherited from Athens and from Palestine. Fortunately, most Americans and most Europeans are still prowestern, not separatists, and so-as shown by their mass desertions to the West-are most East Europeans and Russians, despite their tyrannical separatist governments. It is not because most Americans are Fascist imperialists but because most Americans are democratic foes of fascism that they are, consistently, likewise the foes of the Soviet police state. Freedom must be defended simultaneously on several different fronts, not on one alone.

But while freedom has several fronts, they are not equally dangerous. Let us retain a sense of proportion about which front faces a permanent menace of 200 armed divisions and which front faces a demagogy that has no armed division behind it and can still be rendered ephemeral with ballots at home.

When Communists and McCarthyites both booed in protest against the giving of the Nobel prize for peace to the founder of the Marshall plan, they proved beyond dispute the validity of the mirror-image metaphor here suggested. Only this mirror interpretation makes sense of the fact that the Daily Worker and Senator McCarthy both opposed, and still oppose, the Marshall plan and all subsequent manifestations of same cooperative western unity. While left and right still have a certain legitimate validity in domestic politics, obviously they must be replaced by the concepts of westernism and separatism in any realistic analysis of European-American foreign relations. Westernism does not stand for coercive uniformity or for the end of independent political parties with lots of healthy disagreement; that would be the very totalitarianism we combat. What westernism means is that those who share it share a common value code; they share a common anti-Fascist, anti-Communist framework of parliamentary liberties. Therefore, westernism means no blind conformism; it means free indi-Vidualism with a close but voluntary unity.

Don't blame Communist propaganda exclusively for anti-Americanism abroad. Blame also America's meanspirited isolationists and zenophobes. Our Europe-baiters and would-be thought-controllers look more important from afar than they actually are at home. In any case, whether important or unimportant at home, these noisy slanderers give wavering Europeans the impressiona false impression-that all America has the rabies. This much-cited rables quotation is from one of the most skillful Soviet-sympathizing writers in Paris. He welcomes McCarthyism as a godsend. In exactly the same way, European neutralist and fellowtraveler periodicals, such as much of the nonliterary section of the London New Statesman, are a godsend to America's Eu-rope-baiters and McCarthyites.

Readers who still recall their college science courses will remember the classic case of a traveling cook called Typhoid Mary. Herself immune to the typhoid germs she teemed with, she left typhoid epidemics in her wake, unintentionally and with blissful unawareness. May we not call Joseph Mc-Carthy the Typhoid Mary of anti-Amer-icanism?

The more we tell Europe about the horrors of communism (though it is indeed monstrously horrible), the more will Europeans tell us about the horrors of fascism, which only recently occupied their countries. being so, let more Americans have the empathy, the sensitivity to put themselves in Europe's place and to think again of the horrors of nazism. If more Americans do so, I guarantee that more anti-Americans in Europe will reciprocate by greater awareness of the horrors of communism.

This reciprocity may not be logical. Logically you make people anti-Communist by talking against communism. But it is psychological. Psychologically, America will not make Europeans sufficiently anti-Commuhist unless America in addition talks about the dangers of Fascist-style thought-control and demagogy. And mere lip service to antifacism is not enough; a rebirth of the anti-Fascist spirit in America—the psychological prerequisite to a rebirth of anticommunism in Europe-must, in Wordsworth's phrase, be "felt in the heart and felt along the blood." Not narrow nationalism but the generous passionate idealism that stopped Hitler is what will stop the appeal of communism abroad.

This freedom-loving idealism cuts across right and left just as does "communazi" to-talitarianism; this idealism is found alike in the conservatism of a Churchill or Eden and the democratic socialism of a Mayor Reuter, of Berlin, or a Norman Thomas; not economics but ethics must be the criterion. No mere economic cooperation with Europe (though I favor it for other reasons) will do as much to inspire Europe against the criminal Soviet aggressor as will a nationwide rekindling in America of our anti-Fascist conscience. What a thrill of renewed faith in NATO and in American leadership would Surge through wavering Europe, what panic and gnashing of teeth would excruciate the propagandists of pro-Soviet appeasement, if our President—while never relaxing our alertness against Communist spies-took the lead in a dramatic all-out drive against all Senators, Congressmen, and newspapers who would corrupt that necessary altertness into attacks on free institutions. And by allout drive I do not mean vague platitudes; I mean naming names and hitting hard.

At the very same time, by the law of mirrored reciprocity, a lot more Italian and French voters would have to vote against communism and for NATO in order to en-courage more Americans to vote out of office our nationalistic know-nothings. ropeans learn that the road to effective anti-McCarthyism must begin with a more sincere anticommunism. Let Americans learn that the road to anticommunism must begin with a sincere anti-Fascist revival.

A big increase in European Atlantic Pact anticommunism and European knowledge of our serious cultural achievements on the one hand, and a big increase in American freeminded individualism, passion for civil liberties, and tolerant world-mindedness on the other hand, will need each other, will feed each other, and will both be gloriously right. This entirely voluntary unity will be based on liberty and not merely on temporary military expediency. Only yesterday this unity saved both Europe and America from Hitler. If today it saves us both from an otherwise inevitable world conquest by Chinese and Russian communism, then for a second time in one century, and by a reversal of astronomy, the sun will rise in the west.

Anti-Nixon Smear Campaign Exposed

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. HOSMER. Mr. Speaker, the January 24 issue of Time magazine, on the newsstands today, contains an exposé of the cruel, hard, and ruthless political strategy behind the latest wave of smear attacks against Vice President Nixon. Fair-minded Americans will not softly judge those who conceived and are executing this "politician cries foul" switch on the old "boy cries wolf" dodge.

The Time article is as follows:

THE VICE PRESIDENCY

TARGET: THE ISSUE

For more than 2 years Democratic leaders have been agreed on the identity of the party's political enemy No. 1. It is RICHARD Since Dwight Eisenhower's political NIXON. armor is hard to pierce, it has been logical Democratic strategy to shoot at the second In midcampaign, 1952, Democratic strategists thought they had downed their man-and the GOP too-with their shouts about the Nixon fund, but Nixon skillfully turned the attack to his and his party's advantage. Since then Democratic leaders have watched Nixon's every move, ready to kick when the word was passed. Last week a new Democratic attack on Nixon was in full kick.

Open season

The new anti-Nixon movement was set off during last fall's campaign by Adlai Stevenson, who accused the Vice President of perpetrating McCarthyism in a white collar. week after the election: Steve Mitchell, then Democratic national chairman, called upon Nixon to "retract and apologize for his campaign excesses." When Congress convened, House Speaker Sam RAYBURN took up the "are not cudgel, growled that Democrats going to say that just because we do not like somebody politically he is soft on com-At a Democratic luncheon in munism. Washington last week, Delaware's freshman Representative HARRIS B. McDowell cried: "It's open season on the Vice President."

After that, Republican leaders decided that the attacks had become serious enough to return the fire. At his press conference, Dwight Eisenhower moved into the battle. When a reporter asked how he felt about the criticism of NIXON, Ike bridled slightly and asked a question of his own: Was the reporter's query based on what Nixon actually said or on what the critics said he said? The reporter replied that he was working from the critics' words, not from Nixon's deeds.

After establishing that point, the President went on: He had never heard of Nixon's making any sweeping condemnation of any party. The Vice President had talked about certain individual cases and the way they were handled administratively, had ques-tioned good judgment, but not loyalty.

The record clearly supported the Eisenhower position. Even in his "chamber of a display in Washington designed to smears. dramatize the attack, Democratic National Chairman Paul Butler could actually show only scattered and minor reference to the Vice President. Most of the space was devoted to local advertisements against Democratic candidates that had no connection with Nixon, for example, a Wyoming ad that called United States Senator Joseph C. O'MAIONEY "Foreign Agent 783" (because that was his number as a registered congressional lobbyist for Cuban-sugar inter-

One Democratic exhibit blandly repeated an error that had been discovered and corrected last September. In a speech at Huron, S. Dak., Nixon had said that the Republican administration was "kicking the Communists and fellow travelers and security risks out of the Government * * * by the thousands." An Associated Press dispatch misquoted Nixon, leaving out the phrase "fellow travelers and security risks." Although a tape recording proved what Nixon had said. the Democratic strategists are still using the erroneous dispatch.

Closed cases

Throughout the campaign, Nixon hit the Democrats hard on the Communist issue. But he never adopted JOE McCARTHY's line that the Democratic Party is the party of treason. Carefully pointing out that he was not charging disloyalty or treason, he made the very different charge that the Democratic administrations of Franklin Roosevelt and Harry Truman had, in some very important instances, failed to understand and to meet the threat of Communist subversion. To support his case, he could, and did, point to specific closed cases, e. g., Soviet Agent Harry Dexter White was permitted to build a whole cadre of followers in the United States Treasury despite repeated warnings from the FBI; Soviet Agent Alger Hiss, whom NIXON helped uncover, was unconscionably defended by Harry Truman and Dean Ache-

Democratic attack on The Nixon is not aimed primarily at the Vice President, although knocking him out politically would be a useful byproduct for the Democrats. What the party strategists are really trying to do, with help from Democratic-leaning reporters of the press and radio-TV, is to perform a quick rewrite of history. Before 1956 they want to erase the record of negligence in dealing with Communist subversion.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Address by the Ambassador From Norway to the United States. Wilhelm M. Morgenstierne

> EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. THYE. Mr. President, a very fine address was delivered in Minneapolis on January 15 by the dean of the diplomatic corps in Washington, the Ambassador of Norway, Wilhelm Munthe Morgenstierne, on the occasion of the 60th anniversary banquet of the Sons of Norway.

It is an address which is of genuine interest, not only because of the man who delivered it-who is so widely respected and beloved in this country-or the useful organization which he addressed.

It is a tribute to the sturdy men and Women of Norse extraction who have made a worthy and a constructive contribution to our American life, and it contains a splendid description of Nor-Way's sturdy people, their traditions and achievements, and their ideals of freedom which are so much akin to those of the United States.

I am informed by the Public Printer that the manuscript will be approximately 234 pages of the RECORD, at a cost of \$220.

I ask unanimous consent that Ambassador Morgenstierne's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS BY WILHELM M. MORGEN-STIERNE, AMBASSADOR FROM NORWAY TO THE United States, Delivered at 60th Anni-Versary Banquet, Sons of Norway, Radis-SON HOTEL, MINNEAPOLIS, SATURDAY EVE-NING, JANUARY 15, 1955

Thank you very, very much. I speak from my heart when I say that I appreciate more than I can express to be with you here today on Sons of Norway's 60th anniversary celebration. Some of you may recall—I certainly do—that I was with you and talked to you 10 years ago on the occasion of your 50th anniversary. The fact that you wanted me to come again means a lot to me. may have heard of that very popular man who was invited everywhere, but never twice. That you wanted me to come again is indeed a great honor, and to me a pleasure which

could not be greater.

I do feel that here I am among friends, good old friends. Do you know that almost 45 Years have gone by since my first acquaintance with some of your lodges here in Minnesota and in North Dakota. When I first was at the Norwegian Legation in Washington, I had a vacation coming to me in the summer of 1911. A good friend of mine in Wash-

ington told me: You cannot make better use of your vacation than going out to see your kinsmen in the Middle West. And he quoted Horace Greeley: "Go West, young man." And I did. From that time dates my lifelong friendship with men like Laurits Stavnheim, Olaf Rove, Halvard Askeland—all great Sons of Norway and pillars of your society. And so, when I was sent as Norweigian Commissioner to the San Francisco World's Fair in 1915, I attended and met many friends at the Sons of Norway convention which was held there that year. lodge. Norden in Tacoma asked me to visit with them on my way back, and there President Martin Ulvestad, the indefatigable collector of material about our pioneers, presented me with this beautiful badge, which carries the inscription AEresmedlem. always has meant a lot to me, even if I have learned later that Sons of Norway recognizes no such thing as honorary member. Thinking it over, I have come to the conclusion that I much prefer to be a regular brother, an honorable, but not honorary member of our great organization.

On that same trip in 1915 I also had the opportunity to visit many of your lodges. I recall vividly that vigorous lodge, Ivar Aasen, in Santa Barbara, where sturdy men from Summre were growing lima beans-lots of them. The greatest impression on me was made by the newly arrived, forest-clearing settlers along Puget Sound, north of Seattle. I visited Silvana, Edison, and Mount Vernon, and watched their steam donkeys in action. I think that Lodge Skjaergaarden, where I spoke, is the nearest I ever came to the pioneer stage. I shall never forget it. You know those steam donkeys were wonderful. I saw them at work in virgin forests. They reminded me more than anything else of trolls, mechanized trolls, as they came rushing through the forest, uprooting big trees, making a clearance through the dense underbrush the first step in what was to become the fertile homesteads of the pioneers.

Now we are getting old. You are 60 years old, and I am 67. Isn't it strange that there is always these 7 years between you and me? I sometime hoped that once I would overtake you, and be just as young as you are. But no. Strangely enough there was always those 7 years.

I cannot quite escape the feeling that this may come to be my swan song to you. In 3 years I shall retire from my present position in Washington and go home to Norway, and carry on as best I can on my pension, spending my remaining years in my log cabin. At least I shall not be here when you celebrate your 70th anniversary. And so I want to take this opportunity to thank you for everything. I also want to make a confession to you. And that is that my association with you through all these years has meant a tre-mendous lot to me. In more than one way it has meant a lot to me as a human being.

It meant to me the opening of a new world, a relevation of a greater Norway, in the sense of Norwegian men and women, Norwegian ideals and traditions, Norwegian love of freedom, independence, and democracy, leaving its indelible imprint on those sturdy, self-assured sections of America called the Middle West and the great Northwest. I was never the same afterwards. My eyes were focused on larger horizons. Det Norske Amerika was enclosed in my heart

besides my own Norway.

But it also meant a lot to me in my official osition as Norway's representative to the United States. And all this was nourished by my close contact with Nordmanns-Forbundet as secretary-general and vice president. In that capacity I traveled more widely in the United States and met more people than would ever have been possible for a mere diplomat. I do believe that it greatly helped me in my task of creating understanding and good will between our two countries.

During these, my almost 45 years in America, I sincerely felt that I had two main aims: To promote close and friendly relations between the United States and Norway, and to strengthen the bonds between the Norwegian people and our kinsmen in this new Norway across the ocean.

That gave perspective, direction, and happiness, to my work in Washington. And when I look back on my official life, I find that I have been singularly blessed.

I hope you will forgive me these personal references, but they have a distinct bearing on my presence here tonight, my long and close association with Sons of Norway.

In those 60 years since the first Sons of Norway Lodge was organized here in Minneapolis, you have accomplished great things.

True to one of your basic aims, to organize

mutual aid in sickness and in death, there has grown a modern life insurance organization with lodges all over the United States. What this has meant to thousands upon thousands of Norwegian men and women in a new land, only the beneficiaries themselves, and the historians, could fully evaluate.

But in addition to such mutual assistance Sons of Norway from the very beginning aimed at preserving the cultural and spiritual traditions of Norway. The Sons of Norway, through the years, have always realized that by keeping alive the Norwegian heritage, or what we call fedrearven, the lives of its members would always be enriched, and they would thereby be able to contribute that much more to their country of adoption.

Now, of course, the word "fedrearven" is used so often that perhaps it is in danger of losing its full meaning and becoming somewhat stale. Yet, no one will deny, I am sure, that the thing itself, our Norwegian heritage, is an ever present, dynamic reality in the lives of all those who received it from the cradle on.

For a long time I struggled in order to find an adequate expression for all that the word "fedrearven" implies. I cannot do better than I once defined it before, and so I will quote it here. I said:

"What, then, are these golden treasures of the mind and the spirit passed down to us from our common fathers? I do not think a comprehensive and satisfactory definition of "fedrearven" has been given as yet. Perhaps it cannot be done, because some of its elements are as illusive as the elfs dancing on lavebrua and the play of nokken in the waterfall.

"But we are not in doubt as to some things, quite a few things, which go to make up our Norwegian heritage. There are the sagas, both the heroic tales themselves and the rhythm of the telling, which have become part of the consciousness of our people. There is Norwegian history, tracing our national life through the centuries, with its glories and its humiliations, its light and its deep shadows, but always with one distinguishing, indelible line—the love of indivi-dual liberty and national independence, sometimes submerged and dormant, but always there, latently. And last, but not least, the determination of the people that with law shall we build our land. Med lov skal land bygges.

One of the treasures which your fathers brought along with them from Norway was the deep religious traditions of the wegian church. Many pastors graduated from the University of Norway came with the Norwegian immigrants to this country, and this meant a great deal both in a religious and a cultural way to the newcomers to a foreign and strange country. Theirs remained the faith of their fathers.

A very essential part of our heritage is Norway itself. Not exactly or exclusively the beautiful flords and mountains, the valleys, or the great highland plains, but the atmosphere, the soul of all these things. Why do the elfs, the nisse, the trolls, the nokken take such an important place in the deeper consciousness and the folk tales of our people? Not because they actually exist as such, but because in the intuitive imagination of the people they represent the mystic, but nevertheless real, interplay and fundamental oneness of the spirit of Norwegian nature and Norwegian cultural and national life.

Part of our national heritage is, indeed, the contribution made by Norwegian scholars and scientists and pioneers in many fields of human endeavor to the advancement of human knowledge. Our great Arctic and Antarctic explorers, for instance, have added immeasurably, not only to humanity's common knowledge of the earth we inhabit but to the prestige and the glory of the country which fostered them.

What more than perhaps anything else makes fedrearven a living reality is Norwegian literature and music. I wonder whether there is any country where literature and music enter so intimately into the daily life of the people. Wergeland, Welhaven, Bjornson, Ibsen, Kielland, Ivar Aasen, Vinje, Garborg, Hamsun, Collett Vogt, Und-set, Kjerulf, Nordraak, Grieg, Sinding—to Grieg, Sindingmention some of the brilliant stars on the Norwegian firmament. All these, and many others, are part of our daily fare; we read them, we quote them, we sing them; they have become inseparably intermingled with our lives.

I know, and everybody in Norway knows, how you were with us in thoughts and sympathy during the years, 5 long years, when Norway was occupied by the enemy, and our people were crushed under the heel of the Nazis. We shall never forget how you stood by, spiritually and with your material support, in the hour of Norway's greatest need.

Today, with that terrible war and cruel occupation behind us, I know that your thoughts and your love still find their way across the ocean, and perhaps you may want me to tell you what has happened during these 10 years since Norway's liberation. How is Norway today? I am happy to be able to tell you:

Norway is all right, now. But we have had a rough time. When the sun rose over a free Norway in May 1945, we found a land devastated by the enemy, many of our towns in ruins, our railroads, bridges, factories destroved. We faced a tremendous task of reconstruction.

And not only that: We faced a double task. We had not only to rebuild our country, but at the same time to see to it, that it must not happen again.

This double task placed a tremendous burden on our people. If we succeeded, and I think that we are well on our way, it was mainly for the following reasons: First, the spirit of the Norwegian resistance movement during the occupation years had, to some extent, carried over to the postwar period. Political parties, political differences, did not mean as much as they used to. Above all differences, all quarrels, there was Norway. We worked together to rebuild and protect our country. I believe that most Norwegians today would say with the leader of the home front during the occupation: "We have learned this, too, that there is something greater than our personal affairs and wishes: Our country, our people, this Norway which has been sustained through adversity, ravaged, pillaged, and poor, but free, and our own deeper, more intimate sense than ever before '

I think it is significant that in the postwar years there were no strikes in Norway. What that meant in the reconstruction years, I do not need to dwell upon.

Secondly, in the years immediately following the war, certain aspects of the economic world situation turned out to be favorable for Norway. We found, for several years, profitable markets for our principal export And in addition, our merchant marine found full employment at profitable freight rates.

Last, but not least, there was that unique manifestation of American statesmanship, vision, and generosity—the Marshall plan. I want to say right here that without Marshall plan Norway, and indeed all of Western Europe, might have been an easy prey for aggressive communism. And let me add one thing: I have heard it said some-times that we in Western Europe do not appreciate the American aid, that you may have won enemies and not friends, by your generosity. May I say as strongly as I can, that this is not true, at least not as far as Norway is concerned. We are sincerely and deeply appreciative and grateful, and your aid in our time of need will go down in our history as one of the finest chapters in international relations. And I believe we made judicious use of the Marshall aid. At least the Marshall plan administration told us so again and again. We used it mainly for investments, not for consumption. In Norway we continued a regime of austerity for many years after the war.

We used a large part of the Marshall aid for the enlargement of our industrial plant, thus enabling us to increase our exports considerably. And also for the restoration of our merchant marine. During the war we lost 51 percent of our tonnage. Today we have not only rebuilt our fleet, but we have a larger total tonnage than before the war. Norway with its 3,250,000 people has the 3d largest commercial fleet of all the countries in the world. Our total tonnage is now 7 million tons. More ships of Norwegian registry visit American ports than those of any other foreign nation, except Great Britain.

As you know, we have a labor government in Norway, as a matter of fact we have had one-with the interruption of only a few months-since 1935. It is not a socialist government in the old sense, in the sense in which it is still often understood. My government does not go in much for socialization or nationalization. It has found that greater social and economic justice, greater well-being for the people, all the people, can be reached in a different and a better way. believes that a nation should also take into its service the advantages, the incentive of personal initiative, of private capitalism, under government control and regulation. It believes that the ultimate solution lies in utilizing all the constructive forces, all the resources of the country, in one great combined effort to reach the maximum strength of the nation.

Of course, government control and regulation are not always popular, nor are high taxes-neither in Norway, nor in any other country. There are, of course, differences of opinion among the people regarding the eco-

nomic policies of the government. And the political parties are quite sharply divided on some of the measures introduced by the government. But, I would say that on the whole, and considering the heavy burdens of the postwar period, we have not been doing badly.

Let me mention one fact which to me seems to have a bearing on the situation. In the Norwegian Paliament (the Storting) we used for a few years after the war to have 11 Communist representatives. Today there are only 3 Communists in the Norwegian Storting.
On the whole I think it is correct to say

that Norway today is a welfare state, laying more stress upon the ultimate aim—that is the welfare of all the people-than on the means to accomplish this aim.

The means by which we have succeeded in furthering the aims of a welfare state, without resorting to nationalization, have been many. I shall mention a few of them: The government has laid great stress on

securing full and efficient employment. The government has done everything within its power to secure a steady rise in

production and productivity.

Great and largely successful efforts have been made to secure a reasonable and just distribution of goods and services. There has in a part, a small part, of the American press been misrepresentations of economic conditions in Norway. It was thus stated recently in an influential paper that under the labor regime there were all kinds of shortages and difficulties.

In this connection it was said that Norway still had wartime rationing, and that it was difficult, for instance, to secure a suit. This. of course, is not so. All rationing in Norway was abolished several years ago, and ir. our shops one can buy practically everything, just as in this country. And not only that. We produce ourselves lots of things for export to other countries. When I was with you 10 years ago, I remember com-plaining that the Quislings ate all our brislings. We have plenty to export to you, for instance.

Through taxation there has been effected a leveling of income, and means have been made available for improving the lot of the common man.

There has been an extension of benefits to the people in the form of social insurance (old-age pensions, insurance against sickness, unemployment, etc.). Also an extension of free educational facilities. Public education is free in Norway, and this applies to public schools, high schools, and universities.

A great deal has been done to spread among all the people our cultural treasures and evoke interest in the fine things of life. Recreational facilities for the people have been provided. It might be said, that as the goals are stable, the means are flexible, and they are judged solely in terms of their effectiveness in creating human welfare and a richer life.

I believe that any objective observer visiting Norway today will find that as far as social justice and well being is concerned. we have gone a long way during the last 20 years. There is less economic inequality. less class distinction, and greater general contentment among the people than there used to be. I believe one would find a deeper feeling, that Norway, with all its material and cultural resources, belongs to all the people. This feeling, I am sure, greatly con-tributed to the fact that when war came, the entire nation rallied to the defense of our land and our freedom. More than ever all the people felt that they had something to lose and so much to defend. The great question is, of course, how far one can safely go with regard to taxation, without inter ferring with a healthy economic development and expansion.

I think that an important part of Norway's role in the world today is to have shown that through peaceful, democratic means it has been possible to organize a soclety based on a higher degree of economic Wellbeing and social justice. There still remains a lot to be done in this field-but I Sincerely believe that we are on our way.

I thought that I should give you this

short outline of our internal situation before I say something about Norway's foreign policies and the role it plays internationally in

the world today.

For many years back Norway has en-Joyed an international reputation as a peaceloving country. For more than a hundred years, from 1814 until we were attacked in we had not known war. Norway had been in the forefront of the countries which Worked for international arbitration agreements, seeking to find peaceful solutions of conflicts between nations. In recognition of this Mr. Alfred Nobel, a Swedish industrialist with warm humanitarian interests, in his testament-provided that it should be left to a committee of Norwegians, appointed by the Norwegian Parliament, to award the annual Nobel peace prize.

I have already related what happened in 1940, when the aggressor suddenly and with-out any provocation on our part broke into our peaceful land. We fought, as you know, bravely for 5 years. When the liberation came in 1945, we, and the free world generally, felt deeply that such aggression must not be permitted to happen again. We must join in organizing collective security and prepare together to defend our freedom and

all that goes with it.

And so in the spring of 1945, with the prayers and high hopes of the peace- and freedom-loving world, the United Nations was organized in San Francisco. I had the privilege to be there myself and to sign the United Nations Charter on behalf of Norway, and I shall never forget the 26th of June 1945 when the charter was signed by all the 50 nations represented in San Francisco. There was a wonderful spirit of relief and optimism in the air. We had real hopes that all the members would now be willing to cooperate in times of peace, as they had during the years of war.

Tragically, this situation did not last long. Soon all kinds of difficulties arose between the Western and the Communist world.

The happenings of the last 9 years of socalled cold war-sometimes not so very cold—are only too vivdly in our minds. Peacemaking with Germany and Austria has been sabotaged. Solemn agreements that free and unfettered elections should be held in liberated countries like Poland, Rumania, Bulgario, and others, were cynically broken. Freedom and human rights were brutally suppressed. Overnight these and other countries were turned into totalitarian dictatorships, with utter disregard for the will of the people. A few years later also the free, democratic country of Czechoslovakia was raped and deprived of all the blessings of freedom and popular government. Iron curtains were lowered for the purpose of keeping out all influences from the free world. Terror, lawlessness, concentration camps flourished. Perhaps worst of all was the gradual poisoning of the moral climate of the world. Untruths were flying thick and fast. The generally accepted meaning of words were perverted. Dictatorships were called democracies, slavery was called free-dom, peaceloving states were called warmongers, and white was called black or red.

The veto power of the permanent members of the Security Council of the United Nations, which had been agreed upon in San Francisco on the explicit understanding that it should be used only in extreme cases, was continuously misused with the result that the United Nations was virtually paralyzed.

It did not prove possible to get the Communist members to cooperate on what was to have been one of the main pillars of the United Nations—a military organization to enforce its decisions and the peace of the

It took some time before we realized what we were really up against, and what this insidious obstacle was, which we seemed to meet at every crossroad. Gradually it dawned upon us that it was the most unscrupulous, aggressive force which the world had ever known, namely the conspiracy of international imperialist communism. sonally I fear that many people even today do not fully realize the mortal danger in which we find ourselves-that we are facing the greatest struggle of all times between the forces of freedom and progress, and the dark evil forces of reaction. It was hard to realize that after having fought and sacrificed to get rid of nazism, we had ended up with something still worse, namely aggressive communism.

Strangely enough there still seems to be some people, not Communists only, who cling to the idea that there is something liberal or radical, even progressive, about communism. They seem blind to the fact that communism is black reaction, trying to tear down what the common man has fought for and sacrificed for through generations—that is freedom of speech, freedom of the press, of assembly, of elections. We know that at elections in Communist states they have a single list, prepared by the Communist gov-The voters have no choice. Vote for the single list, or else. I must think of a Communist satellite state in Europe, which a few years ago was going to have one of the single-list elections. One of the news-papers in that country wrote: "These are going to be really free elections, because they will be free of the demagogy of opposition parties.'

There is nothing the matter with the Charter of the United Nations. It is a fact that the charter stipulates most of the things to which a free, peace-loving world aspires. It reaffirms faith in fundamental human rights, in the dignity and worth of the human person. It stipulates that armed force shall not be used, save in the common interest. It emphasizes the duty of member states to respect the obligations arising from treaties, and it obligates them to practice tolerance and to live together in peace with one another as good neighbors.

No, there is nothing the matter with the charter. If all the members would scrupu-lously respect its stipulations then we should certainly not be in the mess in which we

But, may I ask, what organization can possibly succeed if some of its members openly flaunt the principles to which they themselves have solemnly subscribed?

Under these circumstances a way had to be found to protect the free world against aggression, until the United Nations should be in a position to fulfill the great task planned for it.

Norway, never forgetting the 5 long years of totalitarian domination, strongly felt that we must continue our search for security for our rewon freedom.

Alone, we could not accomplish this. We knew that, and our first thought, naturally, was to turn to our neighbors and friends in the north to see what the three of us together could do. As we saw it, the best solution, not only for ourselves but for the cause of freedom and democracy generally, would be a Scandinavian regional defense pact, under the Charter of the United Nations, and in some way affiliated with the great western democracies.

Our Swedish friends could not see it that way. They found that they had to adhere to Sweden's traditional neutrality, based on her past experiences and, no doubt, in accordance with the wishes of the majority of the Swedish people. A Scandinavian neutral defense pact, however, without solidarity with a larger democratic regional group, offered no solution for Norway's problems. strongly felt that neutrality in these days had no relation to the facts of life.

And so, in 1949, together with Denmark, we decided to join with 10 other countries of the North Atlantic regions in a defense alliance. The alliance was named the North Alantic Treaty Organization, NATO for short. This was in full accordance with article 51 of the Charter of the United Nations, which provides for individual or collective selfdefense of its members. As we know, nations have not always taken to heart the lessons of history. But here was one instance where a group of free countries did decide to profit by the bitter experiences of the past, and not allow an aggressor to pick them off one by

From now on a would-be aggressor, whoever he might be, would face a strong group of peace- and freedom-loving countries. An attack on one of them would constitute an attack against all. Only a country which has aggressive aims needs to fear the Atlantic Pact.

This organization is steadily getting stronger. Under the inspiring leadership of General Eisenhower and his successors as commander of the NATO forces, it made great headway. I don't think there is any doubt that the Atlantic Pact has been largely responsible for preventing so far a new world war. It has deterred any would-be aggressor from attacking.

Norway is happy and proud that from the very first we joined this great organization, in spite of the fact that we were seriously threatened by the Communists. Norway is the only one of the Scandinavian countries which has a common frontier with Soviet Russia, as a matter of fact a frontier more than 100 miles long. The risk we took was, consequently, particularly serious.

I must not keep you much longer. Let me say this only: Is it not a wonderful thing, that after all these years of close friendship, of common ideals and ideas, our countries, America and Norway, are today allies?

In the fact of the threat to our common peace and freedom we are brothers in arms in a great defensive alliance. It is a natural development of our thousand years of understanding and friendship.

Only the Atlantic Ocean separates us. What unites us is of sterner stuff than water.

No nations could be more sincerely peaceful than yours and mine. We both devoutly pray that divine providence will spare us, and all men, the indescribable horrors of

There is only one thing that we hate more than war, and that is slavery under a to-talitarian master. And only one thing we love more than peace, and that is freedom and all that goes with it.

Warning Against Proposed Columbia **Basin Interstate River Compact**

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, January 24, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Gain in a Compact?" published in the Portland Oregonian of January 18, 1955.

The editorial warns against the proposed Columbia Basin Interstate River Compact in the Pacific Northwest. I subscribe to its general conclusions.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT GAIN IN A COMPACT?

The Columbia interstate compact, in our opinion, will be adopted by the Legislatures of Montana, Idaho, Nevada, Utah, and Wyoming, but has no more than a 50-50 chance in the Legislatures of Oregon and Washington. If the Democratic senatorial bloc from Oregon, Washington, and Montana opposes a compact bill in Congress, the necessary Federal authorization may not be obtained.

When the final compact draft was signed in Portland Saturday, State Senator Robert D. Holmes, of Astoria, a member of the Oregon compact drafting delegation, refused to sign with the others. This may mean that it will be Democratic policy to oppose the compact. All four "major" States—Washington, Oregon, Idaho, and Montana—must ratify, and Congress must approve, if the compact is to go into effect. But it is noteworthy that there is no escape hatch for Oregon, once it has joined. A State may stop paying its "dues," but the compact goes on unless it is dissolved by the four major States with consent of Congress.

Our greatest disappointment in the compact plan is that almost from the beginning the conferees decided that the States should not attempt to build dams and transmission lines for the development and distribution of hydroelectric power, nor engage in multipurpose projects of water use. Instead, the proposed compact commission will be recommendatory only. Yet its recommendations will be based on a formula which rigidly establishes the superiority of "upstream beneficial consumptive' use of water-irrigation, etc., in which most of the water is not returned to the rivers-over "downstream nonconsumptive" use-power, navigation, flood control, industrial poses, pollution control, preservation of fish and wildlife, and recreational use.

There may be benefit in such an interstate agreement establishing the priorities of water use. But the section on allocation of power leaves us queasy.

This section is not so objectionable as it was before the recent Spokane meeting, in which the formula was made less rigid. Still it is the purpose of the compact to assure an upstream State the full power production of dams in that State, plus a "fair and equitable" share of power produced because of such storage at downstream plants. The compact commission will determine what is "fair and equitable." A loophole was left in the final draft. It reads:

"A recommendation for the reservation of the full amount of the power and energy so determined shall be made as to projects to be reviewed hereunder unless the commission finds the making of a reservation to be impracticable."

So, in the end, everything is left to the agreement of a commission in which the 4 "major" States will each have 2 votes and the 3 "minor" States 1 vote each—with 8 votes being a legal majority. Most of the unauthorized big power sites are in upstream States. The greatest need for power is in the western portions of Oregon and Washington. Obviously, the upstream States will insist on "drawback" provisions in any contracts for power to the industrial coast.

There are a great many factors in this complicated proposal which need careful consideration by the Oregon Legislature. We hope the assembly will not divide on po-

litical lines on this basically economic issue. The main point is whether the best interests of Oregon and the entire Northwest will be advanced. Of this we remain somewhat skeptical, to put it mildly.

Tariffs and Trade Barriers

EXTENSION OF REMARKS

HON, GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1955

Mr. SMATHERS. Mr. President, on behalf of the Senator from Arkansas [Mr. Fulbricht], I ask unanimous consent that there be inserted in the Appendix of the Record two articles by Ralph Mc-Gill dealing with tariffs and trade barriers, which recently appeared in the Atlanta (Ga.) Constitution.

There being no objection, the articles were ordered to be printed in the Record, as follows:

GOP GHOSTS ARE AGITATED

(By Ralph McGill)

As Republican high-tariff leaders of the period of looting and special interest grabs, which began with the Grant administration and continued to Grover Cleveland in 1834, watch Republican Dwight D. Elsenhower striving to reduce tariffs, there must, indeed, be a great many agitated ghosts and graves.

That a GOP Chief Executive should be engaged in attacking the Hamiltonian structure so firmly rooted in the economic and political life of the Nation is perhaps the most dramatic feature of today's aspect of those two subjects—politics and economics. When the tariff bill of 1828 was being de-

When the tariff bill of 1828 was being debated, Abbott Laurence, a Massachusetts manufacturer, wrote Daniel Webster thanking him for amendments which helped the position of woolens. "I must say," he penned the great Senator, "that New England would reap a great harvest by having the bill adopted as it now is. * * The bill if adopted as amended will keep the South and West in debt to New England the next 100 years."

No prophecy was ever more accurate. By the time the War Between the States was ended the Republican Party, dominated by industrialists, had political control in a vice-like grip. They set out to enlarge the tariff cornucopia which since 1828 had hung over the industrial east showering it with billions of dollars in privilege profit—most of it from the Nation's farmers and small consumers.

MOVE TO WEST BEGINS

There was discontent with the tariff at war's end, but the West was pacified by the homestead law, passed in 1862 and implemented when peace came. With it was loosed a great flood of money available for all who would build turnpikes, canals, and railroads. Land values boomed and thousands of farmers sold out and began to move westward.

But, by 1881 the Treasury was embarrassed to find itself with a surplus of more than \$100 million. Taxes were high. Costs of all goods were up. Farm prices were down. Gold from new fields was plentiful.

Railroads boosted rates and, joining the industrialists, gave certain favored commodities and friends low rates and their competitors higher ones. Farmers in Iowa burned their corn for fuel because, at 15 cents the

bushel, it was cheaper than coal, though in the East corn was being sold at \$1 a bushel. They properly accused the railroads of extortion. The Farmers Grange and politics of protest began to grow.

President Arthur's tariff commission of

President Arthur's tariff commission of high-protectionist men were honest enough to recommend a reduction of 25 percent. But, lobbyists got to the Congress. The reduction was 5 percent.

POLITICS OF PROTEST

The politics of protest grew in the face of such angered looting and Grover Cleveland was elected in 1884. He made the tariff a party issue, denouncing it as a "vicious, inequitable, and illogical source of unnecessary taxation."

Cleveland also punctured the favorite claim of the high-tariff leaders—that it protected the American workingman. He proved that only 15 percent of all American labor was in protected industries.

In 1838 Cleveland got the most votes but William Harrison won in the Electoral College. Promptly, in 1890, came the McKinley Tariff Act raising the rates to 49 percent. Prices of all food and consumer goods shot up and Democrats were swept back into office in 1892, for the first time since the War Between the States, electing a President controlling both Houses of Congress.

controlling both Houses of Congress.

But, by this time, many Democrats from the more industrialized States were dominated by tariff interests. Tariff reform failed. A bill introduced by Representative William Wilson, of Virginia, and Senator Arthur P. Gorman, from Maryland, was emasculated when Gorman betrayed Cleveland and managed to gain a heavy protection duty on coal, sugar, iron ore, and iron products—and leave the farmer's products to bring what they would. President Cleveland called it a piece of "party perfidy and dishonor." It became law without his signature.

Next great enlargement of the tariff cornucopia came after Harding's election—as we shall see in the next chapter.

"YE WORSE THAN BLIND" (By Ralph McGill)

The voice—speaking today on a need for lowering trade barriers—is the voice of President Elsenhower. But the words are those of Woodrow Wilson and Cordell Hull.

In one of his last messages to Congress President Wilson said:

"Clearly, this is no time for the erection of high trade barriers. It would strike a blow at the large and successful efforts which have been made by many of our industries to place themselves on an export basis. It would stand in the way of the normal readjustment of business conditions throughout the world, which is as vital to the welfare of this country as to that of all the nations."

They went unheeded. The tariff has powerful friends.

In 1920 the Nation turned its back on the economic and political facts of life. It repudiated the League of Nations. Had it not been deceived into thinking this country could become another Tibet, it might have avoided world depression and the second great war.

(Many historians and observers of international affairs have said so, including Winston Churchill.)

USED OUR LOANS TO BUY

But we did so vote—a decision which has cost, and still costs, blood and money.

In 1922 the Harding government approved the Fordney Tariff Act. It was like the elephant fleeing from a mouse. Europe could not flood us with goods, since she was war ravaged and needed desperately to buy. The act made it impossible for her to buy. The irrational quality of the financial minds of that time is hardly comprehensible. Having lent more money than ever before in our history, we passed a tariff act which made repayment impossible. But since we needed to sell our goods, our international bankers made huge loans abroad, floating bonds as security, so that nations which didn't have the money to buy, could use our loans to do so.

There is no record of any financial house warning the people that the bonds couldn't possibly be any good—unless the nations borrowing could sell the products of their factories.

The spiral of prosperity mounted higher and higher. But by the end of 1928 certain uneasy men abrutly halted the lending.

This precipitated world economic disorder. It rocked the newly formed, small democracies of Europe. Our answer was more tariff.

ECONOMISTS PROTESTED

The GOP Congress enacted the Hawley-Smoot tariff aet which raised rates to the highest point in our history. Hoover signed, let it be noted, over the protest of practically every reputable economist in the Nation.

Four years later, speaking before the National Republican Club in New York City, in February 1933, a wistful Herbert Hoover said: "We cannot isolate ourselves. During the past 2 years the crash of one foreign nation after another * * * has dominated the whole economic life of our country."

(Herbert Hoover, no matter how one tries to excuse him as a well meaning man, was a bumbler in office and little else. In 1955,

he is again an isolationist.)

The crash of foreign nations had dominated our, and his, economic life. Our huge export industry had collapsed through the folly of our tariff acts. We had built up new plants for the war and expanded others. They needed to sell more—not less. Our cotton, wheat, tobacco, lard, and fruit which formerly went abroad was piled up in surpluses—costing the taxpayers great amounts of money. Not only that, but the tariffs started other nations on great plans—and successful ones—to grow their own cotton, tobacco, and wheat. Many now have surpluses of their own.

Today the President, heeding economists, sees that. So do most of our new industrialists—such as Henry Ford and the many others who made the Randall Report urging trade.

Meanwhile—what does it mean to the consumer?

Let's look tomorrow.

Durum Growers Need Help

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Durum Growers Need Help." The editorial refers to the raising of durum wheat in the Northwest, and was published in the Devils Lake Journal of January 23, 1955.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

DURUM GROWERS NEED HELP

Unless something is done to bring more farmers into the crop insurance program.

durum acreage in the lake region, the Nation's top durum production area, will take a drastic slump, estimated at 50 percent.

Although one of the smallest crops of durum was produced in 1954, little is being done on the national level to encourage farmers to plant durum next spring.

While the macaroni manufacturers plead for more quality durum, the Department of Agriculture, fearful that rust will hit the crop again next year, has canceled any new crop insurance in 16 North Dakota counties which produce most of the Nation's durum.

In effect, the ruling means that farmers who had no insurance in 1954 will be unable to take out any wheat coverage on the 1955 crop. Faced with a continuing rust threat, farmers without insurance will be unlikely to gamble on much durum next season.

If the Government really wants to encourage durum production, steps should be taken to assume part of the risk with the farmer

through crop insurance.

Even those farmers who had insurance on their 1954 wheat acreage will be reluctant to concentrate on durum because of its vulnerability to rust. Without insurance, it will be impractical for them to plant durum at all.

Part of the inconsistent action on national level can be attributed to the fact that some of our agriculturalists have not yet learned a basic lesson—that hard wheat and durum are not the same thing. They are both classed as wheat, but are used for entirely different purposes.

Looking at the record, it was no doubt seen that the durum area had become particularly vulnerable to rust. Because of heavy losses, it was believed practical to deny new coverage farmers in the durum area.

Were the Nation blessed with an abundance of durum, as in the case of hard wheat, removing the 16-county area from any new insurance could be more easily understood. However, the Nation has a crying need for durum to supply the demands of the macaroni and spaghetti manufacturers.

In view of the shortage, restricting crop insurance only to those who had it in 1954 will do little to encourage production, but will rather have the opposite effect. Few farmers, knowing the vulnerability of durum to rust, will want to take a gamble on raising durum, without some sort of protection.

It is time that the Department of Agriculture takes a more realistic attitude toward durum, if it really wants to encourage farmers of this area to continue raising the crop. In cases of severe shortage, some form of subsidy, such as through crop insurance, would appear to be justified, if only to get the Durum Triangle back on its feet again from the heavy blows it has suffered in the past 2 years.

Anniversary of the Proclamation of Ukrainian Independence

EXTENSION OF REMARKS

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record my statement of January 22, 1955, commemorating the anniversary of the proclamation of Ukrainian independence.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. JOHN MARSHALL BUTLER, OF MARYLAND, COMMEMORATING THE ANNI-VERSARY OF THE PROCLAMATION OF URRAIN-IAN INDEPENDENCE

January 22 is the day set aside for the traditional observance of the proclamation of Ukrainian independence. Since 1918 this memorable day in the history of man's struggle against oppression has been a reminder to us, both of the athetistic dictatorial forces at large in our world and equally as important, the unbounded zeal of the Ukrainian people to attain the freedom and liberty for which they have so long aspired.

We, in America, together with the other free peoples of the world, are the present keepers of the flame of freedom—man's undiging will to live in peace and friendship with his fellowman in accordance with the principles of God. As we enjoy these blessings, we cannot and we will not forget the freedom-loving people of the world who are not free, those who cherish liberty, but who must live without it, and those whose offer of a faith and charity to their neighbors is scorned by godless dictators whose thoughts and ambitions are of world domination and slavery for mankind rather than the protection of the inalienable rights of the individual.

No people have been more heroic, nor fought more bravely against countless odds for liberty and freedom than the Ukrainian people. We in America are not unmindful of their present plight nor of our solemn obligation to them. On this anniversary, we hail the free spirit of Ukrainia and renew our pledges of the past to continue to seek the means by which they can throw off the oppressor's yoke and walk with us as a free people.

Discovery of a Natural Bridge in the Grand Canyon of the Colorado River

EXTENSION OF REMARKS

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1955

Mr. WELKER. Mr. President, on October 30 of last year our distinguished colleague from Arizona IMr. Goldwater discovered a natural bridge in the world-famous Grand Canyon of the Colorado River. He flew into that inaccessible area by helicopter and was able to prove discovered of the beautiful natural bridge to which I have referred. He first discovered the existence of the bridge by flying his own private plane several times over that natural wonder in 1950, and reported his discovery to the National Park Service.

I ask unanimous consent that a news item which appeared in the New York Times of Sunday, January 23, 1955, entitled "Bridge Is Found in Grand Canyon," be incorporated in the Appendix of the RECORD.

There being no objection, the item was ordered to be printed in the RECORD, as follows:

BRIDGE IS FOUND IN GRAND CANYON—SUNA-TOR OBSERVES A NATURAL SPAN WHILE FLYING OVER ISOLATED CREEK BASIN

WASHINGTON, December 30.—A United States Senator has reported the discovery of a natural bridge in the Grand Canyon. Senator BARRY GOLDWATER told the National Park Service of a large bridge in the

isolated Nankoweap Creek basin. On October 30 the Arizona Republican flew by helicopter into the rugged area to establish its

location deunitely.

The Arizona Republican related that he first saw the bridge 4 years ago from his private airplane while flying to a trading post he operated on the Navajo Indian Reservation in Arizona. Subsequent flights bore out his first observation, he said, but the shifting light within the deep canyon hindered the aerial survey.

During the recent election campaign he

said he took a day off and engaged a helicopter to fly to the canyon from Cameron, Landing within the basin and along Nankoweap Creek, the Senator and his pilot, Bob Gilbreath, hiked more than 3 miles to a point near the base of the redwall for-

mation.

The formation stands out to air travelers because of its often brilliant reddish hue. It comes from water discoloration of the

canvon's limestone walls.

The bridge is approximately 2,500 feet be-Point Imperial on the north rim of Grand Canyon and near the head of Nankoweap Creek. Nankoweap is an Indian word meaning echoing waters.

The bridge has a span of about 200 feet at its base and a height of some 200 feet to the underside of its arch. Senator Gold-water and park service officials believe that it may have been cut by a waterfall immedi-

ately above it.

Preston P. Patraw, superintendent of Grand Canyon National Park, said that a check of park records had shown that Senator GOLDWATER was the first person to have reported the existence of the natural bridge. said few persons had ventured into the Nankoweap basin, particularly in recent years.

Senator GOLDWATER said that he had found no evidence, such as campsites, that indicated anyone had been in the canyon with its sheer redwall limestone walls. He said he had noted some pieces of old Indian pottery near the helicopter landing place. The creek empties into the Colorado River 6 miles away.

The Senator also recalled that on trips down the Colorado River he had passed the month of the creek but never thought of exploring the area. He suggested to the park service that the bridge be named after the Kolb family, Arizona pioneers.

Prevention of Commercial Logging in Three Sisters Wilderness Area of the Willamette National Forest

> EXTENSION OF REMARKS OF

HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, January 24, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Outdoor Groups Oppose Logging in Three Sisters Widerness," published in the Portland Oregonian of Sunday, January 16, 1955.

The article describes the efforts of outdoor and conservation groups in the State of Oregon to prevent commercial logging in the present Three Sisters Wilderness area of the Willamette National Forest.

There being no objection, the article was ordered to be printed in the RECORD, as follows.

OUTDOOR GROUPS OPPOSE LOGGING IN THREE SISTERS WILDERNESS

The United States Forest Service has set February 16 as hearing date on a proposed reclassification of the Three Sisters primitive area which would lop 55,600 acres from the western section and allow logging in that area, located in the Willamette National Forest.

Outdoor groups, two major timber unions and numerous Northwest organizations will be represented at the Eugene hearing to oppose the plan either totally or in part. County lumber interests will seek a bigger reduction.

Major source of opposition is the 21,000member Federation of Western Outdoor Clubs and a specially formed committee called the Friends of the Three Sisters Wilderness Area. These groups are prepared to do friendly battle against the Forest Service only insofar as the western boundary change will affect 12,000 coveted acres.

STONE TO REPORT

Following the hearing Regional Forester J. Herbert Stone will make a full report on the issue to the Secretary of Agriculture, who will make a final decision on the reclassification provisions.

The regional office of the Forest Service in Portland released January 14 a fact sheet on the proposed reclassification which de-scribes as the crux of the controversy the selection of Horse Creek as the western

boundary.

Outdoorsmen want 12,000 acres between Horse Creek and the summit of Horse Pasture Mountain-Olallie Mountain ridge safely within the wilderness areas. They said this area has outstanding scenic beauty and is a natural laboratory for study of flora and geologic formations.

Virlis L. Fischer, Portland, chairman of the WFOC's conservation committee, said other than that the federation will go along with the Forest Service in its plan to change the primitive area into a better protected

wilderness area.

The executive committee of the A. F. of L.'s Northwest council of lumber and sawmill workers and the CIO woodworkers union, however, have gone on record as opposing any reduction in the 246,000 acre tract.

AFL WANTS PROTECTION

Julius C. Viancour, assistant to the Northwest council secretary, said the decision was in line with the AFL's policy to protect recreation areas. A. F. Hartung, CIO-IWA international president, said that the timber resources of the area don't merit logging.

Purpose of the reclassification is to conform with a forest-service goal of making national forests serve the greatest good to the greatest number in the long run.

The regional forest office explained that the Sisters primitive area, set up under regulation L-20 in 1937 and 1938, was originally given protecture status until a survey could be made from which to base permanent

Reclassification, under regulations U-1 and U-2 for wilderness and wild areas, actually will give former primitive areas greater protection from encroachments. In conformity with the regulations, the Three Sisters wil derness area still would include 196,640 acres.

Willamette national foresters said principal reason for the readjustment is the timber situation in Lane County. The area west of Horse Creek contains 1,500 million board-feet of sawtimber, which the foresters believe must be opened for logging to prevent crisis in Lane County's lumber economy.

The service pointed out that 60 percent of the county's available sawtimber is located on national forest land, but that only 26 percent of the annual yield is from those stands. On the other hand, private timberlands, owned mostly by large operators, contribute 65 percent of the annual cut. represent only 30 percent of available timber.

George Owen, Eugene, spokesman for the small or medium-sized operators in that area, said the Horse Creek boundary is between it and Separation Creek, near timberline. With Separation Creek as the line, the operators could take 24 million or more board-feet of sawtimber from the area every years. Horse Creek boundary would provide an annual cut of about 16 million board-feet.

Large timber companies in Lane County are only nominally interested in the possible

stumpage addition.

A Forest Service boundary survey extended over four summers. Subsequent to its findings, the regional office set Horse Creek from the confluence of Eugene Creek as a defensible boundary, because the timberland west of the creek" contains nothing of especially outstanding scenic quality." The outdoorsmen strenuously protest this point.

VALUE LOSS FEARED

Other reasons for the Horse Creek decision, as listed in the fact sheet, are as follows: The excessive amount of merchantable timber (4 billion board-feet) in the entire primitive area; the possibility of giving permament employment to 75 families if the 1,500,000,000 board-feet of the western section were opened to logging; the adequate size of the ramaining portion of wilderness; the large amount of timber (500 million board feet) located on only 12,000 acres be-tween Horse Creek and the ridge. The op-position argues otherwise on the latter point.

Opponents declared that interrupting the. continuity of the Horse Creek drainage will destroy wilderness values east of the stream. Hikers of the high country and Skyline Trail would be confronted by the scarred ever-present site of the ridge's logged east slope.

They pointed out that pressure would be great to open up the remainder of the forest.

The Forest Service answered this charge with the statement that "reasoning of this nature disregards entirely the multiple-use plan of management followed by the Forest Service." Cutting would be in small, unobtrusive patches, the Service statement continued. Roads would be located away from streams.

LOGGING ROADS STRESSED

Any logging roads would be located outside the wilderness area, from which the Forest Service manual bars any motor traffic.

The Forest Service intends to set up wild areas composed of no less than 5,000 acres at Mount Washington and Diamond Peak. Aggregate would be some \$2,000 acres. offer to set aside a portion of the ridge as a natural area. The Outdoorsmen countered, however, that while this might preserve the

flora, it would be a "needless removal from the Three Sisters wilderness area of the outstanding feature which contributes so much The ridge is "the meeting place of three distinct flora. Nowhere else, in or out of the

wilderness area, is the overlapping of these

flora so apparent or so accessible to the student," a WFOC bulletin declared.

Asserting that keeping the drainage area intact will help preserve the wilderness character and allow science groups to study native fauna, the WFOC also contends that the Government must not lose track of poplation pressures on a long-range basis. of a large wilderness area will increase in stride with the growing number of persons privileged to use it.

California his six times as much land devoted to national parks, monuments, and wilderness areas as Oregon, Fischer said. Washington has 21/2 times as much.

"The wilderness area belongs to all the Nation and not to just a handful of timber operators in Lane County who might be interested in bidding so much a thousand feet," the WFOC declared.

Timber in the disputed area would provide an annual yield of only about 6 million to 7 million board-feet, the opponents claimed.

They pointed to the necessity of increased use of the total forest product and asserted "there is no pressing need for this timber."

"Much of the forest cover in the disputed area is made up of slow-growing alpine species that would contribute little to a sawlog economy," the WFOC pointed out.

Groups in opposition to be represented at the 9 a. m. hearing in Eugene's Veterans Memorial Building include Mazamas, Chemeketans, Obsidians, Seattle Mountaineers, Sierra Club, Wilderness Society, American Nature Study Society, Nature Conservancy, Oregon and Seattle audubon societies, Eugene Natural History Society, Willamette University's science department, Izaak Walton League, Boy Scouts of Portland and Eugene, Men's Garden Club, Garden Clubs America, Portland Women's Forum, McKenzie River Guides Association, Santiam Sportsmen's Association, McKenzie Bridge Chamber of Commerce, National Forest Recreation Association, and the Oregon Academy of Sciences.

Keep Murphy General Hospital Opened

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolutions by the House of Representatives of the General Court of Massachusetts.

The resolutions follow:

Resolutions memorializing Congress to prevent the closing of the Murphy General Hospital in Waltham

Whereas the proposed closing of the Murphy General Hospital in Waltham would cause great inconvenience to disabled war veterans and would greatly lessen the hospital facilities available for such veterans: Therefore be it

Resolved, That the House of Representatives of the General Court of Massachusetts urgently requests that the Federal Government take such steps as may be necessary to prevent the closing of said hospital; and be it further

Resolved, That a copy of these resolutions be sent by the Secretary of the Commonwealth to the President of the United States, to the Secretary of the Army, and to each Member of the Massachusetts delegation in Congress.

House of Representatives, January 17, 1955. Adopted.

LAWRENCE R. GROVE,

Clerk.

A true copy. Attest: EDWARD J. CRONIN, Secretary of the Commonwealth.

A Threat to the Nation's Glass Industry

EXTENSION OF REMARKS

HON, CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD. I desire to call the attention of my colleagues to the dangerous threat to the Nation's glass industry should the proposed Japanese Treaty be approved

The following article from the Weston Democrat, Weston, W. Va., one of the leading glass-producing centers, is quite significant

The article, including a table on glass imports from the United States Tariff Commission, follows:

[From the Weston (W. Va.) Democrat of December 17, 1954]

TARIFF CUT WOULD HURT, GLASSMEN TELL BUREAU

The manufacturers of table, stem, and ornamental glassware today told the United States Tariff Commission and the Commitfor Reciprocity Information that any reduction in the present tariffs on their ware would be very injurious to the now critical and unprofitable state of that industry. It would cause more unemployment in the industry which is now operating at only 60 percent of its capacity.

The handsome table, stem, and ornamental glassware industry's opinion was presented by Thomas C. Heisey, executive vice president of A. H. Heisey & Co., of Newark, Ohio, and by W. F. Dalzell, president of Fostoria Glass Co., of Moundsville, W. Va. Earl W. Merry, vice president and secretary of Indiana Glass Co., of Dunkirk, Ind.,

manufacturers of hand and machine household pressed ware and producer of lens and private mold glass, stated it was his opinion that handmade glassware loss of business recently was due to imports from low-wage paying countries with which American manufacturers could not compete.

Samples of recently imported ware purchased in several department and specialty stores were displayed, which bore price tags of 50 percent less than comparable ware

made by American manufacturers.

Marshall T. Gleason, secretary of Rodefer Gleason Glass Co., of Bellaire, Ohio, manufacturers of illuminating and industrial glassware, declared that competition from imports were already a source of great concern because Japanese labor was only 22.8 cents per hour, while the American average wage is at least \$1.72 per hour.

It was the consensus of manufacturers' opinion that the industry was in a very pre-carious condition due to the reductions of tariff rates within the past few years. has resulted in liquidation of several old established American glass companies re-cently. To further reduce tariffs, as seems contemplated by the proponents of the Japanese negotiation, could only lead to greater crippling of the industry.

The speakers were emphatic in their claim that, in view of the vital part played by the glass industry in the past two World Wars and present national defense program, any action that might impair the survival of their industry would adversely affect the national security.

Table and art glassware; 1 United States imports for consumption, by principal sources, 1951-53 and September and October 1954

[Foreign value in thousands of dollars]

Widespread Objection To Adopting President's Suggestion That Local Interests Share the Cost of Deepening Delaware

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. WOLVERTON. Mr. Speaker, as an indication of the widespread and substantial opposition to the President's plan suggested in his budget message, that local interests be required to share the cost of deepening the Delaware River Channel, I include as part of my remarks the following newspaper comments:

> [From the Philadelphia Inquirer of January 20, 1955]

GIVE THE PRESIDENT FACTS ON CHANNEL President Eisenhower's statement at his press conference, reaffirming his position that local interests should help pay for the deepening of the Delaware River channel to 40 feet, will strengthen the impression held by many that the President has no clear understanding of the channel project and has been badly advised about it. In his recent budget message to Congress, he had proposed a supplemental appropriation of \$6 million to get the channel work started, provided local interests contribute about \$18 million of the \$91 million total cost

The President's share-the-cost edict made it imperative to determine whether it meant that a new Government principle, applying to all public works in which Federal appropriations figure, was being set up, or whether Philadelphia and Delaware Valley, United States of America, were being made the targets of a discriminatory measure.

A direct question to this effect was put to President Eisenhower at his news conference yesterday by John C. O'Brien, head of the Inquirer's Washington Bureau.

The President replied that he felt there should be some participation in the Delaware River channel job by those who were going to profit directly and in a major way. He stated that he believed that when the Federal Government spends money that is mainly in the interest of a locality, some way should be found to make that locality participate.

If this means anything, it would seem to indicate a new Government policy of requiring communities and private interests to share the cost of federally financed improvements that are expected to bring some benefit to them.

The scope and implications of such a policy are tremendous. If local beneficiaries of the deeper Delaware channel are to be assessed \$18 million to help pay for it, corresponding contributions should be exacted in the case of other projects.

A case in point is the St. Lawrence seaway, which is expected eventually to cost the Federal Government about \$2 billion. A great many local areas and local industries are going to profit from this expensive undertaking.

But has there been any step taken by the Federal Government to get the city of Cleveland, for instance, to help defray the cost of the seaway, which presumably will benefit Cleveland business? The M. A. Hanna Co., which was headed by Secretary of the Treasury George M. Humphrey prior to his acceptance of the Cabinet post, and which has large investments in many fields, including steel, will doubtless benefit largely from the seaway. Will it be forced to share the cost?

If the policy is not to be confined to the Delaware Valley, it should mean that in every river and harbor improvement where any local area receives benefit—could there be any where local benefits are absent?—the cost would have to be shared by local interests.

It is obvious that if such a scheme of massive local assessment for federally directed improvements were to be pushed by the administration, or if individual corporations benefiting from the St. Lawrence seaway were compelled to shoulder part of the cost, there would be loud howls in Congress.

If Mr. Eisenhower does not seriously contemplate wholesale applications of his sharethe-cost principle, he should not discriminate against the Delaware Valley.

nate against the Delaware Valley.

It may be his impression that the United States Steel Co.'s Fairless plant would solely profit from the deepening of the upper channel and that, therefore, the corporation should share the cost. But that view is wholly inaccurate, as can be demonstrated very easily.

very easily.

The share-the-cost recommendation will be fought by Pennsylvania Senators and Representatives in Congress, and every effort will be made to uphold the original authorization by Congress for full Federal appropriation for the channel.

But there is a good chance that the President might reverse himself in the matter and back the appropriation if the facts are fully presented to him personally and not

through go-betweens. An effort to make direct presentation should be pressed at once.

EISENHOWER SETS POLICY ON CHANNEL COST— WANTS LOCALITIES TO HELP FINANCE ALL SIMILAR WORK

(By John C. O'Brien)

Washington, January 19.—President Eisenhower said today that requiring local interests to share the cost of major Federal improvements—as he has demanded in the case of the upper Delaware River—should be the new national policy.

His share-the-cost plan would involve a drastic reversal of the historical policy under which the Federal Government has assumed full responsibility for developing and maintaining navigable waterways. Further, Mr. Eisenhower indicated the same policy should apply to any projects in which Federal spending was largely in the interest of a particular locality.

FIRM ON CHANNEL

He upheld his budget message position that he would recommend no Federal appropriation to deepen the upper Delaware River channel unless local interests contributed some \$18 million. He emphasized, however, that he would not specify whether the contribution should be through tolls on shipping, by direct contribution, or some other method.

Reminded by this reporter that private industry has never before been assessed for a navigation project, he was asked whether the cost-sharing plan applied only to the Delaware River project or whether it was a new Government policy.

new Government policy.

If it is a new policy, Mr. Eisenhower replied, he thought it should have been considered long ago.

OPPOSITION CERTAIN

His program was almost certain to face strong opposition from commercial and shipping interests throughout the country and from Congressmen in all sections.

In the Delaware Valley, maritime spokesmen renewed their demands that the entire \$91 million needed to dredge a deepwater channel from Philadelphia to Trenton should come from the Federal Treasury. Any requirement that local interests share the cost, they said, would discriminate against Delaware River ports and might be, in fact, unconstitutional.

They recalled that Congress considered a proposal last year that local interests contribute to the channel project—and rejected it. They had sought a \$25 million appropriation in the new budget to start work on the waterway this year, with no strings attached.

Instead, the Budget Bureau held out for a local donation of at least \$18 million, and agreed, if that payment was guaranteed, to recommend a Federal appropriation of only \$6 million.

The local interest that should provide the \$18 million was not identiged in the budget, but the original proposal turned down by Congress was that the United States Steel Corp. should make the contribution because its Fairless Works at Morrisville would be supplied by ore vessels using the new channel.

In discussing his share-the-cost plan at his news conference today, the President said he believed that when the Federal Government spent money that was mainly in the interests of a locality some way should be found to make that locality participate.

Delaware Valley spokesmen, in and out of Congress, have argued that the Delaware channel would benefit not one industry or locality but hundreds of industries and, basically, the entire country. Its importance as a national defense asset has been stressed to be a stressed to be

FINANCING METHOD OPEN

Mr. Eisenhower said he was not, by any manner of means, specifying the method by which the partnership between the Federal Government and localities could be worked out.

He said he supposed the range of things that could be studied would be all the way from tolls—that is, from vessels actually using the channel—to some direct participation in the original cost.

But, he added, he believed that in projects such as the deepening of the Delaware, the Federal Government should try to find a way to get the local concern or the economy or the local benefits reflected in the appropriations the Federal Government makes.

INDORSED BY NEW JERSEY

Admitting such a project might benefit the Nation as a whole, the President maintained that cost sharing by the local community was proper, whether or not it was a new policy of the Government.

It was pointed out to the President that the new feature of the Budget Bureau's proposal on the Delaware channel was the assessment of part of the cost on private industry—not the sharing of expenses by State or local governments.

He repeated that he was not wedded to any particular form of cost sharing. He said he wouldn't say this should not be done by tolls, but he still felt there should be some local participation by those who are going to profit directly and in a major way.

SCOTT PREFERS TOLLS

Commenting on the President's remarks, Representative Hugh Scott, Jr. (Republican, Pennsylvania), said he still believed the Federal Government should pay the entire cost of the project. But failing that, he said, he would favor tolls rather than assessing a few private firms for a share of the cost.

The United States Steel Corp. has spent \$500 million to build its integrated Fairless plant, which sparked the industrial expansion of Delaware Valley, United States America. The deeper channel, although needed by the steel company, also has been warmly indorsed by New Jersey officials as a vital necessity for the Trenton Marine Terminal, north of the Fairless Works.

The plan to levy tolls on river shipping, mentioned by the President, was especially denounced by maritime leaders here. Such charges would place the entire Delaware River port area at a serious disadvantage against competing ports, they said.

POLICY DENOUNCED

Despite the President's position, advocates of the channel in the Philadelphia area renewed their demands that the channel be dredged entirely as a Federally financed project.

Members of the Delaware River Port Authority went on record formally in denouncing the local responsibility concept as one that Congress had never considered and one which appears in unprecedented contravention of the responsibility of the Federal Government with respect to navigable interstate waters.

PAYING FOR THE CHANNEL

To the EDITOR OF THE INQUIRER:

President Eisenhower's proposition that private interests should contribute directly for dredging the Delaware River channel is an odd one for a Republican President to make. I suppose these industries should also pay directly for the building of streets, highways, and other public facilities. But then what would happen to our free enterprise system? Would not private interests soon claim ownership and other rights to the exclusion of the public?

REPUBLICAN.

PHILADELPHIA, January 18.

Minority Report on Investigation by Special Campaigns Committee in Ninth Congressional District of North Carolina

EXTENSION OF REMARKS

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. BOGGS. Mr. Speaker, House Resolution 439, 2d session, 83d Congress, created a special Committee To Investigate the Election of the Members to the House of Representatives of the 84th Congress. By the terms of the resolution the committee expired with the end of the 83d Congress.

The majority report of the committee was filed on January 1, 1955. At that time I was in my home district of Louisiana and did not have an opportunity to examine the report prior to its being filed.

The report was not signed by myself or by Representative Frank Karsten of Missouri. We were the minority members of the committee. The committee having expired, there is no procedure whereby a minority report may be attached to the majority report. Representative Karsten and I are using this means of publishing the report which we would have filed. It follows in full:

MINORITY REPORT ON INVESTIGATION BY SPECIAL CAMPAIGN COMMITTEE IN NINTH CONGRES-SIONAL DISTRICT OF NORTH CAROLINA

Ordinarily we would not issue a minority report concerning the procedure followed by the Campaign Expenditures Committee in its investigations and hearings. But we are particularly concerned with the report issued relative to the investigation conducted in the Ninth Congressional District of North Carolina. This report, plus various and sundry press releases, issued in the name of the committee has, in our opinion, created in the minds of the voters of that district widespread misconceptions and we think the record should be set straight.

In our opinion neither the hearings nor the investigations were warranted.

The bearings demonstrated the soundness of the rule previously adopted by this committee that only complaints filed under oath in writing by either the victorious or the defeated candidate for Congress would be considered. This rule was neither adopted nor followed in the 83d Congress. The soundness of such a requirement is obvious. Without it complaints, by crackpots and others, could undoubtedly be filed in all of the congressional districts of our country.

In the Ninth Congressional District North Carolina the committee never had a complaint in writing from either the winner or the loser in the congressional race. The only complaint was that filed by the Republican organization of North Carolina. At the time that complaint was filed we took the position that it involved the election laws of the State of North Carolina. (We are not authorities on the election laws of North Carolina, although we did learn a few things about them while there.) At the most it seemed to us that what was indicated was action by the Legislature of the State of North Carolina, amending, if necessary, the North Carolina absentee ballot laws, but in no instance was Federal legislation or Federal election laws involved. Throughout the existence of our Republic the States have zealously guarded their rights to determine election procedures.

We most certainly condemn the violation of any election laws. The privilege of voting is the greatest heritage that the American people enjoy. A man who stultifies that right or seeks to buy or sell a vote or stuff the ballot box is a criminal. Nevertheless the net effect of 3 days of hearings in North Carolina simply confirm our original conviction that the election laws of North Carolina must be determined by the representatives of that State acting in their own legislature. The investigative rights of Congress ought never to be used as a weapon to accomplish the desires of a political party in any locality because that party at the moment happens to be the majority party in the Congress of the United States.

It appears to us that one of the main objectives of the Republican Party in North Carolina was to create doubt in the minds of the voters on the soundness of the North Carolina election laws, particularly those sections dealing with absentee voting in that State. These laws may very well need changing. We are not prepared to say yes or no. We do feel, however, that it is not the function of this committee to dictate to the Legislature of North Carolina.

In its effort to justify its expedition into the Ninth District, reckless and greatly exaggerated statements were made by members the staff of the committee during and after the hearings. Cases were presented to the committee without adequate preparation, some of which had no bearing whatsoever on the congressional election. Frequently only one side of a case was pre-sented to the committee. Several cases were presented as illegal which were not so. The alleged irregularities were magnified by the staff of the committee. A careful check of all of the irregularities has been made. On the basis of the testimony before the committee it is doubtful that more than a dozen or two votes would have been changed had there been a complete recount in the That could hardly be called gross irregularities in a district which casts from 70,000 to as many as 130,000 votes. In the November 2, 1954, election, approximately 100,000 votes were cast.

In order to clarify the above conclusions we deem it necessary that we here review in brief the evidence in the record county by

Alexander: Evidence was presented to the committee that 14 absentee ballots were voted prior to the date of issuance of the ballots with further evidence that the office of the chairman of the board of elections erroneously failed to enter the dates when the applications were received and when the ballots were sent out. There was some controversy about challenges by Republicans and some misunderstanding of the law of North Carolina relating thereto on the part of the election officials. There was some evidence that an invalid woman received \$7 for voting. This was denied by her sister who was there. In another matter brought before the committee there was hearsay testimony that someone voted an absentee ballot for a lady without her knowledge. From the evidence there was a misunderstanding between the Democratic and Republican members of the board of elections as to just who could see the election records with evidence that the Republican member at one time had illegal possession of part of the records. There was no showing that any candidate was prejudiced by what transpired.

Alleghany: Three cases were erroneously brought before the committee, all of which concerned residence qualifications under the North Carolina law. Had counsel for the committee prepared his cases adequately and had he checked the North Carolina law, he would have found that each of the voters were duly qualified under the law and that there was no irregularity from this county.

Ashe: There was evidence with affidavits and counteraffidavits that an invalid man 80 years old, who was forgetful, stated he didn't vote his own absentee ballot. Yet there was evidence that his son accompanied the notary public at the time the father voted the

There was evidence presented that the ballots for one precinct were not properly guarded. In one case a newspaper reporter and others offered conflicting evidence as to whether or not 2 or 3 aged invalid ladies, who did not appear before the committee when subpensed, had not received their ballots by mail. No prejudice was shown from this county to any candidate.

Cabarrus: Evidence that one registrar left books in custody of clerk with instructions to contact him if anyone desired to present any challenges and that this was not done on that day but the next day the registrar heard the challenges.

Caldwell: Nothing was presented to the committee concerning this county.

Rowan: Nothing was presented to the com-

mittee concerning this county.

Stanley: Evidence given by a 45-year-old son, who couldn't read or write, that "X" mark on absentee ballots of father, who couldn't read or write, and who died on night of election was not the "X" of the father.

Watauga: Evidence was offered that the chairman of board of elections failed at one time to let the Republican member of board see election records. Evidence was presented by a Republican watcher who kept a record of people who voted that more votes were turned in in one precinct than had actually voted, but no more for congressional candidates than she had written in her book. No prejudice to any candidate was shown from this county.

Finally, we would like to emphasize that at no time during the hearings were there any indications of any nature that either candidate for Congress participated in any fashion in any of the alleged irregularities. Our own conclusions are that the Legislature of North Carolina should make a thorough study of the election laws of that State and take whatever action is deemed necessary in the premises. We reiterate the inadvisability of congressional committees concerning themselves with matters which should be left to the respective States.

HALE BOGGS. FRANK KARSTEN.

Ike's Power Partnership: One Horse for One Rabbit Deal

EXTENSION OF REMARKS OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. ENGLE. Mr. Speaker, the President's much-talked-of power partnership program is a 1 horse for 1 rabbit deal, with the Federal taxpayer getting the rabbit. As Mr. Stokes points out in the following article, the Federal Government gets all the nonrevenue-producing features of these great water and power projects, while the private power monopoly gets the major profitmaking feature, the powerhouse—the cash registers. The Federal Government takes all the risks. Furthermore, this program amounts to a complete repudiation of

the low-cost public power policy solemnly announced by the Interior Department in August 1952. Unless the Federal Government builds the powerhouses, generates, and sells the electricity, there will be no more low-cost public power to help irrigation development or to build an industrial empire such as has grown up around the low-cost public power in the Northwest area. The test of the President's partnership program is to ask what would have happened to the Columbia River Development, the Central Valley project in California, and the TVA if it had been in effect when those great projects were planned. The answer is that they would not have been built-or, if built, would not have contributed what they have to the economic life of the country. I include the article by Mr. Thomas L. Stokes in the Star of January 20, 1955, for his excellent comments on this subject:

PARTNERSHIP FOR WHOSE BENEFIT?—EISEN-HOWER PHILOSOPHY SEEN LEADING TO GREAT MONOPOLY IN POWER AND CONSERVATION AND WITH TAX MONEY

(By Thomas L. Stokes)

In his messages to Congress President Eisenhower harps constantly and repeatedly upon his "partnership" idea, so-called, for conservation and development of our natural resources. He refers to a "partnership" among Federal, State and local governments and private enterprise, with emphasis upon shifting responsibility away from the Federal Government.

Already it has raised the question: Part-

nership for whose benefit?

For purposes here, we will just mention in passing the revelation of how special benefits are being conferred upon powerful electric utilities by operation of this policy in development of water resources. What "partnership" means is that the utilities "monopolize the bulk of revenues" at the dams. So the trick is described by newly-elected Senator Richard L. Neuberger, Democrat, of Oregon.

He knows. He won election, as the first Democratic Senator from Oregon in 40 years by exposing the harmful effects of the "partnership" program on the people of his State and on development of the Pacific Northwest. He is a recruit to a group in Congress which is very familiar with this issue from long experience. In the coming session this band will resist encroachment of the Eisenhower "partnership" idea and try to prevent damage to TVA in the southeast, the great public projects in the northwest, and the Southwest Power Administration in Missouri, Oklahoma and Texas and its rural electric cooperatives.

So much for hydroelectric power. There is, however, another threat to the public and consumer interest which is less readily detected because it is an almost new field. That is the production of power from atomic fuels. In a few years this will far out-distance production of electricity by other means.

You will remember how the last Congress enacted a law by which private industry was admitted to partnership in development of power from atomic fuels, all under pressure of the administration, the Atomic Energy Commission and politically powerful private utility and other interests.

You will recall also, because of the dramatic filibuster, to which they had to resort, how an embattled band in Congress was finally able to insert a few protections to the public so that the law was not the complete giveaway of the Nation's heritage in this new source of energy that otherwise it might have been.

But the law is still full of confusions and loopholes by which a monopoly could be set up that would make the once all-powerful private utility monopoly look pale and wan and minuscular.

Another attempt will be made in Congress at this session to insert further protections to the public in the law after a detailed review of how the AEC is operating under the present law. That review will be through hearings by the Joint Congressional Committee on Atomic Energy, headed by Senator CLINTON P. ANDERSON, of New Mexico, that he announced will begin the last of this month and run for 2 weeks or more. After hearing from the AEC, the committee then will listen to representatives of the industry and the public.

What is the partnership story here?

In the first place, the whole atomic-energy plant belongs to the people of the United States for the simple reason that they paid for it by their taxes, involving a certain amount of toil and sweat. Some \$14 billion of our money has gone into atomic energy to date. We are the owners—and the partners. The Government holds our investment in trust for us.

What do we see happening now? The Government—which means us—is farming out part of our holdings to private industry to develop power reactors to produce electricity. The terms are favorable to a few industrial giants which worked with the Government during the war and since to produce atomic bombs and do research in peacetime uses under contracts with the Government for payment for their services. They are on the inside and on the ground floor.

They have the know-how.

We are already subsidizing one company and will subsidize others with our tax dollars. They are the favored and, unless we watch out, they can monopolize the field to the exclusion of others. This is because of specifications in the law that will make it difficult for others, private industries as well as public power agencies such as municipalities and rural electric cooperatives, to get fuel and get into development of power. These specifications must be corrected. For another defect in the law, there is nothing to force private power producers from atomic fuels to pass along in rate reductions the subsidies from us, the taxpayers.

Also, while the law contains a provision for compulsory licensing of patents for 5 years, this is not tightly enough drawn in the view of some experts to prevent the giant "insiders" from withholding patents from others entitled to them.

Unless Congress and all of us are alert, we are on the eve of permitting creation of the greatest monopoly the world ever saw, and with our own money.

If we allow it, we will deserve what we get.

Christmas Message of Pope Pius XII

EXTENSION OF REMARKS

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BOGGS. Mr. Speaker, on January 3 His Holiness Pope Pius XII delivered a delayed Christmas message to the world. It was one of the most thoughtful addresses in the long and distinguished career of this great spiritual leader. It was delayed because of his illness.

I ask that it be included in full. The message follows:

"Behold I will bring upon her, as it were, a river of peace." (Isaias 66: 12.) This promise, announced in the messianic prophecy of Isaias, was fulfilled, with mystic significance, by the incarnate word of God in the New Jerusalem, the church: and we desire, beloved sons and daughters of the Catholic world, that this same promise should resound again over the entire human family as the wish of our heart this Christmas Eve.

A river of peace upon the world: this is the desire which we have most constantly cherished in our heart, for which we have most fervently prayed and worked, ever since the day when God in His goodness was pleased to entrust to our humble person the exalted and awe-inspiring office of common father of all peoples which is proper to the vicar of Him to whom all races are given for His inheritance. (Psalms 2: 8.)

Casting a glance backward over the years of our pontificate with regard to that part of our mandate which derives from the universal fatherhood conferred upon us, we feel that it was the intention of divine providence to assign to us the particular mission of helping, by means of patient and almost exhausting toll, to lead mankind back to the

paths of peace.

At the approach of the feast of Christmas each year, we would have ardently wished to be able to go to the cradle of the Prince of Peace and offer Him, as the gift He would cherish most, a mankind at peace and all united together as in one family. On the contrary we had to experience—during the first 6 years—the indescribable bitterness of seeing nothing all around us but peoples in arms, carried away by the mad fury of mutual destruction.

We had hoped—and many others had hoped with us—that once the rage of hatred and revenge had finally ceased, there would very soon have dawned a period of secure peace. Instead, there continued that agonizing state of uneasines and danger, which public opinion described with the name "cold war" because in reality it had little or nothing in common with true peace and had much of the character of a truce that trembled at the slightest touch. Our annual return to the cradle of the Redeemer continued to be a sad oblation of sorrows and anxieties, with an intense desire to draw therefrom the courage that was necessary in order to persist in exhorting men to peace and pointing out to them the right road to attain it.

Can we, at least now in this 16th year of our pontificate, fulfill that wish? According to many reports, the cold war has slowly been replaced by a period of decreased tension between the opposing parties, as if they were giving each other a longer breathing space: and not without some irony, this decreased tension has been given the name "cold peace." While we willingly recognize that this does represent some progress in the laborious ripening of peace properly socalled, nevertheless it is not yet a gift worthy of the mystery of Bethlehem, where there appeared "the goodness and kindness of God our Saviour" toward men (Tit. 3: 4). For it is in too vivid contrast with the spirit of cordiality, of sincerity, and of brightness that hovers around the cradie of the Redeemer.

In fact, in the political world, what is meant by cold peace if not the mere coexistence of various peoples based on fear of each other and on mutual disillusionment?

Now it is clear that simple coexistence does not deserve the name of peace, to which Christian tradition, formed in the school of the lofty intellects of Augustine and Thomas Aquinas, has come to apply the definition "the tranquillity of order." Cold peace is only a provisional calm, whose duration is

conditional upon the changeable sensation of fear and upon the varying calculation of present strength: while it has about it nothing of true order, which presupposes a series of relationships converging toward a common purpose that is right and just. Besides, by excluding all bonds of a spiritual nature between peoples so fragmentarily coexisting, cold peace falls far short of which was preached and desired by the Divine Master: for His peace is founded on a union of souls in the same truth and in charity. It is defined by St. Paul as the "peace of God" which binds in the first place men's minds and hearts (cf. Philippians 4: 7), and it is put into practice by acts of harmonious collaboration in every field of life, not excluding the political, social, and economic

Such is the reason why we do not dare to offer cold peace to the Divine Infant. It is not the simple and solemn pax (peace) which the angels sang to the shepherds on that holy night. Much less is it the pax del (peace of God) which surpasses all understanding and is a source of interior and complete joy (cf. ibid.). It is not even that peace which mankind today dreams of and longs for after so much affliction. However, we wish to examine in detail its shortcomings, in order that from its hollow void and its uncertain duration there may be born in the rulers of nations and in those who can exercise any influence in this field, the imperative desire to transform it as soon as possible into true peace, which is, in reality, Christ Himself. For, since peace is order and order is unity, Christ alone is able and willing to unite men's minds in truth and love. It is in this sense that the church points Him out to all peoples in the words of the prophet, as being Himself peace: "Et erit iste pax" (and this man shall be our peace). (Micheas, 5: 5; cf. Liturgical Office for Feast of Christ the King, passim.)

COEXISTENCE IN FEAR

It is a common impression, derived from the simple observation of facts, that the principal foundation on which the present state of relative calm rests, is fear. Each of the groups, into which the human family is divided tolerates the existence of the other. because it does not wish itself to perish. By thus avoiding a fatal risk, the two groups do not live together, they coexist. It is not a state of war, but neither is it peace: It is a cold calm. Each of the two groups smarts under the fear of the other's military and economic power. In both of them there is a grave apprehension of the catastrophic effect of the latest weapons.

Each follows with anxious attention the technical development of the other's armaments and the productive capacity of its economy, while it entrusts to its own propaganda the task of turning the other's fear to its advantage by strengthening and extending its meaning. It seems that in the field of concrete politics reliance is no longer placed on other rational or moral principles, for these, after so many delusions, have been swept away by an extreme collapse into skepticism.

The most obvious absurdity of the situation resultant from such a wretched state of affairs is this: current political practice, while dreading war as the greatest of catastrophies, at the same time puts all its trust in war, as if it were the only expedient for subsistence and the only means of regulating international relations. This is, in a certain sense, placing trust in that which is loathed above all other things.

On the other hand, the above-mentioned political practice has led many, even of those responsible for government, to revise the entire problem of peace and war, and has induced them to ask themselves sincerely if deliverance from war and the ensuring of peace ought not to be sought on higher and

more humane levels than on that dominated exclusively by terror. Thus it is that there has been an increase in the numbers of those who rebel against the idea of having to be satisfied with mere coexistence, of renouncing relationships of a more vital nature with the other group, and against being forced to live all the days of their lives in an atmosphere of enervating fear. Hence they have come back to consider the problem of peace and war as a fact involving a higher and Christian responsibility before God and the moral law.

Undoubtedly in this changed manner of approach to the problem there is an element of fear as a restraint against war and a stimulus to peace; but here the fear is that salutary fear of God—Guarantor and Vindicator of the moral law—and, therefore, as the psalmist teaches (Psalms 110: 10), it is the beginning of wisdom.

Once the problem is elevated to this higher plane, which alone is worthy of rational creatures, there again clearly appears the absurdity of that doctrine which held sway in the political schools of the last few decades: namely, that war is one of many admissible forms of political action, the necessary, and as it were the natural, outcome of irreconcilable disputes between two countries; and that war, therefore, is a fact bearing no relation to any kind of moral responsibility. It is likewise apparent how absurd and inadmissible is the principle-also so long accepted-according to which a ruler, who declares war, would only be guilty of having made a political error, should the war be lost. But he could in no case be accused of moral guilt and of crime for not having, when he was able to, preserved peace.

It was precisely this absurd and immoral concept of war which rendered vain, in the fatal weeks of 1939, our efforts to uphold in both parties the will to continue negotiations. War was then thought of as a die, to be cast with greater or less caution and skill, and not as a moral fact involving obligations in conscience and higher responsibilities. It required tombs and ruins without number to reveal the true nature of war: namely, that it was not a luckier or less lucky gamble between conflicting interests but a tragedy, spiritual more than material, for millions of men; that it was not a risking of some possessions, but a loss of all: a fact of enormous gravity.

How is it possible-many at that time asked with the simplicity and truth of commonsense-that, while every individual feels within himself an urgent sense of moral responsibility for his own most ordinary acts. the dreadful fact of war, which is also the fruit of the free act of somebody's will, can evade the dominion of conscience, and that there be no judge to whom its innocent victims may have recourse? In the atmosphere of that time, when people were beginning to return to commonsense, widespread approval was given our cry, "war against war," with which, in 1944, we declared our opposition to the pure formalism of political action and to doctrines of war which take no account of God or of His commandments. That salutary return to commonsense, instead of being weakened, became more profound and more widespread in the years of the cold war, perhaps because prolonged experience made more clearly evident the absurdity of a life lived under the incubus of fear. Thus the cold under the incubus of fear. peace, with all its incoherences and uneasiness, shows signs of taking the first steps towards an authentic moral order and towards a recognition of the elevated doctrine of the church regarding just and unjust war, and the licitness and illicitness of recourse to arms.

This goal will assuredy be attained if, on one side and the other, men will once again sincerely, almost religiously, come to consider war as an object of the moral order, whose violation constitutes in fact a culpability which will not go unpunished. In the concrete this goal will be attained if statesmen, before weighing the advantages and risks of their decisions, will recognize that they are personally subject to eternal moral laws, and will treat the problem of war as a question of conscience before God.

In the conditions of our times, there is no other way to liberate the world from its agonizing incubus except by a return to the fear of God, which in no way debases the man who willingly submits to it; rather, it saves him from the infamy of that awful crime—unnecessary war. And who can express astonishment if peace and war thus prove to be closely connected with religious truth? Everything that is, is of God: the root of all evil consists precisely in separating things from their beginning and their end.

Hence also it becomes clear that pacifist efforts or propaganda originating from those who deny all belief in God—if indeed not undertaken as an artful expedient to obtain the tactical effect of creating excitement and confusion—is always very dubious and incapable of lessening or of eliminating the anguished sense of fear.

The present coexistence in fear has thus only two possible prospects before it: either it will raise itself to a coexistence in fear of God, and thence to a truly peaceful living-together, inspired and protected by the Divine moral order: or else it will shrivel more and more into a frozen paralysis of international life, the grave dangers of which are even now foreseeable.

In fact, prolonged restraint of the natural expansion of the life of peoples can ultimately lead them to that same desperate outlet that it is desired to avoid: war. No people, furthermore, could support indefinitely a race of armaments without disastrous repercussions being felt in its normal economic development. The very agreements directed to imposing a limitation on armaments would be in vain. Without the moral foundation of fear of God, they would become, if ever reached, a source of renewed mutual distrust.

There remains, therefore, the auspicious and lightsome other way which, based upon the fear of God and aided by Him, leads to true peace, which is sincerity, warmth, and life, and is thus worthy of Him Who has been given to us that men might have life in Him and have it more abundantly (cfc. John 10: 10).

COEXISTENCE IN ERROR

Although the cold war—and the same is true of the cold peace—keeps the world in a harmful state of division, yet it does not, up to the present, prevent an intense rhythm of life from pulsing therein. It is true that this is a life developing almost exclusively in the economic field. It is, however, undeniable that economics, taking advantage of the pressing progress of modern techniques, has by feverish activity attained surprising results, of such a nature as to foreshadow a profound transformation in the lives of all peoples, even those heretofore considered rather backward. Admiration unquestionably cannot be withheld for what it has done and what it promises to do.

Nevertheless, economics, with its apparently unlimited ability to produce goods without number, and with the multiplicity of its relationships, exercises over many of our contemporaries a fascination superior to its potentiality, and extends to fields extraneous to economics. The error of placing such trust in modern economics is again shared in common by the two camps into which the world is today divided. In one of these, it is taught that, since man has given proof of such great power as to create the marvelous technico-economical composite of which he boasts today, he will also be able to organize the liberation of human life from all the privations and evils from

which it suffers, and in this way effect a kind of self-redemption. On other hand, the conception gains ground in the opposing camp that the solution of the problem of peace must be sought in economics, and particularly in a specific form thereof, that of free exchange.

We have already had occasion at other times to expose the baselessness of such teachings. About a hundred years ago followers of the free-commerce system expected wonderful things from it, attributing to it One of its most an almost magical power. ardent converts did not hesitate to compare the principle of free exchange, insofar as its effects in the moral world are concerned, with the principle of gravity which rules the physical world, and he attributed to it, as its proper effect, the drawing of men closer together, the elimination of antagonism based on race, faith, or language, and the unity of all human beings in unalterable peace (cfr. Richard Cobden, Speeches on Questions of Public Policy, London, Macmillan and Co., 1870: vol. 1, pp. 362-366).

The course of events has shown how deceitful is the illusion of entrusting peace to free exchange alone. Nor would the result be otherwise in the future if there were to persist that blind faith which confers on economics an imaginary mystic force. present, moreover, there are lacking those foundations of fact which could in any way warrant the over-rosy hopes nourished today, as in the past, by followers of this teaching. As a matter of fact, while in one, of camps which coexist in cold peace, this highly vaunted economic freedom does not in reality yet exist, it is, in the other, completely rejected as an absurd principle. There is, between the two, a diametrical opposition in their ways of conceiving the very fundamentals of life-an opposition which cannot be reconciled by purely economic forces. Nay more, if there are—as there actually -relations of cause and effect between arethe moral world and the economic world, they must be so ordered that primacy be assigned to the former; that is, the moral world which must authoritatively permeate with its spirit the social economy. Once this scale of values has been established and its actual exercise permitted, economics will, insofar as it is able, consolidate the moral world and confirm the spiritual postulates and forces of peace.

On the other hand, the economic factor might place serious obstacles in the way of peace—particularly of a cold peace, in the sense of an equilibrium between groups—if, employing erroneous systems, it were to weaken one of the groups. This could occur if, among other eventualities, individual people of one group were to engage, without consideration or regard for others, in a cease-less increase of production, and a constant raising of their own living standard. In such a case, an upsurge of resentment and rivalry on the part of neighboring peoples would be inevitable, and consequently also the weakening of the entire group.

Prescinding from this particular consideration, however, one must be convinced that economic relationships between nations will be factors of peace insofar as they will obey the norms of natural law, will be inspired by love, will have due regard for other peoples and will be sources of help. Let it be held for certain that in relations between men, even merely economic relations, nothing is produced spontaneously-as does occur in nature which is subject to necessary laws but everything depends substantially on the spirit. Only the spirit, the image of God and the executor of His designs, can establish order and harmony on earth, and it will succeed in doing so to the same extent that it becomes the faithful interpreter and docile instrument of the only Saviour Jesus Christ, who is himself peace.

Moreover, in another matter even more delicate than that of economics, error is shared by the two camps coexisting in the cold peace: an error, namely, regarding the principles which animate their respective unity. One of the camps bases its strong internal cohesion on a false idea, an idea, moreover, violating primary human and divine rights, yet at the same time efficacious; while the other, forgetful that it already possesses an idea that is true and has been successfully tested in the past, seems instead to be tending toward political principles which are evidently destructive of unity.

During this last decade since the war, great yearning for spiritual renovation urged to unite Europe strongly, the impetus coming from the natural living conditions of her peoples, with the purpose of putting an end to the traditional rivalries between one and another, and of assuring a united protection for their independence and their peaceful development. This noble idea did not present motives for complaints or diffidence to the world outside of Europe, in the measure that this outside world was favorably disposed to Europe. It was also believed that Europe would have easily found within herself the animating idea for her unity. But the succeeding events and recent accords which, as is believed, have opened the way to a cold peace, no longer have for a basis the ideal of a more extensive European unification. Many, in fact, believe that the governing policy is for a return to a kind of nationalistic state, closed within centralizing therein its forces, unsettled in its choice of alliances and, consequently, no less perilous than that which had its time of highest development during the last century.

Too soon have been forgotten the enormous mass of lives sacrificed and of goods extorted by this type of state, and the crushing economic and spiritual burdens imposed by it. But the real error conststs in confusing national life in its proper sense with nationalistic politics: the first, the right and prized possession of a people, may and should be promoted; the second, as a germ infinitely harmful, will never be sufficiently repelled. National life is, in itself, that operative composite of all the values of civilization, which are proper and characteristic of a particular group, for whose spiritual unity they constitute, as it were, its bond. At the same time, it enriches, as its own contribution, the culture of all humanity.

In essence, therefore, national life is something not political; and this is confirmed by the fact that, as history and practice demonstrate, it can develop alongside of others, within the same state, just as it can also extend itself beyond the political frontiers of the same state. National life became a principle of dissolution within the community of peoples only when it began to be exploited as a means for political purposes; when, that is to say, the controlling and centralizing state made of nationality the basis of its force of expansion. Behold then the nationalistic state, the seed of rivalries and the fomenter of discord.

It is clear that, if the European community were to move forward on this road, its cohesion would become, as a result, quite weakened in comparison with that of the opposing group. Its weakness would certainly be revealed on that day of future peace destined to regulate with foresight and justice the questions still in abeyance. should it be said that, in new circumstances. the dynamism of the nationalistic state no longer represents a danger for other peoples, being deprived, in the majority of cases, of effective economic and military power, for even when the dynamism of an imaginary nationalistic power is expressed in sentiment rather than exercised with actions, it is equally offensive to the mind; it feeds on dis-

trust and breeds suspicion within alliances, impedes reciprocal understanding and thereby loyal collaboration and mutual help, to the same extent as it would if it had at its command effective force.

command effective force.

What would become, then, in such circumstances, of the common bond which is supposed to bind individual states in unity? What kind of a grand and efficacious idea would that be which would render them strong in defense and effective in a common program for civilization?

Some would like to see it as agreement in the rejection of that way of life destructive of liberty, proper to the other group. Without a doubt, aversion to slavery is worthy of note, but it is of negative value, and does not possess the force to stimulate the human spirit to action with the same efficacy as does a positive and absolute idea.

Such an idea, instead, could be a love of the liberty willed by God and in accord with the needs of the common good, or else the ideal of natural law, as the foundation of an organization of the state and of states.

Only these, and like spiritual ideas, acquired now for many long centuries as part of the tradition of a Christian Europe, sustain comparison—and moreover emerge victorious in it, to the extent that these ideas are really lived—with the false idea, though concrete and effective, which apholds together in cohesion, not parently without the aid of violence, the other group, the idea, namely, of an earthly paradise to be attained as soon as a determined form of social organization would be realized. Though illusory, this idea has succeeded in creating, at least outwardly, a compact and hardy unity, and in being accepted by the uninformed masses; it knows how to inspire its members to action and voluntarily to make sacrifices. The same idea, within the political framework which expresses it, gives to its directors a strong capacity for seduction, and to the adept the audacity to penetrate as a vanguard even into the ranks of the other side.

Europe, on the other hand, still awaits the reawakening of her own consciousness. Meanwhile, in what she stands for—such as the wisdom and organization of associated living and as an influence of culture—she seems to be losing ground in not a few regions of the earth.

Verily, such a retreat concerns the promoters of nationalistic policy, who are forced to fall back before adversaries who have taken over the same methods and made them their own. Especially among some peoples until now considered colonial, the process of organic maturation toward an autonomous polity, which Europe should have guided with perception and care, was rapidly turned into nationalistic outbreaks, greedy for power. It must be confessed that even these unforeseen eruptions, damaging to the prestige and interests of Europe, are, at least in part, the fruit of her own bad example.

Does this mean only that Europe has momentarily lost her way? In any case, that which must remain, and without doubt will remain, is the genuine Europe, that is, that composite of all the spiritual and civil values which the West has accumulated, drawing from the riches of individual nations to dispense them to the whole world. Europe, conforming to the dispositions of Divine Providence, will again be able to be the nursery and dispenser of those values, if she will know how to resume wisely her proper spiritual character and to repudiate the divinization of power.

Just as in the past the wellsprings of her strength and of her culture were eminently Christian, so now too will she have to impose on herself a return to God and to Christian ideals, if she is to find again the basis and bond of her unity and true greatness. And if these wellsprings seem to be in part dried up, if this bond is threatened with rupture and

the foundation of her unity crumbling, the historical and present responsibility falls back upon each of the two groups who find themselves now facing each other in anguish and mutual fear.

The motives ought to be enough for men of good will, in one and the other camp, to desire, to pray, and to act, in order that humanity may be liberated from the intoxication of power and of preeminence, and in order that the Spirit of God may be the Sovereign Ruler of the world, where once Almighty God chose no other means for saving those whom He loved than that of becoming a weak babe in a poor manger. 'A child is born to us, and a son is given to us, and the government is upon his shoul-(Isaiah 9: 6; cf. Introit, Third Mass of Christmas Day.)

COEXISTENCE IN TRUTH

Although it is a sad thing to note that the present rupture of the human race took place, in the beginning, between men who knew and adored the same Savior, Jesus Christ, still there appears to us to be a wellfounded hope that, in His name, too, a bridge of peace may yet be built between opposing shores, and the common bond, so sadly broken, be reestablished.

There is, in fact, some hope that today's coexistence may bring mankind closer to peace. In order, however, that this expectation be justified, such coexistence must in some way be coexistence in truth. Now a bridge cannot be built in truth between two separate worlds unless it be founded on the human beings living in one and the other of these worlds, and not on their governmental or social systems. This is so because, while one of the two parties still strives in large measure, whether consciously or unconsciously, to preserve the natural law, the system prevailing in the other has completely abandoned this basis.

A one-sided supernaturalism might refuse entirely to take such an attitude into consideration, alleging the reason that we live in a redeemed world and are therefore withdrawn from the natural order; or some might say that the collectivist character of that system ought to be recognized as a historical truth, in the sense that it, too, corresponds to the will of God, but these are errors to which a Catholic can by no means submit. The right road is quite different.

In both camps, there are millions in whom the imprint of Christ is preserved in a more or less active degree: They, too, no less than faithful and fervent believers, should be called upon to collaborate toward a renewed basis of unity for the human race. It is true that, in one of the two camps, the voice of those who stand resolutely for truth, for love, and for the spirit, is forcibly suffocated by the public authorities, while in the other people suffer from excessive timidity in proclaiming aloud their worthy desires. It is, however, the duty of a policy of unification to encourage the former and to make heard the sentiments of the latter.

Particularly in that camp where it is not a crime to oppose error, statesmen should have greater confidence in themselves: They should give proof to others of a more firm courage in foiling the maneuvers of the obscure forces which are still trying to establish power hegemonies, and they should also show more active wisdom in preserving and swelling the ranks of men of good will, es-Pecially of believers in God, who, everywhere, adhere in great numbers to the cause of peace.

It would certainly be an erroneous unification policy, if not actually treachery, to sacrifice in favor of nationalistic interests the racial minorities who are without strength to defend their supreme posses sions; their faith and their Christian cul-ture. Whoever were to do this would not be worthy of confidence, nor would they be acting honorably if later, in cases where their own interests demanded it, they were to invoke religious values and respect for law.

There are many who volunteer to lay the bases of human unity. Since, however, these bases, this bridge, must be of a spiritual nature, those sceptics and cynics are certainly not qualified for the task who, in accordance with doctrines of a more or less disguised materialism, reduce even loftlest truths and the highest spiritual values to the level of physical reactions or consider them mere ideologies.

Nor are those apt for the task who do not recognize absolute truths nor admit moral obligations in the sphere of social life. latter have already in the past-often unknowingly, by their abuse of freedom and by their destructive and unreasonable criticism-prepared an atmosphere favorable to dictatorship and oppression; and now they push forward again to obstruct the work of social and political pacification initiated under Christian inspiration.

In some places it happens not rarely that they raise their voices against those who, conscientiously, as Christians, take a rightful active interest in political problems and in

public life in general.

Now and then likewise, they disparage the assuredness and strength Christians draw from the possession of absolute truth, and on the contrary, they spread abroad the conviction that it is to modern man's honor, and redounds to the credit of his education, that he should have no determined ideas or tendencies, nor be bound to any spiritual world. Meanwhile, they forget that it was precisely from these principles that the pres-ent confusion and disorder originated, nor will they remember that it was those very Christian forces they now oppose that succeeded in restoring, in many countries, the freedom which they themselves had dissipated.

Certainly it is not upon such men that the common spiritual foundation can be laid and the bridge of truth built. Indeed, it may well be expected that, as occasion demands, they will not find it at all unseemly to be partial to the false system of the other shore, adapting themselves even to be overcome by it in case it were momentarily to triumph.

In awaiting, therefore, with confidence in the divine mercy, that spiritual and Christian bridge, already in some way existing between the two shores, to take on a greater and more effective consistency, we would exhort primarily the Christians of the nations where the divine gift of peace is still enjoyed to do everything possible to hasten the hour of its universal reestablishment.

Let these convince themselves, above all, that the possession of truth, if it were to remain closed within themselves, almost as if it were an object of their contemplation for deriving therefrom spiritual pleasure, would not be of service to the cause of peace; the truth must be lived, communicated, and applied to all phases of life. Also truth, and particularly Christian truth, is a talent that God placed in the hands of His servants in order that, with all that they undertake, it may bear fruit in works for the common good.

To all possessors of this truth, we would wish to propose a question, before the Eternal Judge asks it, whether they have used this talent fruitfully, in any way to be worthy of the invitation of the Master to enter into the joy of His peace. How many, perhaps even priests and lay Catholics, ought to feel remorse for having instead buried in their own hearts this and other spiritual riches, because of their own indolence and insensibility to human misery.

In particular, they would become cul-

pable if they should tolerate that the people be left as though shepherdless, while the enemy of God, taking advantage of his powerful organization, is producing destruction in the souls not solidly enough formed in the truth. Equally responsible would the priest and laity be, if the people were not to receive and find from Christian charity in practice that active help which the divine will prescribes. Nor would those priests and laity fulfill their obligations, were they voluntarily to close their eyes and keep silence concerning the social injustices of which they are witnesses, thus furnishing an occasion for unjust attacks against pacity of the social action of Christianity and against the efficacy of the social doctrine of the church, which, with the help of divine grace, has given so many and such unquestionable public demonstrations in this regard and also in these recent decades.

In case the failure to which we have referred were to occur, it would likewise be those priests and laity who would bear the responsibility that groups of the young, and even pastors of souls, let themselves, in some cases, be won over to radicalism and erroneous progressivism.

The conduct of Christians—be they of high or humble state, or be they more or less prosperous-who would not be resolute in the recognition and observance of their own social obligations in the management of their economic affairs, would cause more grave consequences to the social order, and also to the political order. Whosoever is not ready to limit justly in relation to the common weal the use of his private goods, be it done freely according to the dictates of his own conscience, or even done by means of organized provisions of a public character, he is helping, insofar as it depends on him, to impede the indispensable primacy of personal impulse and responsibility in social life.

In democratic systems one can fall easily into such an error, when individual interest is placed under the protection of these collective organizations or of a party, where one seeks protection for the sum total of individual interests, rather than the promotion of the good of all; under such a guise the economy becomes easily subject to the power of anonymous forces which dominate it politically.

Beloved children, we are thankful to the divine goodness for having given us yet another opportunity to indicate to you, with paternal solicitude, the path of goodness. May the earth, abundantly watered by the giver of true peace, be able to proclaim glory to God in the highest. "Let us go up to Bethlehem." (Luke 2: 15.) Let us go back there close to the crib of sincerity, of truth, and of love, where the only begotten Son of God gives Himself man to men, in order that humanity may know again in Him its bond and its peace. "Today true peace comes down to us from heaven." (Office of Christmas, response, second lesson.) In order that the earth be worthy to receive it, we invoke upon all abounding divine blessings.

Reappraisal in Formosa Strait

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, in this morning's Washington Post and Times Herald the column by Mr. Walter Lippmann presented some information regarding Formosa and its neighboring islands which I believe to be basic and germane to any discussion of the crisis in that area. I think it is appropriate to call the attention of the Congress to Mr. Lippmann's excellent column.

TODAY AND TOMORROW (By Walter Lippmann) REAPPRAISAL IN FORMOSA STRAIT

In their press conferences on Tuesday and Wednesday of last week Mr. Dulles first and then the President made known the decision not to defend the Tachens and the other offshore islands which are held by Chiang's Nationalist forces. This marked the turning

of a page.

Until then our military commitments in this area had as a matter of policy been left undefined and uncertain. Our policy was to keep everybody guessing. Thus under the proposed security pact with the Nationalist Government our military commitments are quite specifically limited (art. VI) to "Taiwan (the Chinese name for Formosa) and the Pescadores." The treaty promises nothing beyond that, nothing, that is to say, about the offshore islands. But notes exchanged by Mr. Dulles and Mr. Yeh, the Nationalist Foreign Minister, which go with the proposed pact, do say that the United States could by joint agreement act in the other territory—which means the Tachens and the offshore islands. We were not bound to act there. But we had left ourselves the option of acting if we chose.

Some time ago the Peiping government began to test our intentions in this unclarified situation. They took to shelling and bombing offshore islands, and finally by an amphibious operation they conquered one of them last week. It was at this point that the administration abandoned its policy of deliberate uncertainty, and made known the decision not to intervene in the defense

of the offshore islands.

This might be described as a sound decision taken under embarrassing conditions that should have been foreseen and avoided. The policy until last week was a bluff that was called, and we have retreated in the face of Red Chinese military action. Since for good reasons we had never meant to fight for the effshore islands, it was a serious error to give the impression that we might fight for them.

Moreover, the President gave a very poor reason for our decision to draw a line between the Formosa-Pescadores territory which we will defend and the offshore islands which we will not defend. He said that the Tachens and the small islands are not "a vital element, as we see it, in the defense of Formosa and the Pescadores." This takes it for granted that we have a unilateral right to intervene in foreign territory for strategic reasons—that the controlling principle of our policy is not law but strategy. This, to give it its true name, is militarism.

We do not need to resort to militarism to protect our interests in this area. There is a radical difference in law between the two sets of islands. Throughout the 20th century Formosa and the Pescadores belonged not to China but to Japan. They were captured from Japan by the United States, not by China. Under the Japanese surrender terms of 1945, which were formally ratified by the 1952 Treaty of Peace (ch. II, art. 2b), "Japan renounces all right, title, and claim to Formosa and the Pescadores." But now let us note this. Though Japan has renounced the title, no one else has acquired it.

In the President's message of January 10, 1952, submitting the Japanese Peace Treaty to the Senate, he put into the Recorn the official statement of Mr. Dulles to the San Francisco Conference. In that statement Mr. Dulles said that "some Allied Powers suggested that article 2 should not merely deplimit Japanese sovereignty according to Potsdam, but specify precisely the ultimate disposition of each of the ex-Japanese terri-

tories. This, admittedly, would have been neater. But it would have raised questions as to which there are now no agreed answers. * * * Clearly, the wise course was to proceed now, so far as Japan is concerned, leaving the future to resolve doubts by invoking international solvents other than this treaty."

None of this applies to the offshore islands. They have always been Chinese. We have a right to be present in Formosa and the Pescadores under the terms of the Japanese surrender, and of the Japanese Peace Treaty. We have a right to see that their ultimate disposition is not settled by force but in accord with the interests of the people of Formosa and of the interests of the powers concerned in the Pacific. Our presence for these purposes is not intervention in the Chinese civil war. It is not intervention because Formosa and the Pescadores are not really Chinese territory.

But were we to intervene in the offshore

But were we to intervene in the offshore islands, we would be acting on Chinese territory in a Chinese civil war. For these reasons our actual decision not to intervene in the offshore islands would not only look better but would in fact be better if it were based not on the strategical opinions of the White House and the Pentagon but on the law and the right about Formosa and the

Pescadores.

Our right to defend Formosa rests on the fact that it is territory ceded by Japan about which the ultimate disposition has not been settled by any treaty. Even though both Chinese governments claim Formosa as Chinese, even though we promised in 1953 at Cairo to restore it to the Republic of China, Formosa is not now, it is not yet, Chinese territory. Because of that, our presence in Formosa is not intervention in the Chinese civil war.

On these grounds we have obligations and rights in the disposition of Formosa, regardless of whether we think Chiang or Mao is the head of the legitimate government of China. Our position in Formosa does not depend upon Chiang. For Chiang has never acquired a legitimate title to Formosa. Our position is the consequence of an international war, and on that ground we can make a case before the opinion of mankind to invoke their collaboration in reaching an international solution.

Wiretapping

EXTENSION OF REMARKS

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission to extend my remarks in the Record, I am pleased to include an editorial from the Wall Street Journal, January 19, 1955, entitled "Wrong Number."

This editorial deals with wiretapping, and it is an editorial that I can recommend for everyone to read because it touches on a very delicate subject and one which caused, in the last session of Congress, a great deal of controversy:

WRONG NUMBER

A State supreme court justice in New York refused a few days ago to authorize the use of wiretapping to catch three bookmakers. The reasons given by Justice Hofstadter for his refusal went straight to the heart of an issue the Congress doubtless will debate again this year.

New York State law authorizes wiretapping in some circumstances, but Justice Hofstadter denied the police because, he said, whatever the results they would not warrant the invasion of privacy that would have followed his issuance of the order. In a word, the medicine was worse than the illness.

To place a wiretap on a telephone is not only, as Justice Hofstadter reasons, an undue invasion of that person's privacy; it is also an invasion of the privacy of every other person who uses that telephone from either end. It is, in fact, much more than that; article IV of the United States Constitution protects "the right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures." The Constitution further restricts issuance of search warrants to "probable cause, supported by oath or affirmation," and the warrant must describe particularly the place to be searched and the person or thing to be seized.

But would not a Federal law authorizing wiretapping reverse that process? Would it not allow an unreasonable search—and a secret one—to cast about for a probable cause?

Now no reasonable man would compare the catching of gamblers to the treasonable Communist conspiracy. The Red intrigue is certainly to be feared and fought; but it must be fought with weapons that do not injure our Nation as one of free men. The heart of the issue here is the same in either case; the medicine of wiretap is equally bad, for it is the prescription of the police state.

is the prescription of the police state.

Indeed, the convictions in the courts of many of the Communist leaders show that police-state methods are not needed. There are statutes on the books under which they can be, and have been, successfully prosecuted. And if need be, the Congress can provide for the calling up of the militia should the conspiracy reach insurrection.

No one has suggested that course.

Meanwhile, we see no need for chipping away at the rights and privileges of people who are not Communists in order to catch Communists. Perhaps the latter can be more easily trapped through wiretapping; certainly it will make the job of our police easier, or the Department of Justice would not have sidered endorsing last year the proposal Representative Keating has again introduced. The job of the police would be made easier also if they could go about arresting anyone they chose and if they could break down any door and if they could bloid in prison a suspect as long as they wished. But restraints were placed on Government and on police so that these things could not happen.

So it should be with wiretapping. Let it be accepted in one field of law enforcement and it will be soon accepted in all. Intimate conversations will be recorded by unseen ears, and the unseen nand of fear and suspicion may rest on every phone call; perhaps

on a wrong number.

Strike Averted Following Intervention of Governor Ribicosf

EXTENSION OF REMARKS

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. DODD. Mr. Speaker, today I am calling to the attention of the member-ship a significant occurrence in the State of Connecticut last week.

A statewide strike of some 2,200 employees of the Connecticut Co., the Connecticut Light & Power Co., which would have paralyzed a large portion of the transportation system of Connecticut, was called off after Gov. Abraham Ribicoff intervened and succeeded in bringing both sides together.

Many of my colleagues will remember Governor Ribicoff as my distinguished predecessor, the Representative from the First Congressional District of Con-

necticut.

Governor Ribicoff believes that the Welfare and prosperity of this country to a very large extent depends upon a harmonious and cooperative effort between employees and employer. Several times in the course of his public career he has publicly voiced this philosophy.

In the bus strike he applied this philosophy with great effectiveness. As a result of his efforts, this strike which Would have been disastrous in many respects, was completely avoided.

For his successful efforts, the bus drivers' union and officials of the Connecticut Co. have both expressed their thanks to the Governor. The people of Con-necticut join in this expression of gratitude.

I have taken this time to bring this matter to the attention of the House, not only to pay tribute to a great Governor Who was a former Member of this body, but as well to point out that this is the kind of leadership in Government which Will produce a more stable society in the United States of America.

Increase in Cotton Acreage Urged

EXTENSION OF REMARKS

HON. ARMISTEAD I. SELDEN, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. SELDEN. Mr. Speaker, recently I introduced a measure—H. R. 2438-Which, if enacted into law, will increase the national acreage allotment for the

1955 crop of cotton to 19,500,000 acres. The Secretary of Agriculture, under existing legislation, has set the 1955 allotment at 18,113,208 acres which com-Dares with the 1953 acreage of 25,151,400 and a 1954 acreage allotment of 21,379,-358.

I have introduced this legislation, and urge its early passage, because many of the cotton farmers of my district and State are already in very bad financial circumstances due to last year's crop failure caused by a disastrous drought.

The cotton farmers of America have demonstrated time and time again their Willingness to cooperate in a nationwide program which enables them to keep production in line with reasonable consumer demands. They know, as I do, that if we are to have a price-support program, we must also have acreage quotas. Yet, I believe that under certain conditions it may be unwise to reduce surpluses in certain years as drastically as they have been in others. I believe that 1955 is a year, certainly in the district I represent, in which our national acreage allotment should not be reduced by as much as 3 million acres.

Our national acreage allotment in 1954 was almost 4 million acres less than the 1953 acreage. In addition, my section of the country as well as other areas suffered the most disastrous drought that can be remembered. Another cut in cotton acreage for 1955 amounting to more than 3 million acres can only mean bankruptcy for some of the cotton farmers in my State and district. I am certain it would be better at this time to spread out our acreage reduction over a longer period of time rather than throw thousands of cotton farmers out of work by another drastic acreage cut this year.

I therefore urge the members of the Agricultural Committee and the Congress to give careful and early consideration to my bill and to other measures that propose an increase in the cottonacreage allotment for 1955.

To delay consideration of such legislation could mean that any increase the Congress adopts might be too late for the planting season.

Money Sent Abroad

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press, St. Mary's, Pa., of December 29, 1954:

MONEY SENT ABROAD

You as an American taxpayer should be interested in what your Government spends abroad as every last cent is taken from your pay envelope whether you are paid by the hour or draw a monthly salary.

Paul Martin, chief, Gannett Papers, Washington bureau, who has made an intensive study of the subject, quotes the late Senator Arthur H. Vandenberg, of Michigan, as saying "the foreign policy of America in the past 14 years," and he was referring to the era before Eisenhower took over, "as the most gigantic speculation since time began."

During this time, and we refer again to Mr. Martin, the American people have made available United State Government grants or loans totaling at least \$117 billion to relieve human distress, improve civilian economies and build up defense establishment of foreign countries.

This, adds Mr. Martin, includes \$50 billion worth of lend-lease equipment during World War II and \$67 billion in economic, technical, and military assistance since the

United States foreign aid funds have been spent in 63 nations and 67 dependent territories around the world. They have cost American taxpayers an average of more than \$2,000 per person—and what you could do with that \$2,000 makes your eyes bulge in anticipation.

Most of this money, according to Mr. Mar-tin, has gone to Western Europe, Of this sum the British empire has received approximately \$50 billion. France and her possessions received \$17 billion in round figures, and yet when it comes time for France to line up with the Allied world in defense against communism, the free world has generally been the loser.

Not all foreign aid investment has gone to friendly countries. It has been estimated, says Mr. Martin, at least \$15 billion worth of United States civilian, economic, and military supplies has gone behind the Iron Cur-

This includes \$11 billion in lend-lease assistance given Russia of which she has not

paid one penny in return.

The \$117 billion this country has poured out in the last several years would have built new schoolhouses in every town of over 5,000 in the United States, would have provided new hospitals in every town of similar size, and would, in addition, provide adequate housing for every serviceman and his family.

Therefore it becomes questionable what America has gained by her display of lavish spending. There is little doubt but what European economy has been benefited to no end, and reports from there say 1954 has been a good year for business all around, gratifying this side of the Atlantic, but the more sober query is how does it assist in an alliance against communism.

When you take a country like France that has received \$17 billion in American help and find her reluctant to line up with United States in military alliance one begins to think much of that \$17 billion gift has been wasted, and would have been far better spent helping American GI's get on their feet.

It has become customary in some parts of the world to look upon Uncle Sam as a man with a bottomless purse. Hardly any for-eign nations sends a diplomat to Washington who does not have his hand out for financial aid.

And the men and women you have elected to represent you in Washington have made it possible for them to dip deeper and deeper into the United States Treasury.

It has become a fixed habit among Ameri-can newspaper readers to ask "How much did he get?" when they read of this or that European dignitary heading for home after visiting the National Capital.

The trend toward this giveaway is being changed at the present time and this may be even more pronounced in the coming congressional session as added Members of Congress become aware that the gold this country possesses could reach the end of the trail. plus the futher realization folks back home who have to foot this tremendous bill are fed up.

At a time when many have to beg, borrow. or come close to stealing enough to pay their personal income taxes, it grates their nerves to see this country so generous with other countries with money that comes from their earnings.

Outside the financial help given United States by France in crucial days of the Revolutionary War not one single country abroad has ever given this country as much as a thin dime.

This all-paying-out, nothing-coming-in, philosophy should soon terminate.

Who Condones or Excuses Immorality?

EXTENSION OF REMARKS OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from the Machinist:

WHO CONDONES OR EXCUSES IMMORALITY?

The extent of the fraud being perpetrated on State legislatures under the guise of "right-to-work" is beginning to dawn on the American people.

These laws, already adopted in 17 States and about to be considered in other State legislatures, are based on a lie and a deception.

These misnamed "right-to-work" laws and bills have one single purpose—to weaken labor organizations, to handleap labor at the bargaining table. They guarantee no man's right to work. Nor do they protect anyone from discrimination on the job because of age, race, color or because he belongs to a union.

A LIE AND A DECEPTION

Instead, these laws are intended to encourage men and women to work without union protection, without seniority, without any guaranty that wages won't be cut.

Any movement that is based on a lie, on deception, as is this right-to-work movement, can best be weighed and evaluated by those qualified to judge morality and de-cency, respected men of experience and cency, respected men of experience and good will, men grounded in the morality of

That is the reason the International Assoclation of Machinists has invited three recognized religious leaders to appraise the morality of the so-called right-to-work movement and the laws and bills it pro-

On pages 4 and 5 of this issue the Ma-chinist presents Rabbi Goldstein's assess-ment of right-to-work laws and his conclu-When he was invited to prepare this article for the Machinist, he was told that no policy or opinion of this organization would interfere with publication of anything he chose to say.

Rabbi Goldstein's article is the second in this series. The first, by Rev. William J. Kelley, an oblate father at Catholic Univer-Washington, D. C., appeared in the Machinist for November 18.

Like Father Kelley, Rabbi Goldstein has written what is in his mind and in his heart, without fear of criticism either from union members or the chamber of com-

We believe that, like Father Kelley, Rabbi Goldstein's analysis is damning. Both Father Kelley and Rabbi Goldstein have condemned these right-to-work laws as immoral. No man of God uses that term lightly. with means wicked, vicious, inconsistent vigood morals, and contrary to moral law.

A RIGHTEOUS CAUSE

With this teaching before us, there can be no doubt of the righteousness of our cause in asking for repeal of these anti-union-security laws in the 17 States where they now exist and in urging legislators in other States to relegate them to the wastebaskets where they belong.

In the weeks ahead we will publish the third article in this series. Together, we believe the three articles will provide not just labor but all decent Americans with a sound basis for moral judgment on these so-called right-to-work laws.

Modesto, Calif.: All-American City

EXTENSION OF REMARKS

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. JOHNSON of California. Mr. Speaker, in Look magazine on February

8, 1955, will appear an article in which the magazine and the National Municipal League, assisted by a group of distinguished civic leaders, selected 11 cities as all-American cities.

In this group is the city of Modesto, Calif. It is the county seat of Stanislaus and the second largest city within the 11th Congressional District of California, which I have the honor to represent in the House of Representatives.

I congratulate the mayor, Harry Marks, the city manager, and the City Council of Modesto, and Lawrence Robinson, Jr., chairman of the citizen's committee, on receiving this honor. But I must confess that I was not surprised. Many years ago when I was a municipal official in California, and a director in the League of California Cities, I organized the Central Valley division of the league. This included Modesto and from that time on I have had knowledge of the city government of Modesto. It has always been a well-governed city. Over Highway 99, the major through highway in the city, is a huge sign with this inscription: "Water, wealth, contentment, health."

Modesto is in the center of one of the richest agricultural areas in the United States. In Stanislaus County are the two most fabulous irrigation districts in California. They are the Modesto Irrigation District and the Turlock Irrigation District. They are operated jointly. Last year they had paid off their bond issues. They furnish the water to the fertile land that raises the fruits, nuts, row crops, alfalfa, and so forth, which make the county so rich and its county seat, Modesto, so prosperous.

Modesto, like most California cities, was afflicted with "growingitis." So many from outside of California came into the area that contiguous to Modesto's boundaries was a population much larger than the city's population. So the people began to agitate and later they organized to provide money, through a bond issue, to make various improvements that would attract the outside area. It did. Then came annexation to the city of many of these areas. The schools were improved to the tune of \$4.3 millions by the sale of bonds approved by the voters for necessary expansion and improved teaching techniques. Incidentally, the superintendent, James H. Corsor, was an Olympic games star in Amsterdam in 1928. He was a world champion discus thrower for a short time, being outdistanced by another American 15 minutes after he had broken the world's record.

Good municipal government in California is partly due to the nonpartisan elections which California adopted over 40 years ago. Partisan party politics are out in our city elections. The elective officers of our cities are selected by the voters who vote for those they think best able to conduct the affairs of the city government.

Under leave to extend my remarks I am including a portion of the article from Look magazine about Modesto, Calif. It follows:

(By Jack Star)

Despite the traditional cynicism of politics, an American community—if it becomes

indignant enough and determined enoughcan stem graft, choke creeping blight, root out bumbling inefficiency, make streets safe for women and children.

As proof, the National Municipal League and Look again point to 11 communities where energetic, purposeful, and intelligent citizen action has accomplished such endsand more. The league, which for 60 years has provided tools and inspiration for better local government, and Look have named these communities the All-American Cities of 1954.

The winners include the second largest city in the land and one of the smallest hamlets. None is necessarily a model town, but all, because of citizen action, are better places in which to live.

In the words of Dr. George H. Gallup, league president and director of the American Institute of Public Opinion, the awards are given not for good government, efficient municipal administration, or a specific improvement, as such, but rather for citizen

This year, a record 225 communities were nominated for awards. The 22 finalists presented their cases before a distinguished tury of civil leaders at the annual national conference on government in Kansas City,

The winning communities are Chicago, Ill.; Decatur, Ark.; Maricopa County, Ariz.; Mexico, Mo.; Modesto, Calif.; Newark, N. J.; Pueblo, Colo.; Richfield, Minn.; Rock Island, Ill.; Rockville, Md.; and Warren, Ohio.

These are their stories:
Modesto, Calif.: Late in the 1940's, Modesto discovered that while its own population (17,000) had remained unaffected by the postwar California boom, the area outside its city limits had blossomed into an industrial section of 34,000. This huge fringe population posed a crushing problem: The suburbanites used Modesto's facilities and paid few taxes. Modesto, with no place to dump its sewage, found itself girdled by 10,000 cesspools.

The solution was annexation-make all problems common and solve them for the common good. But outside industry feared higher taxes and stricter regulation. In 1953, the voters adopted city-manager government (which had once been ruled illegal) and began wooing the suburbanites.

"Some outside industries began boycotting our merchants," recalls Mayor Harry Marks. "So we decided to make them want to come in, to offer them a city they would beg to become a part of."

A committee of 21 swelled into a committee of 1,000 and began a campaign of doorbell ringing to publicize a \$2.5 million sewer-improvement bond issue. It carried 8 to 1. improved fire department meant lower in-

surance rates for industry. The annexations began. By the end of 1954, so many areas had been annexed that Modesto's population had more than doubled and more areas were waiting their turn. The voters approved spending \$4.3 million schools; a youth center that stood unfinished for 3 years was completed in weeks with donated labor and materials. Many more improvements are on the way.

Events in Costa Rica

EXTENSION OF REMARKS

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. MORANO. Mr. Speaker, on January 12 of this year I sent a telegram to our able Secretary of State, Hon. John Foster Dulles, urging immediate and vigorous action by the United States under Mr. Dulles' personal direction and Within the framework of the Organization of American States to bring about a cessation of hostilities and of needless bloodshed in Costa Rica. I am pleased to report that the Organization of American States has moved swiftly and it now Would appear that a serious menace to the Panama Canal and to the entire Western Hemisphere has been averted. All of us can be proud of the Organization of American States and of the vigorous leadership taken by the United States within that organization's frame-Work

As the membership of the House well knows, the headquarters of the Organization is in Washington, located several blocks from the White House and the Department of State. I urge as many Members of this House as possible to become better acquainted with the Organization of American States by observing at first hand the many useful activities pursued at its headquarters.

There follows the text of an address delivered in Houston, Tex., on January 20 by the Honorable Henry F. Holland, our able, courageous, and very effective Assistant Secretary of State for Inter-American Affairs, covering the events which have been transpiring in Costa Rica:

During the past 10 days much of our attention has been centered on the conflict in the Central American Republic of Costa Rica. Through the newspaper, television, and radio you have followed events there. I would like to discuss with you their significance as regards the inter-American system, and the policies of our own Government.

The dimensions of the conflict itself may be small—some 10,000 Government forces, only 4,000 of them well armed, pitted against six to eight hundred revolutionaries; nevertheless, the principles and issues involved in the conflict are basic and of lasting importance to the peace and order of our hemisphere.

What has been taking place in that small Central American country is in the first place a matter of humanitarian concern to all of us because human lives and welfare are affected. If, and to the extent that, this is a domestic upheaval, it is regrettable, and would not be an occasion for United States or OAS political action. nature and apparent origin of the conflict suggest intervention from abroad and thus have presented problems of deep preoccupation to the American family of nations. At stake have been the principle of non-Intervention and collective action to maintain international peace which are cornerstones of the relationship among the American States—a relationship which is unique in the divided world of today. In the balance stood the expressed intention of the American nations to come to the assistance of a sister republic when the integrity of its territory or sovereignty or political in-dependence was threatened, thereby demonstrating the effectiveness of the inter-American regional security system. Beyond this, what is taking place in Costa Rica and the response of the Organization of American States, in my opinion, carried serious implications for the fabric of collective security which binds the nations of the free world. Happily, in this case there the free world. the free world. Happily, in this case there was no evidence that international communism had gained control of the political

institutions of Costa Rica. If that had been the case, the Caracas declaration would have applied and the Communist-dominated government would have been deemed a common danger to all of the American Republics.

I am pleased to say that the challenge has been met by the OAS, and in a rapid, effective, and resourceful manner.

Before taking up the course of events in the Costa Rican crisis and their significance, I believe I should very briefly describe the inter-American machinery to which that country appealed for any of you who might not be familiar with it. The Organization of American States, or OAS as we generally refer to it, is a regional organization within the United Nations. All 21 American republics are members. Its affairs are normally directed by a council comprised of representatives of each member state and which under emergency conditions such as those in the existing situation is accorded certain unusual and extensive powers such as those it has exercised during recent days.

Among the organization's basic purposes as expressed in its charter are the following:

1. "To strengthen the peace and security

of the continent."

"To prevent possible causes of difficulties and to insure the pacific settlement of disputes that may arise among the member states."

states."
3. "To provide for common action on the part of those states in the event of aggression."

A fundamental principle vouchsafed in the charter is that:

"If the inviolability or the integrity of the territory or the sovereignty or political independence of any American state should be affected by an armed attack or by an act of aggression that is not an armed attack, or by an extra-continental conflict, or by a conflict between two or more American states, or by any other fact or situation that might endanger the peace of America, the American states, in furtherance of the principles of continental solidarity or collective self-defense, shall apply the measures and procedures established in the special treaties on the subject" (art. 25).

The principal treaty referred to in this article is the Inter-American Treaty of Reciprocal Assistance, known as the Rio Treaty. It is under this treaty that Costa Rica on January 8 appealed to the Council of the Organization for assistance, considering itself to be in imminent danger of invasion.

The Costa Rican call for OAS action brought to a head issues and difficulties which have hovered in the background for some time. Last spring, after frustration of an attempt to assassinate him, the President of Nicaragua asserted that the President of Costa Rica, from whose territory certain of the conspirators had come, was implicated. Thereafter the Costa Rican Government from time to time asserted that a revolutionary movement was being prepared against it from outside its territory, with the toleration, if not assistance, of other governments.

During this period of tension in the area those of us dealing principally with Latin American affairs in Washington were informed of these developments. Not infrequently we were called upon to lend our assistance in an effort to ease the difficulties. At times, both before and after the recent outbreak, we have been asked to provide more direct assistance ourselves.

In response to such appeals, the policy of the Government of the United States has been to take such informal and friendly steps as we believed would be proper and helpful to bring about a more cordial atmosphere between the governments concerned. We also encouraged them to make every effort to resolve their difficulties by direct negotiations. All members of the Organization of American States clearly have a responsibility

to strive for such settlement under the charter of that body, the Rio Treaty, and the U. N. Charter. However, we have firmly and consistently insisted that governments which found themselves unable to resolve their difficulties by direct negotiations should utilize the abundant and effective machinery of the Organization of American States in achieving that peaceful solution which is enjoined upon all members of the inter-American community. Specifically, we have repeatedly advised that a government which had reason to believe that its sovereignty or political independence were endangered from outside its territory should place its complaint before the Organization of American States. We believe that procedures which are readily available in the OAS can be effective, and that the degree to which they achieve good results depends small measure upon the degree to which the American States resort to them, and thus demonstrate their confidence in them. No machinery for the maintenance of peace and security can demonstrate its effectiveness unless it is used by the governments that created it.

Now let me review briefly the order of events in connection with Costa Rica's appeal to the OAS. That will permit a clear understanding of the role played by the United States and the other members of the OAS.

On Saturday, January 8, the Costa Rican representative notified the Council of the Organization of American States that his government believed an invasion of its territory was imminent and that the movement was being supported in violation of the obligations of the governments under inter-American treaties. These prohibit any American state from resorting to force in a dispute with another and require each state to take effective measures to prevent its territory from being used to further an armed attack on any other state. Costa Rica asked that the provisions of the Rio Treaty applicable to such emergencies be invoked.

The Chairman of the Council immediately called a meeting of that body for the following day. Subsequently, the meeting was postponed 24 hours, with the concurrence of the representative of Costa Rica, because of the absence of the Nicaraguan representative from Washington.

The Council met on the afternoon of Monday, January 10, and heard Costa Rica present its case and Nicaragua's denial of the allegations of its complicity in any revolutionary movement. No act of violence having taken place, and considering it desirable for the representatives to consult their governments on the matter, the Council scheduled a further meeting for Wednesday, calling upon the Governments of Costa Rica and Nicaragua to take the necessary measures to prevent any acts which might aggravate the situation.

The situation changed drastically the following morning, Tuesday, January 11. Rebel attacked forces and occupied the Rican town of Villa Quesada, some 60 miles within Costa Rica, north of its capital, San José. At the request of Costa Rica, the Council of the OAS met immediately that day. In view of the new circumstances, it did not hesitate to apply the Rio Treaty, and as a first step to send an Investigating Committee without delay to the scene to ascertain the facts. The United States was privileged to be designated as a member of the Committee, together with Mexico, Brazil, Paraguay, and Ecuador. The Committee was named at 9 o'clock in the evening. At 6 the following morning the group was on its way in a plane which, in view of the urgency of matter, was furnished by the United States. The Council had acted with vigor and dispatch.

While the Investigating Committee was en route on Wednesday, a new element entered

the picture: Costa Rica reported that during the day several towns, including the capital, had been bombed and strafed by aircraft coming from the north. Costa Rica pointed out that, having no air force of its own, this development posed a new and serious danger to its security. Not only was the danger in-creased, but it appeared that such elements could only have come from outside Costa Rica.

In response the Council called urgently upon all American governments to take the measures necessary to prevent the use of their territories for any military action against another government. But it also made what I think is an historic decision in the inter-American system; the establishment for the first time of an international aerial patrol under the supervision of an OAS body for the purpose of making peace-ful observations over the region affected by the situation. To accomplish this, the member governments in a position to do so were requested to place at the disposal of the Investigating Committee aircraft which would fly in its name and under its supervision. Within 2 hours after this decision was unanimously taken by the Council, our Government announced that it was making planes available. Ecuador, Uruguay, and Mexico have taken the same step.

The use of peaceful observation flights under the supervision of the Investigating Committee is a new development in inter-American peace machinery. Multiplying the eyes and expanding the vision of the fiveman committee, this procedure doubtless also served as a deterrent to any international transit of men and arms in violation of treaty obligations.

Recognizing the need for a finding of facts, the Council requested the Investigating Committee to send immediately a prelim-This inary report on the situation. Committee did with noteworthy speed.

This report received late Thursday indicated that aircraft originating from outside Costa Rica had machine gunned and bombed several places in the country, and that there existed grave presumption that arms entering Costa Rica were continuing to across its northern frontier. On Friday the Council, on the basis of this information, condemned the acts of intervention against Costa Rica: it called on all American governments, especially Nicaragua to the north, to redouble their efforts to prevent their terri-tories from being used for military action. It also directed its Investigating Committee immediately to send observers to all airports and other places in the region which might be used to transport military elements into Costa Rica. Meanwhile, constant aerial surveillance under the supervision of the Investigating Committee continued, as did the other activities of the Committee.

At midnight on Saturday, January 15, the Committee reported that its reconnaissance indicated that the air force of the revolutionary group operating in Costa Rica had been increased by the addition of one P-47 which had come from outside Costa Rica. This plane had been used in strafing opera-The Costa Rican Government had no combat aircraft with which to meet this new threat.

At 2 o'clock in the morning on Sunday the Council of the OAS met to consider what should be done in the light of this latest development. The Council was inlatest development. formed that Costa Rica had asked that the United States sell it four P-51's. Since the problem was being dealt with by the OAS, we would not send such war material into the area except at the request of the Council. We told the delegates that we could, under our laws, make a sale of the four planes to Costa Rica, and that, if the Council requested that such aircraft be made available to the Costa Rican Government, we would do so. Five hours later, at 7 in the morning last Sunday, the Council unanimously approved a resolution which made known its desire that these aircraft be sold to Costa Rica. At 3 that afternoon the 4 P-51's were on They arrived on their way to Costa Rica. Monday, January 17, and have been turned over to the Costa Rican Government.

There has been speculation in the press as to the price of the planes which have been transferred to Costa Rica. United States law requires that the price of military equipment sold to other friendly governments be fixed at its fair value, which is determined according to standards specified in the Mutual Security Act of 1954. In past sales of similar equipment that price has been far less than the original cost of the planes. The price in this case is now being determined by the Department of Defense and will be fixed on the basis of the type of plane and equipment, spare parts and services made available with them. I might add that if because of price or any other reason Costa Rica would now prefer not to have the planes, we would be satisfied to have them returned. They were withdrawn from National Guard units here in Texas, where they are useful.

After its night session the Council reconvened at 4 o'clock Sunday afternoon to consider what further measures might be taken to insure against treaty violations. It had before it petitions from both Costa Rica and Nicaragua that effective surveillance of their frontier be established under the OAS for the purpose of keeping watch on border crossings by revolutionary forces or supplies. The Council approved this request, directing its investigating committee to plan and maintain effective vigilance of the border through its military advisers.

Aerial reconnaissance revealed that the rebel forces had 4 planes-2 AT-6 trainers, a DC-3 cargo plane, and the F-47, which I have mentioned. The DC-3 crashed last Sunday. On Monday the air patrol reported that the three remaining planes had left the rebel airstrip in Costa Rica. Later the two trainers were observed to land in Rivas, Nicaragua, where the pilots surrendered to Nicaraguan authorities who report that the Government has interned the aircraft and crews. The whereabouts of the fighter plane has not been determined.

This account of the action taken by the OAS speaks well of the forceful and expeditious manner in which the 21 American republics, operating through their regional organization have been able to act. Not only has its action saved lives and property which would undoubtedly have been destroyed had the fighting become more widespread, it has also shown to the world that effective machinery exists and is being used in this hemisphere for the prevention of international conflicts. This success will strengthen the Organization of American States by giving a concrete demonstration of its power as a deterrent to warfare in this hemisphere. The United States as a member of the OAS may be justly proud of its contribution to this joint undertaking.

A question often asked me in the last several days is, "Who is responsible for this armed conflict in Costa Rica? Are the accusations made by the Governments of Costa Rica and Nicaragua against each other true?" This is not a question for any one member of the American community to decide, and we shall not engage in speculation. The determination of facts and the assessing of guilt, if any, is the function of the OAS. If we want to preserve the dignity and integrity of our regional organization we must not prejudge issues which it is studying preparatory to rendering a decision upon them. Nor must we expect hasty decisions from it. The Investigating Committee still in the field. It has just spent time in Nicaragua where at the invitation of that Government it has been assembling information. Until all of the facts are in, it would not be proper to render any judgment, as the voicing of unfounded or unsupported accusations by an official spokesman of any of the American governments would only tend to worsen the situation.

The importance of the OAS action thus far lies chiefly in the prompt and resourceful way in which it acted to protect the sovereignty, integrity, and inviolability of the territory of one of the member states. Despite the small size of the military engagement which is involved, the issues presented were the kind that could in the future arise in connection with any member of the group. The measures applied were unique. before has the Organization requested the establishment of pacific observation flights or requested the sale of military equipment to a beleaguered member. Under these circumstances one cannot exaggerate the significance of the fact that all decisions not only of the Council but of the Investigating Committee have been taken unanimously. Americans throughout our 21 republics can be grateful that the peaceful solution of our problems has been entrusted to this regional organization to which the Soviet veto cannot extend.

The OAS has acted with speed and efficiency which deserves the applause of all the members of the inter-American system. less than 4 days actions were taken which put an investigating group into the affected area and gave it the means for carrying out peaceful observations of the widest possible scope. I doubt that in any similar situation an international investigating body has discharged its duties with greater diligence, greater speed, or greater resourcefulness.

Furthermore, as a result of the OAS action, aircraft were made available which enable Costa Rica to defend itself against marauding planes introduced from outside its territory. The basis has been established for a system of effective frontier vigilance. These are remarkable achievements for any international organization.

Let me summarize the policy which the United States Government has pursued and will continue to pursue in this matter. First, we support vigorously all appropriate steps determined by the Organization of American States to protect the obligations and guaranties of the treaties upon which our inter-American system is founded, and we make every effort to insure that these steps are taken on the basis of facts rather than charges or rumors. Finally, we are committed to a policy of strengthening the OAS as an effective international organization within the United Nations to which members of the American family should in the first instance refer such problems as this for peaceful solution.

Communists' Ruthless Technique

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting editorial from the Lawrence Daily Eagle, Lawrence, Mass., Saturday, December 4, 1954:

CRUEL BUSINESS

Nothing is quite so maddening to a peaceloving nation like our as the Communists' ruthless technique of false imprisonment on trumped-up charges. It is most aggra-Vating because it is so difficult to combat.

latest shocking episode of this kind, Red China's imprisonment of 13 American citizens for terms from 4 years to life, dramatizes a painful fact that has been long known: That the Communists did not return all Allied prisoners as they were required to do under the Korean truce agreement.

It goes without saying that this cruel business is international gangsterism of the worst sort, a violation not alone of the Korean pact but of the laws of war governing the status of prisoners. Men in uniform are not spies, as charged.

But the point, of course, is: What can we

do about it?

A few voices raised in and out of Congress have demanded that we resort to drastic measures, declaring that "only force" will free these men.

Such a course clearly does not recommend itself to President Eisenhower, Secretary of State Dulles, or Secretary of Defense Wilson, nor would it be likely to have appeal to most Americans who give the matter sober

For force can mean just one thing—war. Even if we could find where the imprisoned Americans were being held, we could not, by any stretch of the imagination, expect to conduct a successful rescue raid into sprawling China. Thus war is the sole conceivable course of action left to advocates of force.

Yet, as much as we cherish the life of every single American, the idea of plunging the whole Nation into war and sending millions to their deaths in perhaps a vain effort to save 13 men from prison terms is something we cannot consider.

It would be very surprising if a single 1 of the 13 wants so colossal a sacrifice to

be made in his behalf.

Frustrating thought it may be, all we can sensibly do is protest. But it ought to be understood that protest is sometimes effective, and it could be again.

Both the United States and its ally, Britain, already have vigorously denounced this newest Red act in defiance of international Justice. But the question should be of instant importance to the United Nations, under whose command the imprisoned Americans fought, and to the neutral Korean Armistice Commission now overseeing the truce.

It is always arguable whether this sort of pressure works best if accompanied by loud hoises of indignation, or if more subtly ap-Plied against the high councils of the hostile state involved.

Ordinary Americans, deeply angered at this latest outrage, nevertheless cannot decide which approach is wisest in this case. But they can insist that every ounce of pressure be resolutely and relentless applied until these and other falsely imprisoned Americans are restored to full freedom.

Heavy Caseload in Federal Judicial Districts of the State of Iowa

EXTENSION OF REMARKS

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I call to the attention of the Congress a resolution adopted by the Iowa State Bar Association on June 5, 1954.

This resolution expresses the concern

of the members of the association over the heavy load of cases pending in the Federal judicial districts of the State of Iowa and urges legislation by the United States Congress to relieve the situation there and in other areas throughout the Nation.

"Whereas the members of this association are seriously concerned with the heavy load of cases pending in both the northern and southern Federal judicial districts of the State of Iowa and with the fact that the amount of litigation is increasing rapidly and that as a result a congestion of cases and of business has been avoided only through the almost superhuman efforts of the judges both in the northern and southern districts of Iowa; and

"Whereas not only are the judges overworked but serious strain is placed upon jurors, court reporters, litigants, and attorneys, and other officers of the court; and

'Whereas there is now pending in the Congress of the United States a measure designed to bring relief for this situation and other similar situations now existing else-where in the United States: Now, therefore, be it

"Resolved by the Iowa State Bar Association in its 81st annual meeting assembled, That we urge upon the Senators and the Members of the House of Representatives from the State of Iowa that they give the strongest possible support to the proposed legislation referred to above and to any other legislation which may be designed to bring relief to the two Federal districts in this State; be it further

'Resolved, That copies of this resolution be forwarded by the secretary of this association to each of the United States Senators from Iowa and to each of the Members of the House of Representatives from the State

of Iowa."

I certify that this is a true and correct copy of a resolution passed by the Iowa State Bar Association on June 5, 1954.

> EDWARD H. JONES Secretary, the Iowa State Bar Association.

Delaware River Channel Between Philadelphia Naval Base and Newbold Island

EXTENSION OF REMARKS OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following resolution:

I, John M. McCullough, secretary of the Delaware River Port Authority, hereby certify the attached to be a true and correct copy of a resolution duly adopted by the authority at its meeting of January 19, 1955; that said resolution has not been altered, amended, or repealed, but is in full force and effect.

In witness whereof, I have hereunto set my hand and the seal of said authority, this

19th day of January 1955. [SEAL] JOHN M. McCullough,

Secretary.

"Whereas the Delaware River Port Authority by formal resolution of December 16, 1953, recorded its objection to the recommendation of the Chief of Engineers, Department of the Army, that local interests be required to contribute in cash to the United States one-half of the additional cost of construction of the recommended improvement of the 40-foot channel in the Delaware River between the Philadelphia Naval Base and Newbold Island in excess of the cost of the 35-foot channel:

"Whereas this position of the authority was respectfully reaffirmed by formal resolution of January 20, 1954, following consideration of a communication from the Chief of Engineers, Department of the Army, presenting his opinion 'that the needs of the prospective general commerce on the Dela-ware River will be served by a channel 35 feet deep'; and

"Whereas the Congress of the United States on August 18, 1954, authorized the deepening of the channel of the Delaware River between the Philadelphia Naval Base and Newbold Island to a depth of 40 feet without reference to the requirement for participation by local interests in defraying the cost thereof and said authorizing legislation was signed by the President of the United States

on September 6, 1954; and

"Whereas the President of the United States in his budget message to the Congress of January 17, 1955, recommended that token supplemental funds for the channel project be provided only if, as a prerequisite thereto, local interests pledged themselves in advance to provide a sum three times greater than the proposed supplemental appropriation or its equivalent thereof in work; and

Whereas this concept of local responsibility in an obligation of the Federal Government is one never before proposed in this precise form, one which the Congress has not previously had the opportunity to consider, and one which appears in unprecedented contravention of the responsibility of the Federal Government with respect to navigable interstate waters; and

"Whereas the importance of the Delaware River as a highway of commerce and of its industrial hinterland as a vital factor in the national security and a healthful national economy have not diminished, but in fact and as attested by statistics and reports both available to and published by the Federal Government have been enhanced markedly during the past year: Now, therefore, be it

"Resolved, That the Delaware River Port Authority views with grave concern and deep misgiving the recommendation of the budget message as applied to channel-deepening projects; and be it further

"Resolved, That the authority reaffirms

most vigorously its opposition to any requirement that local sharing of costs be a prerequisite to approval of a project of this character in the realm of the public interest: and be it further

"Resolved, That attested copies of this resolution be forwarded promptly to all parties having an interest in the matter."

Effect of Bicycle Imports on Domestic Production

EXTENSION OF REMARKS OF

HON. WILLIAM R. WILLIAMS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. WILLIAMS of New York. Mr. Speaker, in a few weeks this House will once again consider the question of United States foreign trade policy. Believing that the following information will prove of interest and help to the Members of this body, in consideration of this issue, I wish to place in the RECORD a copy of a letter from one of the larger manufacturers of bicycles in this country, whose plant is located in my congressional district:

H. P. SNYDER MANUFACTURING CO., INC., Little Falls, N. Y., January 17, 1955. Hon. WILLIAM R. WILLIAMS, House Office Building.

Washington, D. C.

DEAR CONGRESSMAN: Many thanks for your note of January 10, and the attached copy of the President's message to Congress on reciprocal trade, dated January 10, 1955. So many comments with regard to this speech come to my mind that it is impossible for me to put them down in writing or you would be reading a new edition of Gone With the Wind.

To say the least, I continue to be greatly distressed by our President's refusal to recognize that his world-trade policy is selling American business down the stream, and I am continually more and more impressed by the fact that his judgment is being affected by the thinking of big business, which seems to have a temporary advantage by investing capital in foreign lands, which capital will undoubtedly be lost within the next 10 years by some upheaval in those foreign lands. It is more than distressing to an American to see our country and our Chief Executive encouraging the investment of American capital in foreign lands instead of investing same in our own country for our own benefit.

In the meantime, may I advise you that our own situation worsens by the Imports of bicycles are going to rise to the 900,000 level for 1954 and new lows in pricing occur every day. I have in my office at the present moment a German balloon-tire bicycle, a duplicate of the very best American balloon-tire bicycles, gorgeously finished with hand polishing and hand decorating that is beyond the possibilities of American bicycle manufacturers due to the expense of performing the operations, which bicycle is currently selling f. o. b. the docks in New York, duty paid, for \$19.90, 2 percent discount. If we were to duplicate this machine in detail, which we could do, our cost (in American plants, including our own, which we feel are superior in efficiency to the German plants) would be in the neighborhood of \$25 or \$26.

If our company had its percentage of the 900,000 bicycles that came into this country last year, we would have employed over 200 more people steadily throughout 1954. In a community of this size, and in a community which has lost so much business in the last year or two, this is disastrous. After 60 years in the bicycle business, BnL, we are really in danger of collapsing in another year, if this keeps up. Let's pray the Lord that the Tariff Commission and our President recognize this situation and correct it within the next few months. As you know, we must have a report from the Tariff Commission by March 14, 1955.

Sincere thanks for your interest. With best personal regards to you and Fred, we remain,

Sincerely yours, H. P. Snyder Manufacturing Co., Inc., H. W. Snyder, President.

Polish Union Testimonial

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial from the Wilkes-Barre Times-Leader of January 22, 1955:

POLISH UNION TESTIMONIAL

The women's division of the Polish Union of the United States of North America, headed by Miss Charlotte Zajkowski, of Wilkes-Barre, is sponsoring a testimonial in Hotel Sterling on Sunday night in honor of Stanley W. Warakomski, of Nanticoke, who has been general secretary of the Polish Union for 33 years. It is an impressive tribute to an executive whose long tenure has few parallels in fraternal circles.

Once described as a product of historic necessity, the Polish Union has leaned heavily on Mr. Warakomski for more than three decades. A native of Poland, he is unusually well equipped for the active management of an organization, dedicated to the welfare of Americans of Polish extraction, most of whom in the early days were, like himself, newcomers to this land of opportunity. He combines in his person a keen insight into the American way of life and a genuine appreciation of the problems confronting his compatriots.

The Polish Union has gone a long way under the guidance of Mr. Warakomski. The immigrant of yesterday is now an American citizen and so are his children. Language is no longer a barrier and the country of his adoption is now home. But old ties, cultural and personal, remain. These the Polish Union seeks to preserve as well as to provide insurance benefits, education, and other assistance to the membership through a program that is constantly expanding, thanks to the role of Mr. Warakomski and his progressive associates. The old and the new march side by side.

The years have dealt very kindly with Mr. Warakomski. His hair has silvered in the interim, adding distinction to his appearance and offering proof of maturity, mentally as well as physically. Otherwise, he is the same friendly and persevering individual who answered the call to duty after the First World War.

While the Polish Union has been his principal interest, by virtue of his office he has been identified with other movements, dedicated to the betterment of America, Poland, and humanity. As general secretary of the Polish Union, Stanley Warakomski has made a substantial contribution to the land of his birth and to the land of his adoption.

Ukrainian Independence Day

EXTENSION OF REMARKS

HON, CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. ZABLOCKI. Mr. Speaker, this week the people of Ukrainian ancestry all over the world are observing the anniversary of the proclamation of Ukrainian independence which will take place on January 22, 1955.

It would seem to me that this anniversary observance presents us with a splendid opportunity for the reaffirmation of our strong faith in the eventual freedom of all of the peoples who are presently enslaved and subject to totalitarian domination.

The principle of self-determination of all peoples has played an important role in the conception and history of our own Nation. We have always maintained and continue to believe that the nations of the world have the right to work out their own destinies, in accordance with the expressed desires of their people.

On this occasion of the anniversary of Ukrainian independence, let us reaffirm our stanch adherence to that principle. May those nations who are presently deprived of representation and the right of self-determination find hope and encouragement in this reaffirmation of our principles.

Anti-McCarthy Technique

EXTENSION OF REMARKS

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I wish to insert the following editorial by Raymond Moley, which appeared in the Los Angeles Times on January 18, 1955.

ANTI-McCarthy Technique (By Raymond Moley)

It is hardly necessary to mention that the pattern of the leftlists who dominate such a large part of the Democratic Party and also of the so-called liberal Republicans in their campaign to drive a wedge between the Vice President and the President follows the pattern used in the long campaign against Senator McCarthy.

With powerful help because of the indiscretions and extreme comments of Mc-Carthy, the campaign against him succeeded. And so the opposition moves on to knock off one after another of the people who have attempted to hold the Roosevelt-Truman regime responsible for its softness toward subversive elements in and out of government.

Once more the promoters of the unending campaign to isolate the President from a majority of his party have been helped by an old and familiar trick practised in his press conferences. The President, by adding lengthy comments to what might have been an adequate answer, provided a back-

handed blow to his party.

In this instance, the President was asked for his opinion about attacks on Nixon "for the manner in which he conducted himself in the 1954 campaign." It took approximately 230 words for the President to answer that simple question. In the course of that answer, he said that (a) he did not believe that any party is guilty of treason, (b) that there are as many patriots in one party as in the other, (c) that "he had never heard" of Nixon making a charge that the whole Democratic Party is a party of treason, (d) that Nixon had so assured him, (e) that not only Nixon but the people who were criticizing him were loyal and patriotic, (f) that he would admit that "in the heat" of a campaign words might "be taken out of context" and be "the subject of legitimate criticism." Finally, he asked if the man who asked the question had read Nixon's speeches.

This highly qualified answer enabled a prominent anti-Nixon newspaper to say correctly in a first-page headline that the President had defended both Nixon and Nixon's critics. All this is highly satisfying to the anti-Nixon people, who can say that all the President had to go on was Nixon's word.

that the Democratic Party (which they will identify with the Truman administration) had just as many loyal people as the Republican Party (which they will identify with the Eisenhower administration).

All this leaves Nixon in a highly probationary status so far as the President is con-

cerned.

critics.

It does not, however, lessen the admiration for Nixon held by those Republicans who believe that a campaign is a campaign and that its purpose is to hold the opposition

responsible.

I have read Nixon's campaign speeches so far as they were written out. I secured them immediately after the election, because the success of the Republican Party in the States where Nixon did most of his campaigning made it clear to me that an attack would be made later on. And I found no scintilla of evidence to support Nixon's

What Nixon said over and over was that 6.926 security risks had been unearthed since the Republican Party took over in 1953, that the Truman administration had cleared and hired these people, and that the Eisenhower administration—had fired them.

This is true. It is legitimate campaigning. It holds an administration accountable for what happens under it. And it was very good evidence indeed that the Truman administration had been lax in protecting

the national security

Of course behind this attack upon Nixon is a bitter memory and a great fear. The memory is that Nixon was the man who brought the Hiss case to the bar of justice, and fear is that Nixon in 1956 will be a Powerful factor in preventing a return to power of a Fair Deal regime.

The Memory of Agnes G. Shankle: Fighter for Pensions

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following in memory of the late

Agnes G. Shankle.

The older people of the United States have lost one of their very best friends, in the passing of Agnes G. Shankle, who was secretary-treasurer of the National Pension Federation, Inc., Washington, D. C., and editor of the National Pension

Guide.

Adequate universal pension coverage for all our senior citizens 65 years of age and older without any ifs, buts, or ands, this was the goal to which she devoted

herself unsparingly.

Not for personal gain or glory, but out of the fullness of her heart, finding ful-

fillment in helping others.

Before congressional committees she argued cogently and convincingly on the need of a national pension, and she provided inspiring leadership for the millions of aged to whom she was the symbol of hone

The facts and figures she presented to prove that a national pension is not only necessary but inevitable were illuminated by her own earnestness and sincerity Into the arena of economics and politics, she brought the saving grace of humanity and the spirit that is eternal.

When the day surely comes that her vision becomes reality, every older person in this Nation can thank the pioneering efforts of Mrs. Shankle for the security they will enjoy during the closing years of their lives.

Our grief is comforted by the knowledge that she is safely home in the

kingdom of the blessed.

As she would wish, we shall continue the good work to which she dedicated her life until a national pension becomes a beneficent law of this land and a living memorial to Agnes G. Shankle.

FPC Regulation of Natural Gas Production

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. HOSMER. Mr. Speaker, this Congress has been asked to alleviate the unfortunate effects of a recent decision of the Supreme Court ruling that the FPC must, under the law as now written, engage in the extensive regulation of the production of natural gas. The basic criteria in deciding between regulation and nonregulation are these: First, would regulation serve the public convenience? Second, is regulation necessary to protect the public?

The regulatory burden imposed on the natural gas industry and the FPC as a result of the court's decision meets neither of these criteria. In fact, it does violence to them as explained in a recent editorial appearing in the Long Beach (Calif.) Press Telegram. The editorial

reads as follows:

WAS PUBLIC INTEREST REALLY SERVED?

Federal regulation, theoretically an instrument to guard the public interest, often has reverse effects. A case in point is Government interference in the natural-gas industry.

In 1938 Congress passed the Natural Gas Act. It gave the Federal Power Commission regulatory authority over transportation of natural gas in interstate commerce. By a Supreme Court interpretation the FPC has assumed also authority to regulate the price at which all independent producers sell natural gas to pipeline companies which carry the gas in interstate commerce for resale.

The Government has moved to take a throttle-hold on prices, and therefore on production, in a highly competitive business. The end result can be diminishing of supply and increase of cost to consumers.

Without regulation and under free competition the price of natural gas has increased less than commodity and cost-of-living prices in general. Federal control offers no benefits to consumers. Certainly it offers none to producers. Both can be hurt by interference that stifles production incentive and encourages retrenchment in a basic industry and sets a precedent for Federal price regulation of other products.

In 1950 Congress passed a bill to clarify its original intent in the Natural Gas Act. That

intent was to exempt from regulation the production and gathering of natural gas. The bill was vetoed by Harry Truman. Passage and signing of corrective legislation is long overdue. Here is an important task for the 84th Congress.

Pay for More Pay

EXTENSION OF REMARKS

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following article from the Journal News, of Nyack, N. Y., is so intelligent and so different from some of the publicity we have seen on postal rates, that I feel it is very worthy of the attention of the House.

I firmly believe that many citizens believe in the opinion expressed in this article. Most people know that anything they get they pay for, no matter how much we sugar-coat the pill.

PAY FOR MORE PAY

As a people, we Americans don't do too well at arithmetic. Maybe other nationalities are just as poor at figures. Addition and subtraction are the weak spots and with them goes an inability to apply the old saying about robbing Peter to pay Paul. Which brings us around to the proposal that's gone to Congress to raise the pay of post-office employees, provided the letter mail rate goes to 4 cents and other adjustments are made along the line. We've heard no opposition at all to the proposal to raise the salary of the post-office employees but we've heard yards of complaint about raising postal rates.

That's where the addition and the subtraction come in. If you have just so much money to run the business and the people working for you are getting a salary total that lies within that income, you can't give them all raises without hoisting the income also. If your income is unchanged, you run into a minus figure known as a deficit. You can go to the bank to borrow money or you can ask a wealthy friend to give you a right smart donation. The Post Office doesn't borrow money—it asks for an appropriation from Congress.

Then comes some more adding and subtracting. Congress adds the amount of the appropriation to the budget, thereby increasing the tax rate. The time comes for establishing taxes and the Government, in due course, subtracts your share of expense from your bank account. So you take your pick—more taxes or higher postage rates. The increase is inescapable, no matter which way you turn. Moreover, you're the one who pays.

Some of us can remember back, no doubt, to the time when letters had those nice red 2-cent stamps, postal cards pretty 1-cent green ones. Now you put the 2's on unsealed Christmas cards, the 1's on 2's to make 3's for your regular letters. Moreover, the way it looks from here, you'll be adding 1's to 3's or doubling up 2's to make 4's before you're too many years older than you are now.

We don't like the proposed increase any more than the next one. It's an added cost of business, it adds maybe a dollar to the annual expense in personal mail. Moreover, the full expense comes out of all our pockets in one way or another. Yet we don't see what else to do about it in the light of the general increase in cost of everything, the

general increase in wages and salaries. We believe the postal employees should have pay increases for work well done; we believe efforts have been made in the direction of improving Department efficiency and cutting down needless expense from outworn methods.

We've heard, too, the howls of protest that have gone up from post office patrons at any time service has been curtailed in an effort to reduce expense. The public still wants the same or better service on today's costs of living at yesterday's prices. That's another thing that doesn't add up and we don't see how it can be made to, no matter how loud the complaints. The Post Office Department says it can operate within its budget if the income request is granted. Isn't it better to have those who use the service pay the freight than to have it spread over everyone through extra taxes?

Last year, you may remember, the pay raise for postal workers was in the mill but was left high and dry for the simple reason no method was included in the legislation for providing the money that was needed. The mailmen were peeved, for which you can't blame them, but it was still the best thing to do under the circumstances; even Government agencies can't afford to operate too deep in the red. We don't think anyone wants a Postofice Department which is run altogether on Government subsidy, for that would affect taxes seriously.

It is easy enough to complain about the way the mails are handled, but we still get excellent uniform service. You know from the postmark when the letter you got this morning was mailed. There will be times when it takes longer to go a short distance than a long distance, but there's explanation for that which is quite logical if you take the time to inquire. You can't, what's more, take a single exceptional case as an example of what happens regularly and as a matter of accepted routine.

You can't argue that postoffice costs have remained stationary during the time the cost of living has been going up. Every single item and every service the postoffices have to have costs considerably more than it did, whether it's fuel or rent or the price of the gum on the back of the stamps. There's no reason, therefore, to feel that postage rates can't be allowed to go up just because a letter has been sent for 3 cents for so many years. It went for 2 cents for a good many years, don't forget, and the public was stunned when that price was raised but lived to tell the tale. The same thing will happen if the 4-cent rate is approved. Maybe we won't write so much for a while but then we'll get back in the groove and go on just as if nothing has ever happened to make 4-cent stamps popular.

A Time for Caution

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I clude the following editorial from the Kane (Pa.) Republican:

A TIME FOR CAUTION

. It can only be hoped that the Congress will look long and hard at President Elsenhower's recommendation for further tariff reductions at a time when foreign imports, especially those of petroleum products, are having an adverse economic effect in Pennsylvania.

Mr. Eisenhower, in submitting his program to Congress, expressed the belief that there exist today too many man-made barriers to mutually advantageous trade and the flow of investment.

In all due respect, it should be remembered that foreign trade is a many-sided problem which calls for a delicate balancing of the Nation's domestic welfare as well as its foreign policy and its relations with other nations.

Sometimes a general reduction of American tariffs does not prove mutually advantageous but benefits only foreign countries. This could just possibly be one of those times. While there is no reason why this country shouldn't work for an expansion of world trade, the utmost care should be exercised to make sure that our efforts do not work to the disadvantage of American industry. For, in that direction lies economic trouble, disrupted markets, less take-home pay, and additional unemployment.

It will do us no good to pump new life into the economic structures of other nations if, in so doing, we injure production and bring about mass joblessness at home. An American depression would shoot around the free world like wildfire. And, needless to say, such an eventuality would bring joy to the Communist hearts of the men in the Kremlin. From their point of view, it would be worth a hundred Koreas and a thousand Indochinas.

Rockville, Md.: A Winner in All-American Cities Awards Competition

EXTENSION OF REMARKS

HON. DeWITT S. HYDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. HYDE. Mr. Speaker, as representative of the Sixth District of Maryland, I am proud that Rockville, Md., has been chosen one of the winners in the 1954 all-American cities awards competition, cosponsored by the National Municipal League and Look Magazine.

The following article was taken from Look magazine saluting Rockville, Md.:

ROCKVILLE, MD.—When Teddy Roosevelt lived in the White House, he bought horehound drops 16 miles away at a little drugstore in Rockville. This suburb of Washington has grown rapidly in recent years, its population increasing from 2,500 in 1940 to 13,000 today. But, like the drugstore Roosevelt made famous, Rockville's local government had resisted change.

New residents found it almost impossible to vote; it took a minimum of 3 years' residence before local franchise was granted. One day, the community's water supply failed. A sewage disposal crisis forced suspension of all new home construction.

A group calling itself Citizens for Good Government, some 300 strong, called public incetings to inquire into the water crisis. Ignoring charges that they were trying to take over the town, the reformers acted to elect a new government. They were successful, but only after a grueling campaign which divided the community.

Needled by the reformers, the old government had contracted for water and built a giant storage tank. The new government

has guaranteed a vote to any citizen after a year's residence. Voting machines were installed. An audit resulted in the mailing out of \$24,000 in previously overlooked bills. Taxes were reduced. A professional city manager was hired.

There is still much to be done in Rockville, but Citizens for Good Government say it will be done.

be done.

Difficult Years Ahead

EXTENSION OF REMARKS

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from the New Era, official publication of the Conference of Eastern Pennsylvania Central Labor Unions:

DIFFICULT YEARS AHEAD

If one man in our Commonwealth is in an unenviable position, he probably is our new Governor, George M. Leader. This youthful chief executive took his oath

This youthful chief executive took his oath of office in Harrisburg on Tuesday at noon and thereupon embarked upon 4 long years of leading the State of Pennsylvania from a chaotic condition created by the ruinous policies of 16 years of Fine, Duff, Martin, and James rule.

Financial problems are staggering, even for as energetic and comparatively youthful man as George Leader is. Public agencies need new ideas and more liberal direction, giving the great mass of people more service for their tax dollars. And workers want to see the rule of the Pennsylvania Manufacturers Association brought to an end while at the same time beneficial legislation is enacted by the legislature to aid the average working man and woman.

There can be no doubt in anyone's mind that not only the new Governor, but the entire Democratic Party will be on trial. Unless the people see demonstrations of new spirit, new direction, and new results for the general welfare, we can be certain that this administration will go the way of the Earle administration.

Voters want results. They felt the Fine machine had corrupted the Commonwealth to the point where the odor was nationwide. In George Leader they saw clean, aggressive leadership. In the Democratic Party they envisioned a new hope for the future.

Responsibility for the record of the next 4 years obviously lies with Governor Leader. His inaugural speech offers an awareness of that responsibility and calls upon all of us to contribute to a solution of grave problems.

Already there are reports that Republicans controlling the senate contemplate obstructionist tactics.

It is up to the press to keep the record straight so that when the day of reckoning arrives in some future election, we can catalog the hits, runs, and errors where they belong.

Our faith in the new Governor, however, remains undiminished because we believe the gritty chicken farmer possesses talents that eventually will vault him into the national political arena as a candidate for high office. Given support and an opportunity to carry out his program, Governor Leader is destined to be one of our State's greatest Governors.

I Believe in Massachusetts

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. McCORMACK. Mr. Speaker, I include in my extension, remarks that I made on a radio program, I Believe in Massachusetts, on January 23, 1955, over station WALE, operated by the Narragansett Broadcasting Co., of Fall River, Mass.:

Thank you very much. I am glad to make my contribution to your radio audience on the subject, I Believe in Massachusetts.

If my discussion seems to reflect a Washington viewpoint, it perhaps may have value because we can evaluate the position of Massachusetts in its relationship with the other 47 States and view our position as part of the national picture.

It seems to me quite unnecessary that we should raise the question of belief in Massachusetts because all of us have a strong faith in the future of our Commonwealth and all of its people, a conviction that we need never

question.

In my opinion, the future of Massachusetts is very bright. Look in every direction and you will find clear indications of a better future, which gives conviction to my belief that we are probably entering the greatest period of economic success and expansion that we have ever seen in our State. There are many signs that point in this di-

Most of our citizens depend upon industry in our State for their livelihood. We have, I believe, been passing through a period of industrial change. Today we can now see, new signs of stabilization and growth that should be encouraging to everyone.

May I point out that change in industrial life is occurring in every State in our country, brought about chiefly by technological advances and the development of thousands of new products, that are making fundamental changes in our economy, replacing older modes of living and opening up new opportunities in increasing numbers to our citizens who are alert to these advances and will grasp the opportunities.

We should never entertain the thought that Massachusetts is declining or losing our predominant position. We are only changing and change is merely another ex-

pression of life.

We have many outstanding advantages in Massachusetts to offer the world. We have the most skilled supply of industrial labor in the United States and we have the best industrial labor record in the United This is recognized everywhere in the industrial world.

People in the Fall River and New Bedford as well as the Lawrence areas have witnessed the gradual loss of their textile industry. While part of this loss is represented by companies that moved away, there were a considerable number that permanently went out of business.

You also probably know that the causes for this loss in textiles were largely a worldwide over-productive capacity and a worldwide growth in substitutes for cotton and woolen products. New uses for cotton and Woolen products should be discovered. Intelligent research will enable such discoveries. The best brains of Massachusetts should be addressed to solving this problem.

May I point out to you that when an industry moves from a northern industrial center it only takes its capital, its manage-

ment, and its machinery and it leaves behind its industrial plants, its highly skilled labor, the industrial facilities that they have built into the community together with many servicing organizations that do busiwith industry.

If utilized, these are tremendous assets of great advantage to other industrial companies. The difficulty lies in the fact that normally industry is slow in making up its mind to change and the problem is to hold all of these assets together until they can be

grasped by new companies.

is my considered opinion that the textile industry in New England is now at its lowest position and that from now on it will experience a new growth, a new life that spells opportunity for our textile industry centers that is if we have intelligent management leadership. We have the intelligent leadership in the ranks of labor.

At the same time, I am firmly convinced that new, other types of industry will quickly develop or move to these textile centers and in the end our textile communities will be healthier because of wider diversification

of manufacture.

Today there are probably 150,000 business concerns in Massachusetts, of which about 12,500 are manufacturing establishments.

Back of all of these industrial concerns lays the greatest concentration of research institutions and technical engineering concerns to be found anywhere in the world. We are today recognized as the greatest center of technical education. It is inevitable that from the explorations and discoveries of these engineers and scientists will come many new products of inestimable value to Massachusetts and to the world. For example, 18 percent of all doctorates in engineering and 14 percent of all doctorates in physics in the country are awarded in edu-cational institutions within 50 miles of Boston. Another instance is that Massachusetts Institute of Technology awards more than 25 percent of all doctorates in metallurgy in United States.

In the fields of electrical manufacturing and plastics we are probably the fastest growing State in the country. Within the last month employment in the electrical machinery industry has become the largest employer of industrial labor in our State.

It is estimated that today Massachusetts industry is growing at the rate of one new manufacturing company or important plant expansion every working day. While most of these are small, it is from small starting and steady growth that large industries develop.

Boston is the greatest medical center in the United States. This is a well-known and self-evident fact. For illustration, the American Heart Association is allotting more funds for heart research to Massachusetts institutions than to any other State in the country.

We still lead the country in many of the major products, including shoe production which this year in Massachusetts is 9 percent higher in production than last year. It can be considerably improved upon. In spite of the concentration of certain industries, like textiles and shoes, Massachusetts is the third most diversified industrial State in the

We have become a great military research center. Witness the recent opening of the Consolidated Quartermaster Research Laboratory at Natick and the new and rapidly expanding Air Force Research Center at Bedford, which are encouraging and stimulating new industrial growth. I introduced the bill which brought this great research laboratory to Massachusetts.

Occasionally we hear of an industrial company closing down or going away but we rarely ever hear of the many large companies that are either moving to Massachusetts or establishing plants here. Massachusetts is a natural for the establishing of large plants here. We have the market and we have the skilled labor.

Let me repeat the advice of our beloved late Gen. George Patton, which was "Never

take counsel in your fears."

The idea that better opportunities lay in other sections of the country is either completely false or wholly temporary—so my message to the people of Massachusetts and especially our workmen is that retaining any faith in ourselves they will probably never find better opportunity than is facing us to-day in our grand old Commonwealth.

Clyde E. Hopping

EXTENSION OF REMARKS

HON, PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. HILLINGS. Mr. Speaker, recently the 25th District lost an esteemed civic leader with the passing of Clyde E. Hopping, founder-president of the Alhambra Foundry Co., Ltd.

I consider myself most fortunate in having had the benefit of his sage advice and counsel. Mr. Herbert G. Klein, editorial writer of the San Diego Union has provided an excellent summary of the life and good works of Clyde Hopping in an editorial which was written on Tuesday, January 11, 1955. The editorial follows:

Have you ever wondered how you will be remembered when you leave this earth? Or will you be remembered? Have your contributions been such that some part of your influence will last past death?

Most of us try to do our best day by day and give little thought to the subject. is probably enough that we have made life a little better for our children, our fellow workers or some segment of the com-

Some communities and individuals construct memorial buildings or even statues in remembrance of someone now gone. After World War II many towns built swimming pools as living war memorials for the war Auditoriums have been constructed dead with the same idea.

Infuence is carried on even before death by those who donate money to universities and colleges. Some provide scholarships and others buildings. Certainly this is a way to make the world better, by assisting in the education of the younger generation. Some of our Nation's most wealthy famiothers buildings.

lies have started foundations which they hope will contribute to the cultural growth of the country.

But a living memorial need not take money. And it will not necessarily be in the form of a building, or anything the eye can see. Perhaps the most lasting memorial any of us can contribute is contained in the lives of those who live beyond us.

Most of us can recall persons whose lives have become immortal because of lasting influence.

We found an outstanding example of this in reviewing the life of a foundry owner who died at Laguna Beach last week. His name, Clyde Hopping, is not nationally known but his influence is

The life of Mr. Hopping, a distinguished gray-haired gentleman, provides a story which was typical of that we like to think of as fulfillment of the American dream. He

came to Los Angeles when it was only a small city and started a tiny foundry business in nearby Alhambra. By the time of his death the small business was a large one.

foundry was growing prosperously.

What we consider to be Mr. Hopping's memorial goes beyond the business field, how-ever. This was a man whose principles and personality were such that his guidance was sought. And he seemed to take special de-

light in helping young people.

A young attorney from Whittier once profited from the encouragement and thoughts of this senior citizen. Guided in part by the advice, he became a Congressman and then a United States Senator. He now is the Vice President of the United States, RICHARD

Mr. Hopping took special interest in the funior chamber of commerce. One of the youths he worked with, Clifford D. Cooper, climbed to the top of the organization to become president of the United States Junior Chamber of Commerce, the spokesmen for thousands of young men. He now is successful as an industrialist.

The list of young men who will contribute more to their country as the result of knowing this foundryman is long and varied. It includes a young market owner, a rival industrialist, the workers in the foundry, police officers, a Congressman, a Presbyterian minister now in La Jolla. This writer was among those who profited from knowing Clyde

Rotary Clubs throughout southern California will also remember this man-a cham-

pion of service above self.

Looking at this one life, one can only draw the conclusion that one's contributions on this earth need not be accompanied by money to be carried on after death. The opportunity is there for all of us, well known or unknown. It is a man's principles which count.

Thirty-seventh Anniversary of the Ukrainian Republic

EXTENSION OF REMARKS OF

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. McVEY. Mr. Speaker, I wish to join my colleagues in rendering tribute to the 37th anniversary of the founding of the free and independent Ukrainian Republic, which was celebrated on January 22, 1955. Thousands of Americans of Ukrainian descent on that day reaffirmed their active faith in the eventual

liberation of all the enslaved nations in the Communist empire.

As a nation of over 40 million people-the largest non-Russian nation behind the European Iron Curtain-Ukraine stands as one of our most important and natural allies in the eventual defeat of Soviet imperialism. should not ignore its historic claim to national freedom and independence. Its place as a sovereign and equal partner in the building of a free Europe of tomorrow must be assured if the foundation of permanent peace among freedom-loving nations is to be unconquerable.

For two or more nations to coexist there must be a common ground of understanding, based on responsibility, confidence, and respect. Above all, there must be a respect for each other's sovereignty. When sovereignty is respected responsibility and confidence will follow. A Communist dictatorship to hold its people must create havoc between themselves and other nations, such as cold wars, little hot wars and big wars, blaming and pointing to the rest of the world as warmongers and aggressors against them. Ukrainian principles are an abomination to Communists, who would destroy every principle of life that is religious and good, since it is their aim to bend everyone to the atheistic precepts of Marxism.

Attacking the Vice President

EXTENSION OF REMARKS OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, appearing in the Washington Star of January 13, entitled "Eisenhower answers wisely-Refuses to Let Question on Nixon's Tactics Be Used To Generate Friction Inside Republican Party":

EISENHOWER ANSWERS WISELY-REFUSES TO LET QUESTION ON NIXON'S TACTICS BE USED TO GENERATE FRICTION INSIDE REPUBLICAN PARTY

(By David Lawrence)

President Eisenhower is beginning to get the feel of national politics and especially the way prejudices are built out of charges that have no foundation.

Instead of allowing his press conference to be used as a means of encouraging friction inside the Republican Party, the President answered firmly and courageously a question yesterday about Vice President Nixon's speeches which had been the subject of criticism by Speaker RAYBURN and other Democratic leaders. Mr. Eisenhower made it clear that he didn't think Mr. Nixon had accused the Democratic Party of treason, as some Democrats tried to make it appear. By meeting this budding controversy in its incipient stages, the President prevented the Democrats from maneuvering him into a battle inside his own political family.

For several weeks now-in fact, ever since the November elections-various Democratic Party spokesmen have been saying over and over again that Vice President Nixon conducted an unfair campaign because of his references to the handling of Communists in Government by the Truman and Roosevelt administrations. The criticisms have been repeated often in Washington, where there still is a predisposition in some quarters to believe what Democratic politicians say without ferreting out the facts.

The President asked one of the reporters if he was inquiring about Mr. Nixon's speeches on the supposition that the Vice President had said what his critics claimed or on the basis of what Mr. Nixon really did say in the campaign. It turned out that the query was based solely on the allega-tions of the Democrats.

Mr. Eisenhower thereupon said he would give a few facts himself. First of all, he declared that he didn't consider any political party in America to be a party of treason, and that only the Communist Party could be held to be treasonable. At its last session Congress by statute declared the Communist Party subversive.

Next, the President said no such sweeping condemnation of any major party had been made by Mr. Nixon. Mr. Eisenhower revealed that he had been assured by the Vice President himself that never, even by implication, had he tried to condemn an entire party, but that the speeches which had been criticized contained references only to Individual cases and to the way they were handled administratively. Mr. NIXON, the President said, had questioned good judgment but never loyalty.

What the Democrats have employed re-

cently is not, of course, a new device—to raise a smokescreen in rebutting a charge of ad-ministrative incompetence. When Attorney General Brownell made a speech in October 1953 criticizing former President Truman for having been lax in handling the case of Harry Dexter White after the FBI had made specific reports concerning White's role in a Communist ring, there was a hue and cry to the effect that Mr. Brownell had questioned

the loyalty of Mr. Truman.

Despite Mr. Brownell's prompt disavowal of any such inference, the Democrats stuck to the accusation and to this day their speakers repeat the canard that Mr. Brownell questioned the loyalty of the former President.

Now it turns out that the same game is being played in an effort to discredit Vice President Nixon. In the past, such propaganda schemes have not been perceived by Mr. Eisenhower, and some of his answers at press conferences have been susceptible of an unfriendly interpretation with respect to members of his own official family.

By coming out flatly and demanding that the accusers of Mr. Nixon give chapter and

verse to support their criticism, the President is well advised. It shows he is recognizing the importance of uniting the Republican Party and preventing political opponents from driving a wedge between him and other

prominent Republicans.

If the Democrats think it politically desirable to pursue the controversy, they will in the long run be injuring themselves. For the last thing the Democrats should want to see happen is a rehash with kleig lights of all the cases in which the Democratic administrations of the past were remiss in ferreting out Communists and security risks in Government.

The President is acting more like the leader of his party, and it is a healthy sign because in 1956 a united Republican Party is a prerequisite to victory.

GI Educational Benefits Should Be Extended

EXTENSION OF REMARKS OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I made this morning before the House Committee on Veterans Affairs in support of H. R. 587, to permit persons now in the armed services or who will be in service on January 31 of this year to continue to accrue rights of educational benefits despite the termination of the war

emergency on that date. My statement follows:

I strongly urge that this legislation be given prompt and favorable action. President Eisenhower has given his sup-

port to this legislation. His press secretary

stated on January 13, 1955:

"We would be very much in favor of it. The President believes that it would be unfair to take those rights (school accrual rights) away from men already in service. We could not include that in the Executive order (terminating the war emergency) because it required approval of Congress and legislation was necessary. We are in favor of such legislation."

I have received a number of letters from parents of young men now in service asking that justice be done in the cases of those who had voluntarily joined the armed services on the understanding that GI educational benefits would continue. It is only fair that these men who entered the service with this understanding, and whose educa-tion is being interrupted, be given a chance to complete their education when they are released from active duty.

The educational benefits program has been one of the most valuable and successful projects for veterans. To cut off their rights of accruing benefits as of January 31 would be an unfair hardship; and their loss of educational opportunities would also be a

loss to the public.

Thirty-fifth Anniversary of the United States Junior Chamber of Commerce

EXTENSION OF REMARKS

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. MAILLIARD. Mr. Speaker, I should like to call to the attention of the House the 35th anniversary of the United States Junior Chamber of Commerce observed January 21, 1955.

I have had a personal interest in the work of this fine organization for almost a decade, having been an active member, committee chairman, and member of the board of directors of the San Francisco Junior Chamber of Commerce.

The Jaycees have grown to where they now command the well-established position of one of America's most dynamic groups. I understand that nationally there are over 2,750 local chapters and 200,000 individual members. In addition, the junior chamber is worldwide in scope; it exists in 58 countries and has a foreign membership of over 100,000 young men practicing the same democratic principles that we practice here.

I am particularly proud of the fine Work our California Junior Chamber has done. Their slogan, "California Jaycees Get the Job Done," indicates the attitude with which this organization operates. In addition to participation in civic improvement and public affairs, the California organization encourages and emphasizes youth development and leadership training in young men.

I wish to extend my sincere congratulations to the United States Junior Chamber of Commerce for its work in the past and best wishes for continued success in the future.

Its Treachery

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio broadcast I delivered over WMEX, Boston, Mass., on Saturday, September 18, 1954.

The address follows:

EYEWITNESS REPORTS ON COMMUNISM AND ITS TREACHERY

Communism mocks divine precepts and human virtues.

Honor, truth, justice, kindness—these have no meaning for the Reds except as balt with which to trap humanity and imprison it in slavery.

There is no wider gulf in the world than the distance and the difference between Communist promises and Communist prac-

To expose this cruel deceit, the Committee on Communist Aggression of the United States House of Representatives conducted hearings in Chicago, New York, London, Munich, and Berlin. Out of these came first-hand reports from those who had escaped the Red terror, ripping the mask from Communist propaganda, and destroying for-ever the illustion that the free world can coexist with this menace to all human freedoms.

I want to bring to you some of the findings of that report.

The cross section of witnesses included members of former ruling royal houses as well as ordinary workers and peasants; internationally known generals, political leaders, and soldiers; members of the formerly free parliaments and governments; clergy-men of all denominations; labor leaders, seamen, and housewives, intellectuals, and even children. They were people who escaped from their Communist-controlled homelands just a few months ago, as well as those who escaped during and after World War II.

As the report says: "Barbed wires, mined fields, machineguns, savage dogs, and ruthless frontier guards, have not been able to shut the door of freedom to those who chose escape to the West."

It is proof that communism with all its power can never conquer the human yearning for freedom.

All who testified had one thing in common: they were eyewitnesses. They saw. They experienced. They were there. Most They experienced. of them suffered the tortures of communism. They came separately from the different nations enslaved by communism, but with fundamentally the same story: the antihuman nature of real life under communism. The basic conclusions from their total testimony, under oath, cannot be questioned. It was a tragic parade of witnesses—people from another world, a dreadful world of mass murders and anonymous graves, of concentration camps, torture prisons, slavelabor camps, the ever-present secret police, and hatred, hatred beyond the comprehension of us Americans.

For years the world has been bombarded with propaganda that communism was both a system and a method to establish a utopia, a workers' paradise. Under it there would be no injustices and inequities which Marx had no injustices and inequities which mark had charged up against both capitalism and Christianity. Communism would establish a classless society. The state would no long-er exist. So communism preached.

But how did actual conditions measure up to these rosyhued promises?

The Select Committee on Communist Aggression was authorized by Congress to investigate and find out the truth.

What they found was shocking, to say the

Testimony revealed that communism was able to fix its rule upon the people of cap-tive nations only when it was supported by the Red army, preceded by subdivision which was politically, technically, and financially engineered by the Kremlin. As soon as the Communist-controlled Red army, infiltrated and dominated as it was by political commis-sars and elements of the NKVD, entered any area, terror, robbery, and violations of women and children became the order of the day. The people learned through bitter experience that the Communists would do whatever they wanted to do without regard for any laws, ethics, or moral codes. The people also learned that any opposition to whatever action the so-called Communist liberators took, meant certain imprisonment or death.

Then came Kremlin agents working with local traitors.

They set up governmental bodies which they tried to clothe with the appearances of legality and respectability to mislead the world and confuse local public opinion.

King Michael of Rumania testified that at the time he was the constitutional head of the country, on March 6, 1945, he stated to Mr. Vishinsky, the then Soviet foreign min-ister: "I am doing things in our manner and according to the interests of my country, and besides, the conference at Yalta says that every country is free to choose its own form of government."

To which Vishinsky bluntly replied: "In this case I am Yalta, and I tell you what to

A recent escapee from Hungary put it this way: "Before the war I had the right to vote, and elections were held in an orderly manner. Everyone could vote for the party of his choosing. After the Communists took over completely in 1948, when the elections were held, we received the ballot and couldn't even look at it. We didn't even know who the people on the ballot were. We simply placed the list in an envelope, sealed it, and dropped it in the box. At the same time the Communists transported truckloads of Communist soldiers all over the district who voted many times. That was all. It was a

To destroy non-Communist political forces, the Reds resort to mass arrests and deportations. Testimony was taken by our congressional committee from many who were themselves deported. They told how men, women, and children were awakened in the darkness of night, given 1 hour to pack their modest belongings, were locked in cattle cars for transportation to Siberia. For days they had no food, water, heat, or sanitary facilities. They died like files.

To break resistance they practice manmade famines.

In the Ukraine during 1932 and 1933, when the harvest was above average, it is estimated that from 6 to 7 million people starved to death.

Armed guards were placed around the churches and other buildings used for stor-ing grain and the grain was allowed to spoil while people begged for something to eat. Mrs. Anna Kravchenko testified that about one-half of the people in the village where she lived died from starvation, and that special brigades of Communists were sent from Moscow to search out all food and to confiscate it.

Another witness, who requested that his true identiy not be disclosed because a large number of his relatives still live in the Ukraine, gave vivid testimony of the way in which the Communists covered up the millions of deaths caused by their planned famine. He told how a famous statesman visited the Ukraine during the time of the famine, and was taken on a conducted tour by the Communists. Every minute of his visit, every home he saw, every person he talked to, every route he followed was carefully prearranged without his knowledge. He saw the fronts of houses newly painted, while directly in back of them peo ple were living like animals in holes dug in the ground. He saw in the windows of the country shops along his prepared route, stocks of loaves of bread, and people who appeared to be freely buying them. he was not allowed to see was that behind these shops and newly painted houses the police had closed off all roads to the faminestricken population.

Other witnesses testified to instances of cannibalism, of how parents tried to save their children by turning them over to the State children's homes, how the militia would punish them if they were caught leaving their children anywhere near those homes, of how quotas were set each day for collecting corpses for burial in the fields.

We can imagine that Clement Atlee, former Prime Minister of Great Britain, and other Laborites were given the same false front tour when they recently visited Russia and China.

As to life under the Communist tyranny, Jan Jasinski testified, and I quote: arrested me about 3 a. m. and took me to Kilce. When they saw that they were not getting much out of me, they began to torture and beat me. They poured salt water down by nose and pinched by fingers in a door joint. They used what looked like a twisted copper cable to beat the soles and heels of my feet, cutting the flesh so badly that I couldn't walk except on my hands and knees for 6 weeks. After 6 years in prison I escaped with a friend to the Czechoslovakia-German border. I got across, but my friend was killed."

Multiply that testimony by millions of other cases and you begin to get the picture of the cruelty and the terror that communism tries to palm off as paradise.

The committee is in possession of documentary material relating to the violent persecution of all forms of religion.

Eyewitness testimony concerning Cardinal Mindszenty's ordeal and his show trial was received by the committee. The cardinal appeared with his face gaunt and emaciated covered by a pink makeup to create an impression of health. He used Communist jargon as if it was his usual way of speaking. Saliva was trickling down his chin. He was unable to control his voice. The fraudulent nature of his trial and the false confession forced upon him by his tormenters, were exposed.

The select Committee on Communist Aggression of the United States House of Representatives, after considering a mountain of evidence detailing Communist crimes, came to the conclusion that peaceful coexistence is a Communist myth which can be attained only through the complete surrender of our free way of life for one of sia-very under Moscow-controlled communism.

Knowing the fate that awaits us should we fail should make all of us more vigilant. Peace and freedom will be in mortal dan-

ger as long as the thing called communism reaches out to enslave the world.

The Late Dwight L. Rogers

SPEECH

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 5, 1955

Mr. HAYS of Arkansas. Mr. Speaker, every Member of the House who had the great privilege of serving with DWIGHT Rogers begins this session with a sense of grief. His death robs us of an association we cherished, and the Nation of the service of an able and devoted public servant. His responsible use of his rare endowments of mind and heart for the advancement of his State and Nation was widely recognized, and the passing of such a leader brings great personal

In one of his last utterances in this Chamber, DWIGHT ROCERS spoke of the curtain of death. It is our faith that the drawing of this curtain opens the way to a larger life, and certainly our beloved Member from Florida was prepared for the adventure. We may say of him, as Georgia Harkness said of her friend, Galen Fisher:

He was a gentle soul of valiant strength.

In him was life forever young and strong; Around the world men loved him, for the length

Of shadow that he cast was straight and

The new year comes-the old must have an

And many a wish is spoken, kind and true. So, forward turns the spirit of our friend To work with God in fields of service new.

Dangerous Dependence

EXTENSION OF REMARKS OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kane (Pa.) Republican of January 15,

DANGEROUS DEPENDENCE

Russell R. Brown, general counsel of the Independent Petroleum Association of America, recently made a report to the president of that organization which should interest everyone in Kane and its surrounding area. He warned that propaganda of oil importing companies is leading America into a state of complacency over increasing dependence on foreign oil.

Mr. Brown pointed out the obvious but seldom recognized fact that these companies have been using publications, speeches, radio, television, and paid publicity to further the myth that continued excessive imports of foreign oil are necessary.

He also stated that the American people would not stand for the United States becoming dependent on foreign sources for water power, which now supplies about 4 percent of our total energy needs. But he added, we are already more dependent on imported oil which now constitutes about 6 percent of the Nation's energy needs.

We'd like to go a step further than Mr. Brown and point out that in time of war, particularly if that war should be with the Soviet Union, a large part of those foreign sources would be cut off from us. For example, the enormous Saudi Arabian fields lie just 600 miles south of Russia and could be overrun in a few days' time if the Russians decided to move against them. In such an event, our dependence on foreign sources would be a costly and highly dangerous business.

Havm Salomon: Son of Liberty

EXTENSION OF REMARKS

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. KLEIN. Mr. Speaker, under unanimous consent, I ask to have printed in the Appendix of the RECORD an editorial by Harry H. Schlacht, noted jour-nalist, entitled "Haym Salomon: Son of Liberty," which appeared in the issue of the East Side News on January 8, 1955.

The story of Haym Salomon and his contribution to the cause of American freedom, is picturesquely portrayed in Mr. Schlacht's article. It should, in the opinion of outstanding historians, be thoroughly familiar to every citizen in the United States, for Haym Salomon's life typified the finest traditions of our land, and should prove an inspiration to all of us.

Mr. Schlacht pleads that this country should remember Haym Salomon for his patriotic services. He asks that Congress pass a resolution setting aside a Haym Salomon Day, so that this American hero should not be forgotten.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

> HAYM SALOMON: SON OF LIBERTY (By Harry H. Schlacht)

Haym Salomon, one of our early American patriots, is still remembered for his contributions to the cause of American freedom. He loved our land so much. He served it so well.

We honor the 170th anniversary of the death of Haym Salomon, son of American liberty. We salute his memory, his example, his inspiration, and his achievements to the cause of American independence.

The American Revolutionary period was a time that tried men's souls. It was also a time that tried men's purses. We remember with gratitude this great Jewish patriot whose qualities of mind and heart endeared him to our Founding Fathers.

The life story of this noble man is both fascinating and tragic. He saw from afar the temple of liberty rising like an exhalation from the soil. He saw beneath its shielding dome a home for oppressed peoples. He saw God's country, where kings were unknown, where liberty was a star, where thrones were

Havm Salomon came to our blessed shores from Lissa, Poland, seeking religious free-dom. He came to help build a Nation which gives to bigotry no sanction; to persecution no assistance. He gave all that he had, he gave all that he could borrow, that this Nation might be conceived in liberty.

It was Haym Salomon who helped raise the money to equip the Continental Army, who contributed all of his personal fortune, who gave his all to enable George Washington to keep his tattered forces on the march until victory was won. It was he who advanced \$640,000 in freedom's holy cause. And he died penniless.

Haym Salomon was a man of great character, of noble self-sacrifice, of whole-hearted patriotism, of martyrlike devotion to high ideals. He was a simple man; the badge of a great soul. He toiled, sacrificed. and lived in the very shadow of anonymity. He would have shrunk from wordly acclaim. He loved America with deeds and dedication, and he merits the gratitude of our Nation.

As we contemplate the life of Haym

Salomon in the light of his background, as

We dwell upon the character of this immigrant who came here to seek liberty, as we think back upon the deeply rooted passion which he derived from his Hebrew heritage— We are reminded of an ancient Hebrew legend.

This legend, relating the creation of man, tells of God gathering the dust from all parts of the earth—from the East and the West, from the North and the South. This was done the legend recounts, so that no country or nation could say that of it alone did God create the human race.

In Chicago there are statues of George Washington, Robert Morris, and Haym Salomon. These patriots symbolize America at its very best. Each worshipped God in his own way. Each dared the hangman's halter, yet each held as one the torch of liberty.

Let America remember Haym Salomon. Let the Congress pass a resolution setting aside a Haym Salomon Day. Let the President of the United States sign this resolution. Let Haym Salomon cease to be the forgotten man in American history.

His contribution to the cause of American independence should be deeply engraved in our hearts and indelibly inscribed in our historic annals. He belongs to us, he is ours by more than the patriotic self-devotion with which he came to the aid of our country in the crisis of our fate.

He is ours by the unshakable gratitude for his services, which is the precious portion of our inheritance. He is ours by that the of love stronger than death which links his name for the endless ages with Washington, Jefferson, Morris, Madison, and the other immortals of our glorious history.

Buy American-Made Goods

EXTENSION OF REMARKS.

HON, THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955
Mr. LANE. Mr. Speaker, under leave

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very appropriate editorial from the Boston Post, Boston, Mass., Saturday, January 1, 1955:

BUY AMERICAN

Administration plans dating back to last March to modify the national policy of buy American are apparently going to be abandoned. This buy-American policy was enacted away back in 1933 at the bottom of the depression, and was designed to promote purchase of American-made goods as against foreign goods in order to stimulate home production. In recent years when the Government has been spending billions of dollars in buying goods from friendly foreign countries, there has been complaint at home that we have been too generous. On the other hand the foreign governments complain when their bids are turned down, if they are anywhere near the level of the domestic producer's price.

An important advantage in buying the home product is, not only that it furnishes employment for our own labor at a time when asveral million are unemployed, but we also get a cut in the profit of the home producer through taxation which amounts to 52 percent of the total profits made by a corporation. That the foreign competition has already been built up to serious proportions by our heavy buying of military equipment abroad was indicated the other day when proposals were made by some of our Government officials to deny the foreign producer the advantages of American know-how in production.

Invitation to House Members To Give House Un-American Activities Committee Their Ideas About Committee Rules of Procedure

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1955

Mr. DOYLE. Mr. Speaker, at the executive meeting of the House Un-American Activities Committee for the 84th Congress, which committee meeting was held on January 20, presided over by the new chairman, Hon. Francis E. Walter, Pennsylvania, the following three members were named as a subcommittee to consider and report back to the full committee on the subject of committee rules of procedure for the committee investigations and hearings during the 84th Congress. The subcommittee appointed was Hon, CLYDE DOYLE, Democrat, California, chairman; Hon. EDWIN E. WILLIS, Democrat, Louisiana; and Hon. HAROLD H. VELDE, Republican, Illinois.

During the 83d Congress your Committee on Un-American Activities operated under a printed and publicly announced and distributed set of rules from July 1953, and the same rules were approved for the committee's operations for the 84th Congress, subject to changes and amendments which may be adopted by the full committee, based upon the report of the Subcommittee on Rules in this statement announced. It was my pleasure to be chairman of the Committee on Rules for the committee during the 83d Congress. Mr. Velde, full committee chairman, was the other member. We have been informed that it is probable that the rules promulgated and published by us on July 15, 1953, is the first time in recent history, at any rate, of Congress, that such a set of rules was printed and distributed for the benefit of witnesses before congressional committees and for their legal counsel and also for the information of the

Pursuant to the continued desire of the House Un-American Activities Committee to have and receive the benefit at all times of the considered opinions of all Members of the House on this important subject of rules of procedure, I this day sent to all Members of the House the following invitation to participate in aiding the subcommittee in its submission of any changes or amendments to the full committee:

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES, Washington, D. C., January 21, 1955.

MY DEAR COLLEAGUE: Good morning. Your House Un-American Activities Committee on yesterday named the following subcommittee to bring back to the committee, by February 20, its report and recommendation relating to the committee rules. The subcommittee is as follows: CYDE DOYLE, California, chairman; EDWIN E. WILLIS, Louisiana; and HAROLD H. VELDE, Illinois.

The Committee on Un-American Activities has been operating under a printed set of rules which were publicly announced on

July 15, 1953. I am placing those rules in the Appendix of the Congressional Record to help you the better to cooperate with your committee and to have an opportunity for your expression of opinion and recommendations as to any additional or different rules and procedures which you may wish to recommend to the Committee on Un-American Activities.

This is a cordial invitation for you to send me on or before Tuesday, February 1, what you wish your Committee on Un-American Activities to consider in this matter of rules of procedure for the committee.

Address your communication as follows: Representative CLYDE DOYLE, of California, 1030 House Office Building.

With best wishes to you for a year of achievement and satisfaction, I have the honor to be,

Your colleague,

CLYDE DOYLE, Member of Congress.

P. S.—The present rules of the House Un-American Activities Committee will appear in the Appendix of the Congressional Record for Monday, January 24, or Tuesday, January 25, with extension of remarks by me.

Said full committee will receive the subcommittee report on or about February 20. Although the rules of procedure which guided the committee during the 83d Congress, subsequent to July 1953, when they were adopted were announced in the appendix of the Congressional Recompromptly after adoption and were reported to the full committee by the subcommittee consisting of Hon. Clyde Doyle, chairman, and Hon. Harold H. Velde, I am sure that all the Members of the House, and especially the new Members, will appreciate having the text of the existing rules brought to their attention, as it will clearly help all the Members to promptly consider what changes, amendments, or additions they would recommend; and then to promptly send these changes and recommendations to me on or before February I.

The Committee on Un-American Activities for the 84th Congress consists of the following: Francis E. Walter, chairman; Harold H. Velde; Bernard W. Kearney; Donald L. Jackson; Edwin E. Willis; Gordon H. Scherer; Morgan M. Moulder; Clyde Doyle; and James B. Frazier, Jr.

Said rules now in effect, and which were printed in a handy, attractive booklet for distribution to all witnesses, counsel, and other interested parties are as follows:

PUBLIC LAW 601, 79TH CONGRESS

The legislation under which the House Committee on Un-American Activities operates is Public Law 601, 79th Congress (1946), chapter 753, 2d session, which provides:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, * * *. "Part2-Rules of the House of Representa-

tives "Rule X

"Section 121. Standing committees

"17. Committee on Un-American Activities, to consist of nine members.

"Rule XI

"Powers and duties of committees

"(q) (1) Committee on Un-American Activities.

(A) Un-American Activities.

"(2) The Committee on Un-American Activities, as a whole or by subcommittee, is authorized to make from time to time investigations of (i) the extent, character, and objects of un-American propaganda activities in the United States, (ii) the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign countries or of a domestic origin and attacks the principle of the form of government as guaranteed by our Constitution, and (iii) all other questions in relation thereto that would aid Congress in any necessary remedial legislation.

'The Committee on Un-American Activities shall report to the House (or to the Clerk of the House if the House is not in session) the results of any such investigation, together with such recommendations as it

deems advisable.

"For the purpose of any such investigation, the Committee on Un-American Activities, or any subcommittee thereof, is authorized to sit and act at such times and places within the United States, whether or not the House is sitting, has recessed, or has adjourned, to hold such hearings, to require the attendance of such witnesses and the production of such books, papers, and documents, and to take such testimony, as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any subcommittee, or by any member designated by any such chairman, and may be served by any person designated by any such chairman or member."

RULES OF PROCEDURE

I. Initiation of investigations: No major investigation shall be initiated without approval of a majority of the committee. Pre-liminary inquiries, however, may be initiated by the committee's staff with the approval of the chairman of the committee.

II. Subjects of investigation: The subject of any investigation in connection with which witnesses are summoned or shall otherwise appear shall be announced in an opening statement to the committee before the commencement of any hearings; and the information sought to be elicited at the hearings shall be relevant and germane to the subject as so stated.

III. Subpenaing of witnesses:

A. Subpenas shall be signed and issued by the chairman of the committee, or any member of the committee designated by said chairman.

B. Witnesses shall be subpensed at a reasonably sufficient time in advance of any hearing, said time to be determined by the committee, in order to give the witness an opportunity to prepare for the hearing and to employ counsel, should he so desire.

IV. Executive and public hearings;
A. Executive:

(1) If a majority of the committee or subcommittee, duly appointed as provided by the rules of the House of Representatives, believes that the interrogation of a witness in a public hearing might endanger national security or unjustly injure his reputation, or the reputation of other individuals, the committee shall interrogate such witness in an executive session for the purpose of determining the necessity or advisability of conducting such interrogation thereafter in a public hearing.

(2) Attendance at executive sessions shall be limited to members of the committee, its staff, and other persons whose presence is requested, or consented to by the committee.

(3) All testimony taken in executive sessions shall be kept secret and shall not be released or used in public sessions without the approval of a majority of the committee.

B. Public hearings:

(1) All other hearings shall be public. V. Testimony under oath: All witnesses at public or executive hearings who testify as to matters of fact shall give all testimony under oath or affirmation. Only the chairman or a member of the committee shall be empowered to administer said oath or

VI. Transcript of testimony:

A complete and accurate record shall be kept of all testimony and proceedings at hearings, both in public and in executive session.

Any witness or his counsel, at the expense of the witness, may obtain a transcript of any public testimony of the witness from the clerk of the committee.

Any witness or his counsel may also obtain transcript of any executive testimony of the witness:

(1) When a special release of said testimony prior to public release is authorized by the chairman of the committee or the chairman of any subcommittee; or

(2) After said testimony has been made public by the committee.

VII. Advice of counsel:

A. At every hearing, public or executive, every witness shall be accorded the privilege of having counsel of his own choosing.

B. The participation of counsel during the course of any hearing and while the witness is testifying shall be limited to advising said witness as to his legal rights. Counsel shall not be permitted to engage in oral argument with the committee, but shall confine his activity to the area of legal advice to his client.

VIII. Conduct of counsel:

Counsel for a witness shall conduct himself in a professional, ethical, and proper manner. His failure to do so shall, upon a finding to that effect by a majority of the committee or subcommittee before which the witness is appearing, subject such counsel to disciplinary action which may include warning, censure, removing from the hearing room of counsel, or a recommendation of contempt proceedings.

In case of such removal of counsel, the witness shall have a reasonable time to obtain other counsel, said time to be determined by the committee. Should the witness deliberately or capriciously fail or refuse to obtain the services of other counsel within such reasonable time, the hearing shall continue and the testimony of such witness shall be heard without benefit of counsel.

IX. Statement by witness:

A. Any witness desiring to make a pre-pared or written statement 2 for the record

¹The committee seeks factual testimony within the personal knowledge of the wit ness and such testimony and answers must be given by the witness himself and not suggested to witness by counsel.

*Statements which take the form of personal attacks by the witness upon the motives of the committee, the personal characters of any Members of the Congress or of the committee staff, and statements clearly of the proceedings in executive or public sessions shall file a copy of such statement with the counsel of the committee within a reasonable period of time in advance of the hearing at which the statement is to be presented.

B. All such statements so received which are relevant and germane to the subject of the investigation may, upon approval, at the conclusion of the testimony of the witness, by a majority vote of the committee or subcommittee members present, be inserted in the official transcript of the proceedings

X. Rights of persons affected by a hearing: A. Where practicable, any person named in

a public hearing before the committee or any subcommittee as subversive, Fascist, Communist, or affiliated with one or more subversive-front organizations, who has not been previously so named, shall, within a reasonable time thereafter, be notified by registered letter, to the address last known the committee, of such fact, including:

(1) A statement that he has been so

named.

(2) The date and place of said hearing.
(3) The name of the person who so

testified.

(4) The name of the subversive, Fascist, Communist, or front organization with which he has been identified; and

(5) A copy of the printed rules of procedure of the committee.

B. Any person, so notified, who believes that his character or reputation has been adversely affected or to whom has been imputed subversive activity, may within 15 days after receipt of said notice:

(1) Communicate with the counsel of the

committee.3 and/or

(2) Request to appear at his own expense in person before the committee or any subcommittee thereof in public session and give testimony, in denial or affirmation, relevant and germane to the subject of the investigation.

C. Any such person testifying under the provisions of B (2) above shall be accorded the same privileges as any other witness appearing before the committee, and may be questioned concerning any matter relevant and germane to the subject of the investigation.

XI. Admissibility of testimony: A witness shall be limited to giving information relevant and germane to the subject under in-The committee shall rule upon vestigation. the admissibility of all testimony or information presented by the witness.

XII. Relationship of husband and wife: The confidential relationship between husband and wife shall be respected, and for reasons of public policy, one spouse shall not be questioned concerning the activities of

in the nature of accusation are not deemed to be either relevant or germane.

* All witnesses are invited at any time to confer with committee counsel or investigators for the committee prior to hearings.

The House Committee on Un-American Activities is a congressional committee, not a court (see pp. IV and V). Moreover, the committee has neither the authority nor the vast powers of a court of law.

A congressional committee conducts &

search for information, not a trial.

The requirements of time, the nature of the fact-finding hearing, the complications of travel, the realities of expense, and the voluminous duties of Members of Congre all add together to make it impractical for courtroom procedure to be followed.

The committee has given frequent and diligent consideration to this subject, and has determined that in order to carry out its re-sponsibilities imposed by law, the rules of evidence, including cross-examination, are not applicable.

the other, except when a majority of the committee or subcommittee shall determine otherwise

XIII. Televised hearings:

A If a hearing be televised:
(1) Television facilities in the hearing room shall be restricted to two cameras, the minimum lighting facilities practicable, and the television production shall be available on a pool basis to all established television companies desiring participation.

(2) Telecasts of committee hearings shall be on the basis of a public service only, and this fact shall be publicly announced on television in the beginning and at the close of each telecast. No commercial announcements shall be permitted from the hearing room or in connection therewith, and no actual or intimated sponsorship of the hear-

ings shall be permitted in any instance.

B. Upon the request of a witness that no telecast shall be made of him during the course of his testimony, the chairman shall direct that television cameras refrain from Photographing the witness during the taking

of his testimony.

XIV. Committee reports:

A. No committee reports or publications shall be made or released to the public without the approval of the majority of the com-

B. No summary of any committee report or publication and no statement of the contents of such report or publication shall be released by any member of the committee or its staff prior to the official issuance of the report.

XV. Witness fees and travel allowance:

Each witness who has been subpensed, upon the completion of his testimony before the committee, may report to the office of the clerk of the committee, room 227, Old House Office Building, Washington, D. C., and there sign appropriate vouchers for travel allowances and attendance fees upon the committee. If hearings are held in cities other than Washington, D. C., the witness may contact the clerk of the committee, or his representative, prior to leaving the hearing room.

XVI. Contempt of Congress: No recommendation that a witness be cited for contempt of Congress shall be forwarded to the House of Represeentatives unless and until the committee has, upon notice to all its members, met and considered the alleged contempt, and by a majority of those present voted that such recommendation be made.

XVII. Distribution of rules: All witnesses appearing before the House Committee on Un-American Activities shall be furnished a Printed copy of the rules of procedure of the committee.

Internal Security

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Washington Post and Times Herald of January 20, 1955, entitled "Clearly Consistent," together with an article from the New York Herald Tribune of January 21, 1955, entitled "Why Security Needs Review":

[From the Washington Post and Times Herald of January 20, 1955]

CLEARLY CONSISTENT

Harold Stassen's statement detailing the reasons why the Foreign Operations Administration hired Wolf Ladejinsky went as far as it could to restore some balance in this atroclously mishandled affair. President Eisenhower at his press conferences yesterday seemed aware of the confusion caused by his unfortunate remarks of last week. But the procedure he enunciated for resolving differences within the Cabinet on such matters did not strike at the heart of the The lesson of the Ladenjinsky case will be lost unless there is recognition that the standards of the security program itself contain a built-in formula for conflict as well as injustice.

Especially for this reason some more com-prehensive reform is needed than the rather vague continual review mentioned by the President. That is, a reappraisal which, while respecting the real security needs of the Government, will point the way toward a more judicial, less capricious system for weighing the qualifications of individuals. Essential to such reform, it seems to us, is a change from the current negative regulation that employment must be clearly consistent with national security-a remote doctrine that prods the phobias of gumshoe security officers and invites administrators to employ the most ill-founded doubts and hearsay as a rationale for branding a person a security risk.

Just this sort of reform was suggested by former Senator Harry P. Cain the other day when he proposed instead a regulation that no person should be dismised on security grounds unless his employment were found to be "reasonably inconsistent with the na-tional interest." This suggestion, incidentally, was of a constructive and positive na-ture, and it deserved more recognition than it received from the President.

Some significant private work is being done in this area by such studies as that being made for the Fund for the Republic by the Association of the Bar of the City of New York. It is important, too, to take note of the generous move of the District bar association in making legal counsel available to defendants in security cases who cannot retain attorneys of their own. But something broader is needed, something that will convey official authority and responsibility. Many months ago this newspaper suggested the appointment of a Commission of distinguished and disinterested men to study and report on the checks and balances nece in an internal security system. Several bills are pending in Congress—notably those by Senator Humphrey and Representative Fre-LINGHUYSEN-to establish a bipartisan group for this purpose. Congress could do no more important work in this troubled area than to approve such a study. The cross currents in the Ladejinsky case are but another reminder of the compelling need for some astringent means of bringing sanity to a system which, however praiseworthy its intention, has gone berserk in far too many applications.

[From the New York Herald Tribune of January 21, 1955]

WASHINGTON

(By Roscoe Drummond)

WHY SECURITY NEEDS REVIEW

WASHINGTON .- The Eisenhower administration is being pressed from numerous di-rections to undertake a thorough, top-level review of its security program.

The President doesn't like this pressure, and would like to resist it firmly. But plainly the White House does not feel too secure in resisting it and would like to find some way of giving the security program a little check-up but not a real review.

Mr. Eisenhower has announced that a spe cial division of the Justice Department will give security advice on troublesome mat-ters referred to it by department heads and that in order to avert another Wolf Lade-jinsky case any future conflicts of judgment will be referred to him personally before

action is taken.

This is a tentative, timid move in the right direction. I am convinced that it rests upon an inadequate appreciation of the widespread, genuine anxiety that the security system, however unintentionally, is doing too much harm to too many innocent per-

A bolder, more energetic, less smug, more questioning reexamination is needed. My judgment would be that if the administration does not act promptly and decisively. it will do itself serious damage—not just in the eyes of its critics but in the eyes of many people who esteem the President's good intention.

The security program must have two controling objectives:

To safeguard the security of the Government from subversion.

To safeguard the integrity of the individual from injustice.

There was a period when, as I see it, the Truman administration seriously neglected the first of these two objectives and came tardly to recognize its mistake. It wundoubtedly hurt because of this mistake.

Today, the Eisenhower administration runs the danger of itself becoming the victim of so much concentration on the one goaltotal, technical security—that it neglects the other-full, faithful, painstaking justice to the individual.

This administration is certainly not soft on subversion, and that's good. But it can't afford to be soft on injustice. It doesn't intend to be but enough has already gone wrong on the side of unfairness to make it imperative that the administration give its program a good, hard look.

Former Republican Senator Harry P. Cain, strongly conservative, strongly anti-Communist, now a member of the Subversive Activities Control Board, has courageously warned that the security program is "unnecessarily destroying individuals" and making it seem that mental blanks are the nearly ideal can-

didates for Government jobs.

"A whole clique of spies," he says, "could hardly do as much damage to us as could our failure as a government to have confidence in our people." He referred to "brutality of bureaucracy at its worst," a bureaucracy which at times seems more powerful than the men who make it up and even capable of reversing their intentions.

Obviously the administration wants to avoid another Ladejinsky case, but another Ladejinsky case is already in the making. There is in the Pentagon right now a top scientist doing valuable work in weapons development who has been fully and carefully cleared for top secret work by one branch of the armed services and refused clearance by the Defense Department itself—each operating theoretically under the same

If the security program is operating as well as the President honestly thinks, the country needs to be convinced. If it is operating as loosely as many others honestly think, the President ought to be convinced. In either event, a searching and self-searching review is desirable.

The Late Kenneth Charles Morton Sills

EXTENSION OF REMARKS OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. HALE. Mr. Speaker, I have asked for this time to memorialize, briefly as I know I must, the life and services of a citizen of Maine who died on November 15 last. I refer to Kenneth Charles Morton Sills, president emeritus of Bowdoin College, one of the best known and best loved men who ever lived in our State.

Born in Halifax, Nova Scotia, on December 5, 1879, he came to Portland, Maine, with his parents in the year following. His father was for several years dean of St. Luke's Episcopal Cathedral in Portland. Kenneth Sills graduated from Bowdoin in 1901. He returned in 1903 as instructor for a single year in classics and English. He came back to the college again in 1906, to teach Latin, and remained at the college until his retirement in 1952. As it happens, I was a freshman at Bowdoin in 1906 and from the day of his advent to the college down to the moment of his death I was his devoted and admiring friend.

In 1910 Mr. Sills became dean of the college, in 1917, acting president, and in 1918, president. His services as president terminated with his retirement at the close of the academic year in 1952. For the rest of his life he was president emeritus. In the later years of his incumbency as president of Bowdoin, he was senior in point of service to most of the college presidents in the country. His judgment was sought and followed by educators everywhere. After his official retirement in 1952, he was constantly active in the cause of education and in an endless succession of good works.

I shall attempt no lengthy biographical sketch of former President Sills, nor shall I list his honors academic or otherwise. I am glad to see that my colleague the Honorable Frederick G. Payne referred to these in brief remarks which he made in the Senate on December 1st, 1954. See the Appendix to the Record, pp. 6887, 6888. I should have made these remarks more seasonably had not the House been in recess at the time of his death, and thereafter until this month.

Kenneth Sills was above all an educator, concerned with the great responsibility of helping immature minds to become mature—of making boys into effective men. He believed in the liberal arts and in the humanities. In his life he exemplified the famous words of Terence, "Homo sum, humani nihil a me alienum puto."

As president of Bowdoin College for 34 years and a member of its faculty for an even longer period, Kenneth Sills naturally left a strong impress on the college. No one who attended it in all those years will gainsay his influence on the college and few will gainsay his influence on their own individual lives. That influence was unfailingly for good. He believed in men. He believed in men's hearts, and in their intellects.

Although we was primarily an educator his mind, like all first-rate minds, wandered into many fields and illumined whatever it touched. It goes almost without saying that he took an acute interest in everything that went on in the world about him. He was deeply concerned with the government of his State and of his Nation. A lifelong Democrat, and his party's candidate for the United States Senate in 1916, he was nevertheless no narrow or hidebound partisan. Though he had not the

temperament of the professional reformer, he was always thinking about how things could be better done. Only a few weeks before his death he and I were corresponding vigorously about possible amendments to our State consti-

President Sills was a profoundly religious man. He was for many years one of the leading laymen in the Protestant Episcopal Church.

One cannot write about Kenneth Sills in terms of particular things he did or said or even of his opinions and judgements. He will be most remembered by everybody who knew him for his capacity for friendship, and the generosity of feeling which endeared him to all with whom he came in contact. He had a warm, responsive nature. To the students of the college, to its alumni, to the members of its boards of trustees and overseers, he gave himself ungrudgingly. His friendship was always stimulating. He brought out the best in people because he believed in them. I can never forget his kindness to me on occasions without number and for much more than a generation.

Also I cannot forbear to mention his devoted wife, now left a widow. The hearts of all his friends go out to her in her sorrow.

Foreign Oil Imports

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Bradford Era, of November 23, 1954:

FOREIGN OIL IMPORTS

A showdown is coming soon on this matter of imports of foreign oil. No matter how they are analyzed or explained, imports are too high for domestic producers to take without a fight.

This was evident in the temper and the statistics displayed at last week's meeting of the Independent Petroleum Association of America. Partisan this outfit may be, but its statistics are pretty sound and its forecast is the best available at present.

cast is the best available at present.

Here's the estimate of the current year compared with 1953; Total demand up 1 percent, domestic production down 0.9 percent, imports up 1.5 percent.

The 1955 forecast: Total demand up 3.1 percent, domestic production up 2.3 percent, imports up 7 percent.

And that's not the whole picture. The most significant factor is domestic capacity to produce. If this were slipping, imports would be welcome, and no problem.

In recent years the domestic industry has

In recent years the domestic industry has increased its capacity to produce crude oil by 300,000 to 400,000 barrels daily each year. This is more than the average annual increase in total demand in this country during the same period.

Several years ago we had a reserve capacity to produce 1 million barrels per day beyond the then current rates—a desirable safety factor though expensive for the industry to carry. Today that reserve capacity is in the neighborhood of 1,700,000 barrels per day—so high that producers say it hampers future expansion.

Imports were 12.8 percent of new supply in 1953, will be 13.1 percent in 1954, 13.6 percent in 1955—a slow rate of increase but a lot of barrels, a trend in conflict with availability of domestic supply.

Domestic producers, by and large, have not suffered seriously yet as measured by statistical yardsticks of activity. But they foresee a creeping paralysis if imports' share of the market keeps rising in the face of excess producing capacity here.

Global thinkers may talk about foreigntrade balances and the need of other countries to export. Statisticians may compute the percentages a little differently. Economists may discuss such corollary factors as the growth of natural gas and natural-gas liquids, changes in inventories, the special place of residual fuel, or the geographical impact of imports.

But, any way it's figured, imports are so high as to convince producers that the health of the domestic industry in endangered.

Domestic producers aren't going to stand for it much longer. They feel they've been patient long enough. They are getting set for a showdown—a hard drive for restrictive legislation by the next Congress. (The Oil and Gas Journal.)

Address by Gov. Theodore R. McKeldin, of Maryland, at Inauguration of Dr. Wilson Homer Elkins as President of University of Maryland

EXTENSION OF REMARKS

HON. EDWARD T. MILLER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. MILLER of Maryland. Mr. Speaker, last Thursday, Maryland's recently reinaugurated Gov. Theodore R. Mc-Keldin spoke at another important inauguration in the Free State. The occasion was the formal assumption of the presidency of the University of Maryland by Dr. Wilson H. Elkins.

Governor McKeldin, with customary eloquence and vision, pointed out in his remarks the vital role required of a great university and the heavy responsibilities that fall upon its leadership. He clearly expressed a parallel of the verses of Homer Van Dyke that quote "Stone walls do not a prison make" and "marble floors and guilded walls can never make a home" when he told Dr. Elkins he did not "cherish the delusion that possession of a superb physical plant" is enough to assure a successful institution.

Under leave granted, I insert herewith Governor McKeldin's address;

I have the honor and pleasure of welcoming Dr. Elkins into the service of the State of Maryland, and I discharge that function with a mixture of pride and humility. I take pride in the fact that we are offering him physical facilities comparable to any in the country; but I do not cherish the delusion that possession of a superb physical plant is enough to assure him that he may be at ease in Zion.

There is a definite limit to the physical expansion of any institution of learning, including State universities, and it may be that the University of Maryland is approaching that limit. But the wisest of men has never discovered any limit to the intellectual and moral development of a university. Therefore I feel that we are summoning Dr. Elkins to a task whose boundaries are beyond human computation; and in calling a man to such an enterprise one should speak, if not exactly with apologies, at least with a certain humility. It is as it was in the old days, when one sent a champion into the lists, confident of the outcome, and yet fully aware of the heat and burden of the conflict that lies ahead.

Dr. Elkins assumes leadership of a university whose expansion in recent years has been, I think it fair to say, the amazement and to some extent the envy of the academic world. But I do not believe that the people of Maryland require or expect him to exceed, or perhaps to equal that astonishing record. What we do hope from his administration is that it may set a record in scholarship comparable to the physical growth of the university.

I am well aware that this is a hard task and to some extent a thankless task since the development of high intellectual standards is not measurable by any physical yardstick, and excellent work along that line often falls of public appreciation. Nevertheless it is a service to the State of the very highest value and in years to come, if not immediately, it will be appraised at its true worth.

For in our complex modern civilization the intellectual capacity of the citizen is of rapidly increasing importance. It is the thinker who will survive. To some extent this has always been true, but it is more important today than it was yesterday, and it will be more important tomorrow it is today. Socrates thought that ignorance was the only evil. One may not go that far and yet admit that in the 20th century ignorance, if not the source of all evil, is certainly the source of fatal weakness. Once it was the strong in body who lived to perpetuate the race; but today it is the strong in mind, those who have acquired the skill to control the physical environment and even more those who have acquired the skill to control the human environment. The ability to persuade men is today a vastly more potent factor than the ability to compel men.

We look to the University of Maryland to supply us in ever-increasing measure with citizens who know the physical world about them and the laws that govern its phenomena; but even more ardently we look to it for men who know themselves, and through that knowledge are capable of knowing others. We ask the University of Maryland to teach our young men science; but over and above that, and far more important than that, we ask it to teach them wisdom; for he that getteth understanding has a treasure more previous than rubies, yea, than much fine gold.

The accomplishment of this task is no

The accomplishment of this task is no child's play under the most favorable circumstances. The people of Maryland have done what they could to supply the favorable circumstances, but for the major part of the work they must rely on Dr. Elkins, his present colleagues, and those whom he may summon to his aid. For that reason we welcome him, not with boastfulness, but with confidence and hope.

As representing the State administration I here and now pledge him all the proper support within available State resources in whatever project he may undertake to make the university even greater as an institution of learning. Provisions have been made in the current budget for a library and all necessary funds to effect accredidation. The State administration can at best play no more than the part of a willing and enthusiastic lieutenant in this work, which must

be accomplished for the most part within the university. But what we can do shall be done; and I doubt not that together we may make this institution constantly more effective as an interpreter of our present civilization and as a prophet pointing to the greater and nobler civilization that is to come.

Long Beach, Convention City

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. HOSMER. Mr. Speaker, for many years my home city of Long Beach, Calif., has been well known as a convention city. Every possible hospitality is afforded our convention visitors and fine facilities for meetings, housing, and amusement are available at all seasons of the year.

Since many bureaus and agencies of the Federal Government find it necessary or convenient to hold area and regional meetings from time to time, I take this occasion to call to their attention the possibilities of Long Beach for this purpose.

The following article appeared in a recent issue of the Long Beach Press Telegram and adds further details to what I have said concerning the desirability of Long Beach as a meeting site:

Invasion of Long Beach by more than 200 members of the State Dental Assistants Associations next weekend will inaugurate a 1955 convention season for Long Beach due to attract an ultimate of more than 300,000 out-of-town guests and more than \$10,000,000 from out-of-town spending before the year has run its course.

First of more than 100 of the 1955 conventions on the city's agenda is that of the Southern California State Dental Assistants' Associations. In charge is Mrs. Alpha D. Cook, of Long Beach City College.

While this organization has the honor of leading off the convention batting order, numerous other State, regional, and national organizations have planned their 1955 meetings in Long Beach.

At the present time approximately 80 of such groups have booked their meetings here, while the future picture shows that already the 1957 convention of the California American Legion is destined to bring upwards of 20 000 rightors to the city.

20,000 visitors to the city.

Meanwhile, President H. G. Markworth, of the Long Beach Convention and Visitors Bureau, yesterday stated, "With construction of the new addition to the Auditorium close at hand, plus development of nearby Disney Land and Marine Band of the Pacific, additional thousands of out-of-town visitors will be attracted to Long Beach.

In addition to the conventions booked by the convention bureau, 14 major events including the Miss Universe Pageant, the All Western Band Review, trade shows, and similar activities, attracted approximately 750,000 persons to Long Beach.

"National surveys of convention dollar expenditures point out that this source of revenue circulates freely through many phases of our local trade", according to Howard Jones, convention bureau manager.

Jones stated that approximately 25 percent is spent for lodging, 27 percent for food, 6 percent for beverages, 19 percent in retail stores, 9 percent in entertainment, and the

balance in transportation, gas and auto needs and miscellaneous services.

Several national conventions slated for Long Beach in 1955 will attract an interesting cross section of delegates, according to convention bureau officials. Typical of the wide variety of national groups slated to convene here are the United Spanish War Veterans, 2,500 delegates; National Quarter-Horse Racing Association, 200 delegates; International Council for Exceptional Children, 1,500 delegates; National Water Well Drillers, 1,500 delegates; and the National Women's Christian Temperance Union, 1,000 delegates.

In addition, Long Beach has already been chosen as 1955 convention city by a great many State and regional groups, and other dates will be announced in the first few weeks of 1955.

The bureau leaders point out that competition for convention business is keen and that many California cities are expanding their local facilities in order to attract group business to their areas. Bond issues for additional auditorium, exhibit and meeting facilities have been approved or are under discussion in San Francisco, Santa Monica, Richmond, San Diego, Oceanside, and other California cities.

Local attractions such as climate, beach facilities, the harbor, and excellent recreation facilities are playing an important part in creating an interest in Long Beach throughout the United States. A colorful new brochure outlining the combined attractions of the area is currently being developed by the convention bureau on behalf of Long Beach.

"The growing interest in southern California continues throughout the Nation and the key location of Long Beach in the very center of some of America's greatest attractions, will prove a genuine advantage in the years ahead," according to Convention Bureau President Markworth.

Commission on Organization of the Federal Judiciary

EXTENSION OF REMARKS

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. HILLINGS. Mr. Speaker, much has been said over the past years concerning the sad conditions which exist in the Federal judiciary. Everyone agrees that something should be done and various suggestions arise from time to time, but nothing ever happens. I believe that now is the time to stop piecemeal measures and inquire into the problems of the judiciary in the broadest manner possible

We hear about crowded calendars, insufficient number of judges, inadequate physical facilities for holding court, lack of sufficient courts, and lack of funds. These are subjects which are not charged with emotion and not too many people think about them until they themselves become litigants and victims of the inadequate system.

It is our duty as legislators to see that American citizens are not denied justice for want of an adequate, well-working court system. After all, the Bill of Rights and other constitutional guaranties mean nothing if our people do not have the instrumentalities to put them into effect.

I do not pretend to offer all the answers to the problems raised. As a member of the Committee on the Judiciary of the House of Representatives, I merely desire to call them to the attention of the Congress and offer a plan of attack.

I have prepared legislation and will introduce it today to establish a Commission on Organization of the Federal Judiciary. The idea is not novel and involves no departure from precedent. This plan is frankly patterned after the Commission on Organization of the Executive Branch of the Government, poularly known as the Hoover Commission. We know of the outstanding work performed by the Hoover Commission in past years, and at the present time we are awaiting the reports of the new Hoover Commission as authorized by the 83d Congress.

The Commission contemplated by my bill would be composed of 16 members. The President of the United States, the Chief Justice of the United States, the President of the Senate, and the Speaker of the House of Representatives would be authorized to appoint four members each. Half of those appointed by the President would be selected from persons in the executive branch of the Government. Half of those appointed by the Chief Justice would be from the Federal judiciary. The two congressional leaders would make half of their appoint-ments from Members of their respective bodies, and all other selections would be made from individuals in private life. All appointees to the Commission should be lawyers in good standing. This suggestion is made because of the technical nature of the subject and specialized knowledge required.

The Commission would be given a broad mandate to inquire into every phase of the Federal court system. A few of the subjects of inquiry might be:

First. The volume of litigation, delays incident thereto and suggested remedies.

Second. Recommendations should be made concerning the advisability of consolidating courts of special jurisdiction such as the Tax Court and others, with district courts.

Third. The necessity of realinement of judicial districts, geographical areas, and places of holding court as dictated by modern-day conditions, shifts in population, and other factors.

Fourth. The adequacy of buildings, courtrooms, libraries, and other physical facilities necessary for efficient administration of justice.

Fifth. Recommendations for liberalizing retirement laws in order to encourage retirement of judges whose efficiency is impaired due to age, infirmity, or other reasons.

Sixth. Recommendations concerning advisability of delegating jurisdiction to State courts in certain cases.

Seventh. Recommendations concerning court aids such as clerks, marshals, and others.

Eighth. Recommendations for improvement of appellate procedures,

Ninth. Other recommendations that the commission may deem appropriate.

I have not raised the question of the pay of judges inasmuch as that subject has been considered by another commission and recommendations have been made.

The proposed commission would have the usual power to appoint a staff, hold hearings, and obtain necessary data for proper discharge of its duties. It would be required to report to Congress 1 year after the commission is established.

If the Congress sees fit to authorize the establishment of a Commission on Organization of the Federal Judiciary, an opportunity will be given for the first time to the lawyers, judges, and other citizens of the United States, to submit their suggestions to one forum which is considering the individual problems and how they affect the whole judicial system. It would be expected that the bar associations and other groups concerned with the improvement of the administration of justice would take an active part in supplying necessary data, members of task forces, and rendering other valuable assistance. The advice and counsel of Members of Congress and Federal judges would also be sought. It should be kept in mind that the final duty for securing adequate justice to the American people rests with Congress. Our duties do not end with the appointment of a commission. It is incumbent upon us to rise to the challenge and follow through with the necessary legislation once we have the recommendations. The commission would gather the facts for us on a nonpartisan basis, free from political considerations and unfettered by the myriad of details which are incidental to service in the Congress.

Anniversary of the Proclamation of Ukrainian Independence

EXTENSION OF REMARKS

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. FORD. Mr. Speaker, the traditional observance of the proclamation of Ukrainian independence, January 22, 1918, presents an opportunity for American citizens to assure to all escapees from tyranny scattered throughout the world their sympathy, and their determination to continue the struggle for the freedom of all people.

This America believes: "That all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness." This applies to men both behind and outside the Iron Curtain.

We hear much of peaceful coexistence today. Every one of us wants peace. To be realistic we must recognize that we do exist in a world divided into two great idealogical camps. And we can hardly demand that every people and every nation adopt our form of Government or our way of life. Yet, we must strive in every legitimate way to assist those who would bring freedom to nations enslaved, or to peoples oppressed.

There are those who say that the internal rule of the Communists is none of our concern. To a displaced person this must have a strange sound. Furthermore, that attitude cannot be defended if we understand the fundamental philosophies of democracy and communism. If democracy means anything, it means a firm faith in the inherent infinite worth of the individual, in the innate dignity of the human being. If we honestly believe this, we will not be satisfied until the worth and dignity of every human being in the world is recognized, and that human being is permitted to live and act freely.

This is not to advocate preventive war nor rash and unintelligent action, but it is to warn all despots that we will continue to strive for justice and decency for all mankind.

There are good and noble people in my district who dream of the day when their captive homelands will be free again. They are working and preparing for that day. Such men were Tomas Masaryk, of Czechoslovakia, and Syngman Rhee, of Korea. To these good people and all like them we pledge our help and our cooperation in securing a body of free nations in a free world.

Anniversary of Proclamation of Ukrainian Independence

EXTENSION OF REMARKS

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. SCOTT. Mr. Speaker, on January 22, 1918, the Ukrainian National Republic issued a proclamation of Ukrainian independence. Last Saturday was the anniversary of this proclamation of Independence. Since that time the Ukrainian people have suffered greatly and they are now among the enslaved peoples behind the Iron Curtain.

The centuries-old struggle for freedom and independence on the part of the Ukrainian nation constitutes an impressive chapter in the annals of human his-This indomitable will for national freedom clearly crystallized itself in the old Ukrainian Kievan state from the 9th to the 14th century, in the Ukrainian Kozak state from 1648 to 1783, and more recently in the Ukrainian National Republic from 1917 to 1920. As one of the first victims of Soviet imperialism, Ukraine, since the very inception of alien Bolshevik tyranny, has proved to be the Achilles Heel of the Soviet Union. The destruction of its national churches, the horrible man-made famine of 1932-33, the mass murder at Vinnitsia in 1937-39. and the vast purges and deportations decreed by Moscow have failed to exterminate the spiritual and moral resources

for national freedom in Ukraine. The historic capital of Kiev, with centuries of rich tradition and culture conserved in its vaults, still symbolizes today the indestructible hope and passion of a nation destined to be sovereign, free, and in-

During the Second World War millions of Ukrainian patriots seized the shortlived opportunity of the German-invasion to realize once again this hope, only to be frustrated in their valiant efforts by the scourge of another imperialism. But this unbending will continues to be strong and powerful in the epic struggle of the Ukrainian Insurgent Army (UPA) against the evil forces of Soviet imperialism, and in the resistance of the Ukrainian people.

As a nation of over 40 million peoplethe largest non-Russian nation behind the European iron curtain-Ukraine stands as one of our most important and natural allies in the eventual defeat of Soviet imperialism. Its historic claim to national freedom and independence cannot be ignored. Its place as a sovereign and equal partner in the mutual construction of the free Europe of tomorrow must be assured, if the foundation of permanent peace among freedomloving nations is to be impregnable.

States Rights Conceal Rule of Special Interests

EXTENSION OF REMARKS OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from Labor, official publication of the railroad labor organizations:

STATES RIGHTS CONCEAL RULE OF SPECIAL INTERESTS

Forty-four of the Nation's State legislatures are meeting this year; most of them are already in session. They have a real opportunity now to put meaning into the

much-publicized slogan of "States rights."
Will they do so? Will they demonstrate that States can lead the way in improving the lot of all the people? Will they bring their unemployment insurance and workmen's accident compensation laws up to date to meet modern standards? Will they enact fair labor laws and remove from the statute books those that now unfairly hamstring Workers and their unions? Will they adopt tax measures based on ability to pay?

Answers to questions such as those will determine whether States rights will serve as a banner of progress or flag of reaction.

In past years, that slogan has all too often been used as a cloak by forces seeking to turn State legislatures into instruments for cracking down on the rights of labor and serving predatory interests.

Why has this been so? One good explanation can be found in the recent book, Adventures in Politics, written by RICHARD L. Neuberger, now United States Senator from Oregon, and before that a State senator, as Well as distinguished journalist.

"With few exceptions-New York being one—State government is attempting to operate with stone-age tools," NEUBERGER points out in the book. "Legislators who write State laws and State executives who enforce them are, for the most part, part-time offi-cials. Other sources provide their basic incomes. And where the treasure is, there is the heart-and the vote."

NEUBERGER goes on to cite the condition in his home State as an example: Legislators are paid just a pittance and rely for a living on the special interests for whom they work

He cites many examples of senators on the floor of the legislature arguing for legislation to benefit their employers—the utilities, tim-ber barons, or real-estate interests for which they serve as lawyers or in other capacities and from which they draw their main income. Such situations, he said, "help explain why State government is such a gamboling ground for privilege and monopoly."

He cites many other factors which have led to gross deterioration in State government-an important one among them, failure to reapportion legislatures so they will represent a State's population as it exists today, not as it did in the frontier past." In State after State, representation is rigged so that farm and rural areas have a far greater voice than the cities. Democracy-in the sense that every citizen has an equal voice and vote-does not exist in many States when it comes to electing members of the legislatures.

This lopsided situation helps explain why so many States have put over the false-face right-to-work measures, which enthrone the right to scab; have enacted sweatshop wage laws that provide a competition in laxity; have imposed sales taxes instead of income taxes, and have, so often, kowtowed to self-

ish and predatory private interests.

Legislatures meeting this year have it in their power to demonstrate that States rights need not mean States wrongs; that States can lead the way to a better life, so as to make it less necessary for Congress to intervene. Will they meet the challenge?

Responsibilities of Management

EXTENSION OF REMARKS OF

HON, EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. WILLIS. Mr. Speaker, over the weekend, I attended the 21st annual meeting of the Mississippi Valley flood control branch of the Associated General Contractors in Memphis, Tenn. It was probably the most largely attended meeting in the history of the association. The outgoing president, Mr. C. W. Volmer, and his associated officers who guided the destinies of the association so very well in the last year, will be succeeded by equally competent and outstanding businessmen in the persons of Mr. C. R. Weymouth and Mr. Larry A. Tvedt, both of Memphis, as president and vice president, respectively, and Mr. C. W. Crumpecker, of Charleston, Mo., as vice president at large. The managership will remain in the capable hands of Mr. Bruce Tucker, assisted by Miss Tempe Wills.

It was a treat to hear the very splendid address of Hon. Ben H. Wooten, president of the First National Bank in Dal-

I desire to share with my colleagues in this body the inspiration which Mr. Wooten brought to all of us. The address, entitled "Responsibilities of Management," follows:

It is a privilege to speak to this splendid group of businessmen and their ladies, and I am deeply grateful. You are successful in am deeply grateful. You are successful in that you have established yourselves in your cities on a social, professional, and financial basis. Success, whether in the field of art, literature, science, business, or construction, is evidence of possession of that extra some-thing that makes for achievement.

A splendid atmosphere permeates this audience. I observed the friendliness with which one greeted another, and I know that many of you have been colleagues in the construction business for a long, long time, and as a result of contacts and mutual experience, friendships have been generated. Someone has said:

"There are no friends like old friends, None so good and true; We greet them in the morning, As the roses greet the dew.

"No other friends are dearer, Though made in kindred mould; While we love our new friends, We treasure more the old.

It seems that the contractors of America have, without intent, formed a kind of fraternity, with no secrets and no passwordsan organization where you have learned to know and appreciate each other. It is very important that we know each other—that nations know each other. An author whose name I do not know has written:

"Here lies the tragedy of our race: Not that men are poor— All men know something of poverty; Not that men are wicked-Who can claim to be good? Not that men are ignorant— Who can boast that he is wise? But that men are strangers."

If it were possible for the average Russian, the average Chinaman, to know the average American and thus be assured that we have no designs on their countries-that we have never taken any territory as a result of any war—I am convinced that international stresses and strains would be immediately alleviated. It is so important that we know those who live and work close to us.

"Life is but a journey taken on a train, With a pair of travelers at each window pane,

I may sit beside you the whole journey through,
Or I may be seated elsewhere never knowing

you;

But if fate should mark me to sit by your side.

Let's be pleasant travelers-Life is so short a ride."

You like the contracting business or you would not have chosen it as a vocation. I like the banking business, having spent 35 years in it. I like to think of life as a bank. The Bank of Life is open every day, and we make deposits, regardless of how short our stay. In the Bank of Life we deposit kind-ness, helpfulness, work, devotion, and char-acter; and out of the Bank of Life we draw fellowship, friendship, contentment, and happiness. There are men in this room who have great deposits in my personal Bank of Life, and, draw as many checks as they will, not one will ever be returned marked, "Insufficient funds."

Ladies always add beauty, charm, and elegance to any meeting, and this we have in abundance tonight. I am reminded that the highway of success is filled with women pushing their men along.

Occasionally we hear an egotist remark that he is a self-made man. This just isn't true.

If you There never was a self-made man. will just for a moment let your mind travel back through a decade or two, you will observe that somewhere along the line a friend, a relative, a loved one gave you a lift and supplied the impetus necessary to make of you a success. You, of course, had to take advantage of your opportunities, but their faith, confidence, and perhaps financial help enabled you to reach the high pinnacle of your profession which you now occupy. If the individual who believes that he is made would look into a mirror, he would see a good example of the work of unskilled labor and I believe would come to the conclusion that he might have done better by letting out the construction contract on a turnkey basis.

The year 1955 is a new year. We have 344 days to use as we will, and it is fitting that we ask our selves: What plans are we drafting on the drawing board of time, and if we should be successful in completing these plans during the year, will we be pleased? Are they of sufficient magnitude and importance to draw the best out of us? Daniel Burnham said, "Make no little plans; they have no magic to stir men's blood, and little plans, if realized, bring no satisfaction."

Let's have a positive approach to 1955, with the firm belief that we can do what we set out to do, keeping in mind that those who have a negative approach to problems receive only the leavings of life.

There are many interpretations of our economic position at this time following different routes but arriving at the same destination, namely, good times in 1955. Due to these devious routes followed by forecasters there is some confusion as demonstrated by a poem by N. A. Mack:

"It may be so—
But then it's not;
It could be good—
Or not so hot.

"You might say this—
But in the light of that,
You can't be sure,
Just where you're at."

We can be pretty sure of our economic location at this time, and those who plan well, work hard, and spend wisely will, at the conclusion of this year, look back upon it with satisfaction.

It is really great to be an American and have the privilege of gathering in a convention where we can say what we think without fear of intimidation. No potentate, no dictator can tell you or me what to think, what to say, and how to pray.

At the beginning of this new year, however, let's not forget that freedom within itself exposes us to personal and economic pitfalls. Freedom permits one to think for himself—and how fine it is that we are privileged to make errors and have reverses; otherwise, we would not be free.

We as free men must remember that life cannot be one continuous round of pleasure and success. If we did not have ugliness, we could not appreciate beauty; if there were no valleys, we could not enjoy the majesty of mountains. Into every life some rain must fall, but, even so, we Americans must continue to be willing to take the economic risks of freedom. We come to the very definite conclusion that our business world is not one for weaklings. We know that we shall make mistakes. We know that our Government has made mistakes, domestic and foreign, and that it will continue to do so—yet our country is the most blessed place this side of Heaven.

A good contractor is a builder at heart, and he is ashamed of the slightest flaw in one of his structures. Somehow I feel that he desires to make each structure a monument unto his knowledge, his personality, and his character, and he looks upon it as an edifice that the ravages of time will not destroy.

Ralph Waldo Emerson said, "He who digs a well, constructs a stone fountain, plants a grove of trees by the roadside, plants an orchard, builds a durable house, reclaims a swamp, or so much as puts a stone seat by the wayside makes a fortune which he cannot carry away with him but which is useful to his country long afterward."—Of such are you, my hosts.

We are pleased to have so many of our military personnel here, especially the engineers. We admire the army. There is something fascinating about a well-dressed, snappy army officer. I am reminded of that old-time limerick:

"There's something about a soldier,
That is fine, fine, fine,
Something in his bearing,
Something that he's wearing,
Makes him hit the line, line, line."

To the civilian, the engineers are in peacetime the most useful segment of the Army. I make this statement knowing full well that our country cannot maintain her national existence and honor without every branch of the armed services.

We are pleased that throughout our broad land we find the Army engineers everywhere, and we want them everywhere. They are the closest tie between the civilian and the military, and only with their help have we been able to make some progress in harnessing the rivers, subduing the forests, and scaling the mountains. It is they who are enabling us in many instances to conserve our soil and reforest our wastelands. We would join with the engineer in emphasizing the importance of the conservation of our soil through the stopping of erosion.

Too few people have been concerned about the tragic toll that is being exacted from our fine farmlands everywhere. When land was cheap and plentiful, it did not seem to matter much if the fertility of the soil was gone, in that the farmer could move to a new location, clear new land, and start over again. In the life of our Nation, 50 million acres of good land have been ruined and abandoned. Another 50 million acres are swiftly coming to that stage, and on another hundred million acres more than half the top soil is gone. Only prompt, vigorous, and intelligent action can stop further losses and start the restoration of fertility to much of our land. tinuation of permitting our land to become nonproductive is a sure road to economic trouble, and we are grateful to the Army engineers for their leadership in endeavoring to save our soil.

My subject (and I have finally gotten around to it) is, "Responsibilities of Management." The manager is the dynamic, life-giving element in every business. Without his leadership, resources remain resources and production just does not come about. In referring to management in the contracting business, I am in most instances referring to the owner of the business; however, in other types of business this is not so often true.

Superior management is the only effective advantage that one enterprise has over another in our competitive economy. In this connection, I am reminded of a writing by Elia Wheeler Wilcox:

"One ship drives east, and another west, With the self-same gale that blows; "Tis the set of the sail, and not the gale,

This the set of the sail, and not the gale That determines the way we go."

Never before in our history has the attitude and responsibility of management so greatly affected our economic, social, and spiritual life as now.

Management's responsibilities and obligations seem to fall under four distinct headings: (1) To the owners of the business; (2) to the public it serves; (3) to the city. State, and Nation; (4) to the employees. The order of the naming of these headings is not in-

tended to be an indication of their impor-

Management's first obligation is to operate an ethically profitable business, and only slightly less important is the necessity for growth. The profit responsibility is absolute and cannot be abdicated.

No business can make its best contribution to society unless it makes reasonable profit. Management that through the years makes meager profits must ultimately be classed as meager management. A profitless business is an ulcer on society, yet a well-managed, prosperous business is a definite strength to our country.

I am reminded of a parody:

"Count that day lost,
Whose low descending sun,
Sees bids put in at cost,
And business done for fun."

Stockholders in our major corporations are scattered throughout the Nation, and major businesses are no longer owned by a handful of pompous individuals. Management that makes money for these millions of stockholders is really serving America well. Let's not forget that the business that goes bankrupt first went bankrupt in management, and any business that does not make a profit will not last long.

It is also the duty of management to produce and sell a quality product or a quality service. In other words, our products—our finished buildings, our levees, our residences, our banking services—must be exactly what the public buys in appearance, in performance, and in quality. A shabby product, a shabby service can be sold only once and, of course, should not be sold at all. Let's be sure that if we were our own customer, we would like to do business with our firm.

We in the United States are the greatest producers, the best fed, the best clothed, the best educated people on earth because you and thousands of other men like you have responded to obligations of management under our individual incentive form of government.

Management has dared to dream, and dreamers are the architects of greatness. Their brains have brought our so-called miracles—our great inventions, beautiful music, majestic temples, educational institutions, our cathedrals and shrines—and in America God has given to management the mind to dream, the soul to aspire, and the body to execute. So let's, as managers, keep on dreaming, keep on developing, keep on achieving and putting our very best every day into our jobs.

In the long ago in old New England, trading ships would leave from Old Salem. slowly traveling around the earth, and would be gone for a long time. It was the custom of the captains to permit individuals to send private cargoes in the vessels, and during the long absence from home of the ship and its crew, those who had sent private cargoes were wont to say, "When my ship comes in-" and then let their imaginations trail away into realms of luxurious living which they envisioned for themselves and their loved ones as a result of the anticipated profit from their venture in the cargobut one thing they knew full well-no ship could come in bringing treasures to them unless they had ventured something in the cargo. And so it is with you and me. Our ship will come in bringing treasures if we venture the best we have in time, talents, and energy into the cargo of management.

Men grow civically in proportion to their participation in civic activities, and an active life of a businessman in civic affairs can bring real joy because of the challenge to satisfy, in part at least, the needs of unfortunate people. All of us and the businesses we represent have specific obligations as relates to the unfortunate in our com-

munity, and we want to do our full share in Community Chest, Red Cross, etc.

It is well to take note of the fact that welfare is our fourth largest business. In the year 1954, \$49 billion was spent by the Government and through private donations for welfare. The spending of this tremendous sum needs the executive talent possessed by the managers of our great businesses. The American heart is big, and any cause that pulls upon the heartstrings will get a ready response—but it is your duty and mine to see that the American heart is not only big but also that it is selective in order that there may not be great waste.

I know that it shall never be truly said that in our respective communities there will be more sorrow, more anguish, mode despondency, more suffering, more juvenile delinquency because any manager in this room Iailed to do his local civic duty.

Hardly a day goes by when some outstanding manager does not assert a new public responsibility. We are all aware of the financial plight of our educational institutions, and I believe that management is going to have to assume more responsibility for the survival of our liberal-arts colleges.

It is most important that management consider the impact of every business policy and action upon society and whether or not that policy is likely to promote the public good, to advance the basic beliefs of our society, to contribute to its stability, strength, and harmony. We should always disseminate American economic truths as widely as possible.

We have an obligation to the people who work for us. Let's ask ourselves right now: How would I like to work for me? What kind of a boss am I, anyway? It makes a big difference whether or not the boy or girl in passing the president's office thinks of him as

an old sourpuss or a right guy.

Around the turn of the century it was kind of taken for granted that in the scheme of things there must be a conflict between labor and capital. The capitalist of today is mainly propaganda, because of the very wide distribution of stock owned by millions of Americans, and there is no irreconcilable difference between labor and management. There are problems, to be sure, but labor and management are not two different specles of human beings. Most of the managers of today came from the ranks of labor, and in the corporations of today the laborer Who has the capacity to take on greater responsibilities and places the welfare of the institution for which he works next to that of his family can easily be a superintendent

Let's never lose sight of the fact that management is not the directing of things; it is the directing of people, and good management listens as well as talks. A good manager knows that a high degree of performance can be attained only through leader-

ship.

Each of our businesses has a good, bad, or mediocre disposition in the minds of the public, and that picture is but the lengthened shadow of the manager. If he has a warm, affable, friendly disposition, it will permeate his organization. If his disposition is cold, sullen, and repelling, that, too, will permeate his organization. There is a great deal of difference between a big man and a big shot. I know men who can strut sitting down, but I do not know an individual who admires such a man.

If we would evaluate others, let's first evaluate ourselves. Let's get under the microscope, and as a result we will be less stiff, less irritable, more modest, humble, and

easy to approach.

A happy employee requires a happy boss. Rappiness is not a destination. It is a journey. We cannot buy a ticket to happiness. We find it all along the way of life. It flows from the inside of the individual out, and in my office there is an inscription, "Happiness is a journey traveled not alone." If

you and I would be happy in our businesses, let's make our people happy.

The best manager is concerned about the welfare of the people who work for him. He has a friendly interest in their families. He inquires about their home affairs. Wherever possible he learns their names. He dispenses fairness without favoritism. He keeps the confidence of his employees, and he gives credit where credit is due. Under no condition will a good manager take credit for the work or ideas of any person employed by him, whether it be a janitor or a foreman.

We all need praise. I am not referring to flattery; I mean well-earned praise. It lightens the load of the laborer; it increases efficiency; it produces enthusiasm; it assures cooperation—in a way, it greases the skids of life. So let's never get too busy or too big to take thought upon those who are doing a good job.

There never was an indispensable man, so let's not take ourselves seriously. I recently read a quotation, "Blessed is he who taketh himself seriously, for behold, he shall afford

much amusement."

Let's remember in dealing with our people that a smile is a language that a baby can understand, and a man's code of ethics is not necessarily the motto on his desk but that written in his heart and before we can command others, we must be able to command ourselves.

It was Aristides who said, "Not houses finely roofed or the stones of walls well builded, nay, nor canals and dockyards, make the city, but men able to use their opportunity." As managers, let's be sure that we afford our people the chance to

better use their opportunities.

People are our most precious possessions, and I am convinced that in order to be helpful and to give proper counsel, there must be in the life of every manager a spiritual experience for, after all, there is a Divine Designer of the universe who cares for every individual in it, and if we would be in tune with the best in life, our hearts must be in tune with the source of all life.

The world owes no man a living, but every man owes the world a life, and if we pay the world that which we owe for our lives, it will pay us a living and as much more as we justly earn. Let us, therefore, make a life

while we are making a living.

There is a poem I like very much:
"It is always a joy in life to find,
At every turn of the road,
A strong arm of the comrade kind,
To help me onward with my load.

"Since I have no gold to give,
"Tis love must make amends;
It is my prayer that while I live,
God shall make me worthy of my friends."

I know you share with me this beautiful sentiment. In assuming the full responsibilities of management, let's pray that God shall make us worthy of our shareholders, of the public we serve, of the city, State, and Nation in which we live, and of the employees who work for us.

You are a grand audience—so kind and so considerate—so sympathetic, and this evening will ever be a pleasant experience in my garden of memories.

Restoration of the Rights and Liberties of the Ukrainian People

EXTENSION OF REMARKS

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. TABER. Mr. Speaker, Commuthemselves. With the termination of dinist Russia has enslaved the people of rect United States economic aid, coun-

the Ukraine, and they no longer have the liberties which they formerly enjoyed, nor do they have an opportunity to better themselves.

I know many people who came from the Ukraine, and they make good citizens, and are entitled to recognition in the Republic of the United States of America.

The restoration of the rights and liberties of the Ukrainian people is one of the things that should be sought after by the free world just as soon as the opportunity presents itself.

Italy's Complaint on United States Subsidy of American Citrus Products

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. CELLER. Mr. Speaker, because of the administration of our laws on the high policymaking level, a conflict has developed between our foreign policy as expressed in GATT—General Agreement on Trades and Tariffs—and our statutory law as expressed in the Agricultural Act of 1935.

As a participating nation in GATT, the United States is committed to a policy of limiting subsidies where it would seriously prejudice the interests of other participating nations. Under section 32 of the Agricultural Act, however, the Secretary of Agriculture has a mandate to encourage the exportation of agricultural commodities through the use of subsidies in order to help increase America's competitive position in foreign markets. The subsidy provisions of the Agricultral Act, however-and this is an important distinction to remember—are not mandatory but permissive and give the Secretary a wide discretion in both the granting or withholding of subsidy benefits, and in the selection of the commodities to be subsidized.

The present export program of agriculture grants heavy subsidies on citrus fruits which compete directly with Italian, Israeli, North African, and Spanish citrus products in the European mar-As a result, Italian oranges, for example, are being crowded out of Italy's traditional orange markets, not because Italy's oranges are inferior, but because of United States financing of American citrus fruits. While it is presently asserted that subsidy assistance is to help American exporters to maintain their foreign markets, the fact is that the Department, through subsidies, is seeking to expand America's competitive position in foreign markets and is in fact lengthening the time period of America's socalled summer citrus market in Europe.

The United States is committed to a foreign program of helping war-ravaged and poor countries rehabilitate themselves, so that by raising their economic levels, these countries may, one day, help themselves. With the termination of direct United States economic aid, coun-

tries like Italy more than ever need their traditional foreign markets and, in fact, Italy must expand hers in order to take up the slack caused by the ending of direct United States assistance. Because it is lacking in many natural resources and cannot compete in the industrial field, Italy must rely most heavily on The her agricultural export trade. United States citrus industry, on the other hand, is enjoying an all-time high and has access to other foreign markets such as Canada without having to invade the European market on an unfair United States subsidized competitive basis, at least not at the present time. Furthermore, if we are to follow the principle of "trade not aid" then these subsidies must be rarely if ever used. If we drive Italy and other countries similarly situated too hard and they have markets for their citrus fruits that are narrowing more and more, we force her to sell wherever she can-behind the Iron Curtain if need be.

SUGGESTED ACTION

The above statement may be an oversimplification of the problem which is indeed a complicated one with many facets. Yet, in the final analysis, it is clear that there must be greater coordination between our executive agencies, in order that conflicts, brought about by the administration of our laws, may be avoided. Negotiations under GATT have reached an impasse. The GATT agreement, unfortunately, has no true en-forcement provisions, and its success de-pends upon the willingness and consent of the countries concerned. Since the policies set forth therein represent our latest thinking on the subject, the Department of Agriculture should revise its policy so as to eliminate those aspects which are harmful to countries like Italy, Israel, Greece, and Turkey. States is presently subsidizing dried raisins and apricots, to the detriment of Greece and Turkey; and oranges, to the detriment of Italy, Israel, Spain, and North Africa. Without seriously preju-dicing United States citrus producers, subsidy payments could be suspended on American citrus exports which are shipped to the traditional European markets of these countries, at least during their market season, which is from November through April.

Anniversary of the Proclamation of Ukrainian Independence

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. PATTERSON. Mr. Speaker, January 22 marked the 37th anniversary of the Ukrainian people. This anniversary symbolizes the love for freedom by all the peoples enslaved by Communist domination. Their indefatigable spirt of opposition to Communist oppression commands the admiration and the support

of the entire American people. When their unity of purpose and resistance forced the regimes in Hungary and Czechoslovakia to retreat and make concessions, what better proof could we have that the captive people entrapped behind the Iron Curtain are our stanchest allies; brothers in arms who man the outpost in the never-ceasing struggle against Communist imperialism.

Such friends will never be forgotten, for their suffering and their sacrifices serve the cause of freedom of men everywhere. Their aspirations of national independence, human rights, and dignity are the same cornerstones on which our Republic was founded and maintained. How could we fail to support, wholeheartedly, these aspirations which are the essence of democracy in which we believe, and for which thousands of Americans gave their lives on the battlefields of Europe and Asia.

The American people will not be fooled by Communist slogans of coexistence which means enslavement for millions of our brothers. We shall continue to strive for the just aspirations of the captive nations, as we have done in the past. That the Congress of the United States, and thus the people who elect their representatives, continuously study means and ways to support the enslaved peoples behind the Iron Curtain is manifested in the work of the House Committee on Communist Aggression and the Senate Foreign Relations Committee. The House committee recommended to the Government a specific course of action, specifically designed to help the now captive nations attain their goal of self-determination, while the Senate's studies on tensions in Eastern Europe again demonstrated to the American people that the Communist regimes in that area only derive their power from inhuman terror and atrocities. American people are fully aware of these conditions, and true to their tradition have formed organizations to combat them. Such private organizations as the Ukrainian Congress Committee of America, Inc., and the Free Europe Committee, are truly representative of the feeling of American sentiment. More important still, they prove by their action, be it by radio or leaflets dropped by balloons, that the voice of the once free nations can never be silenced as long as the American people stand side by side with their freedom-loving brothers behind the Iron Curtain.

ORT in North Africa

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. CELLER. Mr. Speaker, in my tour through French Morocco, Tunisia, and Algeria, I made a special attempt to visit the ORT schools and facilities, and I willingly testify to the dynamic and realistic approach made by them. I

know of nothing more useful in raising the standard of living of our unfortunate Jews in the Mellah than to afford the young men and women the opportunity to become skilled workers. ORT provides a great ray of hope to thousands of these people. It is really and truly the Organization for Rehabilitation and Training.

I saw ORT installations in schools in Algeria and Casablanca. I am sorry, indeed, I was not privileged to see many of the other schools which ORT has established.

I wish to draw particular attention to some 50,000 Jews, sometimes called Berber Jews, who live in the Atlas Mountains region of Morocco. They have for centuries been small craftsmen and tradesmen, who sold their wares to the Berber Moors. With the impetus of the coming of industry to Morocco, a change has occurred bringing with it new problems. Machine-made goods are replacing handmade goods and the Berber Moors are coveting the cheaper machinemade goods. This tendency is displacing some of the Jews and taking them out of the economic market. It is essential that many of these Jews be trained by ORT; for example, in the use of machines for making shoes, clothes. radios, auto supplies, and so forth.

Up until a decade ago, Jews in Morocco had a monopoly on trading in the southern part of Morocco. Now the Berber Moors are competing with them, and the Berber Moors are given the preference. The Moors only buy from the Jews when they cannot buy from the Berbers. It is to the great advantage of the Jews, therefore, to learn all they can about electronics, about the work of beauticians, and other trades in which the Moors themselves are untrained. ORT can help the Jews get ready for industrial jobs through its training program.

I know of no better service to which money can be put than in contributions to the activities of ORT. The knowledge that we, the more fortunate, cannot take for granted that poverty, ignorance, and disease must always be with us—that help can and must be extended to the individual to aid him in finding a place for himself in this ever increasingly complicated society. ORT has shown the way, and to ORT every support and contribution should be given.

As I have been thinking of the development of ORT and the necessary statistics that must accompany its history. I was forcibly struck by an amazing parallel. I repeat what I said once before, that the point 4 program of the United States Government is exactly the drama of the work that ORT has been carrying on for more than 70 years. When President Truman announced the point 4 program, it was hailed—and rightfully so-as a dynamic concept of far-reaching significance in the training of the individual for the realization of a productive society. A new emphasis was placed on the individual, on his training. on his rehabilitation, teaching the use of tools first for his own benefit and for the benefit of the society in which he lives. It was a departure from mass thinking. It focussed attention on the needs of the individual, on the dignity of

the individual, and how he as an individual contributes to the common good. It struck me then how ORT quietly, persistently, and even doggedly had inaugurated just such a program many years

In 23 countries of the world ORT is training people in new uses of the hands and the eyes and the mind, lifting from them the weight of their uselessness and with such training bringing an understanding of new standards, of pride Which will some day reflect itself in their children yet to be born.

A fact to be noted and remarked is the realization that ORT follows the line of history. The camps in Germany, Austria, and Italy are now closed. Most of the DP's are gone. ORT has turned its gaze eastward and to Africa, as has the rest of the world. The Near, Middle, and Far East, as well as North Africa, have by the pressure of events forced the western nations, not only to acknowledge their existence, but to begin to understand for perhaps the first time that these regions of the world must relate themselves to each other. So with ORT. While retaining and maintaining its ties with the western civilization, it has brought its greatest intensity to bear upon these areas.

One cannot feel kinship with Jews in one part of the world and choose to forget about Jews in another. Sooner or later the facts will creep through to your consciousness. One cannot escape. One has to recognize the chain that links all people together regardless of geography. In Iran, in Moslem North Africa, in French Morocco, in Tunisia and Algeria. Jews have huddled in the ghettos of those forgotten worlds, feeding for centuries only on the strength of Judaism. They are no longer forgotten, ORT will not let us forget. ORT is bringing new values to live by, a new dimension to life itself, to these people whom civilization has bypassed. This is not the age of despair.

In these turbulent years one fact has emerged-that it is not a natural law for some to be born and to die in helplessness, in futility and in hopelessness. I do not exaggerate when I say that in the realization of this concept, ORT has shown us how to open the doors and windows to let the sun come in, cleansing and reviving. ORT has been on that road a little before anybody else.

Can Stock Market Be Controlled by Amendment of Capital-Gains Tax?

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. WOLVERTON. Mr. Speaker, in view of widespread interest in the present stock market situations, and the feeling upon the part of some that there should be some restraint, it seemed to me that consideration might be given to the suggestion of Lucian O. Hooper in his follows:

MARKET COMMENT

(By Lucien O. Hooper)

Any market which advances for 17 months without a single correcton of as much as 41/2 (in the D-J Industrials) naturally is not as cheap as it once was. An accident always can happen as the excuse for a welcome setback. The fact remains, however, usual technical background for an inter-The fact remains, however, that the it will take something unexpected to make stocks available as much as 10 percent below current prices-and 10-percent declines in a churning market like this until recent years were regarded as just routine.

The big supporting factor in this market, as I see it, is the unwillingness of those who own securities to take profits and pay the capital gains tax. Millions and millions of shares which otherwise might be sold in profit-taking maneuvers are being held undisturbed because of capital gains tax inhi-

The great mass of stocks is held by people who regard themselves as pleasantly locked in by the present tax system. Rising prices do not bring out a supply of shares. Prices go higher and higher because eager buyers must cajole reluctant sellers into making

More and more will be heard about what steps should be taken to control the stock market, or tame it. You can't tame a market which is not based on borrowed money by raising margin requirements; and the people who own stocks at such large profits do not scare easily.

The one logical control measure (open only to Congress) is to reduce the capital-gains tax to a level where people won't feel that they are impoverishing themselves unneces-sarily when they sell. I know hundreds of people who would be willing to take profits in their life-insurance shares, for instance, if the tax were 10 or 12 percent on long-term profits instead of 25 percent. I would guess that 90 percent of all the General Motors (102) stock now outstanding cost the present owners less than half its current price. Probably 95 percent of the owners of International Business Machines (362) paid less than 65 for their stock. I imagine 90 percent of the owners of Lincoln National Life (385) paid less than 100. Just figure what it would cost them, with a 25-percent capital gains tax, to sell.

It might also be remarked that if the Federal Government wants to share in this big market through a larger tax collections, it can do so in a big way by reducing the capital-gains tax. I would guess hat the cap-ital-gains tax yield would increase 200 to 400 percent each year if the tax were made 10 percent instead of 25 percent, and I suspect that this is an overconservative estimate. So here is your argument, Representatives and Senators: cut the tax rate on capital gains and you will (a) tame this rise in stocks, and (b) increase the Government's revenues. Don't forget that 8 million people or more hold stocks. Most of them vote, too. (Taken from Forbes, January 15, 1955.)

Lee, Maury, and Jackson

EXTENSION OF REMARKS

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. SMITH of Mississippi. Speaker, on Thursday, January 20, I had the privilege of hearing United States

pamphlet Market Comment, reading as Senator Olin D. Johnston, of South Carolina, deliver a very inspiring speech at the meeting of the District of Columbia division of the United Daughters of the Confederacy. By unanimous consent, I include Senator Johnston's speech as an extension of my remarks:

> Mrs. Harlee and my friends in the United Daughters of the Confederacy, there is more of realism than sentiment which keeps organizations like yours alive. An attachment to ideals and principles, often misunderstood. binds us together. A communion with the past strengthens us as we face our present and future problems.

> Several years ago a friend of mine whom I have known since my college days received a letter from the distinguished and now ceased president of our college. In that letter was the statement, casually written:

> "Whenever a people forgets its worthy past, the day will come when it will not have a past worth remembering."

> Let that casual thought be the theme of our brief discussion and reflection this evening. It is no waste of our time to reflect upon the lives of some of the great men whose memory we honor tonight. Preemi-nent among the leaders in the tragic fratricidal conflict between the North and the South will always be the names of Lee,

> Maury, and Jackson. To you, Daughters of the Confederacy, belongs a distinction I have always liked to recall. Besides the testimonials and enduring monuments of granite and marble which dot the Southland as living memorials of your evaluation of your heritage, the glory of our past and as a bulwark of hope for the future, there is the universally accepted national holiday—Memorial Day, May 30, of each year—which is credited to your acts of remembrance in placing flags and fresh-cut flowers on the graves of the Confederate and Union soldiers alike. The inspiration for the issuance of General Logan's famous order establishing Memorial Day in 1869, had its origin when he was witnessing the evidence of your patriotism. Later by act of Congress, Memorial Day on May 30 was established for the Nation. This fact has not altered the happy custom of celebrating other memorial days on other and separate dates in our Southern States. Your objects and purposes and those preceding you in this patriotic organization were to petuate the recollections of the sacrifices, hardships, and deeds of valor of our brave forebears in the struggles of 1861 to 1865. Just and righteous to them was their conception of duty and principle. They labored for a time in vain, but not without permanent rewards to us, the beneficiaries of their valor, heroism, and ideals. The pages of unbiased history record for all time their unprecedented genius for being able to accomplish so much with so little.

> While we reflect with great and justifiable pride upon the achievements of our great generals and Commander Maury, I doubt but few, if any, there are who now would have history reverse the conclusion of the Civil The scars of that conflict are healed and these assemblages have higher purposes than to keep alive the strife of the days gone by.

> We have builded upon the heritage of their sacrifices. The courage and loyalty to principle, exemplified in our leaders, are the com-

mon property of us all.

On Palm Sunday almost 90 years ago an undernourished, poorly equipped, and scantily clad army of less than 150,000 men began to slowly disperse from the several surrendering posts to wend its weary way home-ward. Surviving loved ones welcomed their return as though they were conquering heroes. The plenty and security which they had left behind when they had volunteered to fight in a lost cause had disappeared. They found instead shattered and destroyed homes. Cities, villages, and farms had been laid waste and pillaged. Pestilence, poverty, famine, distress, destitution, and desolation stalked every countryside. Indiscriminate waste, death, and destruction lay in the path of Sherman's march, 60 miles wide and 300 miles long. What a spectacle of hopelessness faced the veterans of our southland.

There was no money. The currency was valueless. The entire economy was wrecked. What small industries and manufactures there were had been destroyed or rendered useless. Four years of neglect had rendered homes and dwellings almost uninhabitable. Farms had been scorched. Storehouses, mills, and small factories had been denuded. Our railroads were torn apart; communications were chaotic. Precious little of material value remained after the Civil War. The tangibles of life were few.

Under the beneficence of an almighty God, our men and women had preserved some of the great intangibles of life. There was courage, faith, hope, character, and a determination to rise again.

Contrast this condition with the problems of the war-torn nations of today. There is no parallel in all history. For 12 years following the Civil War, the South suffered under the unspeakable domination, economic and political, of its conquerors. Sordid pages of history record brother's mistreatment of brother. A sustained, calculated, and premeditated design of oppression was practiced upon a once proud but now subdued segment of our American Nation. Revenge, greed, avarice, and treachery were the daily experience of a struggling and suffering people.

A kind providence stood at our side. In gracious benediction. He lighted our paths and kept our spirits alive. Congress refused all relief appropriations. Less than \$1 million was donated for our relief by several philanthropic societies in Philadelphia and Baltimore.

Lend-lease was not then in the English or American dictionary. No point 4 program was projected. There was no Economic Cooperation Administration. No War Claims or War Damage Commission was created for us. No Marshall plan was established for the South. The ingenuity and kindness of man had not progressed to the point of being able to conceive of the term of "mutual assistance or mutual aid." Eighty-nine years had to elapse before the phrase "Foreign Operations Administration" could be born. The administration of the affairs of the South was marked with a suppression compounded by oppression.

I need only to refer to one illustration of the ruthlessness and utter indifference of the times with which you are all too familiar. The ancestral home of the Custis family, we known as the Custis-Lee Mansion, was appropriated by the Government. It has only been recently and within our lifetime, fol-lowing years of persistent struggle, that meager compensation has been paid the survivors of the Lee family for this wanton act of banditry. Contrast this condition with the manner of our treatment of friend and foe alike after the close of World War II We have spent many billions of dollars in rehabilitating the economies and restoring the damage caused by the war to the various countries all over the world. Even many countries rely on our bounty who took little part in the recent war. And in this connection, unless we keep constantly on guard, this generosity may become a permanent part of our national existence and to the point of so weakening our own economy as to make us the easy prey of our enemies.

But the spirit of the South would not die. Your early members kept it alive. Your recollections of the past and your intermittent meetings serve to refresh the spirit and to keep it alive. This is nurture for ourselves and future generations.

. When the name of Lee is mentioned to the

unprejudiced, at once he is associated with the great generals of all time. We link him with Alexander the Great, Caesar, Napoleon, Washington, Jackson, and a few Born the son of a distinguished Revolutionary soldier, his scholarly attainments at West Point made his recall there as superintendent a natural sequence. While he at first opposed secession with such means available to his as an Army officer and was offered the supreme field command of the United States Army, he, nevertheless, through loyalty and devotion to his native Virginia resigned his commission and became the leader of all the southern forces. His ability and leadership was demonstrated under General Scott in the War with Mexico. While he may have resisted to the bitter end, his regard for the welfare of his men, his beloved Southland and her future caused him to tender his sword to Grant at Appotomax on April 9, 1865. His greatness, his humility. and his reverence for the things eternal are reflected in his final order to his troops which he issued on the following day of April 10, 1865. His words in that order were:

HEADQUARTERS, ARMY OF NORTHERN VIRGINIA, April 10, 1865.

After 4 years of arduous service, marked by unsurpassed courage and fortitude, the Army of Northern Virginia has been compelled to yield to overwhelming numbers and resources. I need not tell the survivors of so many hard-fought battles, who have remained steadfast to the last, that I have consented to this result from no distrust of them; but, feeling that valor and devotion could accomplish nothing that could compensate for the loss that would have attended the continuation of the contest, I have determined to avoid the useless sacrifice of those whose past services have endeared them to their countrymen. By the terms of the agreement, officers and men can return to their homes and remain there until exchanged. You will take with you the satisfaction that proceeds from the consciousness of duty faithfully performed; and I earnestly pray that a merciful God will extend to you His blessing and protection. With an increasing admiration of your constancy and devotion to your country, and a grateful remembrance of your kind and generous consideration of myself, I bid you an affectionate farewell.

R. E. LEE, General.

The eloquent tribute to the bravery and devotion of his men were expressed in Lee's last order to his troops. His affection for them and consideration for their future led to the cessation of hostilities.

Matthew Fontaine Maury, of Fredericksburg, Va., having been educated at the United States Naval Academy, became an officer in the United States Navy. Historians say he was trained to the sea. After a few years, due to an accident, he retired but continued his devotion to naval affairs as a civilian. His worldwide fame was achieved at a conference in Brussels in 1855. This resulted in his restoration to active naval service as a commander. He had distin-guished himself as head of the United States Naval Observatory and Hydrographic Office. His authorship of the Physical Geography of the Sea, Wind and Currents Charts, and other meteorological works resulted in the renown for him in his day as the world's most distinguished oceanographer and hydrographer. When the War Between the States began, he resigned his command in the Navy of the United States and assumed the harbor defenses of the meager southern navy. Upon the close of the war, he retired to Lexington as the professor of meterology at the Virginia Military Institute. By training, study, and excellence in naval affairs we are happy to acclaim him as one of the leading naval authorities of our country and particularly of the Southland.

Thomas Jonothan Jackson, one of the most daring and successful military tac-ticians ever to wear a soldier's uniform was much younger than either Lee or Maury. From Clarksburg, then a part of Virginia, he entered and graduated from West Point. He gave evidence early in life of his military genius. His army career with the United States was of rather short duration, for we find him as military instructor at Virginia Military Institute when hostilities began. He became a colonel in the Virginia Militia and soon rose to the rank of brigadier and major general. His achievements, his courage, and valor have become the topics of discussion among military men of all succeeding generations. His surprise attacks and sudden exploits in the Shenandoah Valley confounded and surprised the Union forces to the extent that Jackson soon had the reputation of being the ablest of Lee's generals. While a strict disciplinarian, he was an ardent Calvinist and a devout Christian. His troops loved him for his genius, his abilities, and his personal worth. eral Lee once said that had he had the services of Jackson at Gettysburg, the outcome there would have been different.

To praise these men is not to minimize others; nor does that praise detract from the respect and admiration, for the rank and file of our men and women; yea the debt, we shall never be able to pay.

Defeats and sorrows give us a better nature. They add to our resourcefulness. In crises we surprise ourselves with what can be accomplished. I am indebted to the great minister who conducts the national pulpit of the air on Sunday mornings for the thought that in despair and reverses that Dante wrote his masterpriece. John Milton wrote his greatest work when blindness had fallen upon him. Tennyson, in struggle for light during his sorrow over the death of a friend, gave us his great In Memoriam. Continuing, Doctor Sockman said:

"Dr. Edwin Mims, of Vanderbilt University, once declared that Robert E. Lee did more for the South in the 5 years after his surrender at Appomattox than during the 5 years he was so brilliantly leading his troops. He took the leadership of a college in Virginia and with no rancor of spirit, he manifested a magnanimity and nobility which made him revered in the South and respected throughout the whole Nation."

While we could spend hours rehearsing the lives and deeds of any one of the three whom we honor tonight, vain would be our proceedings unless from "Defeat we receive its dividends." Surely the morale of the human race has been lifted more by those who have courageously borne their defeats than those whom success have ever attended. The inspiration of these lives to our fathers and mothers are ours to transmit to our children and they to theirs. In complete succession we shall ever keep fresh in the minds and hearts of our people the measure of gratitude to these illustrious men of our past. Back of me on the wall of my office is an almost life-size picture of Robert E. Lee. As I gaze upon it, my spirit from day to day is refreshed by thought and hope that in defeat, sorrow, and surrender comes crowning achievements if we will but persist in the right. So my friends, it is well that you have dedicated yourselves to carrying on in the paths your parents treaded. Surely, the joy, the happiness and blessings which ours shall then increase for all. The faith of our fathers and mothers must remain with us as a constant reminder. In that faith, sustained by the influence of the Supreme Being are born the virtues of our existence exalted in the lines:

"God in all His glory rules
Watching over us with care
He sends us wisdom, love and truth
With his fellowman to share."

To Lee, Maury, and Jackson, representative as they are of all that is noble in a cause dear to their hearts, we of the South must never cease to acknowledge our debt of gratitude and appreciation. Their names as symbols of many others must ever be spoken of in reverence. To remember them is both an opportunity and a pleasure. To you and me it shall ever be a sacred duty.

Protest Against Contemplated Merger of Chase National Bank and Bank of Manhattan

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. CELLER. Mr. Speaker, I have written to the Honorable William Mc-Chesney Martin, Jr., Chairman of the Board of Governors of the Federal Reserve System, urging him to do all in his Power to prevent the merger of the Chase National Bank and the Bank of Manhattan Co. In addition, I have asked that the Federal Reserve Board withhold its approval of any application for the establishment of branch banks which may be made as a result of this union.

In the light of the excessive accumulation of capital in the control of the Parties to this merger, it is highly questionable whether the resulting banking corporation can avoid conflict with the laws and policies of our Federal Government involving monopolies and/or undue restriction of competition. Inasmuch as the merger concerns two of our largest banking institutions which are daily engaged in intensified competition with each other, there can be no doubt that the union of the two will be in defiance of and will directly flout the whole spirit and policy of our antitrust laws. I secured the passage of the Celler Antimerger Act which prohibits the merger of corporations where such consolidations tend to substantially lessen competition in any section of the country. The merger of these two banking institutions is clearly at odds with the whole intent and policy of that law as well as with the antimonopoly policies established under the Clayton Act and the Sherman Antitrust Act.

Together, these 2 banks presently have over 80 branches concentrated in a 50-mile area in the city of New York and are daily vying with eath other for the business of the people in New York. In addition, the Bank of Manhattan Co. is also set to acquire the Bronx County Trust Co. The danger is therefore evident that the merger will unduly lessen the competition which large competing banks provide and may tend to create a monopoly to the disadvantage of the People of New York and to the country generally. The businessman and merchant will find it increasingly difficult to establish credit facilities and they will be at the mercy of a financial colossus Which, because of the lack of competition, will be able to set the standards providing for the bank's best interests, to the detriment of small-businessmen and other customers.

There have been 14 bank mergers in New York City in the past 7 years. Unless some brake is placed on this trend, serious consequences will befall that section of the country. If the present merger is approved, an all-powerful oligopoly, made up of the National City Bank, the Manufacturers Trust—both the results of mergers—and the new Chase-Manhattan Bank, will have a stranglehold on New York banking facilities. Under these circumstances, the Attorney General has the clear duty, under the Sherman Act, to investigate and prevent this merger.

In addition, I have asked the chairman of the House Banking and Currency Committee to hold hearings on my present bill, H. R. 2115, which is a measure designed to subject all bank mergers and consolidations to the scrutiny and written approval of Federal banking author-The bill, in substance, would require that before any bank merger can be effectuated, the approving Federal official would determine whether or not the merger or consolidation would lessen competition unduly or tend unduly to create a monopoly contrary to the policy of Congress hereby declared in favor of local ownership and control of banks and competition in the field of banking.

I advise Chairman Martin of the Federal Reserve System, Attorney General Brownell, and Governor Harriman, Superintendent of Banks in New York State, and the Comptroller of Currency, that, in the event this merger goes through, it is my intention to have a full and complete investigation by the House Judiciary Committee of which I am chairman.

Also, because of the unwarranted rise in the stocks of these banks, there are strong indications of stock jobbing and sale manipulations. The records of brokers, traders, directors and officers of the banks in question should be closely scrutinized by the Securities and Exchange Commission.

I have in addition, introduced a bill designed to subject all bank mergers and consolidations to the scrutiny of Federal banking officials. The bill, in substance, would require that before any bank merger could be effectuated, it would be necessary to obtain the written consent of appropriate Federal banking authorities as follows:

First. If acquiring bank is insured national or District of Columbia bank, approving agency is Comptroller of the Currency.

Second. If acquiring bank is insured State member bank, approving agency is Board of Governors of the Federal Reserve System.

Third. If acquiring bank is insured nonmember bank, approving agency is Federal Deposit Insurance Corp.

Fourth. If acquiring bank is noninsured bank, approving agency is Board of Governors of the Federal Reserve Sys-

In determining whether or not to approve the merger, officials, under the

terms of the bill, would be required to determine if the effect of the merger or consolidation "may be to lessen competition unduly or * * * tend unduly to create a monopoly contrary to the policy of Congress hereby declared in favor of local ownership and control of banks and competition in the field of banking."

The bill would enlarge upon existing statutory provisions in several important respects. As provided by the Federal Deposit Insurance Act of 1950, Federal banking officials must approve mergers between insured banks only where the capital stock or surplus of the resulting bank will be less than the aggregate capital stock or surplus of the two institutions combined. Under existing law, the Comptroller of the Currency also must grant his approval before the merger of two national banks or a national bank and a State bank can occur; and the Federal Deposit Insurance Corporation must lend its sanction to mergers between insured and noninsured banks. In none of these instances, however, is the competitive impact of the merger a necessary element to be considered in granting or withholding approval of Federal officials.

The bill I have introduced would extend the merger provisions of existing statutes to include all insured banks regardless of the capitalization of the financial institution resulting from the merger and to require approval of mergers and consolidations of all non-insured banks as well. It would also make it necessary for Federal officials, in adjudging the merits of proposed mergers, to inquire as to the effect of the consolidation upon competition and monopoly power in the field of banking.

In introducing the proposed legislation, I wish to emphasize that no impartial observer viewing the financial structure of the Nation can feel other than alarm over the constant and unremitting decline in the number of banks serving depositors and borrowers in the country. This is a trend which began well before the great depression and has continued even into the most prosperous periods of our history. In 1951, more than 80 banks were lost through consolidation or absorption into other institutions. In the first half of 1952 alone, 52 banks went

by way of merger. Many of these consolidations result principally in strengthening the already powerful position of large banking institutions. Manufacturers Trust Co., for example, has risen to the position of the fifth largest bank in the United States principally by virtue of the efforts of the many fine banking institutions which it has absorbed, such as Brooklyn Trust Co., Equitable Trust Co., of New York, Flatbush National Bank, of Brooklyn, and others. Mellon National Bank & Trust Co., 11th ranking bank in the United States, has in recent years embarked upon a program which has resulted in the acquisition of many small suburban banks in the residential communities surrounding Pittsburgh. see in the Bankers Trust Co., as another example, this surge toward financial concentration. Bankers Trust Co., since 1950, has absorbed such independent

banking institutions as Title Guarantee & Trust Co., Lawyers Trust Co., Flushing National Bank, Commercial National Bank & Trust Co., and the Bayside National Bank, of New York. At the present moment there is a contemplated merger between the Chase National Bank and the Bank of Manhattan Co.

Something must be done to put a halt to this continued decrease in our bank population. Access to capital for all types of businesses, small as well as large, must be safeguarded. Concentration of financial power in a comparatively small number of banks must be discouraged. These are not partisan objectives—on the contrary, they are the aims of all those interested in preserving free and independent enterprise.

Present laws relating to bank mergers are completely inadequate. This is confirmed by the Board of Governors of the Federal Reserve System, whose Chairman wrote me some time ago, as follows:

It is apparent, therefore, that present statutory provisions with respect to bank mergers and consolidations do not provide effective means for the prevention of mergers and consolidations which may result in a lessening of competition or a tendency to monopoly. Even in those cases in which consent is necessary, the law does not specifically require the Comptroller of the Currency, the FDIC, or the Board, in determining whether to grant or withhold consent, to consider whether the proposed merger or consolidation will lessen competition or tend to a monopoly or to consider any other specific standards or guides.

The objective of this bill is consonant with that of the Congress in recently enacting the Celler Antimerger Act amending section 7 of the Clayton Act extending the merger provisions of that statute to acquisition of corporate assets as well as stock by those concerns subject to the jurisdiction of the Federal Trade Commission. It is now time to close another loophole in our salutary laws against mergers, and I believe this is the kind of legislation to which Members of both parties can freely lend their support.

Sun-Times Calls Calumet-Sag a Must

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. O'HARA of Illinois. Mr. Speaker, supplementing my remarks of last week concerning the Calumet-Sag Waterway project included in the President's budget message, I now am respectfully directing the attention of my colleagues to the lead editorial appearing in the Chicago Sun-Times of today, January 24, 1955, illustrated with a cartoon by Burck in which a mermaid says to old man Neptune "What do you know, pawe're going to New Orleans by way of Chicago."

The editorial in the Sun-Times which follows, reflects the great interest with the press and the people of Chicago in

a public works development on the early completion of which hangs the prosperity and the security of the entire middle-western area. As the Sun-Times well says: "Cal-Sag has become a must. It is time for a decision in Congress."

WIDEN THE DITCH IN PROSPERITY'S PATH

Narrow and inadequate, the winding Calumet-Sag Channel is an archaic ditch in mid-America's route to prosperity. When the St. Lawrence seaway opens. Cal-Sag could be a thriving link between the Great Lakes and the Gulf of Mexico for foreign cargoes. Literally, this aquatic road would bring the world's vessels to America's hidden heartland.

Cal-Sag is a short but vital waterway, built originally as a sanitary canal. It is but 16.2 miles long, just half the distance from Chicago's Loop to suburban Park Forrest. Now, it carries 4 million tons of freight annually. Army engineers estimate it could float some 18 million tons after it is developed.

For years Chicago area proposals to widen this channel have been mired in obscure political debate in Washington despite manifest need. A decade has passed since Congress O. K.'d the plan. Since then, only \$300,000 was set aside for the work.

In his 1955 budget message, President Eisenhower wisely earmarked \$4 million for a major start by Army engineers on widening 5 miles at Cal-Sag's western end. This, of course, is a minor amount in the \$98 million in estimated Federal and non-Federal money that must be allocated to complete the missing link.

Cal-Sag is important to all of America, not just the Midwest. Its completion will bring new-found prosperity to many areas, it will aid in the military defense of this entire country, it will bring Americans closer together, and it will cut cargo costs.

Cal-Sag is not an overnight job. It will take years to complete. So now is the time for every Congressman and Senator to get behind it. Support of the President's budgetary request has been promised by all members of the Illinois delegation in the House.

Nature endowed the Midwest with the Great Lakes and the Mississippi River, neither of which yet have been used to their greatest potential. Man can tap their unending availability by using a little money and plenty of imagination. Thanks to the Cal-Sag Waterways Development Committee, Inc., headed by Henry E. Seyfarth, the community is being kept aware of the project's need and progress.

The indecision and sidestepping that have marked the Cal-Sag project no longer can be tolerated. Because of the St. Lawrence Seaway Act, Cal-Sag has become a must. It is time for a decision in Congress.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily Record at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939). LAWS RELATIVE TO THE PRINTING OF

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD.

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Door-keeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and I at the Capitol.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Schator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Appendix

Displaced Textile Workers in New England

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of William H. Miernyk, associate professor of economics and director of the Bureau of Business and Economic Research, Northeastern Uni-Versity, Boston, Mass., before the Committee for Reciprocity Information, December 6, 1954:

I have been asked by the New England Textile Committee to appear before this committee to summarize the results of a research project, recently completed by the Bureau of Business and Economic Research at Northeastern University, dealing with the employment experience of displaced textile Workers in New England.

It has often been assumed that textile workers displaced from their jobs by the liquidation of New England mills have been absorbed by establishments in other industries which have been expanding in this region. For many years competition from lower-wage southern mills has had an adverse effect upon textile employment in New England. Although there has been some expansion of employment in other industries, much of this has occurred in nontextile areas and there has been considerable chronic unemployment in New England tex-tile centers since 1947. Our study was made to test the hypothesis that displaced textile Workers are finding employment in other industries or in nonmanufacturing occupations. The results are summarized in the tables appended to this statement. All of the tables are taken from chapter 2 of Inter Industry Labor Mobility, a report of the Bu-reau of Business and Economic Research, copyrighted by Northeastern University.

In all, six case studies were made in the areas listed in table 1. The mills involved had been liquidated over a period ranging from 6 months to 21/2 years prior to our sur-Vey, which was conducted between September 1953 and March 1954. They were selected to obtain a good sample of representative mills, both geographically and over time.

We found that about 43 percent of the displaced workers were unemployed at the time of our survey. Another 12 percent had withdrawn from the labor force, although not all of the latter were voluntary withdrawals. About 30 percent of the total group had been unemployed continuously since their layoff. Men were more successful than women in finding jobs, but 33 percent of the men were unemployed when interviewed, and 21 percent had been continuously unemployed since their layoff (table 2).

The sample workers were relatively old compared to the civilian labor force of Mas-

sachusetts (table 3). On the whole, younger workers were better able to find jobs than those past the age of 45, although nearly 30 percent of the unemployed were also under 45.

Textile mills provided the chief source of employment despite the fact that textile employment in New England was declining during the period covered by our survey, while employment in other industries was increasing. Nearly 36 percent of the dis-placed workers who found new jobs were once again working in a textile mill. The next largest single group found service jobs. mostly in relatively low-paying, unskilled occupations. The expanding industries employed a small proportion of the displaced workers (table 5).

Sixty-four percent of the sample workers reported that they were earning less than they had prior to their displacement (table Forty-seven percent felt their new jobs were generally worse than their mill jobs had been, and 54 percent of those who found nontextile jobs indicated a preference for textile employment (table 8).

Short-run labor mobility and immobility are matters of degree, and our survey re-vealed some of both. But in view of the vealed some of both. But in view of the employment trends in New England during the period covered by our survey we found a surprisingly small proportion of displaced textile workers employed in the expanding industries. This is not due to their unwillingness to accept other jobs, but to a lack of job opportunity.

This survey suggests that if large numbers of manufacturing workers are displaced from their jobs through the liberalization of our foreign trade policy we should not assume that they will be automatically absorbed by other manufacturing industries, or that they will readily find employment in nonmanufacturing jobs. The displacement of textile workers in New England has been largely due to interregional competition. employment effects of international competition should not differ significantly from those of interregional competition.

It is unrealistic to assume that declining employment in some industries will always be offset by an expansion of job opportunities in other industries in the same labor market areas, or that displaced workers are able to move without difficulty to other labor market areas where job openings might

We found that workers often have only the most fragmentary information about labor market conditions, and this has been supported by earlier studies of labor mo-bility. All of the unemployed workers in our sample were actively seeking jobs. They were unable to find employment in their own communities, and many were unable to move because they owned their homes, they felt that they were too old to make a new start in another community, or they were unaware of job opportunities elsewhere.

Our survey reveals some of the imperfections in the operation of the labor market which are not obvious to those who base their conclusions upon highly aggregated statistical data. If there is to be a further displacement of manufacturing workers in this country, however, these problems cannot be ignored.

Payment of Traveling Costs to Visit Prisoners of War

SPEECH OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. KEATING. Mr. Speaker, today I am introducing a bill to authorize payment of the travel costs incurred by relatives of the men who are prisoners of the Chinese Communists, if it really works out that the Communists are serious and that visits will be permitted. To my surprise, this proposal has been misunderstood and even the subject of some controversy. A brief clarifying statement seems to be in order.

In the first place, it would be entirely inappropriate for any of us here in Congress to urge these unfortunate men and women to decide one way or the other, whether they go or stay. That was not my intention.

In the second place, it would be highly inappropriate for us to interfere with whatever negotiations or policy determinations the executive branch may ultimately undertake. I had no thought of forcing the hand of the President or his advisers

But, Mr. Speaker, this small matter of defraying the expense, if and when such travel is undertaken, does fall squarely within our province as the appropriating authority for our Government. I feltand I still feel with all my heart—that we should hasten to remove any question of expense from the other and broader considerations that confront us.

One of these men, unjustly imprisoned in a hostile foregin land as a result of strategy and policy that he had no hand in formulating, would simply be unable to understand even a suggestion that his Government might deprive him of an opportunity-if it turns out to be that—to receive a visit from his family

This question was not asked in Lowell.

¹ This question was not asked in Lawrence.

Note.—This question was not asked of the employed workers in Lowell; it was not asked of any workers in Lawrence. The "no answer" category includes those who had retired, and members of the Armed Forces. The question was not answered by many of the mail respondents.

and loved ones. We must not forget we are dealing with individual human beings, loyal and devoted citizens whose service to our country has put them in a terrible position.

I cannot conceive of trifling with their feelings and the possibility, remote though it may be, of improving their situation before we win their ultimate release. That alone would be enough to merit swift action in their behalf.

But beyond there is something more important. This is an obvious propaganda device, cleverly pitched at us by Chou En Lai. The world is watching our reaction. And if the United States is to turn the offer down, let it be done in the considered terms of great policy and not in any sense through niggling quibbles over details.

It is my hope that we will take this offer calmly in our stride, demonstrating that we are absolutely sure of ourselves and sure of our ground all the way through. If, as is conceivable, the Chinese Reds are really indulging a cruel and heartless bit of trickery at the ex-Dense of the feelings of these unfortunate Deople, let the consequences rest squarely on their heads—and not on ours because we held back in apprehension. Least of all, can we afford further talk, such as has been reported in the press, that the wives and mothers who are suddenly faced with this surprising suggestion must turn it aside bacuse they have not funds to make the trip. What could be more damning and a more entirely Wrong picture of our good, rich, and Warmhearted Nation?

U. N. Seen Helpless

EXTENSION OF REMARKS

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. DAVIS of Georgia. Mr. Speaker, I am inserting herewith an article by Constantine Brown, published in the Washington Evening Star Friday, January 21. In this article Mr. Brown very frankly discusses the complete failure of the United Nations to deal successfully with Communist China's lawless acts, and the failure of that organization to deal successfully with any of the other major problems which it has undertaken to solve.

The article follows:

U. N. SEEN HELPLESS—EISENHOWER SEEN BACKING DOWN AFTER FIRM STAND ON REDS

(By Constantine Brown)

President Eisenhower's suggestion at his televised news conference that the United Nations take a hand in the war between Communist and Nationalist China has found only a few supporters in Congress.

Congressional leaders have no desire to ignore the U. N. It may be that at some distant date, after the lawless nations such as the U. S. S. R. and Communist China have changed their form of dictatorship, the U.N. can become influential in world affairs. But so long as Moscow and Peiping continue on

a rampage, taking advantage of the unbelievable timidity of the free world, it is hard to imagine that the U. N. will be able to do anything constructive in the latest bloodletting. Its intervention to liberate the Americans jailed by Peiping shows the U. N.'s impotence.

On November 26 last year the country was stunned by the announcement that 11 Americans in uniform held by the Chinese Communists in violation of the Korean armistice had been sentenced to long jail terms. There was an uproar with demands that measures be taken to liberate the men at once. The administration had means to force the Reds to do so by threatening a blockade of the China coast.

According to expert advice given the National Security Council a blockade could have wrecked the Pelping government. Only a very limited amount of commercial and military supplies reach China by the Trans-Siberian Railroad. The Red Chinese must have open sea lanes to live. A few weeks of blockade would have forced her to shout "uncle" and get back on the track of respect for signed agreements.

Mr. Eisenhower stated that such a drastic measure as a blockade was an act of war. It is true. But we are still at war with Communist China over the Korean affair. Until the armistice has been changed into a peace treaty, the state of war between the participants in the Korean war continues to exist.

Instead of acting with determination to which we are entitled by all international regulations, the administration preferred to place the matter in the weak hands of the U. N. And now 8 weeks after the Reds told us that they had placed our men in stinking Chinese jails we are still where we were at the beginning.

Dag Hammarskjold has returned from Peiping empty handed insofar as the Americans are concerned. He announced proudly that he had begun negotiations. But he has never revealed publicly—for very good reasons—what the Chinese demanded as ransom for our boys. The good reasons are, according to what has leaked out, that the American people would not accept the Chinese Communist price.

President Roosevelt proclaimed America as the arsenal for democracy when the Nazis started their war for world domination in 1939. Since the beginning of the cold war America has not only remained the arsenal but also the world's fire hydrant. The hose has been placed, however, in the hands of her many allies, most with a similar ideological outlook but with entirely different economic and political interests.

The fact that the executive branch would welcome placing the China war in the hands of the U. N.—which so far has been utterly unsuccessful in solving any major problems—has caused concern not only among our Chinese allies in Formosa but also in congressional quarters in Washington. A collective military intervention would have to be approved by the U. N. Security Council in which the Russians have a veto. They were absent when the council decided to intervene in Korea in 1950. Nobody has been able to explain logically the reason why the Soviet representative stayed away. But we can be sure that as soon as a resolution for U. N. intervention in the China war is put forward, the 67th Soviet veto will be forth-

Regardless of how longingly and wishfully our policymakers may be looking toward the U. N., the consensus of the realists in the Government is that the battle for Formosa which began this week is our own.

The Pelping dictatorship, directly supported by the U. S. S. R. and favored by the U. N. members which have recognized it, is determined to do away with the remnant of the legitimate Government of China now

holding out on Formosa. Until Chiang Kaishek and his army have been destroyed, the Chinese Communists are not sure of their domination of the mainland.

Our own security in the Pacific depends on the support we are giving to the Nationalist forces. The short-range policy is to prevent the conquest of Formosa. The longrange policy is to help the Nationalists return to the mainland.

The hesitant policies of the administration in the last few days have caused serious concern that the intimate advisers of the Chief Executive may be urging him to reconsider the only strong stand this country has taken toward Red aggression recently.

How Many More?

EXTENSION OF REMARKS

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. THOMPSON of Texas. Mr. Speaker, the editorial which follows reflects the deep concern which many of my constituents feel in regard to the plight of the small farmers. A delegation from the neighborhood where this editorial was first published will be in Washington during the next 3 days to tell the story of their distress to the Committee on Agriculture and to Government officials.

It should be remembered as we approach the overall economic problems of our country that the depression of the late twenties was prefaced by a very high stock market, great industrial prosperity, and at the same time acute distress in agriculture.

The editorial follows:

[From the Hallettsville (Tex.) Tribune of January 7, 1955]

HOW MANY MORE?

Our small farmers are victims of policies which are one-sided and unwise because unjust, to say the least. There is also no doubt as to their effect.

The high tariff is forcing our farmers to plant less and less cotton, while other countries produce more and more, as the result of our tariff policy. Mexico just had a record crop, also not without the help of our own capital.

The parity is paid in the price with a full knowledge that it will act as a serious handicap to cur cotton in the world market.

Our allotment policy cut those at the bottom the same as those at the top—contrary to our income tax policy. If this tax would be levied the same way, it would make it impossible for the small people to make a living—just as this allotment policy does to the small farmers.

Under this policy, the cotton acreage is taken from our old cotton counties and given to the new ones. While our small farmers must plant less, the large producers can plant more in the new cotton counties.

plant more in the new cotton counties.

The cotton allotment is in acreage, the same for those producing two bales or more per acre as for the others averaging a half bale or less.

Can anything else be expected than the farm families by the thousands being driven into the cities?

For instance, this congressional district lost some 8,000 farm families—about 25 per-

cent-as did the State and the rest of the South.

Certainly never before were so many family farmers wiped out as since 1940—with all it means to the country. There is already a talk of a farm depression spreading also into the cities.

Senator OLIN JOHNSTON sees the farm depression already on-yet almost utterly ignored, much less understood.

Senator Joseph McCarthy believes the answer is in a higher farm income-of little help to small farmers unless they can produce and sell more cotton.

From independent farmers are being made people dependent only on jobs.

Instead of helping more people to settle on the farms, we are losing them wholesale.

And instead of dividing the large estates into small farms to make more independent people, we are wiping out the small ones and making bigger farms the same as the Com-munists do. The same results, only a dif-ferent method. Nothing else can be ex-pected—but are those policies inevitable?

Must our small farmers be sacrificed to our

tariff policy?

Must our parity be used as a price handicap?

And must those at the bottom be cut the same as those at the top?

And should not the allotment be in lint

instead of acreage, in justice to all?

Also, must the cotton acreage be taken from the old and given to the new counties? And must we force our farmers to plant less while we encourage other countries to produce more cotton?

That the mechanized farming is responsible for this trend, is only a sinister fallacy—which has nothing to do at all with the above

So much has happened to our farmers, yet so little is known, much less understood.

How much more must happen?

How many more farmers must be sacrificed?

How much more must our very foundation be weakened by those blind and stupid policies?

Only Congress now in session can give this answer.

Oppose Tariff Reductions on Textile-Advocate Increases in Duties on Velveteens

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Herald Annual Textile Review. January 23, 1955, by William F. Sullivan, president, Northern Textile Association.

This is not only a very interesting article, but one that is most truthful and forceful. Imports of Japanese textiles will cripple further a domestic industry that is already struggling for existence in the world market:

FOREIGN IMPORT RATE MAY SPELL TEXTILE DOOM

(By William F. Sullivan, president, Northern Textile Association)

New England textile people oppose tariff reductions on textile goods and advocate increases in the duties on velveteens. The rate at which recent imports of certain types cotton goods have been entering the United States indicates that it may be necessary to recommend an increase in the duties on these fabrics, as well as on velveteens.

JAPANESE PRODUCERS

Importations of velveteens under present rates are such that the Japanese producers have captured the entire American market for low-grade plain-back velveteens and are underselling American producers of back velveteens by at least 25 percent.

It is certain that any reduction on present tariffs on other textile goods would result in an invasion of the American market by Japanese or other imported cotton textiles.

The competitive interrelationship among various fabrics and fibers coupled with the complexity of the textile industry means that imports which take the domestic market away from any one fabric harm the entire industry.

The reasons for this are:

1. The textile industry which employs over one million persons is an important part of our national economy and an essential part of our New England economy. Destruction of this industry would have a chain reaction throughout our economy, and would seriously damage our national and regional economic structure.

HEAVY EMPLOYMENT

2. The textile industry is composed of thousands of highly competitive small businesses with heavy employment concentrations in certain regional and local areas. This latter characteristic magnifies the severity of losses to this industry.

3. The textile industry has been in a depressed condition for well over a year, and is particularly susceptible to competition from low-wage foreign countries. Present imports at prices lower than American man-ufacturing costs tend to keep the domestic market depressed and prevent a recovery by this industry.

4. Textile workers displaced by foreign or domestic competition either remain unemployed or are forced to take lower jobs. Experience has proven that the so-called "growth" industries do not absorb such workers. A study of 1,705 displaced New England textile workers, recently completed by the Bureau of Business and Economic Research of Northeastern University. shows that less than one-half of the workers were reemployed, and of this number, twothirds were earning less pay. The study concluded that "workers displaced * * * are not being absorbed in large numbers by the industries which have been expanding in this

FOREIGN COMPETITION

5. Competition from foreign countries, particularly Japan, is based on the extremely low wages paid in those countries. and other forms of compensation are the most important factor in measuring the cost of producing fine combed cotton goods. It is estimated that labor constitutes 43 percent of the cost and raw material represents 40 percent of total cost. With only slight variations from country to country in the cost of raw material, the tremendous wage differential between the American industry and foreign countries is of special significance. Average wages of \$1.41 per hour in the northern cotton and synthetic-textile industry exceed Japanese wages of 11.9 cents per hour by over 1,000 percent. Even though there may be superior productivity in American mills, it is not sufficient to offset the enormous wage differentials.

COOPERATIVE COSTS

According to experienced textile engineers, the costs in northern United States mills exceeds Japanese costs on 6 specific cotton fabrics by 52 to 69.5 percent. If the Japanese mills had the same productivity which exists in American mills, the decrease in Japanese costs would be very slight, ranging from nine-tenths to 1.95 per yard, indicating that the current advantage of American mills in higher productivity is of but meager importance in relation to the very low wages paid by the Japanese industry. 6. The significance of the vast wage dif-

ferential between our American cotton textile industry and that of Japan and other textile exporting countries is emphasized by the fact that our own industry shifted in response to wage differentials of much smaller amounts. The major portion of the industry has shifted from New England to the Southeast, because the wage and compensation level in New England varies from 20 to 30 percent higher than that of the South-This compares with differentials between the United States and foreign countries of from 200 to 1,200 percent. of Japanese or other foreign textiles into this country would bring about an even more rapid and intensive liquidation of the American cotton textile industry than that which has occurred in New England.

7. The attempt to aid Japan's domestic economy by aiding her to expand textile exports to the United States at the expense of the domestic producers is an unwise method. This approach to the problem of helping Japan's economy would succeed in destroying the American textile industry. The problem of combating communism in Japan by strengthening her economy is one which must be shared by all American industry and all the American people. Destruction of the American textile industry would be a severe blow to our economy which might trigger further unemployment in related and

dependent industries.

The Meaning of Ukrainian Independence

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. RODINO. Mr. Speaker, for Ukrainians one of the most compelling and cohesive forces of unity is the desire for national independence. This desire is a force that brings together all Ukrainians into a common understanding and endows them with a common ideal. Achievement of this ideal is indeed fundamental for any people; for to be free from foreign domination, to establish a way of life in accordance with one's own unique political, economic, cultural, and religious concepts, and to be independent and self-reliant are basic human impulses.

Thirty-seven years ago the Ukrainians had realized, after centuries of subjection to foreign powers, their long-sought aim of national independence. Disintegration of the Russian Empire and later the Austro-Hungarian Empire made it possible, for at least a short time, to gather the formerly subject peoples of the western and eastern Ukraine into one homogeneous national republic. The Ukrainian dream had at last come

But the Ukraine was caught in the struggle between the Red Russians and White Russians for control over the former Russian Empire. Both forces were inimical to the national interest of

Ukrainians; for an objective of each was to reassert Russian domination, whether Red or White, over the Ukrainian people.

A country exhausted after years of war and German occupation, the Ukraine could not resist successfully the over-Whelming Russian forces from the north and south and defend the independence of the Ukrainian National Republic. And thus, before Bolshevik might, which had defeated the White Russian armies. the forces of Ukrainian liberation were compelled to recoil, until at last the Eastern Ukraine was again conquered by Russia. Large sections of the western Ukraine thereafter fell under Polish, Rumanian, and Czechoslovak control; but at the close of the recent World War, even those areas were united with the Soviet Ukraine and brought within the Soviet Empire.

On this January 22, the anniversary of Ukrainian independence, it is a fitting tribute to Ukrainians everywhere that this historic occasion be acclaimed. To the Ukrainian people beyond their native land, may their age-long dream again come true: That the yoke of the foreign tyrant will one day be thrown off, and that the Ukraine will again be free.

The Bureaucrats

EXTENSION OF REMARKS OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kane (Pa.) Republican of January 14, 1955:

THE BUREAUCRATS

Once a Government bureau or commission is established by law to handle a specific problem, it too often begins to expand its activities until the original purpose for which it was created may be lost sight of.

The Interstate Commerce Commision Act Was passed in the 1880's to prevent monopolistic practices by railroads, to see that charges were reasonable and just and to correct and prevent discriminatory rates. Thus did the ICC come into being.

Any railroad monopoly that may have existed 75 years ago has long since been done away with by new forms of competition on waterways, highways, and in the air. All are regulated to a greater or lesser degree by government. The railroads, however, which are the backbone of our transportation system, are handicapped by redtape and regulation which was designed to meet conditions when railroads had no competition.

Now public regulartory bodies seem to give more thought to protecting carriers from Competing with each other than they do to allowing them leeway to offer the public services and rates on a competitive basis.

Thus have we seen a government regulatory agency expand its functions until today It has virtually assumed the management of the Nation's transportation systems without facing the burden of financial responsibility for their success.

If our regulatory bodies would confine themselves to giving equal treatment to all carriers, instead of trying to manage the

details of their operations, the public would be assured of the best at the lowest rates. Regulation of business does not and should not be construed to mean administration and management of business.

Military Construction in Bexar County, Tex.

EXTENSION OF REMARKS OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include the following article from the San Antonio Light of January 16, 1955:

MILITARY BUILDING SPREE

San Antonio military installations enter the year 1955 in the middle of their greatest building boom in history involving permanent construction.

Work already is well underway or soon to be started on projects totaling some \$43 million with an additional \$9 million planned for later in the year.

Heading this gigantic permanent improve-ment program is Kelly AFB with 5 projects amounting to close to \$30 million.

Lackland AFB adds \$6,500,000 to the total and the highly classified ordnance depot and storage area west of that base another 86.800.000.

Still in the planning stage but tentatively set for later in the year are the \$8 million School of Aviation Medicine at Brooks AFB and \$1,130,000 nurses quarters at Brooke Army Medical Center.

Topping the Kelly building program is the 2,000 by 300-foot aircraft maintenance hanger and adjoining shops 1,650 by 250 feet. Steel framework for the huge \$12,500,000 structure, being built by Farnsworth & Chambers, contractors, is now up but the estimated completion date is February 1956.

Another project barely shaded by the hangar construction is scheduled to get started next month at Kelly. Bids will be opened February 9 on the 2-mile-long heavy duty runway for which \$12,193,000 has been authorized.

This runway is to be actually 11,550 feet long and 300 feet wide and is to accommodate aircraft up to 400,000 pounds gross weight. The estimated completion date is June 30, 1956.

Another big structure being built at Kelly is a 1,200 by 400-foot supply warehouse, work on which will continue throughout the year, The H. B. Zachry Co. is building the ware-house under a \$2,196,977 contract.

Farnsworth & Chambers also are building a 400 by 400-foot special warehouse, shop, and office at Kelly. The cost is \$1,-396,000 and the completion date June 1955.

Also nearing completion at Kelly is the last of 16-engine test cells, built under a \$1,330,000 contract by Harwell & Harwell.

With the exception of the maintenance hangar at Kelly, all new construction at local installations is being supervised by the San Antonio suboffice of the Galveston district engineer's office. The Air Force is supervising the hanger construction.

Last summer the Galveston district englneer's office announced award of a contract for \$6,810,796.38 to C. L. Browning, Jr., or construction of the classified ordnance depot. The work was to be completed early in 1955.

At Lackland a 9-story Air Force hospital is being built by Farnsworth & Chambers under a \$6,498,107.63 contract.

The architectural firm of Page & Sons, Austin, has been working on the plans for the new home of the School of Aviation Medicine at Brooks. Construction contracts are tentatively scheduled to be let in the fall.

A first authorization of \$8 million has been made for that project, originally announced as a \$30-million program.

This means that San Antonio is expanding its position as the major Air Force center of the United States, and is maintaining its position as a major Army center.

Fifty-two million dollars in military construction in Bexar County in 1955.

Forty-three million dollars already under construction or under contract.

Nine million dollars in contracts will

be awarded in 1955. The aircraft-maintenance hangar

nearing completion at Kelly Air Force Base is actually the rebuilding of the obsolete shops at Kelly. With the completion of the new runway, Kelly will be the most modern aircraft-maintenance center in the world, in addition to being the largest such installation. It now furnishes steady employment for about 20,000 civilian employees. With modern buildings, runways, and equipment, its permanence and future are assured.

National Shut-In's Day

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. RODINO. Mr. Speaker, it is indeed a pleasure for me to invite the attention of the House to a highly commendable organization known as the Shut-In's Day Association.

The objective of the association, which everyone must readily recognize as being most benevolent and humanitarian, is to encourage remembrance of the sick and disabled shut-in whether the individual be a civilian or war veteran. The general therapeutic value of the activities of this association to the less fortunate members of our society who must be confined indoors for long or permanent periods of time is widely acknowledged. The welfare of all mankind will be significantly advanced. It is a well-known fact that there are some long-continuing illnesses which can be at least partially alleviated by the bringing of encouragement and cheer and through the proper display of kindness and affection on the part of those who are entirely well. That the organization's manifold activities are intended to be universally appealing and effective is apparent since it has consciously striven to be nonsectarian, nonpolitical, nonracial, and nonprofit-mak-

I consider it a distinct privilege to be able to encourage the national observation of Shut-In's Day by introducing a bill to have Congress designate the first Sunday in June of each year as Shut-In's Day and to authorize and request the President of the United States to issue annually a proclamation calling for appropriate recognition and celebration of the day.

A developing interest on both a national and international scale is being demonstrated with reference to the desirability of having a day of remembrance set aside for the many unfortunate people who are forced by illness and disability to remain in their homes, hospitals, or sanitaria. An increasing number of the shut-ins are war veterans who, because of their sacrifices for all of us, are particularly deserving of the attention and consideration of those who are in good health. Many of the hospitalized veterans remain cheerfully patient, awaiting the day of recovery or improvement, even though they realize inward-ly that they may never enjoy the open sunshine again. Their chief contentment must be derived only from the thoughtfulness of those who visit them and send them books, magazines, flowers. and other tokens of warm and kind friendship.

Precisely when such an excellent program as the present one originated, or by whom it was first conceived, is not known, but the determination of the date is not essential to the continued success of the program. It has been estab-lished, however, that an annual day of remembrance for those unfortunate souls who must be confined to their homes, hospitals, and other institutions was in the mind of man perhaps centuries ago. English and Canadian soldiers stationed in India many years ago brought back reports concerning one of the Indian religious sects whose members visited soldiers confined in hospitals or their homes on a certain day of each year. The sick or wounded were presented with gifts such as flowers and food delicacies.

In the early thirties in the United States and Canada many shut-ins exchanged cards or letters of greeting observing Shut-In's Day. The honor and credit for making Shut-In's Day an organized observance belongs to Ernest Barker, a young Canadian shut-in, who with the help of a few friends founded the Shut-In's Day Association, International, in 1942. Since that time a great deal of desirable, well-warranted publicity has been accorded the idea of an annual Shut-In's Day. Ministers, governors, mayors, representatives of the press, radio, television, and civic clubs, and the general public have all made impressive contributions to furthering the project. Twenty of our State governors issued proclamations in recognition of Shut-In's Day in 1953.

Surely so noble a movement—already so widely supported—deserves the fullest national recognition. In terms of cost—whether we consider costs in time, energy, or money—adequate observance of the day entails very little by way of sacrifice on the part of society. But no sacrifice is too great if through it we may bring to the permanently afflicted—the shut-ins—some measure of comfort by the demonstration of the friendly concern of their more fortunate fellow citizens.

Fair Trade

EXTENSION OF REMARKS

OF

HON, HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1955

Mr. SCOTT. Mr. Speaker, Mr. J. Mahlon Buck, president of Smith, Kline & French, Inc., wholesale druggists in Philadelphia, recently made a speech at the company's annual sales meeting on private brands and fair trade, and under the authorization granted me I am asking it be reprinted in the Record.

PRIVATE BRANDS AND FAIR TRADE

In preparing for this meeting, and before deciding what I would say today, I read over the papers presented at our meeting here at Seaview just 10 years ago. I wish that time would permit us to review all of the events and experiences leading up to our decision to discontinue our own private brand line in 1944, but we believe that the time can be more profitably spent in studying the results attained during the intervening period.

It was interesting to note in going over these reports that every statement contained therein applies with equal force today; and that the need for a crusade on behalf of national brands throughout the country is even more urgent in 1955 than it was in 1945. As Mr. Van Arsdale will show you, there is abundant evidence to prove that in the area covered by this company, the private brand has practically disappeared from the shelves of the great majority of leading independent drug stores. It is regrettable that similar progress has not been made in other sections of the country, where the retailer's display space, as well as his stockrooms, still bulge with so-called long-profit off-brands or agency lines which have neither consumer demand nor acceptance comparable with the nationally advertised leaders.

In our opinion, a large share of the responsibility for this unfortunate condition rests upon the editors, publishers and writers of the drug trade publications, the officers of the National, State, and county pharmaceutical associations, and those who, like our guests today, represent our vast publicity network, including the newspapers, magazines, radio and television. It is still the grassroots support, if you please, of that vast multitude of small and medium-sized independent retail druggists which determines and will continue to determine the number of dollars which advertisers will have available to spend in the national media, and the few dollars spent by the agency line or private brand advertisers is a drop in the bucket compared with the potential loss of revenue to your companies if the national brands manufacturers of proprietary drugs and toiletries are compelled to

cut back on their appropriations.

Whenever drugmen gather together today, the subject of grocery distribution of health and beauty items soon emerges as the chief topic of conversation. Well-documented statistics, confirmed by the producers themselves, indicate that as much as 40 percent of the sales of some products which were previously sold almost entirely through drugstores is now moving through the grocery channels. There are many reasons for this, but to our mind the primary reason is seldom considered. We refer to the druggists' blind devotion to agency lines and/or substitutes for national brands.

stitutes for national brands.

Ask yourself this question: "Why did the grocery chains meet with immediate suc-

cess a few years ago when they first installed their so-called drug departments?" do you remember the average drug store 10 years ago? Everything for sale was behind glass in wall or floor cases, except the items displayed on the counter. And what items were featured in those displays? In a great many cases, the proprietor's agency line, or substitutes for national brands, or his own tonic, cough sirup, or what have you. didn't feature the brands that people wanted to buy because they didn't show him enough profit on each sale, and, when he did, he re-fused to price-mark them because, as a professional men, he didn't want his drugstore to look like a grocery store. He insisted on doing business the way he liked it, with no thought for the consumer's preference. All the grocer had to do was to offer what the customer wanted (no agency lines or substitutes) with the price clearly marked on the shelf. And the price was the same, only the druggist wouldn't let the consumer know

Now suppose all the druggists had instead featured national brands, with prices clearly marked, in open displays. Undoubtedly the grocer would have tried a drug section just the same, but if it hadn't clicked with big volume right at the start, he would have discontinued it, or relegated it to an unimportant location, or at least would not have expanded it to the extent that he has.

We're glad to say that druggists by the thousands have been installing open displays and promoting national brands to combat this new competition. This is commendable, for it is never too late to recognize the consumer's preferences.

But now comes the \$64 question: Will the grocer go over to private brands after this "drug" department is firmly established, as he has done on hundreds of food products? My guess is that he likes it very much this way, with fair trade, a 1½-percent rent, no high-priced registered pharmacists, and self-service. But he is inherently a hard trader, and the threat of promoting substitutes will find many willing manufacturers who will be scared into paying for display position. This is only the beginning.

In conclusion, I want to say a few words about fair trade. Those of us who were in the drug business prior to the passage of the Miller-Tydings Enabling Act in 1938 remember only too well the chaotic conditions prevailing throughout the industry at all levels. I fail to understand why even the most rugged individualist in business would oppose a system which, if properly enforced, would insure orderly distribution, with equal opportunity for all, in favor of a return to continuous jungle warfare in the market place, unless he personally had never been subjected to it. Even those in the advertising agency and newspaper fields who were greatly concerned initially, lest the elimination of price wars might reduce advertising revenues, have enjoyed steady growth under fair trade.

The great majority of us in this industry believe in fair trade, but have been conditioned by advance reports coming out of Washington for an attack on this law by the Attorney General's office early next year, which may have the effect of setting off fireworks in many States where fair trade has become a political football.

Naturally, the public doesn't like fair trade, because it doesn't understand it. To the consumer, it means fixed prices at high levels—nothing more or less. It seems to me that unless we can convince him that fair trade actually protects his interests by keeping prices down, we are in for a tough fight and a possible defeat.

For a long time I have been waiting for some tangible evidence which would again confirm the findings of the NARD survey of

several years ago; as well as the results of the exhaustive study undertaken by the drug chains at about the same time. You will chains at about the same time. remember that the former conclusively proved that fair trade actually saved the consumer about 1 percent by leveling prices in small towns and big cities nationally, While the latter developed the indisputable evidence that under fair trade, the retail prices of drugstore products rose only a few percent during our inflationary period, while the retail prices of all other classes of goods were rising from 25 percent in many cate-gories to as much as 100 percent in a few

The big test came in February 1953. You Will remember that in that month, President Eisenhower ordered the removal of all price controls. To our chagrin as wholesalers, very few prices were advanced either at wholesale or retail. Now we were to see just what decontrol of prices would mean to our friends in the grocery field, where fair trade had been scornfully spurned as a device to gouge the consumer.

With so many items involved, it was obviously impossible to estimate the average increases which were put into effect almost immediately in the grocery field. But there is always one source of information which accurately reflects the net operating profits of our larger retail corporations—the earnings per share as revealed to the SEC through their financial statements.

I submit to you now a comparison between the earnings per share in 1951 through the latest available fiscal period in 1954, of the 5 leading drug chains operating very largely under fair trade, versus the 5 leading grocery chains operating very largely without fair trade. These firms were not handpicked. They represent the largest companies listed on the New York Stock Exchange in their respective fields.

5 drug chains 1 earnings

 ³ Estimated.
 (Food Fair reports 28 weeks to Nov. 13, \$1.26 versus \$0.80 last year.)

Note.-1954 versus 1951, earnings up 26 percent.

I think you will agree that what may presently appear to be fair trade's Achilles' heel, namely, the argument that it falls to protect the consumer through its elimination of free and open competition, may indeed become its strongest defense against attack, when and if these facts are made known to the public.

Gallup Poll Opinion on First-Class Postage Increase

EXTENSION OF REMARKS OF

HON, EDWARD H. REES

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. REES of Kansas. Mr. Speaker, under consent approved by the House, I am including herewith a statement entitled "Gallup Poll Opinion on First-Class Postage Increase.'

Postmaster General Arthur Summerfield has called attention to a report by George Gallup, director of the American Institute of Public Opinion, indicating the views of the people contacted in respect to increases in first-class mail rates

The statement follows:

For the first time in the 6 years since an increase in postage rates was first advocated to cut down the operating deficit of the United States Post Office Department, majority opinion today favors raising the rate on first-class mail from 3 to 4 cents.

By an even greater margin, the public would approve increasing the airmail rate

from 6 to 7 cents.

These facts come to light in the latest coast-to-coast survey by the American Institute of Public Opinion in which a repres sentative cross section of the Nation's voters was asked:

"To help put the United States Post Office Department on a paying basis, would you favor or oppose increasing the rate of first-class mail from 3 cents to 4 cents?"

The vote nationwide and by men and women:

	National	Men	Women
Favor Oppose No opinion	Percent 51 45 4	Percent 55 42 3	Percent 46 49 5

An increase in postal rates was first advocated in 1949 to help erase the mounting post-office deficit which since World War II has exceeded \$4 billion.

At that time an institute survey found 59 percent opposed, 33 percent in favor, while 8 percent expressed no opinion on increasing first-class postage.

The 1949 survey did find a majority would approve raising the rate on the penny postcard to 2 cents. That increase was approved by Congress in 1952.

Each voter in today's survey also was asked:

"Would you favor or oppose raising the rate on airmail from 6 cents to 7 cents?"

The vote:

	National	Men	Women
FavorOpposeNo opinion	Percent 54 40 6	Percent 50 35 6	Percent 48 45 7

Six years ago, the vote was 51 percent in favor, 40 percent opposed, and 9 percent no opinion.

Today's survey finds that the greatest op-position to boosting first-class postal rates would come from the Nation's farmers, from southern voters and from residents of small towns and rural areas.

Rank-and-file Democrats are more opposed than are GOP voters.

In the fiscal year 1954, the Post Office had a deficit of more than \$399 million.

Last August, the President vetoed a general pay rise for the postal service's 500,000 employees, partly on the ground that the bill passed by Congress contained no provision for improving postal revenues.

Tribute to a Hometown Citizen

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. LANE. Mr. Speaker, every city and town has a few people with splendid minds. Because they revere truth and integrity they avoid the vanity of personal publicity. Not until they have passed away, do their fellow citizens become aware of their fine qualities and the self-effacing service they gave in helping

Upon the smaller circle of friends and associates they leave an indelible impression. Contact with a fine mind that is a stimulating adventure. It brings knowledge, reason, and, above all, understand-

We had such a man in Lawrence, Mass., by the name of Charles D. Mahoney.

He was a brilliant product of Yale's Sheffield School of Engineering and Harvard Law School.

His talents were many and his heart was generous.

Some of this excellence rubbed off on those who were privileged to know him, and, in turn, will be passed on to others. He was a man of whom one could genuinely say, "I am better than I might have been, because he shared his mind with me."

Imitation is the greatest tribute of all. Slowly, but inevitably, it increases the range of human progress.

In the meantime, permit me to bring to you the hometown appreciation of Attorney Charles D. Mahoney, as it was published in the Lawrence Sunday Sun of October 31, 1954.

The article follows:

SUNDAY SUN, PRESIDENT HAD OUTSTANDING CAREER

The bell tolled last Thursday in the Chuch of St. Laurence O'Tools—his home parish—for Charles D. Mahoney, 53, lawyer, engineer, journalist and sportsman, who, in too short a lifespan, had contributed so much to his community, had given so unstintingly of his skills, time and effort over the years to hundreds of persons who had had the good fortune to move within his broad sphere of activity.

His work was done unobtrusively, for he was of a nature which shunned ostentation and possesed an inherent characteristic which motivated him to circumvent as many as possible of the avenues which had been

opened to him to bathe in the glare and glamor of the plaudits of the multitude.

He did his work quietly. He did it with precise efficiency. He did it in such a manner that those in his intimate association could not help but marvel at the vast volume

of labor he could accomplish, without flourish but invariably almost with mathematical precision.

But, try as he might to "hide his light under a bushel," there was no way in which he could prevent the radiation of his spirit and his energy among his fellowmen, and it was contagious to a degree which found those within his aura unconsciously reaping benefit from his professional acumen and his rich experience and academic background.

Exemplary of the esteem in which he was held by his colleagues in the legal profession was the fact that Judge John J. Darcy suspended the session of Lawrence District Court in his honor on Wednesday after a most impressive eulogy was presented in the courtroom by Attorney Harold M. Siskind, president of the Lawrence Bar Association.

The passing of Charles D. Mahoney brought a sense of personal loss not only to the members of his immediate family, but to scores of others whom he had befriended as he walked his quiet way through life. His classmates at Phillips Andover Academy, at Yale's Sheffield School of Engineering, where he was designated the most brilliant student in his class and from which he received his degree in that scientific field, at Harvard Law School, where he received his degree which led him into the footsteps of his illustrious father, the late Attorney John P. S. Mahoney—those who knew him in his youth—mourned that he had gone away.

And even more acutely was his departure a source of grieving to those who associated with him in his postacademic years; and this embraces men and women in every walk of life, and all of whom he treated with the great and the little, each an equal respect which was a part of his makeup, an unswerving acknowledgment of the dignity of the human spirit, an unbending adherence to the principles of his faith and his Nation which dignate that all men are greated equal.

to the principles of his faith and his Nation which dictate that all men are created equal. His magnificent victory for the city of Lawrence in a power-rates case some years ago in which he, alone, pitted his skills against some of the greatest legal and engineering minds in the country, wrote a deathless page into the history of the city and established him as being beyond question one of the greatest minds in his field in his time. What he did would have furnished conversation pieces for a lifetime for persons less modest in their self-appraisal. But, Charles D. Mahoney never talked about it. His accomplishment was on the record. So far as he was concerned, that was sufficient unto the day.

In more recent years, he turned his thoughts and efforts in large measure, while carrying on his law practice, to his first love, the publication of a newspaper, the Lawrence Sunday Sun, which his father years ago had operated. And, once again, he was following in the footsteps of a great publisher and a great lawyer.

While a newspaper can be a weapon of great potentiality, Charles D. Mahoney, in his role of president-treasurer-managing editor, chose to employ it in a benign sense. He operated from his position with an attitude of fair play for all, deviating from that course only when a given situation might warrant a blow in the cause of righteousness. Those about him in the newspaper field had the deepest respect for his sound judgment and for his equitable treatment for all the many hundreds of persons who are in close personal contact with a hometown newspaper. And his first thought in mind was ever for the dissemination of truth among the thousands of readers of the Sunday Sunpresenting the facts, and leaving to them the formulation of opinions therefrom.

His funeral was, in a way, the story of his life. It was a story which could be read in the faces of those who came to mourn: pride in that they had once walked his way; sadness in that their ways were severed.

The funeral was held from the John Breen Memorial Funeral Home with a high Mass of requiem in St. Laurence's Church at 9 o'clock. Very Rev. John A. Daley, O. S. A., pastor, was the celebrant. The choir chanted Subvenite as the body was borne into the church, Mrs. Thomas J. Murphy sang Pie Jesu at the offertory.

The Deficit in Jobs

EXTENSION OF REMARKS

HON, GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I wish to include an editorial from the St. Louis Post-Dispatch:

THE DEFICIT IN JOBS

Is the national economy sitting on a time bomb?

We ask the question in all seriousness because the trend of employment statistics continues to be disturbing.

We ask it in spite of the resolute cheerfulness of Secretary of Labor Mitchell and Secretary of Commerce Weeks. In the latest of their monthly reports, the two Cabinet members say that, although total employment fell by more than a million jobs in December, the decline was largely seasonal, due to less activity in farming, construction, and the like.

In summer the administration is cheerful about the rise in outdoor jobs and plays down any decline in factory employment. In winter it hails the rise in factory jobs and dismisses the loss of outdoor jobs as largely seasonal.

But is this really the wise way to approach the problem? Is it not better to face all the facts all the time, winter and summer? Is it not better to face facts now than to have them hit us like a blockbuster later on?

The overriding fact which Messrs. Mitchell and Weeks consistently overlook is that, in spite of some encouraging gains, employment is not rising enough to match the growth of the Nation.

Total employment in December, they report, was 60,688,000 jobs. What they do not tell us is that this is the lowest December total since 1950.

Is December, then, a bad month to look at because of seasonal decline in outdoor jobs? Well, let us look at the month of highest total employment, usually August. In 1954 the peak employment was 62,276,000. That was the lowest peak month of any year since 1949.

It is all very well to say that 62 million jobs are a lot of jobs. They are. But they are not enough for a growing country and an expanding economy.

Over the last 20 years the working popu-

Over the last 20 years the working population has grown by more than 11 million, an average of 560,000 a year. Applying that rate of growth for the past 4 years, December employment should have been 62,564,000 instead of 60,688,000, and peak 1954 employment should have been 64,623,000 instead of 62,276,000.

Employment cannot, of course, follow a nest and regular pattern at all times. Ups and downs are inevitable, especially during adjustment to a peacetime economy. But the Korean war has been over for 18 months now. It is time to recognize that we have a deficit of 2,000,000 or 2,500,000 jobs which needs to be promptly overcome.

An Annual Address to Congress by the Chief Justice of the United States

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. KEATING. Mr. Speaker, the distinguished journalist, Mr. Arthur Krock, of the New York Times, has analyzed some of the arguments pro and con relating to the proposal that the Chief Justice of the United States be invited to deliver an annual address to Congress on the state of the judicial branch of government and related matters.

His characteristically fair and able approach to this problem, I hope, will help to put the issues in proper perspective and serve to dissipate some of the discussion which has beclouded the merits of the controversy.

IN THE NATION—THE PLAN TO PUT THE CHIEF JUSTICE BEFORE CONGRESS

(By Arthur Krock)

Washington, January 13.—It was inevitable that objections would arise to the proposal by Representative Kenneth B. Keating that the Chief Justice of the United States shall address annually a joint session of Congress on "the state of the judiciary." It was also desirable that these protests should be strong because of two implications of the proposal that quickly suggest themselves.

The first, as some Members of Congress pointed out, is that regular physical contact between the head of the Federal judiciary and the legislative arm of the Government, with the former asking legislation from the latter as an entity, tends to remove the barrier which the Constitution carefully erected between these two branches. The second point made is that the proposal would create a fixed association between the head of the Federal judiciary and the political body of the Government and expose the Chief Justice to the suspicion he might take advantage of the opportunity thus offered to make himself President.

Neither objection was applied to the present Chief Justice, they envisage a possible future in which another Salmon Portland Chase would take with him onto the high bench an insatiable ambition to become the Chief Executive. Earl Warren has left the political arena so recently that he is still the victim of would-be President-makers, callous toward the great constitutional principle, who now and then nominate him for the Republican nomination in 1956 if General Eisenhower shall decline to run again. There is every reason to believe these suggestions are deeply repugnant to the Chief Justice, and that he meant it when he said he was through with politics forever. this will not necessarily be the case with a successor.

The Constitution prescribes the President as the only head of another department who shall regularly inform Congress as a whole on the state of the Union and make recommendations concerning it. The Constitution also makes the President a participant in the legislative process by giving him the veto power. But everything in the charter holds the judiciary aloof from the two other coordinate branches.

ADVOCATES AND THEIR ARGUMENTS

The Keating plan carries out an idea originally advanced by William P. Rogers, Dep-

uty Attorney General of the United States. It is supported by some of the highest-minded men on the Federal bench—among them Chief Judges Harold M. Stephens and John Biggs, Jr., to whom none can attribute an easy attitude toward relaxing the principles of the Constitution or deny their understanding of these. They find the Federal courts in what they describe as a desperate plight by the neglect of Congress, with a growing backlog of unfinished litigation (78,531 of 171,512 cases left pending July 1, 1954) and greatly undermanned. They are convinced by their own experience with congressional committees that the situation calls for a desperate remedy. So they have Concluded that only the personal interven-tion of the Chief Justice in the dramatic setting of a joint session can rouse Congress from its indifference.

They and other judicial supporters of the Keating plan offer, among others, these re-buttals to the objections:

Congress has provided by law for a Judicial Conference of the United States, presided over by the Chief Justice, which shall recommend the creation of new judgeships and other increases in personnel. The law requires that conference estimates of costs shall be included without revision in the President's budget as submitted to Congress. Representatives of the conference often appear personally before committees in behalf of this budget. There could be no conceivable objection if the Chief Justice at times were to be one such representative. then, is the difference in principle between his personal appearance before a committee, as a suppliant for legislation and money, and his personal appearance before the entire Congress from which the committees derive their function?

The current system has been marked by fatal delays before Congress gets around to approving recommended increases in the courts. And Congress is disposed disastrously to cut the conference budget. Moreover, these conference spokesmen "are not able to make their representations * * * even to the full Committees on the Judiciary and Appropriations of the House and Senate.

* * They appear only before the subcommittees." And, even if they could appear before the full committees, the record shows that this would not be sufficiently effective; hence the needs of the judiciary should be made known to the whole Congress.

'Delay in the disposition of civil cases in the United States courts," wrote Chief Judge Stephens in a memorandum supporting the Keating resolution, "has become such that in the urban centers * * * there is in effect a denial of justice to litigants. [This] impairs the confidence of litigants and the public in the judiciary branch."

The congressional delays and cuts coexist with overconservatism in the conference toward new recommendations. Only by the Chief Justice in a joint session can Congress and the people be alerted to what many think

a national disaster.

Income Tax on Dividends Coming From Foreign Investments

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. REED of New York. Mr. Speaker, yesterday my good friend, the gentleman from West Virginia [Mr. Balley], in the course of some very interesting remarks on the pending extension of the reciprocal trade agreements authority, made a statement which I believe needs clarification

He stated, and I quote:

Only in the last session of the 83d Congress, we approved a tax bill which reduced the income tax on dividends coming from foreign investments. By that act alone, you set up a 14 percentage point advantage American capital to go abroad and establish factories to exploit cheap labor abroad in order to make these products to be brought to America under our trade treaty to take the jobs away from your American workers.

Mr. Speaker, there was a provision in the tax bill as it passed the House similar to that which the gentleman referred. However, it was not in the bill as finally enacted and is, therefore, not a part of our present tax law. I might also point out that the House provision denied the 14-point tax reduction where more than 25 percent of the gross income from the foreign branch or subsidiary would be derived from the manufacture of goods intended for sale or use in the United States.

The President's Message-Formosa and the Pescadores

EXTENSION OF REMARKS OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, appearing in this morning's New York Times, entitled "The Purpose of the Message and Its

THE PURPOSE OF THE MESSAGE AND ITS FORM

WASHINGTON, January 24 .- The President had two principal reasons for asking Congress, but not in person, for authority he already has as Commander in Chief to defend Formosa and the Pescadores. Since the notice it gives to Communist China is designed to act as a deterrent to the proclaimed intention of Peiping to take the area by force, the President wanted the notice to have the full official and public support of the branch of Government which finances military undertakings and has the sole constitutional power to declare war. Since peace was the design of the message, the President sought to restrain the contrary impression, which the Peiping Government is trying to stimulate, by not delivering it in person.

When Presidents in this country have gone to the Capitol in times of military threat to the security of the United States it has been in the atmosphere of impending or actual war, and war itself has quickly followed. Woodrow Wilson knew of the German For-eign Minister's offer to Mexico to join Germany in war against the United States, in consideration of help to regain Texas and other Southwestern States, when, February 26, 1917, he asked Congress for approval of his plan to arm American merchant ships, And Germany had already declared total submarine hostilities. On April 2, 1917, and December 8, 194,1 Presidents Wilson and Franklin D. Roosevelt respectively went in person to the Capitol to ask Congress for formal declarations of war.

This historical association was deliberately avoided by President Eisenhower today. It was good statesmanship to do so, and it was good strategy in the interest of maintaining his request as a deterrent, and not as a stimulus, of war, or as an implication of belief that war is inevitable. In the highest sense of the word, it was good politics, too. Politics has been well defined as the art of government, and for the President to seek a common front of the executive and Congress in the circumstances, and a common front of the two major political parties also, were excellent practices of the art of government.

PERSONAL AND POLITICAL PLEDGE

From the standpoint of political integrity the President's resort to Congress was also of national benefit. He was carrying out a pledge he has often made publicly as well as his own concept. But in addition he was redeeming an implied pledge in the plat-form on which he was nominated.

It was:

"We charge that they [the Truman administration] have plunged us into war with Korea without the consent of our citizens through their authorized representatives in Congress and have carried on that war without will to victory."

In view of the President's decision that the governmental province and responsibilities of Congress entitled it to know in advance what he proposed to do around Formosa, and his request for it to become his partner where the Constitution authorized him to act alone, a comment attributed to Speaker RAYBURN seems strange. According to the United Press, the presiding officer of the popular legislative body, himself second in the presidential line of succession, re-marked that General Eisenhower had the unilateral power to do what he proposed, "but he wanted it done this way, so it will be done this way." The reasonable expectation was that the Speaker of the House of Representatives would have applauded this presidential recognition of Congress, quite aside from the obvious and important fact that by his action the President sought to present to the world a unified Government of the United States in so grave a business.

The contrast to President Truman's procedure with respect to the Communist invasion of South Korea implied, of course, a criticism of this procedure that was not relished politically by Democratic leaders who, if perchance they shared this criticism, anyhow did not voice it and defended what Truman did. Senator Taft contended that the President usurped his powers and breached section 6 of the bill to implement the United Nations Charter by ordering Armed Forces to Korea without consulting Congress or asking for its sanction. Other Republicans attacked him for not even asking for the approval of Congress immediately after the fact, or ever. And now a Republican President has gone to Congress for its approval before the fact, though by common consent he did not require it.

Some Democrats have been saying privately that what the administration really wanted was for the Democratic-controlled Congress to volunteer advance approval of what the President as Commander in Chief might deem it necessary to do to protect Formosa and the Pescadores. They read this purpose into visits made to committees by administration officials before it became known that the President would initiate the matter by sending a formal request. They suspect that these officials hoped to join the Democratic Party more firmly to eventualities in the Formosa Strait through the sponsorship of an advance resolution of approval by committees under Democratic control.

But either this lacks substantial proof or the proof is not procurable. At any rate, the President initiated the move, after his agents tested the political ground and found it firm in both parties.

Address by Democratic National Committeeman Carmine G. De Sapio

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I submit herewith the address of the Honorable Carmine G. De Sapio on the occasion of the victory dinner of the New York State Democratic Committee on Friday, January 14, 1955.

Mr. De Sapio is the Democratic national committeeman, and the secretary of state of the State of New York. He is one of our outstanding Democratic leaders; and as the national elections of 1956 approach, he will be heard from more and more often.

His remarks follow:

Good evening, my friends and fellow Democrats, this is a happy occasion, this victory celebration, an historic event which largely was made possible by your loyal support. You have earned the gratitude of your party and the gratification of knowing that have helped elect what will undoubtedly be a very great State administration. For myself, I congratulate you and I thank you. I pledge to you my continued efforts to serve you, our party, and the people as best I can for as long as I may.

You have every right to take pride, this evening, in the results of your political activities. But just as you may well be proud, so too must we all be aware of the profound responsibility with which we as a party have been entrusted. The people look to us to support our Governor and his administration so that we may bring to realization the Democratic Party platform and the Democratic tradition of a sound government possessed of purpose, of vision, and of action

In order that we may achieve that for which we strive, and that we may keep our bargain with the 15 million people of our State, it is imperative that each of us do all that we can to secure the support of the people for our program. It is vital, too, that we attract to our administration the best minds that we can find so that more men and women of the type our Governor has thus far appointed can make their genius and their talents available for public service.

Soon you will meet many of the members of Governor Harriman's administration—people who represent the highest dedication to public service and the finest qualifications and backgrounds for the positions which they hold.

But as the Governor-and Mayor Wagnercan tell you, it isn't easy, these days, to enlist sufficient of the great wealth of intel-lect, of experience, and of leadership with which we as a State are endowed. It isn't easy because in recent years too many outstanding people who, at great personal and financial sacrifice went into Government service, frequently found themselves the victims of brutal vilification.

In the shallow interests of political expediency on the one hand, and stimulating readership circulation on the other, decent people have been maligned and outraged; insultingly and degradingly characterized as "politicians."

It is axiomatic, my friends, that the people will get only the kind of government and the kind of public officials they want. So long as a placid public permits the fear of unwarranted attacks to discourage leading citizens from making their abilities available for the benefit of all, so long will it be difficult to find men and women of sufficient courage and armor to perform necessary jobs. And if we continue to allow politicians and public servants to be held up to ridicule, we will continue to deny ourselves the manpower and brainpower which good government requires and demands.

We who are in politics—we politicians—have no cause for apology. To the contrary, we directly make possible our system of government, and we work in the causes of civics and citizenship.

Every man and woman in this great banquet hall tonight is a politician. Whether you be labor leaders, teachers, industrialists, bankers, farmers, workers, housewives, or students, the fact of your interest in politics, and your support of a political party, makes you a politician. And I submit that that is an honorable designation and one which evidences acceptance of your responsibility as American citizens, and your recognition of the truth that politics is everybody's business.

It is at once naive and shortsighted to try to separate politics from government, and government from any part of human life. Let us be proud to be known as politicians, and let us be even more proud of those people who devote themselves to public serv-It is not easy to hold high office, Certainly it is incumbent upon all of us to lighten the task of those who accept the challenge and to heighten the dignity and the prestige of their work.

It is for us, also, to see to it that politics and government are practiced on the same standard of conscience and morality which we apply to our homes and families-in the spirit of faith and goodwill, and in keeping with the teachings of the golden ruleing unto others as you would have them do unto you.

Again may I extend to you my personal thanks as well as the thanks of our party for all that you have done. With men and women such as you in our ranks, we cannot help but achieve ever greater success for our philosophy, for our program, and, most of all, for the people whom we are mandated to represent and whose welfare we are pledged to protect.

Thank you very much.

The Port: United States Stepchild

EXTENSION OF REMARKS

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Bulletin of January 19, 1955:

THE PORT: UNITED STATES STEPCHILD

The port of Philadelphia is cast in the role of underprivileged stepchild in the new Federal budget.

What the port asked was a good start on the \$91 million needed to cut a 40-foot channel up-river to Trenton. What it got was a grudging, tentative \$6 million tied in with demand for "adequate cost sharing."

The President no doubt following the advice of his budget aids is thus demanding that the United States Steel Co. or some other individual or group of local interests pay at least two-thirds of the channel cost.

Why the Federal Government should take this attitude is not at all easy to understand.

Is there a desire for general economy in harbor work? It doesn't seem that way: the total amount for the Nation is increased \$66 million in the President's message. And to rub a little salt into Greater Philadelphia's wound, there's \$21 million for the St. Lawrence Seaway. Many regard that as the greatest threat to the Port of Philadelphia since DeWitt Clinton's Big Ditch.

Is it a new way of doing business, with private corporations asked to buy in on the public domain of navigable waterways? Perhaps. But why start with Greater Phila-delphia? Why does the budget call for the United States to pay the way from Puget Sound to the Florida Keys, excepting along the Delaware?

It is pertinent that the \$91 million, sizable as it is, is less than the Federal customs take from the port for 2 years. There are figures that show that every dollar spent by the United States on the Delaware in 50 years has yielded more than \$14 in customs. Where is the economy in halting that kind of return on an Investment?

Congress often makes up its own mind on the President's budget recommendations.

The citizens of greater Philadelphia—with

the growth and prosperity of the whole area involved-have reason to hope that the region's Congressmen can forcibly upset this damaging budget recommendation.

The Administration Discovers Culture 2 Years Late

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, President Eisenhower is trying to get Congress interested in the fine arts. This is a field, he thinks, where Russia is outdistancing the United States, and he proposes that something be done about it. As a beginning, he proposes that Congress set up a Federal Advisory Commission on the Fine Arts.

This story is told in the January 28, 1955, issue of U.S. News & World Report. The story fails to mention the bills sponsored by 10 Members of the House and 6 Senators in the 83d Congress on which hearings were held by the House Education and Labor Committee.

In the majority report on those bills the Republican members of the House Education and Labor Subcommittee said:

In view of our analysis of the proposed legislation, and our study of this hearing record, we recommend that none of the bills referred to in this report be passed.

It may be that, as in the case of other legislation developed by Democratic Members of the Congress which was at first rejected by the Republican Members and then presented later as administration proposals without any reference being made to those who had labored hard in its development, it largely depends upon who is presenting the legislation. For the record then, the gentleman from New York, EMANUEL CELLER; the gentleman from Montana, Lee Metcalf; the gentleman from Louisiana, James H. Morrison; the gentleman from Pennsylvania, George M. Rhodes; and the gentleman from Minnesota, Roy W. Wier, have joined with me in introducing bills "creating a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an Inaugural Hall of Presidents and a music, fine arts, and mass communications center."

A second bill "to establish a program of grants to States for the development of fine arts programs and projects, and for other purposes," has been introduced by the gentleman from New York, EMANUEL CELLER; the gentleman from Montana, Lee Metcalf; and myself.

These bills have been endorsed in principle by many national organizations and by outstanding leaders in our country in all walks of life—see hearing record and the report on the fine arts bills considered by the 83d Congress.

The total cost to each 1 of the 53 million taxpayers of our country for the program which these bills would establish would be, on the average, just about 11 cents per year. It may be noted, for purposes of comparison, that Americans spent \$5,310 milion for tobacco in 1953. This is an average expenditure per taxpayer of \$100.07. They also spent \$8,865 million for alcoholic beverages that same year, for an average expenditure of \$167.05 per taxpayer.

In view of these facts, it seems reasonable to assume it unlikely that the legislation which was rejected by the Republicans in the 83d Congress, and which has been introduced again this year with some minor revisions, would contribute to the impoverishment of the richest nation in the world, as feared by the Republican majority of the House Education and Labor Subcommittee in the 83d Congress.

A third measure in the cultural field which I have introduced in the 84th Congress would create a Federal Commission to study the copyright laws and make recommendations for their revision—see Congressional Record of January 20, 1955, pages A256-A258, and A262-A263. A fourth measure would establish a program of financial aid to students in higher education in order to help us cope with the Russians in this cold-war period—see Congressional Record of January 13, 1955, pages A131-A132.

The article from U. S. News & World Report follows:

IKE LIKES THE ARTS, SO UNITED STATES MAY EXPORT CULTURE

(EDITOR'S NOTE.—The arts, all of a sudden, are getting official attention. White House is concerned, thinks United States needs to show the world its finer side, as Russia does. Many in Congress agree. Idea is to promote music, painting, sculpture, dramatics, the dance, other artistic pursuits. For now, the President asks only a study. Out of that could come a system of subsidies.)

President Eisenhower is trying to get Congress interested in the arts.

This is a field, he thinks, where Russla is getting ahead of the United States, and he wants to do something about it.

As a start, he proposes that Congress set up a Federal Advisory Commission on the Fine Arts. Its chief job will be to size up the art situation and recommend a program.

The President has not yet laid down a plan for subsidies or other heavy spending. That might develop later.

Reports from United States officials overseas have stirred the President, as well as many Congressmen. The Russians are sending singers, dancers, musicians, actors, and art exhibitions to places all over Europe and Latin America. The Soviet Government foots the bill.

The Russian artists are reported to be making a deep impression. And American prestige, the reports add, suffers in proportion. The Russians picture Americans as gum-chewing barbarians. They spread the idea that the United States might excel in science and industry, but it has no art worth showing.

PROBLEM FOR EISENHOWER

The truth is that the United States does very little to show foreign countries its artistic work. The President has been pondering this, close associates recall, since he was president of Columbia University. He is a painter himself, and that other noted amateur, Sir Winston Churchill, has talked to him about it as well.

Nelson Rockefeller, a new special assistant at the White House, is credited with getting the President actually to launch an art program. Mr. Elsenhower is reported also to have been impressed recently by an eloquent radio talk on the subject by the actress, Lillian Gish.

The President made a small start on an overseas art project last summer. At that time, he got Congress to appropriate about \$2.5 million to be spent by the United States Information Agency on cultural programs. With that fund, USIA subsidized some of the overseas performances of Porgy and Bess, which has been a smash hit in places that hardly ever saw an American production be-

UNITED STATES AS ART PATRON

Porgy and Bess played to full houses everywhere, but lost money in such countries as Yugoslavia, where the average admission price was 35 cents. USIA is underwriting the show's appearances in such places as Israel, Egypt, Greece, Spain, and North Africa.

José Limon and his modern American dance group made a tour of Latin America, with expenses underwritten by USIA. Icelanders heard Isaac Stern, American violinist, with similar help from the USIA funds.

American paintings are seldom seen outside the United States. Only 8 or 10 exhibitions have been sent abroad by USIA since 1953. Between 1947 and 1953, no traveling shows went over. That was because some Congressmen in 1947 denounced exhibitions then on tour. Too much abstract art, they said, and too many "reds" and "pinks" among the artists whose works were displayed.

WHAT'S WANTED FOR THE ARTS

The President is seeking to install a top-flight commission of leaders in the art world, which will help him make a start on a more ambitious Government art program. The only task he has announced for it, specifically, is arranging for Government awards of merit. In his state of the Union message he proposed that awards go to Americans "who make great contributions to the advancement of our civilization." Apparently, scientists, engineers, and others will be honored, along with artists.

Here are some ideas a commission will be expected to consider:

Subsidies for art schools, orchestras, operas, theaters, art galleries—all such subsidies to be administered by the States.

Scholarships for artists, writers, and liberal-arts students.

An art center in Washington, to be a show place for the Nation and visible evidence to foreign visitors of America's interest in the arts. It would comprise an opera house or theater, a presidential inaugural auditorium, an art gallery and studios for the study and teaching of art.

Projects of this type are being discussed widely in art circles. Bills to put them into effect have been introduced in Congress. If Congress does not approve the President's proposal for a commission, it still can grab the ball from Mr. Elsenhower and start some of these projects on its own.

Art lovers for a century and a half have tried without success to have a high-level fine-arts agency created in the Government. Bills to create some kind of fine-arts unit within the Government have been introduced in nearly every session of Congress since 1877. The existing Commission of Fine Arts merely advises the Government on the acquisition of art works for Federal parks and buildings.

FINE-ARTS PRICE TAG

No big spending has yet been suggested. The subsidy proposal before Congress would involve about \$5 million—called "leverage money," to start private funds flowing. A scholarship program, however—now being drawn up within the United States Office of Education—could cost from \$20 to \$25 million a year.

No public works-of-art project, such as the New Deal ran in the 1930's, is talked of. Artists themselves oppose any such venture at this time. Some art organizations oppose even subsidies, fearing Government domination.

Art activities in the United States receive almost no Federal aid and little help from cities or States. Artists in most foreign countries depend heavily on subsidies.

Berlin spends \$1 million a year, and Milan, Italy, spends \$3 million, mostly on opera. The Italian Government spends \$3 million. Great Britain spends \$1.4 million a year. Denmark spends \$800,000 for the Royal Theater in Copenhagen, with its dramatic school. France, Germany, the Netherlands, and many Latin American countries provide sizable subsidies.

Subsidies, nevertheless, are to be only one of the problems of the new commission, if it is created. Its primary job will be to tell the President what can be done to capture the imagination of the people of the older, art-loving nations of the world.

My Recent Visit to North Africa—Status of Jews in Morocco, Algeria, and Tunisia

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. CELLER. Mr. Speaker, during my recent trip to North Africa, I conferred with French Government officials, native chieftans, leaders of Jewish communities, Moorish Berbers, Moorish Jews, with Europeans and American military, naval, and Air Force personnel. I give, herewith, my impressions of Morocco, Algeria, and Tunisia, with particular reference to the conditions of the Jews in those countries.

French Morocco has a population of 8,500,000. Of this number, roughly 214,000 are Jews. There are two divisions of Moroccan Jews: The Berbers, who live in the southern part of Morocco in the neighborhood of the Atlas Mountains, have been there for centuries—even before the Jews were banished from Spain. It is thought that they are the descendants of the Israelites driven out of Palestine by Joshua. The others are the Sephardic Jews—descendants of those who fled from Torquemada, who live in northern French Morocco.

The Berber Jews are nomadic and live chiefly in Saharan mountain villages. They are conspicuous by their black cloaks, black skull caps and round black hats. They hold steadfastly to the customs and faith of their ancestors.

In addition to these Jews, there are some tribal Jews—a fanatical sect who live deep in the Sahara Desert and in the Atlas Mountains. They are warlike and are a fierce looking people, and are known as the fighting warrior Jews of Morocco. They are said to be able to trek for hours and hours across the Atlas Mountain ranges with their children strapped across the backs of their women.

There are also some albino Jews residing in the mountain fastnesses along the coast. They are blind and have yellowish hair, pinkish eyes, and a reddish complexion.

The Sephardic Jews, to a great extent, live in the mellahs or ghettos. A mellah is found in every Moroccan city-Casablanca, Rabat, Marakeesh. In the mellah thousands of Jews have lived and suffered, persecuted for centuries. In the old days they never ventured forth. To remain within the mellah was their best protection from the onslaughts of the Moors. The Jews have suffered and still suffer injury, misery, and humiliation. They are not even second-class citizens in Morocco. The very word "mellah" means salt. The Moor Caid in the old days were wont to decapitate the infidel or unfaithful or non-Moor and place the head upon a pike to be exhibited in the public square. The head, however, was first salted and pickled in vinegar. This was done by the Jewish butcher, and the word "mellah"-salt-was finally applied not only to the place or abode of the Jewish butcher but to the ghetto where the Jews lived as well.

The only protection for the Jews of Morocco is the French Government. If the French should now leave and independence is achieved, the life of no Jewish person would be worth a sou.

The independence party is called the Istiqlal Party. It is supported by the Moors of the north, but opposed by the Moorish Berbers of the south. The Berber Moors are controlled by an old feudal chieftain called El Gloui. El Gloui and the Berbers are opposed to independence and support the French. The French deposed the former Sultan Sidi Mohammed Ben Yussuf, who was a huge landowner and opposed French reforms. It was essential for the French to get rid of him. The French set up a new Sultan, Sidi Mulai Ben Araffa.

This change of Sultans infuriated the Istiqlal Party, but was acceptable to El Gloui. The latter is friendly to the Jews, hates the Arab League, and is an admirer of the strides made by Israel. Incidentally, the private secretary is a Jew, Albert Berdugo.

The Jews take no part in the independence movement. They dare not. Silently, however, they are generally with the French. This is a natural point of view, since their survival and the safety of their families depend upon the French. However, they know they are sitting on a keg of dynamite. Recently some 6,000 have been screened by the Jewish agency for emigration to Israel. Most of the Jews in the mellah wish to go to Israel. The rich and middle-class Jews outside the mellah have not made up their minds. They do not want to lose their possessions in Morocco, yet they realize the danger that lurks around the corner.

I wish to emphasize that there is no disposition on the part of the Jewish agency, or any agency representing Israel, to encourage emigration from Morocco. There are enough voluntary applications for entrance to Israel to overtax the abilities of the Israeli representatives already. In other words, there is no need for encouragement.

Statements made that a "panic migration" has been stimulated are contrary to fact. There is no pressure from any source save the pressure of inner fear that possesses most Moroccan Jews. They realize that their safety lies with the French and that if the French go and independence descends upon Morocco with Istiqlal in power, then their doom is sealed. Then the pogrom at Petit Jean would become the genocide of Morocco. Almost 30,000 will be taken into Israel during the coming year. That is not "panic migration." More are clamoring to go if conditions do not become better. Israel may in the future be compelled to siphon off more than 30,000 a year. The numbers that covet entry into Israel will depend upon the degree of banditry of the Istiglal and the terrorists

I honestly believe that Jews would be content to remain if they were given a fair degree of equality with their Moorish neighbors, were assured of their personal security, and that of their dear ones. But one would be insane to deny the menace to all Jewry if an uninhibited nationalist Morocco and a frenzied Moslem Brotherhood would control.

Presently the great roadblock to Moroccan Jewry's road to human dignity is the question of nationality. Citizenship in Morocco cannot be acquired. A Jew is merely the feudal subject of the Sultan. The Sultan and his Caids are the ruling cult. There is no political equality, no social integration. The Jew is a Moroccan but with no rights of a Moroccan. Such condition of servitude was bearable so long as Jewry lived within the small confines of the Mellah. But enlightenment could not be kept from the Jews even in the dark dismal mellah. Their aspirations have been raised. Their alien status has become obnoxious and intolerable.

Now superimposed upon their misery is the danger of extermination. No wonder they really and truly pray: "Next year in Jerusalem."

There are many wealthy and cultivated Jews in Morocco. They have a long tradition of cultivation reaching back into medieval Spain, but the great mass of Jews in Morocco live in mellahs. There in squalor, despair, degradation they live more like animals. Their position is beyond description. This is especially so in the Casablanca mellah.

Organizations like the Joint Distribution Committee, the World Jewish Congress, the ORT, The Jewish National Fund, and so forth, are doing heroic work amongst the Jews. The French Government does its best with its limited resources. The French are increasing their subventions to help ameliorate the condition of the Jews. They have set up some housing to relieve mellah congestion. The government granted to the Alliance Israelite considerable sums for schools. But vast sums of money are needed to deal with the perplexing problems of housing, education, cultural development, and political emancipation. The entire Jewish world must give these questions most anxious consideration. I particularly stress the good work of the Alliance Israelite which brings education into the remotest and darkest parts of the Jewish dispersion in Morocco. I have seen some of the magnificent schools built by this worthy organization.

The Istiqlal Party is encouraged by the Spanish radio beamed into Morocco from Tetuan, capital of Spanish Morocco-encouraged also by Nasser's radio in Egypt and by the Communist radio in Budapest, Hungary. The opposition to the French make strange bedfellows out of the Communists, Egypt, and Spain. The Istiqlal Party draws some of its funds by way of extortion. Letters are frequently received by Jewish merchants demanding sums of money to be deposited in a given place at a given time. If the demands are not complied with, their places of business or residence is threatened with fire, or they are threatened with kidnaping. The defenseless smaller Jewish merchant complies with the demand of extortion. The rich Jew, who knows how to protect himself refuses to comply. A few months ago, eight Jews were killed in cold blood in Petit-Jean, a village not far from Casablanca. Their bodies were soaked in oil and burned in public. They were victims of the riotous Istiglal.

As recently as January 6, a bomb was thrown into a Jewish shoeshop in Casablanca. Fifteen persons were wounded by the blast and the anti-French terrorists, the Istiqlal Party, are believed responsible for this barbarous deed. It is just such acts of violence that drive Jews to Israel.

The United States has expressed neutrality in the feud between the French and the Moroccans. United States has 5 bases, necessary for the defense of the free world, spread over Morocco—4 airbases and 1 naval base. We cannot long remain neutral for the good and sufficient reason that if the French

leave, it would take 5 to 6 divisions of our troops to defend those bases. If the French remain these bases can be held with a battalion. Our important stake in Morocco requires at least an expression of opinion favorable to the French. Assuredly if the Istiqlal outrages are stepped up our State Department has the duty of protesting. Usually persecution is not confined into any tight compartment. Persecution of Jews becomes persecution of Europeans and other minorities. It would eventually embrace all foreigners including Americans.

If the French leave, the new Moroccan Government would say, "What right have you Americans to hold these bases?" The answer could be: "We made a 99-year treaty with the French." The Moroccans would retort: "You made no treaty with us. We recognize no treaty with the French. Get out."

Moroccan Jews, understandably, take no outward sides in the political controversy raging between Istiqlal and the French. They do at times differ among themselves as to the degree of severity and repression, or even the wisdom thereof, that some local French officers take against the nationalists. Many think that extreme force begets more violence and hastens the coming of a revolution. Some prefer a gradual liberal approach of the French leading to eventual independence.

But if Jews in Morocco deliberately are fearful of taking sides, Jews outside of Morocco cannot bury their heads in the sand. They can take sides. I must take sides with fellow Jews and against the persecution of the Istiqlal.

The Istiqlal, it should be noted, has an extremely active office in Washington, D. C., and its principal protagonist there, I am told, is a man who was born a Polish Jew, became a British Protestant, and is now a Catholic American.

The French, having been taught a costly lesson in Indochina, are no longer guilty of colonialism in Morocco. At long last they are now keenly interested in raising the standard of living of the natives and are putting into Morocco far more treasure than they are taking out.

It is my firm conviction that the Moroccans are not yet ready for independence. Considering their centuriesold illiteracy, their religious fanaticism, and feudalism it will take time to educate and alert them to the ways of independence. Freedom does not always mean democracy. Their freedom would not bring democracy. They do not know the meaning, yes, of the word. I am not going into the reasons for their despair and illiteracy. True democracy would mean protection for minorities, including the Jews, European inhabitants from France, Spain, Italy, and other inhabitants. But an independent Morocco at this time would not mean true democracy. These minorities would be unsafe if independence were to be given to the Moroccans at the present time. Giving independence to Morocco would be like giving an automobile to a child. The child would not understand the mechanism of the automobile. Even with a bock of rules the child would not understand how to apply them. So Moroccans would not now understand the constitution that might be given them, nor its application to government. Morocco must wait for independence.

The French are as sensitive as eels to criticism. They resent criticism. Such an attitude is damaging and unrealistic. They are not free of blame. They waited too long before bringing genuine aid. Associate Justice William O. Douglas recently wrote an article which appeared in Look magazine. Therein he laid heavy strictures upon France vis-a-vis Morocco. He charges that "the French have fastened a milking machine on Morocco for their benefit." Yet in another breath he says:

The French have done good things in Morocco since they made it a protectorate in 1912. They have built fine communication systems—highway, railway, telephone, and telegraph. There are good French hotels and resturants everywhere, and in the larger towns, there are good French shops also. The French opened mines, built factories, cleared ground for large farming enterprises, and established new industries. They introduced public-health measures, eradicated malaria, and supplied the towns with pure water. They undertook a tree-conservation program that has produced good results; and they have done much to plant forests.

The judge, whom I consider my dear friend and for whom I have great respect, I believe has been misinformed and is enthusiastically misguided when he plumps for immediate Moroccan independence and disparages the French His emphasis is strictly one sided.

With a large but politically unschooled population badly divided within itself, Moroccans will be reaping a whirlwind of trouble with independence now. Meanwhile the French have the bear by the tail. I do not blame them for hesitating before pulling out now

I quote from the New York Herald Tribune's editorial of October 19, 1954:

Thus, after acknowledging a very few of the achievements of the French protectorate since its establishment in 1912, the author [Justice Douglas] cites housing as an example of how these achievements have largely benefited a French milking machine. He is silent about French-financed modern housing projects for Moroccans like those in Casablanca and Rabat, and neglects the French effort to get Moroccans into schools above the level of the traditional Koranic institutions, making the extraordinary statement that "education is reserved for the French." He totally ignores the vast diversities and divided allegiances of Arab, Berber, and Jew, making it sound as though nearly every Moroccan wanted the French to leave tomorrow.

Justice Douglas also attributes to the ex-Sultan a degree of interest in western parliamentary institutions that would astonish Ben Youssef's strongest partisans. In fact, last year's move to depose him, however wise or unwise it may have been, was made in large part because he had blocked Frenchsponsored reforms that would have paved the way for many of the changes Justice Douglas urges.

Americans rightfully and traditionally support self-determination and freedom. But self-determination must be tinctured with commonsense. Immediate freedom for Morocco would mean not only anarchy but intense hostility toward the United States. Can we afford chaos and intense enmity in an area

which contains five of our important long-range bomber bases? I doubt it. We must be on the side of the French.

The French have been in Algeria for over 100 years. Algeria is a part of metropolitan France and is represented in the French National Assembly and its inhabitants are citizens of France. whereas Tunisia and Morocco are monarchies under French protection. Under the Cremieux decree of 1870, Jews have been citizens of France, and this includes the Algerian Jews. The protection of Jews in Algeria parallels the period during which France has been in possession. The French have had a protectorate over Morocco only since 1912, but they have been in Algeria since the early part of the 19th century, and in Tunisia since 1880. The longer the French have been in control the greater has been the security of the Jew. Many Jews occupy positions of public influence and authority. Numbers of them have been elected to the French National Assembly. The Jewish population numbers about 140,-000 out of a total population of about 8 million.

The position of the Jews is strongest in Algeria and weakest in Morocco. There is little or no evidence of any independence movement in Algeria. There was a flare-up of Fellaghas or outlaws, who operate in the southern part of Algeria in the province of Constantine, as well as in the western part of Tunisia. They seek independence for Tunisia and Algeria. As far as Algeria is concerned, the movement is quite negative.

Most of the Jews live in Algiers and are happy and contented. A small number have gone to Israel. The Jews in Algeria have great faith in the French.

Tunisia presents a different picture at present. There are about 110,000 Jews in Tunisia-most of them in Tunis—out of a total population of about 31/2 million. The backbone of the independence movement in Tunisia is the Neodestour Party. The Bey of Tunisia, the nominal head of the protectorate under the French, is friendly to the Jews. Some Jews are members of the Neodestour Party. At the present time, the Neodestour Party is conducted honestly and decently. Publicly, the Jews are for it, but privately they express fear that at some future date, this party might become infiltrated with Moors who are oriented toward the Moslem Brotherhood and the Fellaghas. That is why many Jews in Tunisia would, if they could, go to Israel. Privately, they are much concerned with the promise made by Premier Mendes-France that independence will be given to Tunisla with the qualification that the French will control the common defense and conduct the foreign affairs of Tunisia. With the departure of the French soldiers and police, the Jews of Tunisia might eventually be in danger.

One prominent Jew may become a member of the Tunisian Cabinet.

It is my belief that Tunisia is ready for independence by virtue of its present state of literacy and democracy which exists there today.

In conclusion, the position of the Jews in Tunisia at present is salutary. The future is in doubt. No obstacle is placed against any Jew desiring to emigrate to Israel. Both the French and Tunisians desire them to remain to help build up the new economy. There is indeed very good hope that the problem of Tunisian independence will be solved by the wisdom and diplomacy of Mendes-France and the patience and prudence of the Tunisian leaders, including the Bey of Tunisia. I say this despite the efforts of the Arab League, which incessantly radios vicious propaganda from Cairo and drafts and arms insurgents from across the long and unguarded frontier from Libva.

Neither in Tunisia nor in Algeria does any representative of the Israeli Government encourage emigration to Israel.

The future will witness the emigration of many thousands of North African Jews to Israel, if such huge emigration will be possible. There is the question, of course, of the absorptive capacity of Israel. Can Israel take many more thousands of the swiftly breeding Jews of that area—that is without creating more arable land-particularly in the sanded wastes of the Negev?

LIBYA

It is interesting to note that it was the Israel vote in the United Nations which decided the independence of Libya. After independence, the Jews in Libya were persecuted. There are only about 2,500 Jews left there out of a Jewish population of 30,000. The Fellaghas, who back the operations against France in western Tunisia and southern Algeria, received their training in camps situated in Libya, and the Libyan Government gave them arms and uniforms.

Libya has permitted great discomfort if not persecution of its Jews. This despite Israel's vote for her independence. What poetic justice.

Government for the People

EXTENSION OF REMARKS

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. LONG. Mr. Speaker, there comes a time in the history of every democracy when the people seem to fall asleep at the switch and allow the big corporate interests to take over control of their government. It has happened in national government many times before: it has happened in state government; and I am sure unless we keep our eyes on the signs of the times that it will happen again. I am thankful to Almighty God that such periods of apathy and indifference on the part of the masses of our citizens are not usually long-lived. The common people soon reassert themselves and show their good horsesense and throw the rascals out. This is not only true of national government but, Mr. Speaker, we have seen

the same process work out in state governments.

In the year 1924 my brother, Huey P. Long-who, may I say with pardonable pride, was a man of great intellectual force and the champion of the masses of people-first appeared on the political scene as a candidate for railroad commissioner. Next, he sought the governorship of our State. He was fought tooth and nail, hammer and tongs, at every turn in the road by the big corporate interests and their lawyers and newspapers. These selfish interests had ruled Louisiana for some years prior to Huey's interest in politics.

On election day a heavy, cold rain fell all over Louisiana and the rural vote could not get out. Although he pulled a tremendous vote, he fell short of election. Again in 1928 he sought the governorship. He was elected. After his election, in spite of the persistent opposition of the specially privileged classes and their major metropolitan newspapers, he inaugurated and carried out a program for the people of Louisiana heretofore unheard of in any State.

He took his people out of the mud and built our first good roads-6,000 miles of concrete roads; abolished all toll roads and bridges and made every road and bridge free to all of the people.

Now, my friends, we are again faced with the proposition of having toll roads in my State. I say that a man should be governor of the people; he should state without any hesitancy that he is opposed to toll roads and toll bridges in Louisiana. We would certainly be playing into the hands of the large corporations and selfish interests should we turn our highway system over to toll roads and toll bridges.

Further, Huey Long gave our people free hospitals and free ambulance service in all parts of the State. He gave us homestead exemptions, provided free schoolbooks for all the schoolchildren. He did so many fine and constructive things for the masses of Louisiana's people that it would take a great deal of time and many reams of paper to set them all out before you. The philos-ophy of government instituted and carried on by my late brother has been in the main preserved since his untimely death in 1935.

But, Mr. Speaker, in the year 1952 a so-called reformed government caught our people napping and we find at the helm of our State government today a handful of selfish people dominated and controlled by the giant corporations and their newspapers. They have, as they invariably do in State as well as in national affairs, sought to control and restrict the gains made by and for our people.

Fortunately for us all, the tide at home has turned and is presently surging toward the type of government which has accomplished so much for our people, both State and national.

Now, Mr. Speaker, I think a lesson should be learned from the ebbing and flowing of these tides of public sentiment and the resultant change from one philosophy of government to another. Just as these gigantic corporate interests and their mouthpieces and henchmen during their brief moments of control of our government have sought to chip off the gains and advantages made by the friends and champions of the masses of people, we who believe in and fight for the kind of government which brings about these gains and advantages should implement, strengthen, and add to them during the times when we are in the pilothouse of the ship of state.

Louisiana's next governor will be elected in January 1956, 1 year from now. It is not known at this time just who the candidates for governor will be. Several good men have already been mentioned as potential candidates; I, myself, have been urged by many fine men and women in our State to become a candidate. I feel highly honored at the compliment.

Mr. Speaker, whoever it is that makes the race as the Democratic Party's candidate for President of the United States or as the people's candidate for Governor of Louisiana, he should far in advance of either election state publicly, as plainly as words may be written or spoken, just where he stands on every important question. He should declare what he intends to do to protect and expand the gains made in the past for the plain, average people of his State or of the United States.

I cannot speak for the next President of the United States, but I can and will say what I think should be assured the people of my State, in this respect, by any candidate for governor who hopes to be elected in 1956. May I suggest the following platform for a candidate for governor? It would be short and simple:

Include first a solemn pledge to the people that every gain and advantage made for them by our friends over the years, such as homestead exemptions, free school books, good roads and bridges, old-age pensions, hospitals, and ambulance service, will be preserved and protected to the utmost.

Increase the old-age pensions to \$80 per month and this without raising taxes one cent.

Increase the homestead exemption from two to five thousand dollars so as to bring it back within the true spirit of the exemption and cover the presentday muchly increased cost of living. At the present, \$2,000 means very little to any taxpayer.

Provide a college education free of charge to every boy and girl who desires to have such an education. The amount of education that a boy or girl receives should not be limited by his family's pocketbook, but by his ability to absorb and profit by further training.

Push the completion of the Louisiana River bridge at New Orleans, but kick out the rascals who have designed to make it a toll bridge and make it by law a free bridge like every other bridge in our State.

Strict enforcement of Louisiana's game laws but eliminate the persecution of our fishermen and hunters who suffer a standard \$25 fine for very minor violations under the present administration.

Eliminate altogether the annual State hunting and fishing licenses heretofore required of our people. The revenues derived from the State from this source are negligible and can be replaced by

funds from other sources.

Mr. Speaker, there are many, many things that remain to be done nationally and within our States in the interest of the plain, average men and women of our land. Their lot should be made easier and happier. Just as an example of the kind of thinking and planning which should be done by those who feel as I do, permit me to cite one instance of planning to help those who wish to obtain homes.

Black River Swamp contains thousands of acres of good, rich, fertile soil. Some of this land belongs to our State. A levee built through that land would make it ideal for farming. It is my thought that a project of this nature should and could be worked out using State-owned machinery. Bulldozers could go into this swamp and the Kisatchie National Forest and clean off the underbrush. Then the State could finish off lots of about 40 acres, building houses on them and selling to those who want a home in the country. Give them tax exemptions for 5 years and for a period of 5 years no payment would be due the State.

We have a law in Louisiana at present which exempts some corporations from taxation for as much as 10 years. Exemptions for some of these corporations run into hundreds of millions of dollars. I am not opposed to encouraging business in this manner, but I also believe the little man should be encouraged to build and develop farms and homes, too. The timber from the land could be sawed up for use in construction of homes. An investment for this purpose would not have to be a large one. The Federal Government, I am sure, could be encouraged to come in and help such a program. They, too, are interested in creating homes for our citi-

A question often put to me is, What are they going to do with all the land in the Kisatchie National Forest? Will it remain a place where 'possums and 'coons and other animals live or will human beings be permitted to live on it? The answer is obvious. The plan I am offering would permit many parents to rear their children in the country in a wholesome atmosphere, where they can grow their own vegetables and own their own milk cow. In short, where a living is much cheaper, much easier than it is now. Much of this land is near enough to the city of Alexandria and other towns that the people could live on it and work in town. I do not mean to destroy the forest. It is my thought that by cutting roads into it and permitting people to live on the part of the land that is suitable for homes and cultivation, fires would be prevented and more timber could be grown on this land so made available. Also, to an extent, the Government would be taken out of the timber business and it would be returned to Drivate industry.

I would like to add one more example before I close. It is in reference to the good-roads program. For more than 35 years I have been going about this country making speeches advocating a superhighway system—a 4-lane highway system-to be constructed from the North to the South, from the East to the West. I am happy to say that the President of the United States is planning such a program now. Let us join in with the Government and get some good roads for all the States of our Nation. As you know, the Government is planning to spend billions of dollars on roads. Large sums will be given to the States on some kind of a matching basis. Heretofore, we in Louisiana have been content with a 20year bond issue. It is my thought to construct roads that will last for 100 years or more. The bonds would be divided up to run up to 100 years, so that the first man who drives on the road will pay the same as the last man who rides on it. The idea is to extend the present road program, and instead of building 100 miles of road with the money, stretch it out 5 times and build 500 miles of road. Instead of covering 20 years it would cover 100 years. Of course, 100 years from now people will need roads as badly as we do now. This is a real pay-as-you-go program. The man who drives over the road pays for it at that time, and the last man pays just as much as does the first man. The only reason that such a program is not in use now is that the selfish financial interests prefer the principle now used in order to make big money. However, I have been told by some good financiers that such a program will work.

We all know it requires money for any government to operate, and those necessary funds are derived principally from taxation. We cannot escape the fact that we must have taxes for our government to operate, but those taxes should be based on sound and just principles and work as an investment for the taxpayer. Anyone who aspires to the governorship should give assurance that our tax structure will be under constant and careful scrutiny and that a continuous effort will be made to keep taxes as low as consistent with the program of benefits and cost of operation.

Now, Mr. Speaker, let me repeat, the friends of democratic government in its highest and finest sense should, during the time they are in office, do such things as these I have been discussing. should secure and expand locally the maximum blessings and benefits which the plain, average, everyday people of America have gained under the most enlightened and democratic administrations. I know of no better time in which to do so than the present, on both local and national levels of government. The tide ebbs and flows. Today it is in the direction of advancement and benefit for the masses. Let us take advantage of it. We, the plain average people of all America, should resolve that we will not doze or fall asleep again where our Government affairs are concerned. We should resolve and see to it that America will always be a land where there shall be no beggars or slaves; a land where our aged, our helpless, and our blind will not be cast aside or neglected but will always receive our sympathy and care; a land

where the dignity of labor and the integrity of capital shall both receive recognition and respect at the hands of those who govern; a land of equal opportunity and justice; an America where a proud and happy and prosperous care-free people shall live; a land where every man is king but no man wears the crown.

Address by Hon. James A. Farley

EXTENSION OF REMARKS

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., board of associates dinner, Villanova University development foundation, Villanova, Pa., December 2, 1954:

As I stand before you this evening, I cannot help but go back in memory to May 19, 1942. On that memorable day, in this great hall and almost in this exact spot, I had the honor of being adopted as a son of Villanova, an honor which I shall always cherish.

I am proud of my association with Villanova because it has brought me close to the Fathers of the Order of St. Augustine. I am doubly honored in being able to renew this association in this particular year which marks the 16th centennial of the birth of their founder-St. Augustine of Hippo. The learned Friars of this Order for centuries in scholarly fashion have exercised a profound influence in developing Christian philosophy and theology and have contributed notably to scientific progress as well. St. Augustine himself is considered as one of the greatest thinkers of all time. And through the centuries the pens of profound students and the tongues of gifted orators have contributed a great share to the progress of our modern Christian civilization.

I am proud of this association because it makes me a fellow alumnus of men who are renowned for scholarship, proficient in business, outstanding in statesmanship, and loyal citizens of this great Nation.

I am proud too of this association be-

I am proud too of this association because from time to time it affords me the opportunity of dedicating myself to a participation in the training of the young men of today. They are tomorrow's leaders and it is important to all of us that they be equipped

with a true sense of values. Some months ago Father McGuire approached me and explained your program for the current and future development of this great university. It is a tremendous program. Yet it cannot be otherwise. It is designed for tremendous needs and in tremendous times. Father McGuire spoke too of the loyal group of corporation executives. professional and businessmen—I believe there are more than 60 now—who have voluntarily banded themselves together to assist this worthy cause. He asked me if I would serve as general fund chairman for the year 1954-55. When I thought of the present plight of the modern world, considered the sacrificial life of those who teach at Villanova, appraised the value of the contributed time and money of the board of associates of the development foundation, I could not say no. Voluntarily and with pleasure I serve your cause. I trust that tonight then my effort may serve to encourage

the good fathers and lay teachers of Villanova in their most important but unsung labors; to inspire the young men who are being trained to safeguard and defend our way of life; to foster and strengthen the allegiance of my fellow members of the Villanova board of associates.

Why should business rally to Villanova's support? You have heard Father McGuire indicate what Villanova needs in the next two decades if the university is to render more effective service to the community at large. Buildings, endowment for research, funds for better salaries, and financial assistance for worthy students—all of these are necessary and worthy goals. They constitute the physical needs of the university and certainly must be attained. To this end we, the board of associates, pledge ourselves.

Tonight, however, as an American businessman talking to his associates in business about support of an institution of higher learning whose contribution to the community is more spiritual than material, I would like to stress some of our spiritual hazards as a Nation and some of our needed spiritual weapons. What I mean to say is that we businessmen have a responsibility for supporting Villanova and institutions like her for their contribution to the spiritual defenses of the United States and the whole of western civilization.

We are a young nation, as the world goes. We are a great nation. We have come to be great because of the spiritual heritage that is ours. Our Constitution and Bill of Rights were drafted by men who had a firm belief in God, and a proper understanding of the dignity of man. They understood man's right and his freedom to be inalienable because he was precisely a creature of God, and so endowed, not by any human authority but by the creative power of God himself. Even Karl Max recognized this fundamental principle, although he would never admit it, when he wrote:

never admit it, when he wrote:
"Democracy is based on the sovereign worth
of the individual, which in turn is based on
the dream of Christianity that man has an
immortal soul."

At the end of the 18th century our first President spoke of religion and morality as indispensable supports of political prosperity. At the end of the 19th century our highest court declared that: "The reasons presented affirm and reaffirm that this is a religious nation." What is true of our political prosperity and our Nation is true as well of our western culture in general.

From time to time during our lifetime as a nation we have been called upon to defend our homes, our rights, and our freedomeven to the extent of war. We have never yet been the aggressor. We have always been in the role of defender. Our many successes on far-flung battlefronts have resulted from a combination of firm national unity, great military daring, the superb use of weapons, and incredible industrial skill. In the main, these represent an overwhelming material force.

Today, however, we are embroiled in what people call a cold war. The longer we are in it the more we realize that material power alone is futile in our quest for final victory. The reason, I believe, is quite apparent. Our enemy in this war is not necessarily and exclusively Russia or Russians; not the Iron Curtain satellites. Our enemy is a system that is not merely political. It is a philosophy of life which concerns itself with the whole of man—his nature, his origin, and even his final destiny. It is a system of thought which is the direct antithesis of the Judaeo-Christian concept which underlies the whole of western civilization. While our material forces are potent, our spiritual weapons must be sharpened and our spiritual armor strengthened if we are to make any strides in the direction of ultimate victory.

The architects of communism labored ardently in the development of the spiritual phases of their false philosophy. Lenin, who still remains the driving force behind Communist activity in the world today, long before the revolution wrote:

"Religion is one of the forms of spiritual oppression, which everywhere weigh upon the masses of the people crushed by continuous toil for others. * * It is the oplate of the people, a sort of spiritual liquor, meant to make the slaves of capitalism drown their humanity and their desires for a decent existence."

Addressing a group of young Communists on another occasion he said:

"In our opinion morality is entirely subordinate to the interests of class war. Everything is moral which is necessary for the annihilation of the old exploiting social order."

On the same subject he wrote that "a Communist must be prepared to make every sacrifice and, if necessary, resort to all sorts of schemes and strategems, employ illegitimate methods, conceal the truth, in order to get into the trade unions, stay there and conduct the necessary work within."

These are but some of the concepts con-

These are but some of the concepts contained in the evil force with which we are at war. "Lenin is our teacher," said Joseph Stalin to none other than Harold Stassen, on April 9, 1947, "and we Soviet people are Lenin's disciples." Unfortunately, all the disciples of Lenin are not confined within the borders of the Soviet Union. They are all over the world. Their beliefs cannot be destroyed with all the material weapons, atomic and otherwise, at our disposal.

C. L. Sulzberger, in a recent article published in the New York Times, discussed varying opinions on the subject of the peaceful coexistence of western democracy and Soviet communism. He wrote that "it would be better to consider the present contest as 'competitive coexistence.' This is a dynamic condition in which idealogical economic and political systems seek to dominate each other by means short of war."

But Mr. Sulzberger struck the nail squarely on the head when he further stated:

"Now for the first time the foundation of our civilization is being menaced. A threat has developed to the moral, spiritual, and ethical values that have cemented our society for centuries. The challenge to the truth of these beliefs is perhaps even more impor-tant than the physical challenge of the Soviet bloc. The main problem to the United States in this era of competitive coexistence is to clarify the ideals of its heritage, both to itself and a confused world. Since the beginning of the cold war, however, we have girded ourselves with more success physically than spiritually. Our armed strength has gained perceptibly more than our moral vigor."

The American businessman then has a vital stake and a grave responsibility in helping to strengthen the spiritual weapons which are his by heritage. And this not particularly because he is a businessman, but more because he is an American. Religion and education must receive considerably more of his attention if he is to fulfill well this responsibility.

And this brings us to the reason why we are here this evening. Our public schools and tax-supported colleges and universities are a vital part of American democracy. They must and do receive the support of every citizen. Yet because of their nature they are not in a position to concentrate on the religious and moral aspects of the education of youth. In the field of higher education this responsibility must be shouldered by the privately controlled, independent church related colleges and universities. The histories of the great majority of these parallel the history of the Nation. They have fought a great fight for survival in the

face of adversity and have served our American society to great adantage. Their chief source of support has been private philanthropy, but in our day and age help from this source has rapidly diminished, if it is not altogether extinct. Today they turn to private business for help.

Villanova University has been a part of the American scene since 1842. It is now in its 113th year of educating young men. The purpose of the Augustinian Fathers in founding Villanova University "was to offer to young men an opportunity of receiving a thorough, liberal education—an education that develops all the facilities of soul as well as of body and finds its expression in a clear-thinking, right-acting Christian gentleman."

For more than a century this university has contributed to our national life great leaders, expert scientists and technicians, as well as dignified professional and businessmen.

She has given bishops to the church as well as lesser clergy. Government has been enriched by her graduates. Education in general and the youth of our land have especially benefited by the able administrators and countless teachers who have been trained in her halls. Doctors, dentists, and lawyers have gone forth to serve humanity in the spirit of the great Christian tradition. Engineering and science have felt the steady, patient drive in research and production of the engineer and scientist.

Here in these classrooms and laboratories, in the library and research rooms, even on the athletic fields, are sharpened and perfected the great tools of our spiritual armor. Here on this campus are minds developed and character formed according to the tenets of our great Christian culture. Here are men trained in the basic principles which underlie the whole structure of our American democracy—a firm belief in God, a sound understanding of the dignity of man, a true appreciation of human rights and human freedom. And last but not least, here are men trained in the knowledge of their duties to their God, their country, and their fellowmen.

You members of this newly formed board of associates have espoused a noble cause in an hour when your country needs most such support. Your participation in strengthening the spiritual defenses of our society is one of the most noble ventures you have ever engaged in. Your association with Villanova will give you a deeper understanding of her motto—Veritas, unitas, caritas—truth, unity, love. Without these three we cannot hope to survive. With them no early power can ever conquer us.

Americanism Activities of Kings County
(N. Y.) Jewish War Veterans

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. ANFUSO. Mr. Speaker, this country can be proud of the services rendered by the people of the Jewish faith since the time of the Revolutionary War. The Jewish people have actively participated, with glory and distinction, in all the wars in which our great country was engaged.

In 1896, men of the Jewish faith organized the Jewish War Veterans of the United States. During the many years of its existence, this organization has

been concerned with a twofold purpose: protection of the war veteran and his rights under the law, and a program of Americanism.

The Kings County—Brooklyn—Jew-ish War Veterans deserve recognition for the outstanding work which they have accomplished in both of these fields, with particular emphasis on their Americanism program. It is readily understandable that men, who have offered their lives in the service of their country during wartime, should logically be concerned with the welfare of our Nation in peacetime. It was in the fulfillment of this program that the Kings County Council of Jewish War Veterans instituted a program several years ago to help awaken the people of this country to the menace of communism.

By way of constructive action, a boycott was instituted at the time to inform the community of the goods produced by Russia and its satellites. Posters were printed and distributed in all stores listing these countries and the goods which originated from there. All large department stores were contacted and advised of this program. Cooperation was obtained from them and a campaign of public relations was undertaken to advise the public not to purchase goods made behind the Iron Curtain.

Side by side with the menace of communism exists also the menace of fascism, and there, too, the Jewish War Veterans of Brooklyn have been diligent and alert. Since the fall of nazism in Germany, the Jewish veterans' organization of Kings County has been alert to any incidents which might arise in our country in an effort to prevent a resurgence of these un-American activities.

While in past years there have been isolated instances of such activities, it was not until 1950 that a concentrated effort appeared on the New York scene. A group of individuals formed an organization called the National Renaissance Party. At that time, Ted Brooks, the JWV Kings County commander, appointed Jerry Cohen to head a committee to investigate and assemble facts about the National Renaissance Party. The committee included several officers of the veterans' organization: Emanuel Greenberg, Benjamin H. Chasin, Lester Sacks, Marshall G. Kaplan, and the executive director of veterans' group, Henry R. Shields.

Under the leadership of Jerry Cohen, secretary to Municipal Court Justice Harold J. McLaughlin, of Brooklyn, the committee was assigned specific duties in Yorkville, a section of the borough of Manhattan, where the followers of this party were concentrated.

The National Renaissance Party was headed by a young fanatic, James H. Madole, who with 20 or 30 followers began to sing the praises of Hitler in vituperation against the Jewish people at a series of street-corner meetings on 88th Street in Yorkville. These men appeared wearing the uniform similar to the Nazi bund, with brassards on which was a lightning-bolt insignia replacing the swastika. Their program and propaganda was practically a wordfor-word "steal" from the Nazi dicta-

tors. For example, their program advocated the establishment of a Fascist corporate economy, the preservation of the white Aryan race by gradual deportation of Puerto Ricans, Negroes, and Jews, and the denial of citizenship, and professional and political posts to Jewish people.

In addition to Madole, John M. Lundoff, Kurt Mertig, Hans Schmidt, James R. White, and Keith H. Tompson, Jr., continued to disseminate this type of vicious propaganda at street-corner meetings and to extoll the virtues of Hitler through publications.

It was disturbing to find that in a city like New York, comprised of over 8 million people of heterogeneous groups, who had been living side by side in harmony and peace and in understanding and respect for each other's religious beliefs and feelings, people should now be subjected to an indoctrination of the principles of nazism. This was an insult to every decent American. It was also a challenge.

The Kings County Council Jewish War Veterans was among the first to accept this challenge. Here was an organization which recognized this menace. For it was only a short time ago, in 1933, when Hitler came into power in Germany, that the Jewish War Veterans of Kings County had helped to awaken our great country and had initiated an economic boycott against Germany. Now, more than 20 years later, we find the same evil seeking to gain a foothold in America. It had to be stopped in time, and the Kings County Jewish War Veterans accepted the challenge.

Night after night the members of the JWV committee spent in Yorkville in an effort to obtain the necessary information to prove that the leaders and the followers of the National Renaissance Party were un-American and against our way of democratic life. They visited stores, meeting halls and places of public assembly, where little groups had gathered to discuss this new party. They attended their secret meetings, knowing all the time that if they were discovered they were subjecting themselves to either a beating or perhaps their very lives would be endangered.

When information was received that the National Renaissance Party had a definite schedule of outdoor meetings, the Kings County Jewish War Veterans, in order to counteract the venom and hate which was disseminated at these meetings, obtained permission to hold Americanism rallies on the opposite street corner at the same time. Jewish War Veterans rallies were orderly and well conducted; their purpose was not only to tell the true story of the American people, but to enlighten the people of Yorkville about the threat represented by the National Renaissance Party if it is permitted to grow and gain a foothold in America.

At one time, it was necessary to call upon the Jewish War Veterans from Brooklyn and from the entire city of New York to come to Yorkville to counteract a very large rally that the National Renaissance Party had planned. In addition, the leadership of the American

Legion and the Catholic War Veterans were notified of this activity and they, too, joined with the Jewish War Veterans.

The press of New York was solicited for its help. Radio Commentator Barry Gray is to be commended for the efforts which he exerted through the media at his disposal, informing the public of what was taking place under their noses. Feature stories and articles were also published in the New York press.

It is interesting to note that the very same people whom James Madole hoped to influence by appealing to their "nationalism" were the ones who repudiated him, heckled him, and told him, in no uncertain terms, that they want no part of him and his followers.

The Kings County Jewish War Veterans, after obtaining all the facts and publications distributed by this group, forwarded them to the Federal Bureau of Investigation in Washington. The FBI was requested to undertake an official investigation and, after the facts had been substantiated, to place the National Renaissance Party on the Attorney General's subversive list.

All of this has borne fruit. On December 14, 1954, the Attorney General of the United States, Herbert Brownell, Jr., issued a formal call for the opening of grand-jury proceedings against the National Renaissance Party. The House Committee on Un-American Activities, likewise, is to be commended for its efforts in exposing James H. Madole, the man who has labeled members of the House committee as "cowards" and has brazenly demanded that President Dwight D. Eisenhower be investigated.

Mr. Speaker, I believe the American people owe a debt of gratitude to the Kings County Jewish War Veterans for their activities in the field of Americanism. Under the leadership of Kings County commander of the Jewish War Veterans, Milton I. Weintraub, and his Americanism committee headed by Eli Goldstein, I am certain they will continue to be alert of any group which proposes to change our way of life, be they to the far left as communism and to the far right as nazism.

The President's Economic Message

EXTENSION OF REMARKS

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. QUIGLEY. Mr. Speaker, President Elsenhower voiced great optimism in his economic message last week. He spoke of the current recovery from the mild-business recession. His message contained fine words.

What the President said about recovery may be somewhat of a surprise to many people in the 19th Congressional District of Pennsylvania. This may be particularly true of industrial workers in York County. More than 2,800 fewer

people were working in York County in December 1954, than were working at the same time a year earlier, according to a report entitled "York Labor Market Letter," a monthly review prepared and published by the York office of the bureau of employment security of the Pennsylvania State employment service.

This report shows that both initial and continued claims for unemployment benefits have been rising steadily in York since mid-October. While estimates of total unemployment were not available for December, current employment was 2,850 below the year ago level. The data compiled covered only manufacturing employment. Of 12 industries involved, 8 of them showed declines in employment.

Of great significance, the report shows that each of the men and women employed during December was working a shorter workweek, and earning less money.

Many of us were disappointed in the President's message, which failed to carry out the intent of the Full Employment Act of 1946, which is the law which requires an economic report to the Congress. This law provides that the President's economic report contain recommendations to maintain full employment. Despite the nice words and phrases, the message made no recommendations designed to promote full employment.

Mr. Speaker, I owe it to those citizens of the 19th Congressional District who want to work but for whom no work is available, to urge the Congress to take up the slack in the President's program and enact measures which will create the climate for full employment. I firmly believe each of us owes it to the people we represent, as well as to the welfare of the Nation, to take action which will promote and maintain full employment.

Despite the failure of the President and his administration leaders to recognize the necessity for full employment, the Congress has a mandate from the people, expressed last November, to take up the slack.

Flood-Control Action Needed in Butler
Area

EXTENSION OF REMARKS

HON, FRANK M. CLARK

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1955

Mr. CLARK. Mr. Speaker, under leave to extend my remarks, I wish to point out the critical need for Federal action to relieve the serious flood situation in my district.

If ever there was a practical demonstration of the truth of the adage that to be pennywise can sometimes be pound foolish, it is the recurring flood damage in and near the city of Butler, Pa., in my congressional district.

Year after year in the city of Butler alone, damage from floodwaters of the

Connoquenessing Creek runs from \$100,-000 to \$2 million. In the flood this past fall, damage in Butler was estimated at more than \$1,500,000. Many families were made destitute and homes were rendered uninhabitable, all because of an unconscionable delay in putting into operation the machinery already available to the Federal Government to correct the cause of the floods.

The entire cost of cutting a ditch or channel less than 2,000 feet long to get at the cause of the trouble would be less than \$150,000. A section of the existing flood-control law permits the Corps of Engineers to allot not in excess of \$150,-000 to any single locality to correct a situation such as this, with the provision that local cooperation be forthcoming.

The council of Butler has taken the initiative in providing this required cooperation. It has demonstrated a sincere desire to cooperate in furnishing the relief these people need, and which they need now. The victims of these annual floods are neither all Democrats nor all Republicans. They are good, loyal American citizens who have every right to expect the protection which available law was intended to give them. I trust the Corps of Engineers will lose no more time in providing that protection.

Court Blow at Commies Recalls Brown's Warning on Red Teachers

EXTENSION OF REMARKS

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1955

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Brooklyn Eagle of Monday, January 3, 1955, concerning the extraordinary service and accomplishments of my good friend of many years, Hon. Peter Campbell Brown during his tenure of service as chairman of the Subversive Activities Control Board. The people of Brooklyn have every reason to feel proud of their fellow townsman who now is commissioner, department of investigation, city of New York:

COURT BLOW AT COMMIES RECALLS BROWN'S WARNING ON RED TEACHERS

Following up our recent editorial welcoming the decision of the United States court of appeals upholding the constitutionality of the Internal Security Act and also approving the order of the Subversive Activities Control Board requiring the Communist Party to register with the Department of Justice, we would like to emphasize the great importance of the work of that Board.

It is of special interest in Brooklyn that the man who was its chairman during the period of its significant work was a wellknown and highly regarded young Brooklyn man, Peter Campbell Brown, who is now serving by appointment of Mayor Wagner as commissioner of investigation.

After a thoroughgoing inquiry lasting over a year, a panel of the Control Board on which Mr. Brown himself served established the status of the Communist Party as "a puppet of the Soviet Union." Few Americans had harbored any doubts as to that relationship but the facts brought out by the Board gave indisputable authenticity to that belief.

A mass of evidence was produced that supported its judgment that the party is nurtured by the Soviet Union and strives incessantly to make the United States a Soviet America. The party has been directed, dominated, controlled, and, to some extent, financed by Russia, acting through the Communist International.

The thoroughness of the job done by Mr. Brown and his colleague on the board in developing the basis of its ruling that the Communist Party must register under the McCarran Act doubtless was a vital factor in bringing about the 2-to-1 decision of the United States court of appeals.

In our opinion that decision was a great victory for Mr. Brown and his colleagues and we extend our congratulations to our fellow townsman. It was Mr. Brown, more than any other one man, who assembled in a painstaking and scholarly manner the evidence that the Communist Party here is an international conspiracy.

These facts should be kept in mind in the

These facts should be kept in mind in the board of education when it makes decisions about the continuance on the job in our schools of teachers who have renounced communism but who refuse to name other teachers who may still be Communists and still teaching in the schools.

In an address to the Brooklyn Bar Association when he was on the control board, Mr. Brown put his finger on this situation when he said:

"Would it not be folly for freemen • • • to ignore the experience of those in country after country who declare that international communism, its adherents, and its innocent dupes are dedicated to the infiltration of government, of labor unions, of the schools, the press, the movies, and the radio?" We must face up to the dangers of exposing our children to teachers who are clever Red propagandists.

New Front in the Cold War

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article which appeared in the December 13, 1954, edition of Time magazine:

NEW FRONT IN THE COLD WAR—THE UNITED STATES SEARCHES FOR A WORLD ECONOMIC POLICY

The United States is preparing to open a new front in the cold war, an economic front. On Presidential instructions, former budget director Joseph M. Dodge hastened back to Washington from his Detroit bank to undertake a sweeping review of the entire field of cold war economic strategy. Secretary of State Dulles is pressing for a huge expansion of United States investments abroad; Foreign Operations Director Harold Stassen, whose department is slated to go out of business next summer, has proposed an ambitious scheme which is already being called a Marshall plan for Asia.

The air is full of plans, but they have yet to undergo a purification by budget. Secretary of the Treasury George Humphrey, a hard man with a dollar and a weighty man in the Cabinet, is against any large-scale foreign spending; banker Dodge thinks Harold Stassen's plans are dangerously dreamy. The foreign-aid enthusiasts think Humphrey and Dodge are dangerously unimaginative. But despite individual differences, the Cabinet is unanimous in its belief that the character of the cold war is changing, and that the United States urgently needs to reshape its foreign policy. The objective is to shift the emphasis of United States world strategy away from military containment (which leaves the initiative with the Communists). closer to economic liberation, with the emphasis on advance.

Pax atomica: Currently, United States policy suffers from what one State Department man calls a heavy military bias. Too many United States officials have fallen into the habit of measuring progress (or security) exclusively by the number of nuclear explosions, the number of divisions mobilized. The result is that the United States is stuck with a warlike vocabulary (e. g., massive retaliation), while the Communists, who continue to aggress, have stolen the words of

Peace (e.g., coexistence).

President Eisenhower is convinced that there is no longer any alternative to peace. The British believe that the world is entering a period of pax atomica, based on a recognition by both sides of a nuclear stand-The new phrase spreading in both London and Washington is competitive coexistence.

In the next 10 years, warned the State Department last week, the main cold-war battleground may well be economic. "The leaders of the Soviet Union," said one of its experts, "are apparently proceeding on the theory that economics is the Achilles heel of the West." To meet this challenge, which in a period of cold peace might prove more dangerous than all the fleets and armies of Moscow and Peking, the United States needs to prove that democracy and capitalism have more to offer-in terms of freedom, justice, and plenty-than the Communists ever can. What is needed is no less than a new world

economic policy.

The challenge is immense: it conjures up a vision of United States capital and skill flowing out to far-off lands to dam great rivers, dig new mines, so that millions who know only hunger may share in the freedom and plenty that Americans take for granted. But the businessmen in the Eisenhower Cabinet are not interested in a return to ex-Pensive giveaway programs. Their WEP is based on spreading abroad the practices and philosophy that have made the United States the wealthiest, most progressive Nation in history. Foreign investment is to the advantage of other nations who lack the cap-Ital to develop their resources; it is also to the advantage of the United States.

Four million dependents: With but 6 percent of the population, the United States Produces and consumes almost 50 percent of the world's annual output of goods and services. Yet if Americans tried to make do without foreign trade, their standard of living would dwindle overnight. There would be no coffee, tea, or bananas in the United States shops; sugar and pineapples would be priced sky high. Telephones (which need 48 different materials from 18 foreign countries), automobiles (300 items from 56 foreign countries) and shoe polish (8 items. from abroad) would be scarce and more ex-pensive. Said Harold Stassen last year: The United States depends on the outside World for 100 percent of its tin, mica, asbestos, and chrome, for 99 percent of its nickel, 95 percent of its manganese, 93 percent of its cobalt, 67 percent of its wool, 65 percent of its bauxite, 55 percent of its lead, 42 percent of its copper."

Still more does United States prosperity depend on export markets. Four million Americans work directly for overseas customers. In 1952 United States foreign sales of earth-grading machinery were equal to 30 percent of production; tractors, 23 percent; textile machinery, 22 percent; type-writers, 19 percent; trucks and buses, 16 percent; refrigerators, 13 percent; cotton tex-tiles, 9 percent. United States farmers ex-ported the produce of 40 million acres of land-between one-quarter and one-half of all their cotton, tobacco, corn, and wheat, About 30 percent of all United States farm marketings are dependent on foreign buyers, and in 1951 farm-export income, divided evenly among United States farmers, equaled \$1,100 per farm.

Off the United States dole: Every year, still more Americans become dependent on foreign trade. United States productive capacity is outrunning United States domestic demand-and the result is that thousands of businessmen are seeking bigger outlets abroad. But if overseas customers are to buy more United States goods, providing more jobs for United States workers, they must obtain the dollars with which to pay for them. In the years after World War II, United States foreign-aid programs helped provide these dollars-35 billion of them, not counting military spending. But the era of donation diplomacy is past. "The world must soon stand on its own feet," says Clarence B. Randall, chairman of the United States Commission on Foreign Economic Policy. "It must come off the American dole, as it wants to do, and earn its own way, as it is determined to do.

To help the rest of the world stand on its own feet, against poverty and communism, is the principal objective of a world economic policy. Such a policy requires two si-multaneous economic offensives: 1, a vigorous expansion of free world trade; 2, a drive to raise living standards in the underveloped lands of Asia, Latin America, and Africa.

EXPANDING WORLD TRADE

Since 1939, world trade has been out of joint. Buffeted by war and cold war, it limps along a narrow defile between the face of the Iron Curtain and the perils of the dollar gap. This year there has been marked improve-Europe is back on its feet (Time, November 29), and 11 of its trading nations, accounting for three-quarters of its imports from North America, are quietly dismantling their restrictions on free trade. In some cases (e. g., Benelux) controls have been removed on almost 90 percent of all dollar imports. The vast sterling area, which accounts for 40 percent of all world trade, is slowly and cautiously approaching the day when the pound (and with it, most other currencies) will be declared freely convertible into dollars.

What happens next rests squarely with the United States. "As the strongest economic power," said the influential Committee for Economic Development last month, direction which our tariff policy takes will * * * determine whether the free world moves ahead to widening markets and expanding production."

Cheese and scarves: Many United States tariff policies are still geared to the outdated habits of a nation trying to get on its economic feet. Others are contradictory, and even self-defeating. Examples:

United States Marshall plan experts helped the Danes expand their blue-cheese industry, so that Denmark could earn the dollars it needed to buy United States goods. But when the Danes started selling their cheese, the United States imposed a quota to keep all but a sliver of foreign blue cheese out.

The United States lays great stress on the 1921 Antidumping Act, which protects domestic markets from the unfair competition of foreign products sold below cost. Yet un-

der the burden of its surpluses,1 the United States is peddling abroad \$1.4 billion worth of food, some of it in 6 million Christmas parcels to be distributed free by United States troops, much more at cut-rate prices that undermine its allies' markets.

Complaints about these, and countless other anomalies, pour into Washington each week. Last month 33 out of the 34 members of GATT (General Agreement on Tariffs and Trade) censured the United States for restricting dairy imports by quota. don Economist wrote: "The United States is seeking two worlds-one where it can sell its surpluses freely, and another where no other country can sell farm products freely to it." Said a Japanese businessman: "The Americans tell us not to trade with the Communists, then they turn around and raise their duties on silk scarves. It doesn't make sense.

Foreign businessmen consider these the biggest United States obstacles to expanding world trade:

The United States tariff wall. Yearly, the United States imports about \$11 billion worth of goods; of these, half enter duty free, and two-fifths pay duties of less than 30 percent. Yet cheap sunglasses pay 335.7 percent ad valorem, pocketknives with folding blades 89.5 percent, concentrated lemon juice 85 percent.

The Buy American Act, which prohibits the United States Government from buying foreign products unless the equivalent United States product costs at least 25 percent higher. Cost to the United States taxpaver in unnecessary Federal expenditures: \$100 million per year. Already, in individual cases, the Eisenhower administration is seeking ways to get around this depression measure,

United States customs procedure. goods take longer to pass through customs than it took Columbus to discover America," said a 1953 United States Government report. There are 20 different chargeable rates on fine animal hair, half a dozen for leather gloves, depending on whether the seam is sewn by hand or by machine. Charges often vary as much as 25 percent between New York and New Orleans, and at the end of 1953 there were some 750,000 unsettled customs entries-the equivalent of a full year's work-pending on inspectors' desks.

Advice to Congress: To remedy the worst of these abuses, the Randall Commission proposed a cautious middle-of-the-road program (Time, Feb. 1). It advised Congress to-

Extend the Reciprocal Trade Agreements Act for at least 3 years.

Empower the President to cut all tariff rates by 5 percent each year over a period of 3 years.

Authorize the President to slash existing tariffs to not more than 50 percent ad valorem at his discretion.

Simplify tariff classifications and customs procedures.

Change the Buy American Act to permit foreign companies to bid on United States Government contracts without discrimina-

The timidity of the Randall Commission's recommendations was rooted in the notion that a bolder program could not get past high-tariff Republicans in Congress. President Eisenhower did not back the Randall proposals with his full prestige, and protectionists in Congress killed the program anyway. But Ike has decided to try again in January, and he should have more luck, since low-tariff Democrats will occupy the

As of September 30, the United States was holding history's greatest hoard of unsold food and fibers: \$6.4 billion worth, including 377 million pounds of butter, 550 million pounds of cottonseed oil, 743 million bushels of wheat, 2 million pounds of tobacco.

key committee chairmanships in both House and Senate.

RAISING LIVING STANDARDS

What Europe needs is trade; what Asia, Latin America, and Africa need is capital and know-how. Perhaps I billion people in these continents are experiencing what economists call a revolution of expectations. A fairly simple Western notion—that poverty, disease, and illiteracy are not inevitable—is spreading like fiery crosses among folk who for centuries have remained apathetic to advance. Having emancipated themselves from colonialism, millions of human beings are consumed by an aching need to pull themselves up from economic servitude. They look to industrialization as a magic panacea.

This blind and touching belief, and the rising expectations that impel it, have been seized upon by the Communists as a powerful lever of influence. From Moscow and Peking, communism is held out as a short cut to material progress. Recently John Foster Dulles warned Americans that the Communists' "cruel system * * * does have a certain fascination for the peoples of underdeveloped countries who feel that their own economies are standing still." The danger is that those who compulsively hunger for economic advance will opt for the Communist alternative, if democracy's methods are too slow.

Partnership for growth: To meet this need and challenge, the Eisenhower Administration is considering an imaginative proposal originally offered to the Government by MIT's Center for International Studies. Backed by a powerful segment of the State Department and by FOA's Harold Stassen, it calls on the United States to launch and lead a free world "Partnership for Economic Growth."

To start it going, the United States would earmark between \$2 and \$3 billion a year (about one-fifteenth of its arms budget) for the next 5 years, to provide an investment fund for underdeveloped nations. and other industrial nations would be asked to supply additional billions; private investors, most of them American, would be encouraged to add to the kitty. Loans from this giant fund would be made available to the have-not nations without military or political strings, but each borrower would be expected to concentrate on those industries for which climate and resources best fitted it: there would be no "partnership" money to set up uncompetitive prestige industries, which might require high tariff protection.
Favorable battleground: Partnership pro-

Favorable battleground: Partnership protagonists in Washington expect to avoid the big error of the Marshall plan—that of handing over United States aid on a government-to-government basis. As soon as the pumps are primed, partnership loans to governments would be quickly tapered off, and the building of dams and factories left to private capital, operating for profit. The partnership would also provide United States and European technicians, to teach Indians, Bolivians, Egyptians, how modern industry is run. United States experts believe that atomic-energy reactors might be used efficaciously to provide some of the power for industries in fuel-scarce areas.

State Department planners have accepted as a target MIT's cautious estimate that, once started, world partnership for growth would make possible an overall I percent annual increase in income per capita for the underdeveloped nations of the world. Considering the poverty and vast size of the populations involved, this is no mean target. But it is easily within the giant capabilities of the United States.

Together with the President's program for expanding world trade, some such world-investment program is indispensable to (1) the security, and (2) the future prosperity of the United States. For if the West loses the struggle for 1 billion in-betweens, on 3

continents, the balance of world power may go in favor of communism.

There will be resistance to a world economic policy—at home and abroad. But economics, a field in which Americans excel, is a battleground which the United States might gladly choose to fight on.

Junior Chamber of Commerce Organized 35 Years Ago This Month

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, I have recently received numerous communications from the junior chamber of commerce national head-quarters about the working activities of this group of your businessmen of America. The letters I have received reflect the activities of an aggressive, alert, vigilant organization which is furnishing young leadership to a rapidly growing industrial nation.

Thirty-five years ago, this month, the junior chamber of commerce was organized. It was intended that this body of the newly organized association be composed of young men interested in business, government, and civic affairs who would have an opportunity to prepare themselves for leadership in business and community activities. The original organizational efforts were started in 1915 but were interrupted for 4 years by the intense national effort during World War I. Members of this group were from 21 to 36 years of age and as the depression of 1929 lowered a shadow casting its gloom over the entire business economy of the United States, this organization of youth matured quickly and cast its efforts in the direction of relieving some of the suffering and hardship, and financial distress so keenly felt throughout the country during that unhappy period of our economic growth.

In my home town of Shreveport, La., the junior chamber of commerce is most active. In other cities and towns throughout Louisiana, 25 junior chamber of commerce chapters carry on the traditions of their organization implanted in its charter 35 years ago. As a matter of fact, the State of Louisiana boasts of over 2,500 junior chamber of commerce members. These junior chambers, composed of young, aggressive men, furnish leadership to business and industry in our State, rapidly coming into full industrial manhood.

The junior chamber of commerce creed is well set forth by a belief—

That faith in God gives meaning and purpose to human life:

That the brotherhood of man transcends the sovereignty of nations;

That economic justice can best be won by free men through free enterprise;

That government should be of laws rather than of men;

That earth's great treasure lies in human personality;

And that service to humanity is the best work of life.

Those of us who are vitally interested in the future of America want to see organizations dedicated to worthy civic enterprise and proper human activity prosper and develop. With this in mind, I express the hope that this organization may continue to be active, aggressive, and alert in our civic and community affairs for many years to come.

Safety of Our Nation Comes First

EXTENSION OF REMARKS

HON, JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BYRNES of Wisconsin. Mr. Speaker, almost daily some critic of the administration challenges our security program. They do so not on the ground that we are not removing untrustworthy personnel, but rather on the ground that some people have been suspended who may not necessarily be a risk. If we are to err, Mr. Speaker, I for one hope we err in favor of the security of our country.

If there is any suspicion concerning the trutworthiness of an employee of our Government, he should be suspended until that suspicion is removed. The safety of our Nation must always come first.

In this connection I call attention to an editorial recently appearing in the Green Bay Press-Gazette of Green Bay, Wis.:

SECURITY IN THE HOUSE

When a woman walked into the House of Representatives and quietly asked Speaker RAYBURN if she might make a speech, the House was thrown into a mental turmoil resulting in "goose pimples" for some Members. Members recalled vividly the shooting from the gallery last March 1 by Puerto Rican Nationalists which wounded five Congressmen. One of the Puerto Ricans was a woman.

Immediately the woman was hustled out, and there was a strong demand for a tightening of the security rules in the House. Plainclothes detectives will be stationed in the spectators' gallery, and the doormen who allowed this woman to pass will get a dressing down.

It is not difficult to see the parallel between this example of House security and many cases of national security. When a responsible department executive or an investigating Senator finds a suspicious person in a sensitive Government position we have a situation far more dangerous than a strange woman in the House of Representatives. It is enough for "goose pimples" and probably more. President Eisenhower in referring to a recent case said "It would scare me."

Certainly it is proper to act immediately to get rid of the danger. The need for security is as clear in matters of national danger as in the House danger. But when public officials remove what they fear is a security risk, they are often subjected to abuse and ridicule. Those public officials and publicists who talk most about freedom of thought are among the first to try to frighten public officials into risking the safety of the Nation rather than face the brutal attacks that are so often the lot of men who try to protect the Nation as the law and duty require.

Extension of Educational Benefits for Members of the Armed Services

EXTENSION OF REMARKS

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the Record or include the following statement which I presented to the House Committee on Veterans' Affairs today in support of H. R. 587, to permit persons now in the armed services or who will be in service on January 31 of this year to continue to accrue rights of educational benefits despite the termination of the war emergency on that date. My statement follows:

Mr. Chairman and members of the committee, I wish to express my appreciation for this opportunity to submit the following statement to you in behalf of H. R. 587, a bill "to provide that persons serving in the Armed Forces on January 31, 1955, may continue to accrue educational benefits under the Veterans' Readjustment Assistance Act of 1952."

The 82d Congress enacted Public Law 550, "to provide vocational readjustment and to restore lost educational opportunities to certain persons who served in the Armed Forces on or after June 27, 1950, and prior to such date as shall be fixed by the President or the Congress. . . " The President on January 1, issued a proclamation establishing January 31, 1955, as the termination of the Korean emergency period. In accordance with Public Law 550, the termination of the emergency period will also end the accrual of educational benefits. The enactment of H. R. 587 would assure those individuals in service on or before January 31, 1955, the privilege of continuing to accrue educational benefits until their discharge and would eliminate any possibility of an injustice, with respect to this act, occurring to any individual serving in the Armed Forces prior to the issuance of the President's proclamation.

I am happy to say I supported the enactment of Public Law 550 in the 82d Congress, and I wish to support the enactment of H. R. 587 in an effort to avoid any misunderstanding or misinterpretation of the Veterans' Readjustment Assistance Act.

Mr. Chairman, at this time I would also like to commend the Committee on Veterans' Affairs, which I feel has done such excellent Work in both honoring and protecting the Veterans of America. The original GI bill of rights was indeed a bill of remarkable vision, a supreme concept, and, in my opinion, extremely rewarding to both the individual and the entire Nation. It was a generous act upon the part of the taxpayers who so Wholeheartedly supported this program, as One sign of their token of esteem for the sacrifice the young men of America made in service to their country during World War II. There was similar public demand and approval that an educational rights bill be enacted for those men serving in the Korean War. It is a credit to this committee that its members carefully studied the operation and history of the original GI bill of rights and in drafting Public Law 550, drew up legislation which eliminated any of the abuses that had developed under the original bill. In this way the committee protected the veteran, retained his educational benefits for him, and at the same time protected the taxpayers.

The GI bill of rights legislation has helped and is helping the veteran help himself. It is one way in which our Government can help a young man regain through education the time and normal advancement he has lost while on military duty. It helps the in-dividual veteran obtain a higher standard of living which, in turn, increases the level of the Nation's prosperity. It is, indeed, of greater benefit to both the veteran and the country to give the veteran a better life through advancing his education than to reward him with a small bonus, quickly spent. The young men of the United States have shown their fine heritage in the sacrifices they have so willingly made for their country, and they deserve to be respected, honored, and rewarded in a like manner. all the citizens, taxpayers, and Congress have tried to do in supporting educational benefits legislation.

In my opinion, H. R. 587 is a perfecting amendment to Public Law 550, 82d Congress, which would facilitate the implementation of this law and would assure any deserving veteran the educational rights which Congress intended that he have. I hope H. R. 587 will be enacted without delay.

The Reciprocal Trade Casualties Act of 1955

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the Record, I have today introduced a bill which, if enacted, would be entitled "The Reciprocal Trade Casualties Act of 1955." It is designed to cushion the shock that will be felt if this Congress decides, as I hope it will, to renew and expand our reciprocal trade agreements program.

This country, I believe, needs expanding world trade. Our export industries can survive in the long run only if we let other countries earn the dollars with which to buy our exports. At the same time, lowered tariffs help the American consumer.

But if imports to this country are to increase, and thus give these benefits to the country generally, someone is going to get hurt in the process. Beyond a certain point, imports can be increased only at the expense of domestic industry. If you are in such an industry, it is small comfort to be told, as your company goes bankrupt or you lose your job, that everything is for the best in the best of all possible worlds.

Now, our trade-agreements legislation has had for some years the escape-clause provision, whereby if sufficient injury is shown, the President is authorized to raise tariffs. Possibly because this escape clause could negate the entire trade program, it is no secret that the President has been very loathe to invoke it. If he does not invoke it, domestic producers suffer. If he does invoke it, where is your trade liberalization then?

The gentleman from New Jersey [Mr. WILLIAMS] and the gentleman from Pennsylvania [Mr. EBERHARTER] recently

introduced bills which would provide assistance to individuals, communities, and industries jeopardized by the lowering of trade barriers. I believe that these bills are entitled to the sympathetic consideration of this House. The bill I have introduced, the Reciprocal Trade Casualties Act of 1955, is designed to serve the same purpose as these bills and to supplement them. Like them, it tries to answer the question: How can we lower trade barriers and yet mitigate the hardship that such action causes by helping producers to adjust to a higher level of world trade?

The bill, in brief, provides that any domestic producer found by the Tariff Commission to be in danger by foreign imports, may receive a certificate entitling it to a percentage advantage—up to 25 percent-in its bids for Government contracts. The idea is to provide an oxygen tent so that a company may keep busy and solvent while it finds new products which can sustain it in the long pull. The certificate would be good only for a limited period, while the company energetically sought to develop new products which could withstand competition. With the Government purchasing many billion dollars a year worth of materials, a percentage advantage of this type could be of real significance in tiding a hardpressed producer over a transition period.

Certainly, we cannot sit idly by and see economic distress and misery caused by our trade policies. An individual plant and its workers cannot just be wished out of existence. Into such a plant, ownership has put its savings and management and skill. Tied to it are hundreds of workers, by reason of seniority, pension plans, or simply by a very understandable wish not to be uprooted from their home, their church, their community.

This bill attempts to keep such a business organization in being. If the company does succeed in making a better mousetrap, we will all be better off for it.

But, as an addition to the cost of certain procurement contracts, the proposal will cost money. So, I suppose, does our practice of giving veterans a percentage advantage in their civil-service examinations. We consider veterans worthy of such protection since they are casualties of our national policy of resisting aggression. Should we not equally recognize as deserving of a percentage break certain industries which are casualties of a trade policy designed to produce a peaceful world? In doing so, we take the costs of a liberalized trade policy off the shoulders of a few isolated industries. and instead spread that cost over the entire Nation, as it should be.

The administrative machinery utilized by the bill is the Tariff Commission, which has already considerable experience in making determinations whether a given industry is being hurt by foreign

imports.

The bill is applicable to all producers, and particularly to a number of industries now in tariff jeopardy, which are well equipped to bid on Government contracts. These include such diverse industries as bicycles, cutlery, optical instruments, watches, and motorcycles.

As a specific example, take the motorcycle industry, of which the Harley-Davidson Co., of Milwaukee, is now the sole American producer. Because our tariff on motorcycles has been bound at 10 percent under the Reciprocal Trade Agreements Act, Harley-Davidson has been severely affected by foreign competition, largely from Great Britain. Employment at Harley-Davidson has declined from close to 3,000 in 1949 to less than 900 today. It has lost more than half its domestic market to foreign competition. It is currently operating, I am informed, very close to the red.

If Harley-Davidson is considered a protectionist company, this is so despite itself. Harley-Davidson longs for liberalized trade and the day when once again it can sell its motorcycles throughout the world market, instead of being kept out by the rigid quota system enforced in the sterling bloc and elsewhere today. It sees the point that foreign countries must earn dollars. I believe it would accept with Christian resignation the loss of part of its domestic motorcycle market to foreign competition if it could somehow see a hope of survival on the horizon. The company is engaged in an imaginative and resourceful search for new products which costs it many thousands of dollars monthly. It hopes that in a year or 2 or 3 it will light upon such a product, and then be able to diversify its line so that it can keep its head above water and keep jobs for its workers. Meanwhile, it is bidding, and bidding hard, on a great variety of Government contracts. It has run into the same experience as many another medium-sized company-it finds that General Motors or Chrysler can underbid it by a few dollars on an important contract.

Let us put the Reciprocal Trade Casualities Act on the books. Let us give Harley-Davidson, and companies similarly situated, the opportunity to prove before the Tariff Commission what is perfectly obvious: That it is suffering, and suffering badly, from foreign competition. Let it be armed, then, with a certificate entitling it to a percentage break on its Government work. Let this added business keep its working capital and working force intact over the next few years. And, hopefully, let the company then fashion a better mousetrap which will set the free world beating a path to its door.

If we can do that, we can move closer to our goal of trade without tears.

Thirty-seventh Anniversary of the Proclamation of Independence of the Ukrainian People

> EXTENSION OF REMARKS OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. ROONEY. Mr. Speaker, last Saturday was the 37th anniversary of the proclamation of indepedence of the Ukrainian people. We in the United States, together with all the free peoples throughout the world, are aware of the great courage displayed by the brave Ukrainians in their opposition to Communist oppression and have great admiration for their consistent zeal in their efforts to attain liberty and free-

We have an obligation to continue to aid them in every way we can in regaining the liberty and permanent peace among freedom-loving nations which they so justly deserve.

The Simplified Tax Form

EXTENSION OF REMARKS OF

HON, CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial by Elinor V. Cogswell, which appeared in the Palo Alto Times, Palo Alto, Calif., on Tuesday, January 18, I believe that the editorial points out better than most the difficulties faced by American taxpayers in trying to fulfill their obligations to the United States Treasury.

EVC AT BAT-THE SIMPLIFIED TAX FORM (By Elinor V. Cogswell)

Through circumstances beyond my control it became necessary for me to file an amended estimate of my 1954 income. I got around to it in the final few days before the January 17 deadline.

In this I was not exceptional, as I learned when I went down to the internal revenue office in the basement of the post office to get an estimated income blank to amend. Lots of people but no blanks. I could probably pick one up from a bank or some place, I was

There weren't any around the Times or in the central office of Peninsula Newspapers, I telephoned the bank that guards my pennies to be sure there are enough there to cover my checks. Sorry, no blanks.

By that time it was Thursday before the deadline. In some desperation I telephoned the internal-revenue office in San Francisco. The switchboard operator, after learning what I wanted, connected me with voice

No. 1. Voice No. 1, after learning what I wanted said she was not the person for me to talk to and asked the operator to connect me with another extension. Voice No. 2 answered and went through the same routine. Voice No. 3 repeated the formula.

Down in the supply room, voice No. 4 answered a ring on local 6843. He had the blanks, all right, but said he was busy. said he didn't have time to send out blanks now. He implied I should have thought of such matters sooner.

I explained piteously that it seemed to me that if the Government said I had to fill out one of these blanks or go to jail, the Government ought to give me a chance at a blank.

Somewhat grumpily he took my name and address. He didn't think the blank would reach me in time, anyhow.

Neither did I. So I betook myself to the postoffice basement again Friday morning and joined one of several lines fanning out from the harried collectors. I wanted to find out what to do if the blank didn't show up.

My line reached well down the hall. After I'd been standing there for 15 minutes or so. the man at the head of the line finished and came out. "What time is it?" he asked. It was 25 minutes to 11. "I got here at 9:15," he said.

About that time I was rescued by an acquaintance. He came in to collect some other blanks from the table in the hall. I told him my troubles and he said he had some estimated income blanks in his office, or could find me some across the hall.

He did. But that did not end my troubles. Being painfully literal in matters fiscal, financial, fiduciary, and involving collectors of internal revenue, I felt that I should figure out every detail of my income. This included a small annuity that I had taken out on one of those days when you feel that you're about worn out and had better prepare for being tossed into the discard pile.

If you've read the new tax form, you know that the matter of figuring out how much you owe on annuities has been simplified. You just divide something or other by your life expectancy, using an actuarial table which the blank indicates is available.

Not from the office of the Director of Internal Revenue, however. Not from the banks. Not from the PNI office. Not from anybody else I could think of to ask.

The man that sold me the insurance said that if the Government had such a table it was locked in the vaults of the Library of Congress. He said that using his company's tables, the 15-page document his own company had put out on this tax gimmick, and 3 other services, he could figure it out pretty close for me. It took him only 1 afternoon and 2 calls to tax experts.

If this is simplification, I vote for complexity.

Just after I rushed my return to the post office, the blank came from the grumpy man at local 6843.

Now, I am told, the Government's table of life expectancy is out.

Ukrainian Independence

EXTENSION OF REMARKS OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. CRETELLA. Mr. Speaker, Prof. Lev E. Dobriansky, president of the Ukrainian Congress Committee of America, Inc., has requested Members of Congress to make a brief statement in the RECORD for distribution abroad and behind the Iron Curtain. The occasion is the observance of the proclamation of Ukrainian Independence on January 22, 1918.

The Nation of Ukrainia, numbering 40 million people, has been under the yoke of tyrants for centuries. The latest plunderers of Ukraine independence and culture are the cruel Soviet imperialists. who have committed mass murders, manufactured famines, and destroyed churches as the highlights of their reign of terror.

In my home district of New Haven. Conn., the Ukrainian flag of blue and gold flew at city hall alongside the American flag last week in memory of the Ukrainian proclamation of independence. I take great pride in pointing out that New Haven is the first city in the United States to recognize Ukrainian Independence Day. It is my hope that many other towns and cities will follow this example of tribute to a nation which cherishes freedom above all else and will never cease to fight for it.

The Meaning of "Face" in Asia

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. ANFUSO. Mr. Speaker, in connection with the present international crisis in the Far East, we often hear a great deal about the importance of "saving face" in the Asian countries or "the power of face" in that area of the world. I think that if more Americans understood the meaning of face to the Asian peoples, particularly if it was better understood by our policymakers, diplomats, and most important of all, by Congress, we could avoid much of the present tension in the world.

One of the most interesting descriptions of the meaning of "face" in Asia is contained in an article published in the New York Times Magazine, last Sunday, January 23, 1955. I am very happy to insert it into the Record and urge all my colleagues to read it. They will find it thought-provoking and Worthwhile as they read their daily newspapers and try to understand the oriental mind and way of thinking.

Mr. Speaker, the article, which is written by Peggy Durdin, who has lived in the Far East for many years, is as follows:

> "Face" Is a Basic Issue in Asia (By Peggy Durdin)

SINGAPORE.—About 20 years ago a Chinese family—man, wife, and 3 children—were living on a little island in the Yangtze River, not far from the city of Chinkiang. The woman became sick. Nothing seemed to help her; not the ministrations of the local herb doctor nor offerings in the village temple. Finally, her husband made up his mind to take her to the hospital of the "foreign devils" in Chinkiang. This was a momentous decision; he had to sell some of their meager household goods to finance the sampan trip down the river, and, after all, no one on the island really knew whether it was good or bad magic that the big-nosed "foreign devils" practiced.

As the husband and some of the other villagers were carrying the invalid down to the river bank, they passed a neighbor woman famous for her shrewish tongue and an eye for other people's business. She shouted some cutting remark about the project. Tense with worry, the husband answered back. A verbal brawl developed in front of the crowd that could always gather in 20 seconds anywhere in China. Finally, harassed beyond his control, the husband slapped his shrewish neighbor before everyone. Her curses followed him down to the water.

At Chinklang the foreign doctor diagnosed cancer in its final stages. With some drugs

to ease the woman's pain, they hurriedly started back to the island, so that she could be at home when she joined her ancestors. When the husband and his dying wife reached their little hut they found the neighbor's body dangling in their doorway. She had committed suicide because she had lost so much face by being slapped in public. (At the same time, she had terribly revenged herself on the man who had taken face from her; unwritten Chinese law ruled that you had to support, for the rest of your life, the dependents of anyone killing himself on your property.)

This is not an unusual instance of the power of face in the country where it was highly developed and widely practiced before the Communists came to power and launched their drives against the old cultural patterns and traditions. But face was never the monopoly of China. If Americans had more appreciation of the part face plays and has played in the relations of nations and individuals, our dealings with the rest of the world—and particularly with Asia—would be smoother and more mutually profitable.

Face, in the classic Chinese sense, was status in the eyes of others. It was not what you were, but how you were regarded; or, more accurately, how you felt you were regarded. Wealth and position might contribute to face but could never guarantee it. It was not solid and irrevocable, like caste in India, but evanescent and variable. By your own acts, you could gain or lose face from one moment to the next. Others could give it to you or take it from you.

Although a Chinese peasant wife might kill herself because her mother-in-law made her lose face too often, a poor farmer might go irremediably into debt to gain face by an elaborate family wedding or funeral, in general, face was a luxury only the upper classes of China could really afford. It was at once one of the flowerings of an extremely ceremonial and civilized society and a real impediment to progress, efficiency, and rule by law.

If a Chinese captain couldn't win a naval battle against Europeans, he could at least gain face by firing off big guns from a safe The Chinese would never recall General MacArthur as President Truman did: they would send out-of-favor generals on expensive tours abroad to save their faces or would execute them. About a hundred years ago Cantonese officials gained themselves and their country great face by treating western traders and diplomats as rudely possible (thereby helping to bring about the opium war and the forcible opening of the Chinese Empire to the West). In later times some antiforeign Chinese used to take pleasure in making Europeans lose face by techniques so delicate and subtle that only other Chinese were aware of them.

A Chinese official always gained face by treating his inferiors arrogantly-if he got away with it. If he did not-if, for instance, the customs officials he bullied still doggedly insisted on opening his trunks and looking through them-then he lost great face. Achieving something by influence instead of legal methods-procuring the re-lease of a man in fall, by dropping a word in the right quarter-gained one face. My father worked for years in China to persuade teachers that they must sometimes flunk students, in spite of the demands of face, and to persuade boys that losing a game on the playing field involved far less loss of face than walking off the court when defeat seemed probable.

One almost invariably lost face in China—as in many other parts of Asia even today—by acknowledgment of error or of ignorance. Not long ago a qualified Chinese physician joined the staff of an American tuberculosis sanatorium to learn new techniques of treating the disease. The institution's doctors and nurses reluctantly came to the con-

clusion that he was trying to kill patients. The fact was—as one of the China-born patients discovered with a little sieuthing—that he simply couldn't bring himself to incur the loss of face involved in admitting that he didn't know enough English to understand the written and oral instructions he was given.

Modern Chinese rightly believed face had reached such proportions that it impeded progress and must go. The Chinese Communists are working hard to root it completely out of Chinese thinking. Regard for face and the basic Communist practices of public criticism and self-criticism are absolutely incompatible. A year or so ago, when the Communists were concentrating on the reindoctrination of Chinese professors, they explained tirelessly that the intellectuals must think of making long, public and often abject denunciations of past ideas and careers not as humiliating loss of face but as highly creditable behavior.

This doesn't mean that all Chinese Communists, expert psychologists that they are, have not utilized face in dealing with their own and other people. One might say that, whereas in old China anyone could give or take away face, now it is done only by the party and the bureaucracy. Good Marxists would shudder at the phraseology, but probably the most important thing the Communists have given the laborers and peasants in China is face—social status, a sense of being someone, of mattering. This the Kuomintang failed to do on the mainland.

Conversely, one of the aims of the Communists' brutal "public accounts" trials of landlords was to make the whole class lose face permanently and irrevocably. Before evicting the thousands of foreign missionaries in China—easily achieved in several months without fanfare if the Reds had so wished it—Peiping went through a couple of years of elaborate, carefully planned routines (humiliating public arrests, trials, and so on) to make the Europeans lose face before the common people. The Communists give labor heroes tremendous face today through such tactics as publicity and trips to Europe. Peaceful coexistence is high-level Russo-Chinese strategy, but a typically Chinese tactic of putting it across is to give to key Asian statesmen such as Nehru and U Nu as much face in Peiping as possible.

One reason Americans tend to underestimate Peiping's strength and appeal among Chinese citizens at home and overseas is that they forget that most of China's contact with the West until Mao came to power was a continuous loss of face for the Asians,

A great country that had never doubted for 2,000 years that it was the center and pivot of the civilized world—the Middle Kingdom—had to accept from western barbarians during the last century not only crushing military defeats but humiliating treaties limiting China's sovereignty on her own territory. China's adoption of so many elements of western culture, however beneficial, involved perhaps even more bitter and profound loss of face; acceptance of European methods was a tacit admission that Chinese techniques and patterns of thought were invalid and inferior.

It is not surprising, then, that face so often dictated the policies and behavior of the Chiang Kai-shek government, and was so valued by it. Churchill and Roosevelt gave China great face by treating it as the fourth great power during the last war, which it certainly was not; Washington took face away from Chiang by publishing the critical white paper half a decade later. Defeated on the China mainland and exiled to the island of Formosa, the Nationalist Government today is probably more sensitive about its face than at any other time in its history.

Face is far less important to the Chinese Communists. More realistic factors, including the demands of world Communist strategy, determine Peiping's policies toward Formosa, the United States, Korea, Indochina, the overseas Chinese, or the 11 Ameri-The Communists value fact, not can flyers. facade. But they do seem to feel a special resentment and bitterness toward the United States for denying them the face that recognition of China and entry into the United Nations would bring.

Unquestionably the Communists have given China great face in Asia. The Korean war added to her face (even anti-Communist Chinese felt a surge of pride and triumph that their country could stand off the West on the battlefield). The Geneva conference gave Peiping face at home and abroad, as has Nehru consistently in his public statements and general attitude toward the Chinese Communists.

"As far as Nehru is concerned, the chief objective of the Afro-Asian Conference to be held this spring is to give Communist China face," said one Asian recently. "But what will this policy gain in the end for India?"

To think of face, however, chiefly as a quaint Chinese idiosyncrasy—like footbinding—is erroneous. Asked to define face in the modern world, one of my Chinese ac-quaintances said promptly "Face is selling a piece of jewelry so you can give a lavish dinner party. It's going into debt to dress more elegantly than your friends, the way the elegantly than your friends, the way the Chinese do in Hong Kong." "Well," said an American, "that definition

makes face a solid American institution. It's going into debt to lunch at chic New York restaurants, or to belong to the right country club. We often call it 'keeping up with the

"Oh, face cuts across national boundaries," said the Chinese. "It's just a human failing. Everyone-and every nation-wants to feel honored and respected."

If we define face as status, and wanting face as wanting public recognition or acceptance of our status, it is almost as integral a part of western thinking as of Asian. face France feels she lost in the last war has made her as unreasonable and sensitive to slights on the international scene as a Chinese woman relegated to the background by a second wife who is younger and prettier. Fear of losing face by giving up a foothold in the Far East has been one of the chief sources of French stupidities in Indochina over the last 8 years.

Policymakers in Washington, American diplomats, foreign-aid technicians, and, above all, Congressmen, would better serve their own country's interests if they would try to understand the problems of face in Asia, a part of the world where we are not winning friends and influencing people on a scale to cause unrestrained jubilation. lonial rule was deeply face-losing for Asian countries and their leaders. For example, how humiliating and productive of neurosis it was for Indians, with their pride of caste and their great cultural heritage, to be impotent under British rule-and, what was worse, under the Britisher's quiet and unshakable assumption of superiority. As a matter of fact, what Asians most resented in colonial rule was not the material exploitation. It was the spiritual humiliation-the loss of face.

Few men-and those few are seldom practical politicians-can feel for years that they and their fellow countrymen are looked down upon and then suddenly, on the day of independence, emerge emotionally unscathed and unwarped. Loss of face under colonial rule has left scars among many Asian intellectuals: a narrow nationalism that is backward-looking and negative; an automatic and irrational suspicion of any move of any western country that has real

power; a compulsion to be important on the international scene; an Asianism which attributes special virtue to being yellow, brown, or black; an assumption that the West owes the East something as a kind of historical penance (this applies chiefly to the United States, which was least colonial); a tremendous sensitivity to the slightest hint of criticism (this often makes the work of a conscientious journalist excruciatingly painful); and a violent reaction against might be interpreted as pressure. Although, of course, it cannot be determined by these factors, American foreign policy risks failure if it does not take them into consideration.

Asian sensitivities from the colonial past are often compounded by sensitivities caused by the difficult present. As one European long in Indonesia put it, "Many Indonesians feel unhappy and thwarted and disillusioned today, and even a little ashamed, because they know things are not going too well in their country. But how much worse they feel just because they know white men are standing on the sidelines, looking on and commenting and criticizing."

Our relations with much of south and southeast Asia might be more fruitful today if we had followed the lead of the British at the end of the last war in giving a very appreciable degree of face to Nehru and India. We do not add to Asian nations' face by calling them "backward" and "underdevelor by giving them the quite false impression that we consider them trivial appendages to Europe or simply expendable pawns in our world strategy against Russia.

Receiving money and advice has seldom added to anyone's face; Americans need to use a good deal more tact in the thankless and delicate operation of giving. Largely because of the activities of the so-called "China lobby group" and McCarthyites, most American diplomats who really know Asian cultures and Asian psychologies are not operating in the area. A special requirement for United States official personnel coming to this part of the world should be an intelligent appreciation of Asian values and a pertalent for giving Asians a sense status generously acknowledged, a feeling of being appreciated and respected.

Let me add that Asians often seem to forget today that they owe the same courteous regard for the face of the United States. Of course, we gain or lose face in Asia by our own acts first of all: Nothing in the decade lost us so much face in the Far East as McCarthyism and probably nothing won us so much as the Supreme Court decision on segregation in the schools. Headline-hunting American politicians who forget that their remarks are seized upon in Delhi, Tokyo, Djakarta, and Saigon often show a positive genius for making their own country lose face in Asia.

But Asians, too, can give us face or take it away from us; nowadays, except in a few countries like the Philippines, they most frequently seem to do the latter. They expect to be treated with sympathetic understanding and appreciation; they are more than willing to view China charitably; but it is always open season for taking pot shots at Washington and at Americans.

They assure you that complete, 99-percent waterproof, governmentally organized thought control in China is just a temporary pimple, a passing blemish—but McCarthyism in the United States is a deep-seated, organic disease, unclean like leprosy. It was not the justified, but the constant and irrational criticism which made so many conscientious well-meaning Britishers in India bitter and warped before the last war-and today it is in danger of doing the same thing to Americans.

It is time that Asians reminded themselves that Americans are as proud of their country and of their way of life as Indians or Indonesians are. If somewhat less resentful of criticism, they are none-the-less becoming more sensitive to the unceasing attack on their country, much of it based on emotional prejudice and ignorance.

The giving of face at the right time in the right manner can greatly facilitate the complex and problem-ridden intercourse of nations. Americans should frequently remind themselves of this. So should Asians.

Revere Memorial Hospital

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered at the eighth annual banquet of Revere Memorial Hospital:

There was a time when we used to think of a hospital as some sort of an elaborate garage for human beings, where they went for overhaul and repairs.

It never occurred to us that we might ever need such care and treatment.

And so the burden of supporting our hospitals was unfairly placed upon the shoulders of a few.

However, a great and necessary change in the attitude of the American people has taken place within the last 20 years.

The depression of the 1930's turned out to be a shock treatment in disguise.

We were folted out of our indifference to economic problems.

In the quest for material security we also became aware of the need for taking better care of our health.

We came to understand that these were matters of group concern and that the responsibility for solving these problems must be shared.

Churches, schools, and hospitals are basic to the life of any community. They are entitled to the widest possible measure of support from all who live in the community.

Churches are exempt from taxation. Schools are maintained from public revenues or private funds. So are the many types of hospitals. Although Government aids in various ways, it is the people by their own voluntary efforts who maintain these institutions—in the spirit of the Good Samaritan.

We in Massachusetts take great pride in the fact that Metropolitan Boston has developed into one of the world's great medical centers. This could not have happened without public confidence and cooperation.

Six years after the establishment of the first English colony in America, Samuel Puchas noted in 1613 that: "Beyond James Towne * * * they were building a hospital with fourscore lodgings, and beds already sent." A little over a century later in 1718, the public records of Boston show that the selectmen were impowered "to lease out a piece of land * * * for the erecting of a hospital or resthouse there for the reception and entertainment of sick persons coming from beyond the sea, and in order to prevent the spreading of infection."

We are not quite so blunt today in our language. Even though an occasional patient, nurse, or doctor may seem to be somewhat of a pest to others, human nature being what it is, we regard hospitals as temples that are truly devoted to the healing arts.

The use of the word "hospital" in this

country, early combined the Latin "host"

and "hostel" with the Grecian concept of a community institution. Larger than the more general meaning in England, where the terms "private hospital" and "nursing home" were usually limited to specialized institutions.

Among the most influential founders of American medicine and medical care were two Massachusetts brothers, Joseph and John Warren, who were largely responsible both for the development of our first military hospital in 1775, and for the medical school at Harvard. Joseph Warren, who had pioneered in medical studies, was killed dur-ing the battle of Bunker Hill, but his younger brother, John, carried forward his work by arranging for shelters for the wounded at Cambridge. The Army hospital, located in a Boston pasture, served as well to house John Warren's lectures on the cadaver; sessions which were conducted behind locked doors. But this early course in anatomy could not remain hidden and, after having been carried on sub rosa, it moved to Harvard College and formed the beginning for the medical school, with John Warren as the first professor of anatomy and surgery. His son, John Collins Warren, who succeeded to his chair, set the stage for modern surgery by founding the Massachusetts General Hospital (1811) where in 1846, he gave anesthesia its first public demonstration.

Today, hospitals in America rank among the 12 largest American industries, repre-senting an investment of billions of dollars, employing more than half a million people, and operating at a cost of more than a billion

dollars a year.

Within the past 10 years the demand for hospital care has increased over half again.

Just look at the record of births in your own city and you will find that most new arrivals now come via the hospital route

rather than the home.

Workmen's compensation laws, and the rapid expansion of group-insurance plans, with their tens of millions of members, have both extended the range of hospital care, and have made it simpler for the institutions to obtain prompt payment of bills. The facts that people are living longer, and that diseases of old age are increasing, have further added to the need for more facilities.

Each year we are providing more hospital beds, but the demand continues to outrun

the supply.

The day is fast approaching when all Americans will not only be born in hospitals but will have occasion to revisit them as patients several times during the rest of their lives.

It is generally agreed that the average community needs 4½ general beds for every

1,000 inhabitants.

This is not just a simple matter of buying a bed from a supply house. There is the building to pay for and maintain, there is costly equipment to purchase, and there are many skilled people to serve the patient who Will occupy that bed.

The United States Public Health Service estimates that the national average cost of a hospital bed is more than \$16,000.

Staffing a hospital is a big proposition. It is generally considered that a commuhity should have 1 general medical practitioner for every 1,200 persons. A mythical town of 70,000 should have at least 58 GP's. It needs specialists, too; 1 surgeon for every 50 beds in the hospital; 1 eye-ear-nose-and-throat man for every 100 beds, plus other

As for nonmedical personnel, the PHS rec-Ommends from 140 to 170 employees for every 100 patients. That breaks down to 80 to 105 nurses, 30 X-ray, laboratory, and dietetics people, and about 35 clerks and housekeepers.

So you can see that each bed requires a

lot of money to service.

If one thing is certain, it is the fact that your community hospital will not be able

to pay its own way completely. Revenue from patients, most sources agree, will only finance 85 to 90 percent of operating costs.

That is why hospitals need your help to keep going.

Nonpatients must carry part of the load. There are almost as many ways of financing a hospital as there are hospitals. Raising funds through public subscription requires the time and generous effort on the part of many people as you know from your own ex-A combination of private funds and public grants might be the better an-

Even hospital buildings have a life expectancy of about 50 years and they, too, need oxygen and transfusions, in the form of money, to keep them up to date and functioning.

Not to mention the income of the staff. which must keep step with the rising standard and cost of living, if these dedicated workers are to be truly appreciated.

Many States are assisting communities ith their hospital programs. Some match with their hospital programs. local contributions dollar for dollar. Others make smaller but still sizable grants.

The nationwide need for new hospitals and public health centers was recognized by the Congress in 1946 when the original Hospital Survey and Construction passed. The major purpose of this legislation is to assist the States to provide adequate hospital, clinic, and similar services to all their people.

This is accomplished in two phases; namely, the survey and planning phase, and the construction phase of financial assistance to the States in building hospital and related

facilities.

For the construction phase of the program, the Congress has, thus far, appropriated over \$682 million. Of this sum, over \$625 million, matched by \$1¼ billion in State and local funds, have been allotted to 2,300 projects approved for Federal aid.

The American Hospital Association, in its June 1954 Administrators Guide Issue, reports that there are 5,212 short-term general hospitals in the United States, providing

546,000 general hospital beds.

In the New England States alone there are 242 voluntary, nonprofit institutions with 31,000 beds; 17 proprietary, with 523 beds; 31 governmental, with 5,661 beds.

It is apparent that, in our part of the country, the backbone of the system is comprised of the voluntary, nonprofit hospital

The summary data on the program in Massachusetts indicates that 64 projects have been approved and are receiving Federal assistance. Of particular interest is the fact that of these projects approved under the program, 52 of these, or 81.2 percent of the total projects were in the voluntary, nonprofit ownership group.

I shall not go into the financial figures of your fund-raising campaign, because I know that mathematics is a dry subject that has some of the effects of anesthesia.

Now if we only had some figures like Marilyn Monroe-or some of your own attractive nurses-to dramatize the problems of our hospitals, I am sure that everybody would take a lively interest in those problems.

As it is, you the workers, and you the donors, have done a fine job in rallying to the support of the Revere Memorial Hospital.

Concerning the future, I think we must have a big and continuing public relations program in order to make everybody hospital conscious.

For the health of the individual and the well-being of the community it is necessary that hospitals should be free from financial worries.

A popular song a few years ago bemoaned the fact that "money is the root of all evil." I believe that the author of those lyrics did

not refuse to accept some of the money that came his way as a result of his efforts.

Hard-pressed hospital administrators and trustees know how indispensable money is-to buy and maintain facilities, improve on equipment, and pay for the services of those who attend to the sick.

Without you, the benefactors, a commu-nity hospital might not survive.

Even though you do not wear a nurse's uniform, or apply a doctor's stethoscope, or take a blood count in the laboratory, you make all these services available to your fellowmen.

In behalf of the Revere Memorial Hospital—even though, as a Congressmen, I wouldn't be of much use on its staff—permit me to thank you for your neighborly spirit and your generosity.

Kind hearts and gentle people are the unsung heroes on the road of life.

And you, the contributors to your community's hospital, are angels of mercy.

Mr. Cain Speaks Up

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. FRELINGHUYSEN. Mr. Speaker. under leave to extend my remarks, I should like to include an editorial from the New York Times of January 25, 1955, entitled "Mr. Cain Speaks Up":

MR. CAIN SPEAKS UP

There can no longer be any doubt that the Federal security program is one of the major domestic headaches of this administration. It will probably remain so, as it should, until there is some substantial and meaningful reform of the present situation.

One of the most effective criticisms of this situation has recently come from a highly qualified but unexpected quarter. Harry P. Cain, former Republican Senator from Washington, has for the better part of 2 years been a member of the Subversive Activities Control Board. This agency was established by the Internal Security Act of 1950 to pass on the Attorney General's designation of organizations coming under the sanctions of that law; and it has held its hearings with a notable degree of moderation, propriety, and respect for processes. When Mr. Cain served in the Senate from 1947 to 1953 he was generally considered to be a member of the far-right wing; and this fact only adds to the piquancy of his remarks.

As a Republican who has been deeply and officially involved in the workings security process Mr. Cain deserves attention in stating that "we have constructed an apparatus which can destroy us if we don't watch out. I know but few." he says, "who think the administration of the system has been adequate to the reasonable requirements of freedom. . . . I hope that Republican leaders will begin to acknowledge the criticisms more rapidly and move more swiftly in correcting mistakes in judgment or procedure when they occur. * * * Some changes in both attitudes and procedures must be agreed to or the system will never

Unlike many critics, Mr. Cain has some concrete proposals for improvement of the program. They include: More meticulous care in the selection of security officers—a most important point too frequently over-looked; greater experience and independence on the part of hearing boards; separation of personnel from security functions within the Federal service; individual consideration of the importance of security in any particular job; revision of the almost impossible present criteria of security; more care in the use of the term "security risk."

A security program is essential, but there is nothing sacred about the present one, and its defenders owe it to the American public to do a good deal more than bury their heads in the sand and hope the storm will

soon pass over.

We Must Go Slow in Reducing Tariffs

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

WOLVERTON. Mr. Speaker, since announcement was made of the policy to be pursued in the extension of the Reciprocal Trade Act, and the power to be given to the President to cut tariffs, there has come into my office many letters protesting against the adoption of such. These letters point out the disastrous effect that ill-advised action would have on their particular industry. All of which impresses me with the fact that it is a matter that should have the utmost consideration, and that no action should be taken that would create the possibility of damage to any industry, or tend to destroy or curtail employment among the workers of this country with its consequent distress to them and their families.

As an indication of the concern that has been created because of the proposed changes, I am including as part of my remarks the following letter received by me. It reads as follows:

DRIVER-HARRIS CO.,
Harrison, N. J., January 20, 1955.
Hon. Charles A. Wolverron,
House Office Building,
Washington, D. C.

My DEAR CONGRESSMAN WOLVERTON: We have been reading about H. R. 1, the bill which is presently under discussion in the House and ultimately will be in the hands of the Senate, having to do with tariff. We have read of the proposals to further reduce tariff on imports on a gradual 5 per-

cent yearly basis.

We are strongly against this drastic proposal of across-the-board tariff reductions. Circumstances vary in different industries and our industry is a case in point. Ours is very specialized alloy business wherein our alloys are sold by the pound and not on a tonnage basis as is the case with steel. follows, therefore, that in such a specialized field the skill required to produce these critical alloys must be very high with attendant high costs and labor rates. At the present time, the tariff on our products is 121/2 percent in one category and 121/2 percent plus a further 5 percent in another category. are now beginning to feel the bite of foreign competition as importers can purchase these highly specialized alloys abroad, import them into this country, pay the above-mentioned duty thereon and undersell us by 25 percent. It is already happening. With our high cost problem, which is fixed and cannot be backed away from, this is a very serious one indeed.

The major factor in all of this, however, is that our industry is one of the most important ones in the country from the standpoint of national defense. When World II started, as was the case at the beginning of World War I, our company was one of the first in northern New Jersey whose output was commandeered by the Government and all output for civilian supply was immediately stopped. This prevailed throughout all of these periods and without question would occur again if such an emergency arose. Bearing this in mind, it is improvident to permit the demoralization of such an important factor in the defense structure of this country by reducing tariffs on like imported products to the vanishing point, which would be the case if the present program should be put into effect. We might add that the tariff on our products has already been reduced the full allowable 50 percent.

If you feel that it would be of any avail to address the Ways and Means Committee on this subject, we will consider doing so.

We, therefore, strongly urge that you consider this tariff matter from the standpoint of survival of this industry in the United States and its critical preservation for the good of the country as a whole in case of a national emergency.

Cordially yours,

STANLEY M. TRACY, Executive Vice-President.

Commemoration of Second Anniversary of Inauguration of President Eisenhower

EXTENSION OF REMARKS

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. AUCHINCLOSS. Mr. Speaker, the second anniversary of the inauguration of President Eisenhower was commemorated by a reception at the Capitol Hill Club on January 20, 1955. On that occasion the members and their guests listened to a few remarks from that great Republican, the Honorable Joseph W. Martin, Jr., and a letter was received and read from the President of the United States. This letter is an inspiration to all Americans, and I hope it will be read thoughtfully by many of our citizens.

Mr. MARTIN's remarks and the President's letter follow:

Fellow Republicans, I guess it is safe to say that here, as I look around; and I am happy to come and join in this anniversary celebration. It is a good thing to have a club like this where we can gather occasionally and become better acquainted. We belong to a great party. We belong to a party that not only the destinies of America, but the world are largely dependent upon to guide them safely. We are happy to have this organization where we can meet and organize to carry on that great work.

We are 2 years old, and knowing Jrm Auchincloss as I do, the energy and zeal and the time he puts into this club, I know that before a few years pass, this will be a club that we will all be genuinely proud of. And we want to have it, too, as part of our plans for 1956. We had a little setback last year, but it is only a slight setback. Next year will be another year.

We can win in 1956. I know that. I have been all over the country and sounded out the sentiment. Last fall I spoke in 23 States. There is no discouragement to be found for Republicans when they visit the other States of this Union. The people are all active and loyal. None are discouraged. What they are looking for is for us here in Washington to make a record so they can go out and win this victory in 1956. This is a must. We can do it by meetings like this, as we come here and talk over our plans with each other, and we arrange what we believe is going to be a great victory in 1956.

The program of this administration, in my judgment, will be a sound and forward-looking one. It will appeal to the large majority of our people if we can bring our message to the country. I am happy to join in this celebration, because I know this club can be helpful to the party. This meeting stimulates the interest which must be aroused

to win the great victory in 1956.

THE WHITE HOUSE,
Washington, January 18, 1955.
Hon. James C. Auchingtoss,
House of Representatives,

Washington, D. C.

DEAR JIM: Because it would be a great pleasure for both of us, Mrs. Eisenhower and I are disappointed that we cannot be at the Capitol Hill Club on January 20 for the inaugural anniversary. For me, personally, the occasion would be an opportunity to discuss with my fellow members some thoughts that I feel are of interest to us all. But—at the risk of mixing a message of regret with a dissertation—I venture, in this note, to suggest a few of them.

This administration is committed to a

This administration is committed to a program of progressive moderation, liberal in its human concerns, conservative in its economic proposals, constructively dynamic and optimistic in its appraisal of the future. This program, I firmly believe, merits the endorsement and support of thinking, confident, forward-looking Americans.

For our country and the world, we seek establishment of international relationships characterized by order and justice, in which reason and truth are respected, under which men can live as neighbors at peace. Within the United Nations and in all our pacts for mutual security, our treaties of alliance, our proposals for trade, that purpose inspires our foreign policy.

For our national economy, we seek a dependable stability in our present assets, a vigorous expansion in our future growth. These can be best achieved, we believe, by giving the private citizen the greatest possible opportunity—consistent with the rights of others—to contribute to the development of the economy and to share in its abundance.

For individual Americans, we seek increase in their opportunity to enjoy good health, good schools, good homes; we seek a lessening in their fear of personal disaster and in the impact of hardships beyond their control. In this endeavor, we reject Federal domination over State and community, for we seek to strengthen—not to weaken—the historic self-reliance of our people.

The principles and purposes, sketchily outlined here, must be, in my judgment, the standard of the Republican Party through the coming months. Committed to them, we can and must work together to advance the legislative program now before the 84th Congress, for this program is their legislative expression.

Thereby we shall serve our party and the Republic. We shall draw to our ranks men and women of action and wisdom who, in prayerful thought and dedicated effort, strive for an America worthy of their forebear's dream and fit for their children's living. Together—all of us—we shall achieve it.

Sincerely.

DWIGHT D. EISENHOWER.

Torch of Freedom Burns in the Ukraine

EXTENSION OF REMARKS

HON, HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. SEELY-BROWN. Mr. Speaker, there is no better occasion than the 37th anniversary of the proclamation of Ukrainian independence from the Russian Empire of the Czar and from the Soviet Government which followed it, to remind the people of the United States that the torch of freedom burns brightly behind the Iron Curtain, and nowhere more brightly than in the breasts of some 40 million Ukrainians who are defacto a part of the Union of Socialist Soviet Republics.

In my district of eastern Connecticut, We have thousands of American citizens Who have ties of blood and culture with their homeland in the Ukraine. They are loved and respected by their neighbors. They take seriously their responsibilities and privileges as American citizens, while retaining, in their churches and patriotic and fraternal societies, observance of their traditional customs, such as the one just recently observed, as it is every year, of the Ukrainian Christmas on January 7, based upon the Julian calendar. Not only in Colchester, Where at St. Mary's Ukrainian Catholic Church elaborate preparations for this festival were made and carried out, but also in Norwich, Hebron, Salem, and Lebanon, all towns in my district, where other hundreds of families dwell, where there was similar observance, the people combined with the prayers at their Christmas services prayers to speed the day when the aspirations for real and lasting freedom in the homeland will be fulfilled.

In the Ukraine, although conquered by Soviet imperialism and brigaded in the Union of Soviet Socialist Republics, like so many other peoples who were free once and who prepare for the day when they can be again, the people may be frustrated, but they are not despairing.

The people of the Ukraine know, from the experience of hundreds of years, that there can be no such thing as peaceful coexistence with a tyrant. As one of the first victims of Soviet imperialism, Ukraine has been particularly subjected to the murder, corruption, and pillaging of the invader, and endures as a captive state only with determination to find and to provide the opportunity to break the shackles.

It is significant that Soviet Russia recognizes the Ukraine as a nation, by asking for and obtaining the admittance to the United Nations, when it was formed, of the Ukraine Soviet Republic as a member of the United Nations. The day must come when the Ukraine will be a totally independent nation in its own right, and not a vest-pocket member to swell the voting strength of the Soviet bloc.

The anniversary of the proclamation of Ukraine independence by the people

of that nation in 1918 should be, at this time, an inspiration to the American people as we continue to strive forward to extend the boundaries of the free world. We shall give, as people dedicated to preserving and restoring human freedom everywhere, every possible assistance and encouragement to the efforts which are being made, and will continue to be made, by the people now behind the Iron Curtain, to attain that freedom.

The Committee on Ways and Means

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. CURTIS of Missouri. Mr. Speaker, the Committee on Ways and Means, on which I have the honor to serve, has recently begun public hearings on the administration's foreign trade program. These hearings are expected to last a minimum of 3 weeks and then, of course, extensive consideration in executive session will be required.

In certain quarters, criticism is being leveled at the committee for its failure to undertake this important task during the last Congress. The following editorial from the St. Louis Post-Dispatch, Monday, January 17, 1955, is a case in point:

IN LESS THAN A WEEK

How to get down to business in Congress promptly has been demonstrated by the House Ways and Means Committee under the chairmanship of Democratic Representative Jere Cooper, of Tennessee.

Chairman Cooper has already started public hearings on President Eisenhower's foreign trade program. Not only that, he has called as the first witness no less an official than Secretary of State Dulles. This would suggest that instead of a long-drawn-out procedure with a lot of time-consuming minor witnesses first, the committee will be ready to take action on proposed reciprocal trade legislation early in the session on the basis of top-level testimony.

President Eisenhower sent his foreign trade message to Congress only a week ago, and it is even less than a week since the Senate and House completed organization of their committees. Yet hearings are already started on perhaps the one most important part of Mr. Eisenhower's program—the part designed to loosen the bonds that restrict world trade.

Contrast this with the way things went on the Ways and Means Committee in the last two sessions when the committee had a Republican majority and high-ranking Republican Representative DANIEL A. REED, of New York, for its chairman.

On this vital issue at least, the White House ought to say a prayer of thanksgiving that it "lost" the election last November.

Mr. Speaker, the Committee on Ways and Means has a reputation for hard work which is recognized by every Member of this House. Its record of legislative accomplishment in the last Congress is unsurpassed. It may well be without parallel in our entire history. If the committee was, in fact, dilatory in taking up the trade question, then it

deserves criticism. On the other hand, if the committee was not dilatory, and I shall demonstrate that it was not, then this charge must be labeled as irresponsible, political, and unworthy of a great newspaper.

On April 7, 1953, during the 1st session of the 83d Congress, the President requested a 1-year extension of the Reciprocal Trade Agreements Act. At the same time he referred to the need for a thorough reexamination of our whole foreign economic policy. Accordingly, on May 1, 1953, the President transmitted a message recommending creation of a commission to make this review. These two Presidential recommendations were carried out promptly. On June 9, 1953, the Committee on Ways and Means favorably reported the bill to provide for a 1-year's extension of the trade agreements authority and to establish the Commission on Foreign Economic Policy. It was provided therein that the report of the Commission was to be submitted within 60 days after the commencement of the second session in 1954. Obviously, it was not intended that the Congress take up the question until after the report had been transmitted.

Let us look for a moment at some of the work the Committee on Ways and Means did during that 1st session of the 83d Congress, when we are informed that it was wasting time. It reported some 34 bills of which 18 became law during that session. In addition to the trade agreements bill described above, it provided for extension of the excess-profits tax on corporations; it provided the Technical Changes Act of 1953, containing a number of technical changes in the tax law; it provided the Customs Simplification Act of 1953, the first major overhaul of customs legislation in many years; the Employment Security Administrative Act which became law in 1954: it provided a judicial retirement system for the tax court, a long-needed reform; it provided for the extension of the renegotiation Act; and many other lesser items of legislation. Perhaps most important, the committee began public hearings June 16, 1953, on general revenue revision. In the course of these hearings, the committee heard testimony from over 500 witnesses. It conducted hearings on 25 days and 10 nights. The full committee remained in session for 2 weeks after adjournment to complete the hearings. These exhaustive hearings made it possbile for the committee to start writing a new tax law in executive session immediately upon convening of the second session. No further public hearings were necessary.

Let us turn now to the 2d session of the 83d Congress and see how the Ways and Means Committee wasted its time. Presumably, it was during that second session that critics of the committee believe it should have considered the trade problem. In this connection, let us not forget that the President's message containing his recommendations on foreign economic policy, based upon the economic report of the Commission, was not transmitted to the Congress until March 30, 1954.

On January 13, 1954, the committee immediately began work in executive session on a complete overhaul of our tax laws, a work which culminated in the Internal Revenue Code of 1954. These executive sessions usually occupied both mornings and afternoons. This was our schedule of executive sessions on the tax bill: January 13, 14, 18, 19, 20, 21, 22, 25, 26, 27, 28, 29, February 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 15, 16, 17, 18, 19, 23, 24, 25, 26, March 2, 3, 4, and 5. If this schedule appears fairly full, do not forget that the staff upon which the committee must depend for technical assistance, had to do its preparatory work in between the executive sessions, usually late into every night and through every weekend.

On March 10, the committee reported the Excise Tax Reduction Act of 1954, carrying out the President's recommendation for extension of certain excises and providing the first significant reduction in excise taxes for many years. The bill was debated and passed by the House the same day. On March 17 and 18, the House debated and passed the mammoth tax revision bill. On March 19 and 30, the excise bill was before the House-Senate conference committee.

Following work on tax revision which the President had called the "cornerstone" of his program, the Ways and Means Committee turned to social-security legislation. Public hearings on the President's social-security recommendations, which had been submitted early in the session, began April 1. The schedule of hearings was as follows: April 1, 2, 5, 6, 7, 8, 9, 10, 12, 13, 14, and 15. The Easter recess began April 15 and lasted until April 26. Following the recess, executive sessions on social security began May 10 and continued on May 11, 17, 18, 19, 20, 21, 24, 25, and 28. The bill was debated in the House and passed June 1.

Next the committee took up the unemployment-compensation legislation recommended by the President. Public hearings were held June 8, 9, 10, and 11; executive sessions on July 14 and 15. The bill was not considered by the House until July 8.

On June 10, the committee had reported the bill for a 1-year extension of the trade-agreements authority.

On June 22, 24, 25, and 28, public hearings were had on customs simplification, an important part of the President's foreign economic policy recommendations. Executive sessions on this legislation were held on June 25, 29, and July 1. The bill passed the House July 26.

On July 7, the committee conducted executive sessions on a variety of less important legislative items and on the 8th began the extremely important House-Senate conference on H. R. 8300, the new Internal Revenue Code of 1954. This conference covered the period July 8, 9, 12, 13, 14, 15, 19, 20, 21, 22, 23, 26, and 27.

The House-Senate conference on the vital social-security legislation began August 16 and lasted, without interruption, until August 20.

Mr. Speaker, that is the record of the Ways and Means Committee last session. Our box score for the Congress was 52 bills reported and 41 enacted into law.

During the second session alone, our record was astonishing. The tax-revision bill which, as I have mentioned, the President called the cornerstone of his program was the first major overhaul of the tax system in over 75 years. It has been estimated that some 500,000 man-hours went into its preparation. The social-security bill extended coverage for the first time to about 10 million workers and their families, thus achieving practically universal coverage, a goal sought for many years. The unemployment-insurance bill extended unemployment-compensation protection to millions of workers to whom this coverage had not previously been available. This was the first significant extension of the system since its inception.

It should also be pointed out that on 15 different days during the session the House considered bills reported by the Ways and Means Committee. This is exclusive of debates on conference reports.

Now, Mr. Speaker, when it is apparent that even under Democratic leadership it will take the Ways and Means Committee about 5 weeks to finish its current deliberations on the trade bill, I cannot but wonder how we could have done the job properly last session and have done so sufficiently in advance to permit a similar period of consideration in the Senate. As I pointed out above, it was not until August 20, the very day of adjournment, that work on the socialsecurity bill was completed. In fact, I doubt if ever a committee of this Congress has applied itself so diligently, so tirelessly, and so successfully as did the Ways and Means Committee last session,

When our committee reported the trade-agreements extension bill last June 10, Chairman Reed publicly declared:

This 1-year extension will serve to maintain continuity of our present trade relationships, while, at the same time, permitting the Congress to have thorough public hearings early next year on the recommendations of the Commission on Foreign Economic Policy.

That is no more and no less than is being done now.

Mr. Speaker, I do not mind criticism when it is honest and when it is fair. When it is neither, I resent it. I do not believe that even the most partisan Member of this House would charge the Ways and Means Committee with having wasted time last session. However, perhaps I am wrong to expect equal fairness and objectivity from the "independent" newspaper whose editorial I have quoted above.

Search for a Missing Child

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following communication from M. F. Stark, of Waltham, Mass.:

DEAR MRS. ROGERS: It may be of interest for you to learn that an Army helicopter from the Bedford base discovered a child's body frozen in the ice on the Charles River here in Waltham. The child strayed from Sawyer Road rear Waltham pumping station; was 3 years old. A search of some 1,000 volunteers about half the night, and the letting out of several plants for the help to join in early, without success. About 10 a. m. Wednesday the river in spots was dynamited. A helicopter soared overhead round and round. At noon it returned to the airport in Bedford. When it came back it was here only a short time before the observer saw the green playsuit, and the recovery of the body was immediate. The tot was buried Friday. Only daughter and child of a family by the name of Hession. Beautiful little tike. I am sure you will be pleased to know one of your "boys," yes, two, observer and pilot, recovered the youngster, although too late to have doctors return her to her parents with life in her body.

M. F. STARK.

WALTHAM, MASS.

Anniversary of the Proclamation of Ukrainian Independence

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1955

Mr. CURTIS of Missouri. Mr. Speaker, in connection with the observance of the anniversary of the proclamation of Ukrainian independence, I am at this time inserting in the Record a letter I wrote to the president of the Ukrainian Congress Committee of America, Inc., Mr. Lev E. Dobriansky:

Congress of the United States, House of Representatives, Washington, D. C., January 24, 1955. Mr. Lev E. Dobriansky,

President, Ukranian Congress Committee of America, Inc., Georgetown University, Washington, D. C.

DEAR MR. DOBRIANSKY: Thank you for your letter of January 18, 1955, suggesting that I put some comments into the Congres-SIONAL RECORD in observance of the proclamation of Ukrainian independence which occurred January 22, 1918. I shall be happy to do so. I think you have struck a basic note when you point out that all this talk of coexistence leaves many wondering whether the plight of the enslaved people behind the Iron Curtain is to be forgotten. I am satisfied their plight has not been forgotten by the people of our great country. but I am afraid that sometimes it is neces sary to remind the leaders of our people that there still exists in the breasts of our people the burning fire that produced the original immigrations to this country, the Declara-tion of Independence, the Constitution, the Bill of Rights, the stirring speeches of Patrick Henry and other great patriots. This warmth in the breasts of the American people goes out to all the enslaved people of the world wherever they may be. Though we may not immediately share this warmth with our brothers, it is important that they realize the fire is there and that the time will soon come when tyranny has run its course and they shall again enjoy freedom.

I for one can never talk in terms of peace as long as injustice exists. In fact, true peace

only comes through attaining freedom and justice. May our countrymen never forget the heritage which is theirs and always keep in mind the necessity for assisting at all times any peoples or persons struggling for the freedom and justice which was given to us through the blood of our forebearers. Sincerely,

THOMAS B. CURTIS.

The President's Budget Message

EXTENSION OF REMARKS

HON, WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. CRAMER. Mr. Speaker, this body has heard the President's message on the proposed budget. No one has ever Successfully challenged the fact that he has the defense and welfare of our Nation foremost in his mind and as the Buidepost of his report to Congress. The thoughtful preparation of this recommendation that so closely affects our economy and our lives gives me hope that we are advancing rapidly toward a sound financial future for our Nation. I, for one, appreciate the tremendous amount of time, effort, and consideration that has gone into the preparation of this voluminous document. I would like at this time to include in the RECORD editorials from the Tampa Times of Tuesday January 18 and the St. Petersburg Independent of January 20, 1955, Which, I believe, express sincere reactions and considered opinions of two of our great papers of the First District of Florida and the Deep South.

The editorials follow:

[From the Tampa Times of January 18, 1955]
PRESIDENT'S BUDGET MESSAGE IS REASONABLE
PRESENTATION

The outstanding fact in President Eisenhower's budget message to Congress is that he is fully aware of the necessity to keep national security the first order of business.

His 62.4 billion budget, which is a marked drop from the \$73.9 billion expenditures of the last year of the Truman administration, is designed to devote \$2 out of every \$3 to defense. That is, the President has proposed expenditures for major national security programs in the 1955-56 fiscal year of approximately \$40.5 billion, about 65 percent of the total budget.

These recommendations won't necessarily please the military or the internationalists, but certainly it shows an earnest effort on the part of the President to be as realistic as possible. It cannot be said that his recommendations are niggardly, yet the budget proposals will not satisfy the profligate who continue to want to fling American dollars in every direction.

Already certain of the more violently partisan Democrats are jeering over the fact that the President admits the year will end with another deficit, perhaps as much as \$2.4

billion.

This would be comical if it were not so ironic, coming as it does from confirmed and hardened New Dealers, some of whom were consistently helping during the Roosevelt and Truman administrations to create enormous annual deficits which for 20 years never varied except when the Republican 80th Congress did balance the budget, to the grief of these same big spenders.

It is plain now that if the present proposed budget is to be balanced it must be done by Congress, and that possibility is extremely dubious now that the liberal Rooseveltians and Trumanites are proposing to run the Democratic caucus again.

One of the inconsistencies of congressional thinking is the fact that while there is always a lot of talk about holding down on appropriations, when it comes to the last moments compromises invariably lead to increases.

Of course, many of these increases are legitimate enough. They are something like the Tampa Harbor improvements which in many local areas are urgently needed, but in the face of grandiose schemes for Federal expenditures that are well intended, but not imperatively necessary, the result is always to destroy and thwart the good planning of the economy-minded Members.

Statesmanship too often gives way to back-

scratching politics.

An example of the kind of thing that unbalances budgets is the President's proposal for large increases, sometimes as much as 25 percent to individuals, in the pay of Armed Forces personnel. It may be true that lacking the patriotic motives of current wars involving the country, volunteers are not storming the recruiting centers. And no-body denies that men and women who risk their lives are entitled to recognition on paydays but there it is. The proposed increases would add many millions to the annual budget, contributing to the anticipated deficit.

It is perfectly obvious therefore we cannot continue to increase budget items and have a balanced budget at the end of the fiscal year unless tax revenues keep pace. And there always arises the dilemma which politicians hate to face.

No doubt there will be much pulling and hauling and endless talk before the budget is finalized. Yet, the fact remains that Mr. Eisenhower and his department heads have tried to produce a budget that has no phony spots intended to deceive the public and does no deceptive dodging of the facts.

Considering the enormous problems of world unrest and peril of war created by the Communists, it may be said in all fairness that the presentation is not a bad job.

[From the St. Petersburg Independent of January 20, 1955]

BRINGING THE MESSAGE HOME

The President's annual budget message, though it proposed the expenditure of \$62,408,000,000, received remarkably little attention from the public at large. In our observation the average citizen just glanced at the big headlines, noted that the recommendation was a trifle lower than last time, sniffed a bit that we still are in the red, shrugged over allowance of two-thirds of the whole shot for defense—and called it a day.

This typical attitude of taxpayers, all but number by years of astronomical figures, is probably excusable. Uncle Sam's business has become so huge and so infinitely ramified no one person can grasp even a small part of it. The message was so long and detailed that even the House did not listen it through and the reading clerk omitted whole passages. It was so long, indeed, that, if any local newspaper had run it in full, the reader would have found half the usual news left out. And he probably wouldn't have read the message anyway.

All these factors contribute to the budget message being regarded as something remote and of no personal concern. Yet it forms the basis on which the House will originate appropriations that determine the extent of Federal activities affecting every person within our borders and millions outside.

To bring the matter home it is only necessary to run down in your mind the Federal functions that are carried on right on your

own ground. Not only are they many, but some have a large impact, economically as well as in terms of service, on the community.

Servicing the St. Petersburg area through its post offices last year was a \$2,494,065 business. In salaries alone, 520 year-round employees received the lion's share—\$2,362,357.

The Coast Guard Installation, with a replacement value of \$10,736,485, had a payroll last year of \$628,000. As personnel is due to go from 112 to 133, it should this year hit \$750.000.

But the most amazing figure, an estimate by the local office of the Social Security Administration, is a present level of social-security payments to residents of Pinellas County of \$1,332,113 a month. The figure has been climbing and will jump still further with liberalization.

To these could be added, were there space, expenditures made in the business of the Veterans' Administration at Bay Pines and the Don Ce-Sar, recruiting stations, the FBI, the draft board—including payments to more than 1,300 listed on its rolls as in service, the Coast and Geodetic Survey, the Office of the Bureau of Internal Revenue, and several others.

The Federal Government is right in our midst and the budget message, read or unread, was nothing remote.

Threat to American Salmon-Canning Industry

EXTENSION OF REMARKS

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1955

Mr. WESTLAND. Mr. Speaker, the American salmon-canning industry is one of the most important industries in the Pacific Northwest. It is because this industry, which is so vital to the wellbeing of the Pacific Northwest and the Nation, is being threatened by continued heavy imports of Japanese and Canadian salmon that, under leave to extend my remarks, I include a telegram sent to the Honorable Jere Cooper, chairman of the House Ways and Means Committee, copy of which I also received, concerning the proposed extension of the Trade Agreements Act:

SEATTLE, WASH., January 20, 1955.

Hon. JERE COOPER,

Chairman, Ways and Means Committee, House of Representatives, Washington, D. C.:

The American salmon-canning industry, through its three trade associations, namely the Association of Pacific Fisheries, Inc., Alaska Salmon Industry, Inc., and the Northwest Salmon Canners Association, repre-senting together over 95 percent of the American production, wishes to file with your committee its desire that the present Trade Agreements Act be extended without change and in every case of a proposed reduction in tariff, the affected industry should first be given adequate notice and a hearing before the Tariff Commission. Our industry consists of about 165 salmon canneries operating in the States of Oregon, Washington, and the Territory of Alaska, employing approximately 40,00 persons, mostly of the skilled labor type. Investment in these canneries and their floating equipment is estimated at approximately \$140 million. Under the

present Trade Agreements Act in 1951 our Government reduced the tariff on canned salmon from 25 to 15 percent ad valorem, the 25-percent rate having been in effect since 1920. Following this tariff reduction, during the years 1952 and 1953, 9.500,000 and over 12 million pounds of canned salmon, respectively, mostly from Canada, were import-Japanese salmon fishing expeditions in the North Pacific south of our Aleutian Islands, produced 150 million pounds of salmon last year as against some 38 million pounds of salmon produced last year in our important Bristol Bay area north of Alaska Peninsula. The production of salmon by the Japanese expeditions in the north Pacific area is increasing tremend-ously each year. They are now planning to double last year's production during 1955. Canada also has a large annual production of canned salmon. The present American tariff of 15 percent permits the importa-tion of canned salmon at a profit from both the rapidly increasing Japanese supply and the Canadian supply, as cost of production in these countries is considerably less than American production costs. For the reasons given above, this industry strongly disapproves of any legislation which would permit any further reduction in the tariff on our product. Such action would be highly detrimental not only to the operators of the canneries, but also to the cannery workers, fishermen, vessel owners, and communities in Oregon, Washington, and Alaska, which are largely or in some cases almost entirely dependent upon the catching and canning of salmon for a livelihood.

ASSOCIATION OF PACIFIC FISHERIES, INC. ALASKA SALMON INDUSTRY, INC. NORTHWEST SALMON CANNERS ASSOCIATION.

Is Justice Breaking Down in the United States?

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the following article to the attention of our colleagues. It appeared in the December 24, 1954, edition of U. S. News & World Report:

Is JUSTICE BREAKING DOWN IN UNITED STATES? SHORTAGE OF JUDGES AND OF MONEY JAMS

A gradual breakdown is taking place in the administration of justice in this country. Federal courts are undermanned. Yet they are jammed with the biggest backlog of cases in history.

Financial starvation is the root of the trouble. All of the Federal courts in the land—their judges, clerks, marshals, bailiffs. parole officers-are being forced to operate on a budget of \$27 million. That's scarcely enough for a good-sized Government bureau.

The Bureau of Indian Affairs is given three times as much money as the courts; the Civil Service gets nearly twice as much. Weather Bureau gets about the same sum. The White House in Washington alone requires a budget of more than \$2 million just to support the President. And, in further contrast, American taxpayers in 6 years have contributed more than a billion dollars in machinery for the industry of Europe. Yet, last year, more than a million dollars was trimmed from the proposal for a judicial budget of \$29 million.

To the judges, who have to administer justice in the United States, the situation is becoming alarming. One high-ranking member of a Federal appeals court fears that the court system may be "on its way to breaking down completely."

DILEMMA

The judges also are baffled about how to call the attention of Congress to their plight. They are a separate arm of Government. They have no lobby that can go to Congress to demand sufficient funds.* They have no to demand sufficient funds. pressure groups, such as farm organizations or labor unions, to plead their case before appropriations committees. They are above ordinary party politics. But they must depend absolutely on Congress for the money they need to operate.

Deputy Attorney General William P. Rogers urges that the Chief Justice of the United States appear before Congress each year to present the court's problems. "The judiciary needs a voice possessing strength and prestige to speak effectively," he has said. "That voice is, in my opinion, the voice of the Chief Justice of the United States." This would be expected to have the same kind of effect and to attract as much public attention as the annual state of the Union messages of the President.

Meanwhile, for lack of funds, the judges are operating under severe handicaps. In some courts the judges have to administer oaths to witnesses because the bailiffs are busy elsewhere. In others judges are forced to interrupt trials to show inexperienced clerks how to mark exhibits.

In many a court a case is set for trial and the plaintiff arrives, ready to begin; but the trial must be put off because papers have not been served on the defendant. United States marshal is supposed to serve the papers in Federal districts, but Congress since 1941 has cut the number of marshals by 10 percent. Now United States marshals often have to serve papers at night, after the courts are closed, because it is the only time they have.

Insufficient funds sometimes force judges to do without the services of law clerks and secretaries. One judge on a circuit court of appeals pays the salary of a substitute secretary out of his own pocket when his regular secretary takes sick leave. He isn't allowed to spend Federal funds for a substitute. When a court employee resigns and goes on terminal leave, he cannot be replaced until the leave is used up. The judge gets along without his services in the interim.

NATION LOSES

Complaints of the judges, however, are not directed at the inconvenience to themselves, but to the harm that these handicaps are doing to the administration of justice in the

It takes as long as 4 years in some Federal courts from the time a suit is filed until a decision is reached. It takes 3 years or longer just to get to trial. A delay of 2 years is found nearly everywhere. And if there is an appeal, another year is consumed. results in frequent miscarriages of justice as witnesses disappear or as criminals take as witnesses disappear or as criminals take advantage of delays to squirm out of their troubles. It inevitably leads to slow justice, and attorneys generally agree that "justice delayed is justice denied."

Take, as an example, a man hit by an auto who sues the driver in Federal court. He may have to wait 4 years before his case is called. Meanwhile, witnesses may die or their memories grow dim. They often move away or cannot be located when the case is

During all this time, hospital bills must be paid, sometimes when income is cut off because of inability to work. Often the person being sued is in just as bad a position. The mere existence of an unsettled suit against him may impair his credit or otherwise interfere with his business and personal

A specific example of delay is shown by 2 disastrous train wrecks on the Long Island Railroad in New York, in which 111 persons were killed and hundreds more injured. These wrecks occurred in 1950. The Federal district court in Brooklyn was flooded with damage suits. Only recently was the last case decided, and some are still bogged down in appeals courts.

This is not an unusual incident. In the southern district of New York it takes an average of 45 months from the time a case is filed until judge or jury reaches a verdict. In the eastern district the lapse is more than 3 years; in Washington, D. C., and Philadel-

phia, the delay is 2 years.
Clogged court calendars and insufficient staffs lead sometimes to miscarriages of justice in criminal cases. In one instance, a maniac was set free by mistake. In another court, Federal attorneys normally are assigned 35 or 40 cases at a time, but close cooperation with the judge proves to be im-

possible.

Thus, sometimes as many as 5 cases may be called for trial on 1 day. While the attorney is busy in one court, another of his cases may be called before another judge. Then an assistant must take over and he may have no more than 10 minutes to prepare his case. The United States attorney in this district notes that "our conviction rate is high, but this isn't good law enforcement."

PAROLE WORK SUFFERS

Lack of funds also is eating into effective probation and parole work. This year requests for funds for parole supervision were trimmed 35 percent by Congress. As a result, the judge and the parole board fre-quently cannot arrange for proper supervision and are faced with the choice of sending convicted people to jail or releasing them

When it comes to probation, funds are so tight that most probation officers are occupied with investigating the background of offenders before they are sentenced, rather than looking out for their wards. Seldom does an officer have more than an hour a month to devote to a convicted person who is released on probation.

Judges argue that this kind of financial starvation makes it impossible for either the offender or the public to get fair treatment.

The courts are further deprived of adequate equipment. Law libraries, one of the basic tools of the judiciary, are held to bare minimums. Because of budget cuts, the courts this year were instructed to cancel subscriptions to 99 separate types of law books. Even such a basic necessity as telephone service cannot always be provided for new judges. One judge, sitting temporarily in Washington, has to use a phone supplied by the Department of Justice.

Even if there were enough money for more court attendants and equipment, there would not be enough judges. During the year ended last June 30, United States dis-trict courts disposed of 93,161 cases, but left pending an additional 78,531. Over the past 3 years, civil cases piled on judges' desks increased 23 percent, and the backlog

grows larger every year.

If all of the 251 Federal district judges did nothing but work on the cases before them, they would require 10 months to clear their dockets. In the meantime, another backlog would be building up as a result of the new cases being filed. Similar delays are the rule rather than the exception in higher courts. A year sometimes is required before a circuit court of appeals can dispose of a case.

PRIMARY TROUBLE

The basic flaw in the administration of United States justice, as the judges see it, Is that Congress has failed to let the courts keep pace with the growth of the country. Fifty years ago, when the United States population was 76 million, there were 101 district-court judges, with an average load of 236 cases each. Today, with more than double the population, there are 251 district judges, with a caseload of 403 each.

In other words, the number of cases has quadrupled, but the number of judges has little more than doubled. If the number of judges had kept up with the rise in cases, there would be 404 district judges today instead of 251. There also would be 87 judges on the circuit courts instead of 68.

From time to time Congress has authorized increases in the number of judges, but seldom often enough. In 1953, appointment of 30 new district judges was authorized, but Congress appropriated enough money to pay only 15 of them.

Pay scales, too, are being held down. New York State pays its top judge more than the \$25,500 paid to the Chief Justice of the United States. Pennsylvania pays as much as the United States. In six States, trial-court judges receive more than Federal district court judges, their counterparts on the Federal bench.

Under such conditions, the President admittedly has a hard time finding qualified men to serve on Federal courts when vacancies occur. Recently, when a vacancy occured in one Midwestern State, three leading attorneys were recommended for the judgeship. All declined. They were making more in private practice than they would have received on the bench. The result was that the appointment went to a lawyer whose income from private practice was not much above the \$15,000 annual salary of a district-court judge.

The chief problem of the Federal courts, however, is lack of manpower stemming from lack of funds. The whole Federal judiciary employs just 4,000 people—from Supreme Court Justices to courthouse messengers. That contrasts with the 1,500 persons employed in the White House alone.

Federal jurists hold the opinion that the people of the United States cannot get the fair treatment they deserve if the courts are to continue on a financial starvation diet. That's why they want the Chief Justice to make their problem known.

Postal Rates

EXTENSION OF REMARKS

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. GWINN. Mr. Speaker, the President's request in his message to Congress last week for an increase in the salaries of postal workers provides the Congress with a splendid opportunity to thoroughly review the whole operation of the Postal Department.

Such an audit is urgently required in view of the deficit of over \$4 billion that the Department has accumulated since World War II. The interest on this deficit presently amounts to over \$100 million annually.

President Eisenhower is to be commended for requesting an increase in postal rates to be coupled with the increase in salaries. Without such an increase in rates, the raise in pay would add an additional one-half billion dollars

to the large deficit already accumulated.

I have always opposed Federal deficits, particularly when they occur in agencies conducting proprietary functions of the Government. The Postal Department is a business run by the Federal Government, and as such should pay its own way. That is commonsense and sound economics. The alternative is to subsidize the Department out of general revenues, thereby increasing the already heavy tax burden of the American people.

I support the President's recommendation for the establishment of an independent commission to handle the long-range postage-rate problem. The operation of such a commission will greatly facilitate future equitable adjustment of salaries and rates and enable the Congress to legislate intelligently and effectively. I regret that no such board is now in existence, as expert, unprejudiced opinion at this time would eliminate to a large degree, the necessity for the debate that will surely come on this question.

As I have indicated I support the President's recommendations generally. I disagree, however, as to the desirability of increasing the rates of first-class mail. It traditionally has paid its own way, because of its size and weight, and for the same reason constitutes the lightest burden in the letterman's pouch. It is also true that an increase on this type of mail most directly affects the ordinary citizen. Even a penny increase can become burdensome to the small wage earner when the occasion arises to send out invitations, announcements, and the like. It is my conviction that a rate increase on first-class mail would penalize the ordinary citzen and amount to a subsidy of the other classes of mail. The classes of mail that cause the deficit should pay the deficit.

I completely endorse rate increases on second- and third-class mail. Secondclass mail pays only 22 percent of its allocated cost and in 1954 expenses on this type of mail exceeded revenues by \$232 million. Present rates are only 3 percent higher than in 1932, the increases authorized since 1951 having only restored the decreases made in 1934. It is absurd to compel the general taxpayer to subsidize the distribution of magazines, newspapers, periodicals, and similar publications. The distribution costs should be borne by the publisher just as he must pay for his printing, paper, and labor. It is a cost of the business, not a cost of the Government.

All of us are familiar with the advertising circulars and similar printed matter that daily jam our mailboxes. A great deal of this material constitutes a nuisance. Not only do these circulars add greatly to the weight of the letter carrier's pouch, but they also compel him to stop at every mailbox on his route which is ordinarily not necessary. The expense of this type of mail, which is third class, exceeded revenues by \$147 million in 1954, which is adding insult to injury.

I agree with the President that increases in pay of postal workers is necessary and long overdue. Obviously rates should also be increased to meet the expenses of the business. The postal workers should support the rate increases on the mail that is most burdensome to the Department, that is, secondand third-class mail. On the principle. the postal workers as citizens and voters, should support and work for rate increases, for neither the Nation nor the Department can continue to operate on a deficit basis. The mounting Federal debt and the crushing tax burden leaves no alternative to a pay-as-you-go method of operation. For the postal employees to recommend any other policy would be selfish and shortsighted. I am sure that they are neither.

Hon. Frances P. Bolton, of Ohio, Proposes Commission on Nursing Services

EXTENSION OF REMARKS

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, I am today introducing a joint resolution providing for a Commission on Nursing Services.

For many years my colleagues in the House have known of my deep interest in the overall health needs of the Nation in general, and for nursing services in particular. Since World War II, the public has been told intermittently that there are not sufficient nurses of all kinds to meet the needs of the sick. It is my firm belief that if the public can be fully informed on the problem and significant developments in the nursing profession, the public will be stimulated to action on all levels and will accept with more understanding the increasing costs of nursing care and nursing education.

So today I have asked for this time in order to inform my colleagues why I believe a Commission plan is an imperative step that needs to be taken in order to find a feasible and effective way to solve the problem of adequate care for our sick.

THE PROBLEM

For some time the Nation has been faced with a very real difficulty in securing adequate care of the sick. All across the country there is a shortage of nurses, and this in spite of the fact that there are more nurses on duty today than ever before in our history. Also there are more young women taking nurse training. If we are to believe the studies that have been made—and I can assure you these are authoritative-some 55,000 nurses should be graduated each year to keep up with the ever-increasing demand for trained personnel. Our nursing schools are graduating only about 30,000.

Many things contribute to our present situation, not the least of which is the fact that the public which is now enjoying the highest standard of living in its history is demanding improved nursing services. This same public however,

is beginning to recognize the need of making the economic status of the nurse more nearly commensurate with her skills and added responsibilities.

We here in the Congress have added to the problem by providing for more hospitals, rehabilitation facilities, clinics, and nursing homes without doing anything to help staff these health facilities. We all recognize that this construction is necessary, but some way must be found to staff them adequately lest they stand empty as all too many hospital wards already do for lack of nurses. Surely the time has come when we must face up to the problem,

WHAT IS BEING DONE

There is nothing new about all this, for Government at all levels as well as many private institutions, has been grappling with the subject for years.

A recent study showed that the Federal Government this fiscal year is spending some \$2 billion annually for its health, medical and related activities, which range from construction of multimillion dollar hospitals to maintenance of clinics. The programs are spread among more than a score of departments and independent agencies. But it is being done without a basic plan to meet the overall needs of the American people.

There have been many segmental studies of health service problems, but none have taken an inclusive national view of the situation. There have been many unilateral studies by separate professional groups in the health field, but none by all the professions, with the public cooperating for the benefit of the patient. It has become apparent that a broader approach is needed.

BOLTON SURVEY, 83D CONGRESS

For several years I have conducted an extensive personal survey of the situation. Nearly 4,000 nurses, doctors, laymen, State governors, Federal and State health authorities, and Members of Congress replied to my letters on this subject. As I told this House last year:

There is overwhelming accord that there is indeed a nursing shortage. Many opinions are given as to the different causes: financial, psychological, social. The difficulties attendant on securing sufficient new recruits to take nurse training are particularly emphasized, as are low pay, and long and irregular hours. Competition from other fields and within the nursing field itself are emphasized.

Over and above the specific replies there was voiced a deep sense of the need for a large-scale program of informative education to bring about a dramatic realization of the common problem presented by this short supply of trained nursing personnel to all segments of the nursing profession, to all sectors of the health-care field. Today, as the survey dramatically brings out, there are misunderstandings, misconceptions, antagonisms, and areas of disagreement between the various groups involved which must be lessened in the mutual interest of all dedicated to serving the Nation's health,

On such a basis of research and educational information there can be constructed, it seems to me, a sound structure which will ultimately meet not only the needs and desires of the profession, but, even more importantly, the requirements of the everincreasing population in America as a whole.

WHY A NEW EMPHASIS NEEDED

Up to now efforts to deal with nursing service shortages have been mainly from the standpoint of increasing the number of nurses. The results have been neither effective nor adequate. Perhaps we have been trying to deal with the nursing shortage as an isolated problem, whereas in reality it is intertwined with and inseparable from the changing needs of a modern society. The tremendous advances in the medical sciences have created whole new fields of health workers and have given many new functions to the established health professions. Today, the professional nurse has much more complex a role to play than she had only a few years ago. Many different categories of nurses has developed with many overlapping functions within those categories. We must become aware of the many implications of these changes.

It has become apparent that we should be dealing with the nurse shortage in its true perspective within the entire health field for the benefit of society, that is, the patient. As an example of a few of the areas needing study:

It has become more and more evident that we should be making more effective use of the skills of the limited professional personnel we now have. We should be able to identify the scope of their duties and see that they are adequately prepared to exercise them.

The more exhaustively one studies the whole problem of the needs of patient care, the more one realizes that there is insufficient authoritative knowledge of what the component parts of a nursing staff should be in a general hospital. For example, how many professional nurses, how many practical nurses, how many auxiliary or volunteer workers could best serve in the various departments of hospitals and of public health associations?

A bringing together of such knowledge as already exists would unquestionably lead to intelligent reorganization of staffs which would improve and safeguard the quality of care given the patient. We need to know something about what the effect upon hospital nursing staffs is of the present trend towards home care of the patient.

Studies have indicated that the time of the professional nurse—time that could better be spent for the more important needs of the patient—is all too frequently used for routine record-keeping, housekeeping, errands for patients, floral arrangements, and so forth. Authoritative knowledge of the value in time and better patient care of methods to relieve the nurse of these would most certainly lead to a wider use by hospitals and nursing homes.

There are many questions that need to be answered, not the least among them: What is the actual economic situation of those who care for the sick? What should be the working hours and the working conditions? Are there no regulations to keep a nurse from lifting more pounds than labor unions permit men to lift? Important matters of this kind.

All such studies and many others should be evaluated and made available to the health field at large so that the patient can receive full benefits of the specialized skills of hospital personnel.

We should know more adequately the areas that could be supplied by less skilled, less highly trained personnel who would, of course, serve under supervision of the professional nurse.

It is quite possible that some part at least of what appears to be a nurse shortage may be due to a failure to adjust educational patterns to the various functional needs of the profession. This, of course, would influence the effectiveness of the use of the professionally trained nurse.

The Commission will be able to evaluate the varying educational and training requirements needed for bedside care, for teaching, for supervisory and administrative positions, for public and community health work.

THE COMMISSION

The proposed legislation seeks to provide a source of authoritative fact and expert opinion about nursing care for the entire field of health service.

It sets up a Commission to be composed of 12 members—4 appointed by the President, 4 by the President of the Senate, and 4 by the Speaker of the House of Representatives. Half of each group would be chosen from private life, and include representatives of the nursing and medical professions.

The Commission to be created by this bill is predicated upon comparable bodies which have done successful work, such as the Commission on Reorganization of Government, the Commission on International Trade, and others. The public interest generated through citizens committees studying these problems have brought—indeed, are still bringing—increased understanding of these subjects.

Mr. Speaker, I would like to call particular attention to section 1 (b) of the joint resolution, which states:

Nothing in this joint resolution shall be construed as authorizing or intending any interference with the programs of study and improvement of patient care which are being carried forward by the professional nurses' organizations, or by public or private endeavor, but rather this joint resolution shall be construed as an effort to augment such programs through the marshaling of resources for a multidisciplinary approach to the problem.

TYPES OF INFORMATION TO BE GATHERED

Up to now research and writing in the field of nursing have been dependent upon the limited resources of foundations, institutions, professional organizations, or individuals. They have had neither the facilities nor the authority of the National Government behind them, nor have they been able to rally a broad field of specialists representing all of the various groups that impinge on nursing. The Commission's membership will be so organized as to include experts, both men and women, from all the varied services, including representatives from the lay public. Working together as a top-level Commission, these people will:

Evaluate what the changing health needs of the public are.

Appraise the resources in money, manpower, and skills necessary to deal with these health needs.

Study the kind of nurse education and training necessary to meet these needs.

Study the relationship between the economic status of nurses, the professional skills required, and the existing personnel shortage.

Analyze the various techniques and arts of nursing including all successful new methods or devices, and indicate where they may best be applied.

Encourage additions to the body of knowledge of nursing as a discipline and thus permit more of the practice of nursing to be based on scientific principles.

In conclusion, Mr. Speaker, if the Commission is to serve its purpose, it must not only find the facts, but it should weigh and interpret them. It should draw conclusions and make, first interim reports, and then broad recommendations to the American people.* One of the direct results of such reports would be to inform the public of the problems and possible solutions—suggesting concerted public action.

Mr. Speaker, under unanimous consent, I insert herewith this joint resolution that the Members may inform themselves at first hand:

House Joint Resolution -

Joint resolution for the establishment of a Commission on Nursing Services

Whereas it is generally recognized that the demand for nurses is increasing faster than the supply; and

Whereas efforts to deal with the resulting shortage solely by increasing the numbers of hurses have not been successful in meeting

the demand; and
Whereas it has become apparent that a
solution of the problem must be based upon
a broader approach which will take into
account all of the factors relating to the
more effective utilization of nursing skills
in the province of nursing and health care;
and

Whereas the relationship between the economic status of nursing, the professional skills required, and the existing personnel shortage needs study; and

Whereas there are many segmental and unilateral studies of health service problems, but none which takes an overall multidisciplinary view of the situation; and

Whereas existing reports, studies, and knowledge could be best coordinated and utilized through the organization of a central task force dealing with the overall health needs of the Nation in general and the need for services of nurses in particular: Therefore be it

Resolved, etc .-

DECLARATION OF POLICY

Section 1. (a) It is hereby declared to be the policy of the Congress to promote the health of the American people by aiding the hursing profession in its efforts to achieve greater efficiency and improved nursing services. It is the purpose of this joint resolution to implement that policy by providing for the establishment of a Commission that will gather by scientific methods authoritative data relating to the services rendered by all types of nursing personnel (including professional and practical nurses, nursing aids, and nursing administrators, supervisors, and teachers) and shall make such recommendations with respect thereto as it deems advisable in the interest of improving patient care,

(b) Nothing in this joint resolution shall be construed as authorizing or intending any interference with the programs of study and improvement of patient care which are being carried forward by the professional nurses' organizations, or by public or private endeavor, but rather this joint resolution shall be construed as an effort to augment such programs through the marshaling of resources for a multidisciplinary approach to the problem.

ESTABLISHMENT OF COMMISSION ON NURSING SERVICES

SEC. 2. (a) To carry out the purpose of this joint resolution there is hereby established a Commission on Nursing Services (hereinafter referred to as the Commission).

(b) Service of an individual as a member of the Commission or employment of an individual by the Commission as an attorney or expert in any business or professional field, on a part-time or full-time basis, with or without compensation, shall not be considered as service or employment bringing such individual within the provisions of section 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes (5 U. S. C. 99).

MEMBERSHIP OF THE COMMISSION

- SEC. 3. (a) Number and appointment: The Commission shall be composed of 12 members as follows:
- Four appointed by the President of the United States, 2 from the executive branch of the Government and 2 from private life;
- (2) Four appointed by the President of the Senate, 2 from the Senate and 2 from private life; and
- (3) Four appointed by the Speaker of the House of Representatives, 2 from the House of Representatives and 2 from private life.
- (b) Included among the six members of the Commission appointed from private life, there shall be representatives of the nursing and medical professions.
- (c) Vacancies: Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

ORGANIZATION OF THE COMMISSION

SEC. 4. The Commission shall elect a Chairman and a Vice Chairman from among its members.

QUORUM

SEC. 5. Seven members of the Commission shall constitute a quorum.

COMPENSATION OF MEMBERS OF THE COMMISSION

SEC. 6. (a) Members of Congress: Members of Congress who are members of the Commission shall serve without compensation in addition to that received for their services as Members of Congress; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

- (b) Members from the executive branch: The members of the Commission who are in the executive branch of the Government shall serve without compensation in addition to that received for their services in the executive branch; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.
- (c) Members from private life: The members from private life shall each receive \$50 per diem when engaged in the actual performance of duties vested in the Commission, plus reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of such duties.

STAFF OF THE COMMISSION

SEC. 7. (a) The Commission shall have power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of the civilservice laws and the Classification Act of 1949, as amended. (b) The Commission may procure, without regard to the civil-service laws and the classification laws, temporary and intermittent services to the same extent as is authorized for the departments by section 15 of the act of August 2, 1946 (60 Stat. 810), but at rates not to exceed \$50 per diem for individuals.

EXPENSES OF THE COMMISSION

SEC. 8. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, so much as may be necessary to carry out the provisions of this joint resolution.

DUTIES OF THE COMMISSION

SEC. 9. (a) The Commission shall gather by scientific methods authoritative data relating to nursing services of all types, including services performed by professional and practical nurses and nursing sides. In the gathering of such data and the making of such recommendations, the Commission shall give particular attention to the need for considering ways and means to—

(1) clarify further the province of nursing personnel (including professional and practical nurses and nursing aides) with particular reference to the impact upon nursing of the changing functions of the related health professions and the changing health needs and resources of the Nation:

(2) add systematically to the body of knowledge of nursing as a discipline and thus permit more of the practice of nursing to be based on scientific principles;

(3) improve and extend our resources for the education and training of nursing personnel of each type for their appropriate functions; and

(4) encourage more effective organization of nursing personnel and more effective utilization of their skills.
(b) Report: The Commission shall submit

(b) Report: The Commission shall submit to the Congress interim reports at such time or times as the Commission deems necessary and shall submit to the Congress its final report not later than 2 years from the date of the enactment of this joint resolution, at which time the Commission shall cease to exist.

POWERS OF THE COMMISSION

SEC. 10. (a) Hearings and sessions: The Commission or, on the authorization of the Commission, any subcommittee, or member thereof, may, for the purpose of carrying out the provisions of this joint resolution, hold such hearings and sit and act at such times and places as the Commission or such subcommittee or member may deemd advisable.

(b) Obtaining official data: The Commission is authorized to secure directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality information, suggestions, estimates, and statistics for the purpose of this joint resolution; and each such department, bureau, agency, board, commission, office, establishment, or instrumentality is authorized to furnish such information, suggestions, estimates, and statistics directly to the Commission, upon request made by the Chairman or Vice Chairman.

Reduction in Army Manpower

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. McCORMACK. Mr. Speaker, in view of the acute situation in the Far East, and with its worldwide implications, it seems to me imperative that President Eisenhower should reconsider at once the drastic reduction that he has ordered in the manpower of our Army. At a time when evidence of strength is necessary, weakness in this respect is shown.

The continued reduction in our Army is inconsistent with the strength we must have and show in the face of the Chinese Red aggression in Formosa and elsewhere, and also the insult to our country by the imprisonment of our airmen.

The Democrats in Congress were right in 1953 in opposing the Eisenhower reduction in our Air Force. We are on firm ground now in expressing our deep concern in the sharp reduction in our

Armed Forces.

There is no question but what our country is taking a calculated risk in this new and sudden policy. Passage of the resolution should be implemented by evidences of strength. The reduction of our Army is weakness at a time when we need strength.

The only thing the Communists respect is what they fear, and that is military strength and power greater than

they possess.

The President should permit military men in active service to express their opinions on this reduction without fear of punishment.

Extension of Benefits for Members of the Armed Forces

EXTENSION OF REMARKS OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. CRAMER. Mr. Speaker, I submit a statement presented by me to the House Committee on Veterans Affairs relative to the extension of educational benefits for members of the Armed Forces beyond the end of the Korean emergency period, which reflects the opinions expressed by many of the veteran organizations and citizens of the First District of Florida as well as my own personal convictions in this matter:

JANUARY 21, 1955. To: House Committee on Veterans' Affairs.

convening January 24, 1955.

Subject: Request to the committee to extend educational benefits for members of the Armed Forces beyond end of Korean

emergency period, January 31, 1955. Under the Veterans Readjustment Assistance Act of 1952 many of those who have served in the Armed Forces of the United States in defense of our Nation and our way of life have, as veterans seeking rehabilita-tion, received in the form of educational benefits encouragement and some slight compensation for the years that have been taken by military service from the regular pursuits ordinarily required in early life of a good citizen of our country in preparation for home and family. These men who have served have been young men. These men who have been called to the defense of our Nation were taken at a time when great strides would otherwise have been made in their education and growth. It is not fitting that these same benefits for educational

opportunity should not accrue to those who are now in service and will be so on the day declared, January 31, 1955, as the end

of the Korean emergency period.

I therefore urge that the House Committee on Veterans' Affairs take favorable action on H. R. 587, a bill to provide that persons serving in the Armed Forces on January 31, 1955. may continue to accrue educational benefits under the Veterans' Readjustment Assistance Act of 1952, and for other purposes.

It would be most unfair to discriminate against these men who are now in armed service, having depended, when enlisting, on these and other existing benefits, and with whom at the time of induction the Government of the United States made a moral contract to provide these benefits. To abrogate this contract would place these men at a great disadvantage in our society especially as compared to their predecessors in service and, without these benefits of educational assistance, the morale and rehabilitation ability of a great segment of our citizenry would suffer.

The obligation we have to these men is beyond question and not one that would place an unjust burden upon our Nation. The wise and considered program that has promoted the welfare of our citizens, has contributed to our high standard of living and has, through its basic program of fair education and opportunity to replace the years of loss to our citizens while in service, brought prosperity and the great concept of equal opportunity for all to greater fruition in this land. The educational benefits heretofore provided have shown by the test of time to have been of gerat advantage to our servicemen-no greater investment can be made than in the education of these youths who have answered the call of their country and, unflinching, stepped forward to face its enemies. Those serving today should not be denied.

I respectfully urge that House Resolution 587 of the 84th Congress be passed by your committee and I shall, upon such passage, support this bill upon the floor of the House.

> WILLIAM C. CRAMER. Member of Congress, First District of Florida.

The Republic of Ireland

EXTENSION OF REMARKS OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution adopted by the Illinois Federation of Labor:

RESOLUTION 17

Whereas the House of Representatives, 65th Congress, 3d session, duly passed a resolution declaring that the people of Ireland should have the right to determine the form of government under which they desired to live; and

Whereas in the intervening years the people of Ireland have so determined but the effect of their determination has been denied them, and they have in fact been deprived of the right to the form of government under which they desire to live; and

Whereas 26 of the 32 counties of Ireland have been successful in obtaining international recognition for the Republic of Ireland, separate and apart from any domination by the British Empire, England, or any

of her possessions; and Whereas the constitution of the basic laws of the Republic of Ireland is modeled upon our own American Constitution; and

Whereas our Nation has fought against partition at all times, and the present Korean and Chinese partitions show clearly that our Nation stands opposed to such oppression of the people's rights; and

Whereas hundreds of Irish trade unionists have given their lives that Ireland be free, members of the printing trades, building trades, transport workers, teachers, rail-waymen, and others, have given the supreme sacrifice to end partition, and free Ireland from British domination: Therefore be it

Resolved, That this convention of the Illinois Federation of Labor, assembled at Peoria, Ill., October 11, 1954, go on record embracing the sense that the Republic of Ireland should embrace the entire territory of Ireland, unless the clear majority of all the people of Ireland in a free plebiscite, determine and declare to the contrary; and be it further

Resolved, That a son of Ireland, and a member of the bricklayers' union of Rhode Island, Congressman FOGARTY, has introduced a resolution to the Congress, embracing the sense of this resolution, that the convention send copies of this resolution to our State Department; to Senators Douglas and Dirksen; to the Minister of External Affairs, Irish Government House, Dublin, Ireland; to Mr. Conroy, general president, Irish Transport and General Workers' Union, Dublin, Ireland; and Congressman Fogarty, Washington, D. C.

The Command Management School

EXTENSION OF REMARKS

HON, ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. SIEMINSKI. Mr. Speaker, we have heard a great deal recently about our new military look which has been designed to give the taxpayer more defense for the dollar. Members of this body will be glad to know, I am sure, that our Army is leaving no stone unturned in its efforts to improve the efficiency of its operations and to increase the effectiveness of its combat elements.

Last week, at the invitation of my good friend, Col. John Roosma, deputy post commander, Fort Jay, N. Y., I visited a most unique and progressive establishment in the Army at nearby Fort Belvoir, Va. The Army calls it the command management school. What I saw was a gigantic step forward in the improvement of military management.

As we all know so well, two-thirds of our mammoth budget is spent for national defense. It is our duty to see that these funds are spent wisely and well. I am convinced that this school will do more to accomplish this end than anything I have yet seen, and I think I might say that I am not without some military experience.

We know that the military has installed, in recent years, many new tools and systems in the management of their installations all over the world. Most of these have been borrowed from our industrial enterprises, which are justly World famous for their managerial efficiency. The Army has recognized, however, that a tool in any system is no better than the executives who administer it. In the command management school the Army has accordingly set out to educate its key officers, largely the installation commanders, in how to use these tools and how to apply them to the business of managing an installation.

The Harvard Business School's advanced management program has been well known for years in the industrial world for its ability to train mature, experienced, business executives and to improve their management skills. The Army's command management school has been amazingly successful in adopting the methods applied by this and similar institutions and in converting these methods to their own use in the training of post commanders and principal staff officers.

Under the direction of the Army Comptroller, Lt. Gen. G. B. Decker, and his chief management assistant, Maj. Gen. L. R. Dewey, the school assembles 50 senior Army installation commanders, staff officers, and key civilian employees, each 4 weeks and puts them through an intensive, round-the-clock course in the efficient management of men, money, and materials. A hand-picked and well-trained faculty of senior Army officers is headed by Col. Frank Kowalski, of Meriden, Conn., the school's commandant. He is ably assisted by a civilian management engineer, Mr. Gilbert C. Jacobus, of my own State of New Jersey. The permanent teaching staff is liberally supplemented by outstanding speakers in the management field from industry. from Government, and from the educational world as well as from the military.

I cannot emphasize too strongly that these men, the generals and colonels who command the Army's installations, are the individuals who, in the final analysis, manage the Nation's resources which have been entrusted to them by Congress for our defense. Having seen these officers attacking the Army's management problems at the command management school, I know that each one will do his job in a far better and more efficient manner as a result of this training.

The school is indeed a new approach to military education. All of our armed services have been justly praised by every professional educator who has examined their systems of schools, but these, until now, have been limited to the purely military fields of tactics, strategy, and logistics. The Army has now recognized the need for the schooling of its senior officers in the field of nontactical commands, of the management of resources: Men, money, and materials.

This school for managers is more than just a classroom. It is in effect, a meeting-place, where the officers participating live; they eat, sleep, and breathe management on a 24-hour basis. Needless to say, the assembly of 50 officers, each with 20 or so years of service, represents a vast quantity of experience; experience that can be utilized by colleagues and is shared among all. The commandant told me that this is really

the secret of the success of the school. The discussion of down-to-earth, concrete problems and the exchange of ideas on how best to solve them, not only in the classroom, but anywhere and everywhere, goes on literally around the clock. Throughout these discussions the school constantly emphasizes the need for accomplishing assigned missions effectively with fewer dollars. The payoff here is dollars saved. One of the students, a brigadier general who commands a large military post here in the East, told me that he dreams management nearly every night. I might add that he, like all of the other students, is delighted with the course and feels that he really is learning how to improve his post. This is the real proof of the pudding, and I am convinced that the school will stand the test of time.

In my enthusiasm for the school I do not want to give the Members of this body the impression that the Army has become so management minded that it has forgotten the primary reason for its existence. So I hasten to assure you that the school, the faculty, and the officers who attend the course are all keenly aware that the Army exists to accomplish the mission assigned to it, to protect the security of our people around the world. On the other hand, every dollar saved, every wasteful practice eliminated, means just that much more effort can be channeled to increase the combat effectiveness of our Army. This is the purpose of command management, and this is the purpose of the school that I

Mr. Speaker, I am sure that every Member of this body would be impressed, as I was impressed, with this example of progress and forward thinking by our Army. I strongly recommend that as many as possible visit Fort Belvoir and see the school in operation for themselves. On every battlefield since the days of Valley Forge, our Army has shown its ability to win wars; it is now showing its efficiency in helping to win the peace which, God willing, we can and will attain.

New York State Legislative Program of the Affiliated Young Democrats, Inc., of New York, for 1955

EXTENSION OF REMARKS

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following program of the Affiliated Young Democrats, Inc., of New York State, adopted at a meeting held on Tuesday evening, December 14, 1954, at their headquarters, the Hotel Piccadilly, 227 West 45th Street, New York City.

Harold R. Moskovit, State president of the Affiliated Young Democrats of New

York State, presided at this legislative meeting.

The program follows:

The election of Governor Harriman and the return of a Democratic administration to Albany marks the opening of a significant new chapter in the history of the people of the State of New York. For 12 years Deweyism, as represented by the Republican Governor and the Republican legislature, have whittled away at the great advances made under the leadership of Alfred B. Smith, Robert F. Wagner, Franklin D. Roosevelt, and Herbert H. Lehman, and have sought to stifle democratic action.

In the person of Averell Harriman, the Democratic Party has presented to our State a Governor who will assuredly give our State a Governor who will assuredly give our State courageous leadership toward the enactment of a program meeting the needs of our people, and which will meet the acid test of being good for all of the people of this State. We are confident that the combination of aggressive and vigorous leadership of the Democratic minorities in the senate and the assembly, and a Democratic Governor with the tenacity and courage to go to the people when roadblocks are thrown in his way by recalcitrant Republican leadership in the legislature will permit the enactment of the program which we now proudly recommend.

1. State housing and building commission: Enactment of a law creating a State Housing and building commission, by combining the joint legislative committee on housing and multiple dwellings with the State building code commission, thereby eliminating duplication, reducing cost of promulgation, simplifying interpretation and clarifying enforcement of the housing and building construction laws.

2. Primary elections: As Democrats, we are irrevocably committed to the proposition that government belongs to the people, and that people should have the fullest possible participation in the selection of those who fill high public office. We again advocate that the candidates of the major political parties for offices filled by statewide election—such as governor, United States Senator, lieutenant governor, attorney general, and comptroller—be selected in statewide primaries.

3. Unemployment: The economic health of our State is a matter of prime importance, Numerous areas in the State today are, and have been for some time, suffering from unemployment. We urge the swift use of emergency measures to restore employment in the communities which have suffered. We urge that the State department of commerce, under vigorous Democratic leadership, seek to attract new industries to our State, and particularly to those areas which have suffered from unemployment.

4. Dairy industry: A major concern of our State is the economic health of our great dairy industry. We urge the adoption of measures, fair to processors, distributors, and consumers to insure the continued stability of that industry.

5. Rent control: Year by year, the past administration has succeeded in eroding the rent-control laws, and in exacting from tenants of both residential and commercial buildings excessive rent increases. We urge that the legislature enact measures to recontrol and rollback rentals which have been so increased. Also, that the rent-control law be strengthened and be extended to garages and other presently decontrolled space, to prevent further unjustified increases in rents, and to restore services in apartment and tenement houses which have been curtailed or suspended.

6. Housing: Nine years after the end of World War II, housing throughout the State continues to be inadequate. We urge an extension of the programs for low-income and

middle-income housing, and a greatly expanded program of slum clearance.

7. Discrimination: The activities of the State commission against discrimination require a more vigorous administration, and the powers and jurisdiction of the commission must be expanded. The commission should be permitted to investigate all violations of the law, and its jurisdiction should be extended to discrimination in housing. Its appropriations should be increased to permit it to operate effectively.

8. Labor: We advocate immediate repeal of merit rating in the unemployment insurance fund, a practice which discriminates against small businesses and seasonal industries through unfair rebates to large corporations. We also favor amendment of the unemployment insurance law to make its benefits available to firms employing one or more workers, to extend its benefits to wives and dependent children, and to reduce the minimum period of employment required to qualify for its benefits to 15 weeks. We also advocate an expansion of the benefits under the workmen's compensation law by increasing the maximum weekly benefits to \$36, and by extending the duration of its benefits to 26 weeks.

9. Communism: We abhor communism in all its manifestations, and we urge that all steps be taken by the legislature necessary to root it out and expel it from our State We are opposed to the employment of Communists in our National, State, or local gov-The danger to our democratic ernments. way of life does not come only from abroad. There are some misguided citizens and resident allens who call themselves Americans who have lent themselves and their energies to foreign doctrine and to foreign aggressors who seek to stamp out democracy in our country. We cannot afford to have an American Gottwald or an American Quisling, and we must take all steps that Constitution permits to make sure that we do not have one. At the same time, we must apply traditional American methods in ferreting out and removing such persons. It is clear to us that the members, both open and concealed, of the American Communist Party are, in fact, the willing agents of a foreign government committed to interfere with and disrupt our domestic affairs. must deal with them as such.

10. Civil service: The outgoing Republican administration has made many raids on Civil Service, and has taken out of the protection of the civil-service laws many positions. We urge the immediate extension of the civil-service laws to repair the incursions of the Republican political raids. We also urge a re-examination of the State salary system to insure that civil-service salaries will keep pace with the cost of living, and to improve the working conditions of

State employees.

11. Presidential primaries: New Yorkers, under the present repressive laws, have not been permitted to participate in the selec-tion of candidates for President and Vice-President of the United States as their fellow citizens in many other States have. We urge the amendment of the election law to permit the members of the major political parties to indicate their preferences for President and Vice President, and to elect delegates committed to such candidates. In order to achieve an equitable reflection of the vote in this State for President and Vice President, we also urge the enactment legislation permitting the allocation of the State's vote in the Electoral College between the different candidates for President and Vice President in direct proportion to their respective shares of the popular vote.

12. Family court: The administration and enforcement of our laws relating to the family are scattered throughout the courts of the State in a meaningless and wasteful patchwork. Divorce, separation, and annul-

ment are in the supreme court; adoption proceedings are in the surrogate's court; paternity cases are in the court of special sessions; support cases and children's court problems are in domestic relations courts; other matters going to the core of family life are in various of the criminal courts. proper consideration for the problems of the family, and a better utilization of community resources, require that all of these matters relating to the family be placed within jurisdiction of a family court, to be established within the supreme court, and having adequate resuorces of an investigating, counselling, and psychological character to permit such family court to cope with the family problems that have intensified under the stress of modern living, and to strengthen the family as the solid foundation of our way of life.

13. Temporary commission on the courts: The present temporary commission on the courts should be continued and its recommendations given careful consideration, so that our court structure may be made more effective.

14. The judicial council: The judicial council, established during the administration of Governor Lehman, has been the agency through which the judges of our court of appeals and appellate divisions, and the organized bar of the State, have made tremendous contributions to the development of the practice and procedure in our courts. Inexplicably, and despite the public need for the continued functioning of the judicial council, the past Republican administration has withheld the appropriations of the judicial council and, in fact, ordered fit destruction. The appropriations of the judicial council should be restored, and it should once again be made an effective agency in the development of the law of our State.

15. State university: The State university has been handicapped by the refusal of Governor Dewey to make permanent appointments to its board of trustees. A permanent board of trustees should be quickly installed, and an inquiry should be made into its progress and accomplishments since its establishment in 1948. Also to consider the desirability of establishing the university on a campus of its own, with its own schools of medicine and dentistry.

of medicine and dentistry.

16. Education: A comprehensive school-construction program, financed by a State bond issue, should be developed so as to relieve the present overcrowding in our schools and to modernize the school system. Local communities should be given greater freedom to make greater improvements in the development of their educational systems. Additional State aid is required, and should be given, to meet the fiscal requirements of an overburdened school system.

17. State aid to municipalities: We advocate a careful review of the fiscal relationships between the State and local communities. We urge that the present principles, under which State aid is used as a political weapon to discriminate between communities, and under which many communities are deprived of their fair and equitable share of the revenues allocated by the State to local communities, be speedily replaced. We also urge that the spirit of home rule be reflected determining the taxing powers of local communities, and that the policy of requiring the imposition of nuisance taxes by municipalities be replaced by a sound and honest approach to the problems of municipal finance

18. Motorists: We support the following proposals:

(a) Enactment of a compulsory automobile insurance law.

(b) Exclusive allocation of funds collected in gasoline taxes and motor-vehicle licenses to the development of the highway system of the State. (c) Extension of the gasoline tax to industrial users of gasoline to the same extent that it is now imposed upon motorists.

(d) Requirement of annual safety inspections of motor vehicles by State agencies, and annual examinations of motor-vehicle operators.

(e) An investigation of the State Thruway Authority, its expenditures and contracts.

19. Bingo: We strongly favor a referendum to determine whether bingo, off-track betting, and lotteries shall be permitted in the State on a local option basis.

20. Eighteen-year-old vote: We again urge,

20. Eighteen-year-old vote: We again urge, as its original sponsor, extension of the right

to vote to 18-year-olds.

21. Public health: We advocate encouragement of prepayment plans for meeting the cost of medical care by giving aid to sound voluntary plans now in existence and stimulating the development of new plans; development of centers for the rehabilitation of the physically handicapped; a program of State aid for the training of medical and nursing personnel to meet the present critical shortage of physicians, nurses, and technicans; establishment of State programs for the care of the chronically ill; expansion of the State's facilities for the mentally ill to correct the overcrowding and present inadequate facilities in our mental hospitals.

22. Securities dealers: We believe that persons engaged in the investment of other persons' money should demonstrate their qualifications for such responsibility by examination, and to this end we advocate the establishment of a licensing system for securities

dealers and investment advisers.

23. Life-insurance companies: We urge revision of the insurance law to provide for a more democratic selection of the officers and directors of insurance companies, and to eliminate nepotism in insurance companies. We also advocate enactment of legislation to prevent officials of the State insurance department from exploiting their regulatory authority in such a manner as to assure themselves of positions with regulated companies, prohibiting any official or employee of the department from having any business connection or employment with an insurance company or firm during his tenure, or for 3 years thereafter.

24. Liquor authority: We urge a complete and thorough investigation of the administrative procedures and enforcement operations of the State liquor authority.

25. Conduct of political campaigns: The recent abuses occuring in the political campaign just concluded demand that a commission be established to adopt a code of ethics for the conduct of political campaigns.

26. Juvenile delinquency: The recent appointment by Governor Harriman of Lieutenant-Governor De Luca to coordinate on a statewide basis the drive upon juvenile delinquency has publicly emphasized the major importance of this problem. Our greatest asset is our youth, and we must spare nothing to protect our young people and to combat juvenile delinquency. The State's facilities for delinquent boys and girls must be expanded, and additional funds must be made available for the probation bureaus of our criminal courts which have been so successful in coping with the problem under the limited appropriations hitherto available to them. We also urge an intensification of the drive upon those who, through their traffic in narcotics and pornography, have a primary responsibility for juvenile delinquency.

27. Permanent personal registration: We favor a mandatory statewide system of per-

manent personal registration.

28. Public utility regulation: In 12 years of Republican administration the Public Service Commission, once the defender of the interests of the consumer, has become primarily devoted to the interests of the major public utility companies. We urge that the commission be rehabilitated, and that a com-

prehensive examination and revision of the rate structures allowed by it to public

utilities be made.

29. Public power: We strongly advocate, in connection with the development of St. Lawrence and Niagara power, safeguards in the marketing of such power, with preferences to municipalities and public utility districts over the public utility companies.

over the public utility companies.

30. Civilian defense: We recommend that the Civilian Defense of New York State be placed under the jurisdiction of the Federal Government, with the cost to be borne by the Federal Government, and that the program be coordinated through the government of New York State. It is further recommended that this policy be adopted nationwide.

31. Minimum wage laws: We favor the enactment of a statewide minimum wage of \$1.25 an hour.

32. Legislative sessions: We urge that a printed record be published and made available to the public of the full proceedings of both houses of the legislature, so that the people may be fully informed of what goes on in Albany.

Liberty Versus License

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio broadcast I delivered over WMEX, Boston, Mass., Saturday, October 16, 1954, 7:30 to 7:45 p. m.:

There is enough trouble and excitement in the world today, without overstimulating our young people via comic strips that have ceased to be funny.

By and large, this industry has much to

By and large, this industry has much to its credit. A minority who pander to the passions of the young are bringing about a public demand to clean house.

Liberty is no excuse for license.

It means freedom with self-control, the obligation to maintain decent standards, and the responsibility of setting the right example for impressionable youngsters.

Both the United States Senate and the United States House of Representatives have thoroughly investigated this problem. While they have clearly and repeatedly emphasized that they are not interested in Government censorship, they are trying to bring about an improvement through self-regulation.

There are three comics published which do not feature crime and horror to one that does, but it is that one-quarter of the output that does the damage.

No less an authority than J. Edgar Hoover, Director, FBI, has warned of the tremendous impact that undesirable literature has on the Juvenile mind. He has said in part that "Crime books, comics, and other stories packed with criminal activity and presented in such a way as to glorify crime and the criminal may be dangerous, particularly in the hands of an unstable child.

"A comic book which is replete with the lurid and the macabre; which places the criminal in a unique position by making him a hero; which makes lawlessness attractive; which ridicules decency and honesty; which leaves the impression that graft and corruption are necessary evils in American life; which depicts the life of a criminal as exciting and glamorous may influence the susceptible boy or girl who already possesses definite antisocial tendencies.

"While comic books which are unrealistic in that they tend to produce fantastic pictures of violence, brutality, and torture may have no effect on the emotionally well-balanced boy or girl, nevertheless they may serve as the springboard for the unstable child to commit criminal acts.

"On the other hand, those comic books which are restrained in presentation, which conform to carefully prescribed standards of good taste and authenticity, and which teach a true lesson that crime does not pay, have a real educational value."

So says FBI Director J. Edgar Hoover.

A witness before the House committee asked this question: "Shall we permit a few greedy publishers to exercise control of a harmful nature over the children of the Nation? The comic-book and picture-strip technique is a highly popular one. The enormous volume of trade—some 50 million sold each month—stresses its popularity. Shall this fertile field of instruction, citizenship, and conduct be allowed to spread in cancer fashion throughout the land with lurid, bloody, sadistic, and immoral attitudes? Or shall it be controlled into channels for the betterment as well as the enjoyment of children?

It is a well-known fact that youngsters are imitative. That is part of the learning process. The schools bring to their attention the product of the best minds of all time. Unfortunately this is offset by other reading, seeing, or hearing in the child's experience outside of school.

Children identify themselves with the characters—good and bad—that they find in the comic strips. They put themselves into the position of the hero, the heroine, or the villain. Since most children have a hard time with reading in their earlier years, picture representation clears the way for them to understand what is going on. The classroom is at a disadvantage with the comic book in this respect. Without going into details I can think offhand of several cases where youngsters injured or killed themselves reenacting violent scenes that have been portrayed for them through visual means of communication.

The committee found that only a small percentage of the so-called comic books dealt with comedy or mirthful subjects. The great majority are about crime, violence, horror, romance, supermen, mystery, adventure, and westerns. They do not teach children to think straight. They glorify crime, make a mockery of democratic living and respect for They make lawlessness atlaw and order. tractive and ridicule decency and honesty. They show children how to make weapons and how to inflict injuries with those weapons. One comic actually printed charts of the human body indicating the exact positions of the points and areas most vulnerable to physical assault, and told just how to attack those points and areas most effec-

The field of comics is one which perhaps more children and a certain type of adults find reading entertainment and relaxation than in any other. Their astonishing circulation far surpasses that of all books, magazines, and periodicals combined, and is exceeded only by that of dally newspapers.

Several years ago the Kefauver Crime Investigating Committee reported that crime comics are believed to have a corrosive effect on the mind of the child, and that they encourage delinquency.

The New York Joint Legislative Committee To Study the Publication of Comics conducted an exhaustive study and produced a comprehensive report on the comic-book situation in 1951. The committee's recommendations have greater pertinence today as the problem is approaching a showdown—nationwide.

Here, condensed, are some of the finding of that committee:

1. The entire comic-book industry is remiss in its failure to institute effective measures to police and restrain the undesirable minority of stubborn, willful, irresponsible publishers of comics whose brazen disregard for anything but their profits is responsible for the bad reputation of the publishers of all comics.

2. Comics are a most effective medium for the dissemination of ideas, and when such a medium is used to disseminate bad ideas which may leave deep impressions on the keen minds of children, the unrestricted publication and distribution of comics becomes a matter of grave public concern.

3. Comics which depict crime, brutality, horror, and which produce race hatred, impair the ethical development of children, and those which describe how to make weapons and how to inflict injuries with these weapons, and how to commit crimes, have a wide circulation among children.

4. The New York State Joint Legislative Committee states flatly as follows: Crime comics are a contributing factor leading to juvenile delinquency.

5. Instead of reforming, publishers of bad crime comics have banded together, employed resourceful legal and public relations counsel, and so-called educators and experts, in a deliberate effort to continue such harmful practices, and to fight any and every effort to arrest or control such practices.

6. The reading of crime comics stimulates sadistic attitudes, and interferes with the normal development of sexual habits in children, and produces abnormal sexual tendencies in adolescents.

The mutations that have been brought about in the name of "comics" by profit-minded publishers are well illustrated by books classified in the trade under the strange designation "war horror comics."

The entire output of one such promoter was officially banned from distribution among United States Navy personnel because some of the contents were deemed contrary to the best interests of our country. It was charged that their objectionable features might be the work of a genuine pacifist organization, but that they were much more likely the subversive efforts of Communists.

Of late, the Association of Comics Magazine Publishers is trying to clean its own bouse

But not all comic-book publishers are members of the association.

The constantly increasing volume of nationwide protest is reflected in many ways, among which is the amount of unsold salacious material returned by dealers to the distributors, in some instances running as high as 40 percent which is believed due, at least in part, to local protests; by communications received from an ever-increasing number of groups from various parts of the United States urging Congress to clean up the newsstands; by protests against the distribution of obscene literature of all kinds; by the activities of religious groups of all denominations; by greater diligence on the part of the police as a result of aroused public opinion; and by the increased activity of all prosecuting agencies, both Federal and State.

Complaints have been received from men in our Armed Forces protesting against the infiltration of pornographic and otherwise objectionable literature there, but lack of time, facilities, and funds, have prevented the investigating committee of the United States House of Representatives from inquiring fully into that situation.

Purveyors of pornographic books, pictures, and the like, frequently attempt to justify their activities by citing the constitutional guaranty of freedom of speech and of the press; but being granted and guaranteed freedom by no means includes license. It is the attempted transformation of liberty

into license for profit which is arousing the indignant public.

Publishers of comic books must learn that

freedom implies responsibility.

And that innocent children also have the right to be protected from the characterdestroying, glorification of crime and sex.

Reserves Our Nation's Bulwark

EXTENSION OF REMARKS OF

HON, BENJAMIN F. JAMES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. JAMES. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following address by Maj. Gen. Edward E. MacMorland, United States Army, retired, and now president of Pennsylvania Military College, Chester, Pa., which is in my district, Tuesday, January 25, 1955, at Bethlehem, Pa., before members and guests of the Honorary First Defenders:

RESERVES OUR NATION'S BULWARK

I have been informed that the members of your organization have long been leagued together to promote proper protection for our national interests, and that some of you have been participating in this laudable endeavor over a period of many decades. Although none of you look particularly old to me, I can share with you after long Army service your continuing zeal for defending our country from enemies within and with-

We have been assured that never before has America had more of both types of enemies. We continue to read in our daily papers that Soviet Russia is laboring night and day to build up her armed might, and already is stronger in some military aspects than any other nation on earth, including our own. We need no crystal gazer to certify that Russia is not developing her military power just to protect her own borders. If Russia is not our country's enemy, she at least is an enemy of the principles and ideals of our Nation and an increasing menace to other countries for which we must retain friendly solicitude.

There can be little doubt that Russia definitely is an enemy without, and so is Communist China which draws its dubious in-

spiration from Moscow. We also know that our country has enemies within, and all of us who are loyal patriots and concerned for the welfare of our Nation should be as alert against such inner subversive influences as against the

possibility of outside aggression.

In the broad view, of course, it is deplorable—even tragic—that so much of our Nation's resources should have to be devoted to our national defense. We are a peaceful We have never started a war against any other country. The only wars in which have fought have been instigated by other nations-wars in which we have been compelled to participate in protecting our own welfare, our people, and our principles of common decency.

It is hoped that history will keep recorded

certain other facts. One is that we terminated those wars as soon as possible, meeting peacemaking negotiators more than half way. Still another is that instead of oppressing our conquered foes, traditional with victors since time began, we have hastened to rehabilitate them, to set up for them democratic governments of full autonomy for complete national independence, and have given or loaned them money.

These actions and attitudes have established a historical precedent, and they should be significant in a world still marred by aggression for domination in many quarters.

A new budget for our national ependitures and revenues was recently submitted by our President to Congress. That budget allocates about 65 cents out of every dollar of national income to our country's defense, directly or indirectly. This means that only about 35 cents of each dollar which we citizens pay into our Federal Treasury through open and hidden taxes-on our incomes, our telephone calls, the trips we make, the dress ornaments we give our wives on their birthdays, the little luxuries like tobacco which relieve the tension of our existence-can go toward development of housing, schools, dams, rivers and harbors, national parks for our recreation, and the thousands of other constructive activities of our Federal Government for the common welfare. This also means that Federal research in better agriculture and other sciences for man's economic and personal improvement gets only one-third of our national potential in funds and concern.

We learn that half of our Nation's maximum research and development functions, governmental and private, now are devoted to atomic energy and aerodynamics for na-tional defense. We also know that if war tional defense. should break out tomorrow, our Nation's entire industrial and business life—our trans-portation, communications, household purchases, and daily personal activities-would become subordinated once more to military necessities. Within our lifetime we gladly have made sacrifices of money, time, conveniences, and service in two world wars and a Korean conflict not of our own origin, yet even today our country still feels adverse effects of World War I, which ended more than 36 years ago. Men and women among you, born since 1918, likewise have been hampered in their vocational careers and perspectives by World War II, whose shooting stopped a decade ago. Our young men similarly have been delayed in their life plannings by the months of frustrated fighting in Korea which we have not even officially designated by the term "war."

It should be particularly noted that in those military episodes as well as in our Revolutionary War, our War of 1812, and our Spanish-American War, we could not depend for defense on large standing armies, because we had none. It is our American credo that we must convince the rest of the world by example that we are not militaristic, and have no sinister designs on other lands and no ideologies to force on other populations which might warrant a large military force suitable for aggression. Our forefathers hastily assembled a small Continental Army in the colonial days, but its members were largely civilians without intensive military training. Their leader was George Washington, who was not a professional soldier but a land surveyor, a country squire. Although he was created a general, and later as President was Commander in Chief of all the colonial men of arms, he did not have the military training now given to an ordinary buck sergeant. The men who served with Washington against the career soldiers of King George III and the soldiers for hire fighting with the redcoats were farmers, tradesmen, students, storekeepers, doctors, manual craftsmen. They were the type of citizen reserves who must remain the bulk of our defense forces for all time.

Even in today's civilized era, we have the grievous necessity of remaining reasonably able to defend ourselves against aggression without keeping a large segment of our population under arms at great expense to our taxpayers, and with minimum interference to the educational and vocational expectations of our young people. We must do this without parading millions of uniformed men before our friends and foes in challenging display. Peaceful though we are, we must remain ready to meet any emergency with a minimum of basic preparation, certainly not taking the open lead in an armaments race which we disparage elsewhere. Our President recently made this policy clear by setting maximum strength of our Armed Forces on active duty.

Thus we have a paradoxical problem of remaining strong in defense without ostenta-tiously violating our assertions for world comity. The answer to that problem lies in a proper reserve system, the same idea which gave us victory in the Revolutionary War and succeeding conflicts, our mass defense strength vested in trained civilians.

I have just returned from Washington, where I secured details of a comprehensive plan now being submitted by the President and the Department of Defense to Congress. No doubt it will be warmly debated by the extremists-those who clamor for a monster military force to deter any attack on us and those who contend that as innocent people we need no defense at all.

This new plan for modified universal military training and creating a large Reserve force is a compromise, and I think a wise one. The plan would consider our standing service elements as a nucleus around which to assemble basically trained civilian reservists in any emergency. I can give you here some of its features which may not have been fully covered in press dispatches.

It is called the National Reserve Plan in Defense of Freedom. The official Pentagon outline, which I shall here quote directly. says the plan would-

Provide a fair and equitable method of recall to active service;

"Allow young men to choose their preferred branch of service, and allow them to elect methods by which military service could be performed:

"Allow them to start fulfilling military service obligations at an early age, before assuming the responsibilities of family and

"Provide all the material benefits of Reserve training to men with military service obligations;

"Fulfill the manpower needs of industry

and the community;
"Retain for free Americans their tradition of voluntary service as citizen Reserves."

Under the plan, induction of men for military service would be continued, with all mentally and physically qualified men subject to call on reaching the age of 181/2. All men entering any of the armed services, whether through induction, enlistment, or appointment, would assume a military obligation extending for at least 8 years, to build a permanent Reserve strength of 5 million

However, all young men of the country would have four choices, and I cite them briefly here.

Under choice 1, men who enlist in any of the armed services for 3, 4, or 6 years would remain in the Reserves after their enlistment expires for a combined total of 8 years of active and Reserve service.

Under choice 2, men who enlist in the Navy or Marine Corps Reserves before they are 19 are subject to call for 2 years of active duty within 2 years of such Reserve enlistment, and after such active duty they remain in the Reserves for the balance of an 8-year period, dating from their enlistment.

Under choice 3, young men may wait for induction into the Army and on their call date begin an 8-year service obligation covering active duty and subsequent membership in the Ready Reserves.

Under choice 4, a limited number of men between 17 and 19 may enlist in the Army. Marine Corps, or Coast Guard for 6 months of active duty, then remain in the Ready Reserves for 91/2 years, thus with a 10-year

service obligation.

The whole 8-year-minimum service plan presumes there always will be men voluntarily joining and remaining in the armed services as a career. In requiring prolonged Reserves membership in addition to active duty for all qualified young men, the plan calls for regular, continuous training pro-grams for all such reservists, in their home towns or nearby, and not merely keeping their names on rolls somewhere. Yet it permits young men to return as soon as practicable to their classrooms, their vocational pursuits and their normal civilian life following active duty, but remaining under systematic military refresher training for a full 8-year total, or 10 years under choice 4.

Men who enlist in any of the Armed Forces for 3 or 4 years would remain in what is called the Ready Reserve for 4 or 2 years, respectively, following their active duty, then would be listed in another category called the Standby Reserve. Men enlisting for 6 years would be in the Standby Reserve for

2 years thereafter.

As for the National Guard, it would retain both State and Federal status, and its members would be considered in the Ready Reserve—that is, ready for instant call to active duty in any emergency-and with the National Guard considered in the first line

of defense.

The ready reservists would be paid for attending sessions of the intensified, steppedup and compulsory Reserve training pro-They would qualify for promotions and retirement pay, they would have 2 weeks of concentrated summer training duty, and the training whenever possible would be geared to the vocational activities of the reservists. This should help young men in their current jobs. It also should help make their vocational talents of maximum bene-At to the country, if they are ever recalled to

active duty.

In brief, the ready reservists would be men
In brief, the ready reservists would be men Who have had limited active duty, but are obligated for Reserve membership and Reserve training for the balance of their 8year periods of responsibility. The standby reservists would be men who have spent sufficient time on active military duty, or have completed stated periods of Reserve training, thus being exempt from further train-

The ready reservists could be recalled if either the President or Congress declares an emergency. The standby reservists would be subject to recall only in an emergency

declared by Congress.

It certainly is not the fault of the Reerves of the various armed services that they have been neglected and the paper program instituted for them by Congress in 1951 has been marked by confusion. sands of veterans of active duty have voluntarily entered the Reserves, without waiting for this new compulsory program, these reservists pleading for training schedules and for encouragement and assistance in their patriotic desire to keep their military knowledge useful to their country. Our country should be proud of these voluntary and eager reservists.

Their spirit which Washington now belatedly is endeavoring to utilize systematically is precisely the same attitude of the colonial farmers and tradesmen who without uniforms drilled with muskets and squirrel rifles and probably broomsticks to defend their homes against the British, and presently fired shots at Concord which are still echoing around the world wherever people cherish freedom.

Let all of us who abhor war, who oppose militarism for its own sake, and who are wary of any trappings of dictatorship, remind ourselves that we Americans have no Fuehrer, or Generalissimo, or politician who

is building up an armed force for his personal aggrandizement or to turn our country into an aggressor. Let us also realize that our Armed Forces are the servants and protectors of our people, not our masters. Our uniformed services are controlled by our citizens, not the reverse. Hence, we shall never have an army manipulated by one official or faction, or concentrating on promulgating any socio-economic creed.

Above all, we must recognize that citizenship involves obligations along with its privileges. If we are to remain free citizens, we must fulfill certain requirements which cannot be met merely by paying taxes. have community participation responsibilities, and these extend to State and National The very same principles which compel the truly good citizen to take part in organized hometown functions for the general welfare instead of remaining aloof in casual apathy and critical isolation surely make it imperative for him to help safeguard his benefits by services and not just by writing tax checks as his national duty.

It is fitting and right for the Defense Department to keep referring to "military service obligations," and, of course, there is nothing new even to Americans about compulsory military service. It is natural to our concept of patriotic duty, not only in wartime but in a time of peace, when we are seeking to avoid further costly wars. Most other countries have such compulsory service more strict and extended than now contemplated for us. Our selective-service program all along has been operated with a minimum of handicaps to education and careers, and the 8-year plan will continue this policy. Even so, 2 years of active mili-tary duty in a youth's late teens can truly be beneficial to him as well as to his country.

Some educator colleagues protest any intrusion of military service in academic schedules. Yet, as president of a military college as well as a career Army officer, I can attest that military training itself is highly educative, and that military discipline engenders a splendid degree in the still formative years of young men of the self-discipline which is a major fruit of all education. Military schooling and military procedures develop orderliness of living, obedience to laws, respect for authority, consecration to duty, also industry, honor, responsibility, and many other attributes of character which surely are of as much enduring benefit to a maturing youth as rushing through academic studies or earning money in his first job. Military training, at a school or in the service, assists young men in adjustment to their fellows; it promotes social responsibility and abrades away rough edges of personality. The military training given thus far to our young citizens has not made them militaristic, but has provided them with principles and idealisms and codes of conduct which can well carry over into any civilian post.

I should remind, too, that under the ROTC program college men may continue their academic studies while getting beneficial military training on the campus. Assuredly, the 8-year plan of obligation now contemplated should give our young men a keener perception of their national heritage and should solidify their patriotism. It should be of tremendous inspirational and educa-tional benefit to thousands of young men coming of military age each year at a time when their sentiments and character are still plastic.

The main benefits of this new nationaldefense plan thus are obvious. We would have advantages of a strong defense force for our own security and as a deterrent for any aggressor with minimum money cost or manpower waste. In the event of war, a strong defense force could be assembled without the distressing delays which followed the Kaiser's invasion of Belgium and the Japanese sneak attack on Pearl Harbor.

Furthermore, the recalled Reserves would require no long basic training, and could be put quickly into combat able to fight effectively and also competent to protect themselves.

It surely must be conceded after all our disillusioning experience that however much we Americans may seek peace we must remain reasonably prepared for war, and that the moral leadership and global influence our country claims will be hollow until we can speak with authority instead of timorous pleading. There can be no coexistence by a voracious bear and a lamb however satuated with gentle virtues. In the world family of nations, ours must stand up vigorously for our rights and our concepts of integrity. as well as those of smaller vacillating nations which emulate America as a model. We, as individuals and as a nation, must ever able to protect ourselves adequately without ever using our strength as a bully, and until our realistic world becomes more idealistic we have to endure what just now we cannot

Our citizens differ on the extent to which we should intrude in tensions across both oceans, but I like to believe they are united on readiness to meet with force any affront to our national interests. So long as earnest people band together to promote peace through strong security, the task of circumventing any misguided total disarmament pacifists should not be difficult, especially when every gale that sweeps across either ocean brings to us the clangor of plowshares and pruning hooks being beaten into swords and spears.

Foundation Grants Oueried

EXTENSION OF REMARKS OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. GWINN. Mr. Speaker, a letter by Mr. Rudd to the New York Times brings out some interesting points in connection with the possible use of foundations for propaganda purposes at the taxpayers' expense. That is to say, the costs of national defense and the costs of Federal, State, and local government which the foundations do not help pay, must be paid by other taxpayers. So that it is quite proper to look upon the activity of every tax-exempt foundation as something which the taxpayers themselves support, at least indirectly, by paying the tax burdens from which foundations are exempt. Mr. Rudd states in his letter:

FOUNDATION GRANTS QUERIED-FINANCING OF STUDIES ADVOCATING COLLECTIVIST IDEAS CHARGED

To the EDITOR OF THE NEW YORK TIMES:

The large foundations are indignant over the majority report of the House Committee To Investigate Tax Exempt Foundations, which found that some "have actively supported attacks upon our social and governmental system and financed the promotion of socialism and collectivist ideas." Let us consider a single record, but a very important one, in the field of public education.

Two of the most clearly established principles of our American form of government are: Specific limitation on Federal powers and protection of the right to own property. Socialists oppose these principles and do their utmost to destroy their force and effect in our laws. They advocate a regimented society having an economy based on the four economic elements Marx introduced to give socialism mass appeal, and ultimately to destroy the capitalistic system. When foundations give lavishly of their funds to organizations aiding such Marxist doctrines there can be only one conclusion.

As long ago as 1926 the American Historical Association sponsored a 6-year study of the Commission on Social Studies, comprising many leading educators. The commission became active in 1929 and continued through 1933, issuing 16 volumes of studies and reports. The final volume, Conclusions and Recommendations, stated: "The age of individualism and laissez-faire in economy and government is closing and a new age of collectivism is emerging" (p. 16). The report then gave a complete plan with directives and objectives for using public education to meet the requirements of the emerging integrated order (p. 35).

LASKI'S VIEWS ON PROGRAM

It was perfectly clear that their new social order was to be a regimented, highly centralized form of government based on doctrines directly opposed to our American concepts of government. No informed person could describe it other than as socialistic. In fact, the late Harold Laski, noted British Marxist, declared: "* * stripped of its carefully neutral phrases, the report is an educational program for a Socialist America * * *. [It] could be implemented in a society only where socialism was the accepted way of life; for it is a direct criticism of the ideals that have shaped capitalist America."

And yet this program was financed by the Carnegle Corp. with five or more annual grants totaling \$340,000. One of the official purposes for which the House committee was created was to determine if these vast sums were being used in accordance with the purpose for which they were established. Does anyone think that Andrew Carnegie, rugged individualist that he was, intended his wealth to be used to establish a collectivist form of society, socialistic or otherwise?

This particular grant had tremendous influence in intellectual circles; for it was in effect the master plan of the liberal educators to use our schools and colleges to change the climate of opinion of our people so that they would accept the socialistic form of society. It became, in effect, the pattern on which was built much of the new education now showing so many disastrous results.

PEA AIDED

Furthermore, the Progressive Education Association, which led this movement and constantly propagandized for it over the past two decades, received \$4,257,800 (1932-43) from the three Carnegie foundations, the Rockefeller Foundation, the General Education Board, and the Ford Foundation.

This is only one of many instances on which the report of this committee has been based. The right of any person or group to advocate socialism within our laws in unquestioned; and the legality of such activities is conceded. But is it in the public interest? Is it within the purpose for which these foundations were established, particularly since these are quasi-public funds? These are the questions Representative Resce has sought to have answered in this investigation by bringing the facts before the Nation. Trustees of all foundations could well ponder these issues, because the use of billions of dollars in their care will exercise a tremendous influence on the future of this Republic.

AUGUSTIN G. RUDD, Chairman, Guardians of American Education. NEW YORK, December 22, 1954.

Who Profits From Free Enterprise?

EXTENSION OF REMARKS

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1955

Mr. GWINN. Mr. Speaker, the following speech by Mr. Fairless, chairman of the United States Steel Corp., is a splendid pronouncement from one of our leading businessmen. He shows that all of us, especially labor, profit by the free-enterprise system. He does another thing which leading businessmen-even leading businessmen failed to do 5 years ago. He acknowledges the fact that we are already deep into socialism. It is not creeping; it is not welfare statism. It has elements of communism in it. But in any event, the American variety of what is being done in the world is plain unadulterated socialism. And it does not pay off in America any more than it does in the rest of the world. There is an element of hope in the acknowledgment by our leaders of the evils that we are possessed of, for certainly we cannot be cured until we admit we have got the disease. Mr. Fairless states the case in most restrained language as follows:

WHO PROFITS FROM FREE ENTERPRISE?

(By Benjamin F. Fairless, chairman of the Board of the United States Steel Corp., in a talk before the Manufacturers' Association of Connecticut, at Yale University, New Haven, Conn., September 21, 1954)

All of us, I know, are alarmed by the rapid progress which communism is making all over the earth. We have seen it swallow up much of Asia in recent years. We have noted its growing influence over some of our most important European allies in the past few months. And we recognize that unless this trend can be reversed, it will be only a matter of time until the Communist countries outnumber all the free nations of the world.

The one encouraging aspect of the situation, probably, is the fact that the American people are fully awake to this danger, and alert to the threat that it poses.

But in our desire to save the world—and ourselves—from the Communist menace, it seems to me that we are dropping our guard against another political force which is equally dangerous to human liberty, and which has been vastly more successful than communism in its creeping conquest of nation after nation.

And that political force, of course, is socialism.

FREE NATIONS OUTNUMBERED

I wonder how many of us have ever stopped to think that the truly free nations of this world—the only nations where men still enjoy freedom in the form and degree that we know it—are already outnumbered, at least 20 to 1, by the countries which have embraced the deadly philosophy of socialism in one form or another.

We are encouraged by the knowledge that some of these countries, like England and Australia, have begun to move back in our direction; but the fact remains that outside of 2 or 3 nations here in the Western Hemisphere, it would be difficult indeed to find any place on this globe where the philosophy of free, private, competitive enterprise is still dominant.

The fight against socialism can only be won—or lost—right here at home. It is a never-ending fight against forces which are often entrenched within the Government itself, and which seek greedily to enlarge their own powers by constantly whittling away the individual rights of our citizens. So in that struggle, we can seldom depend upon Government for leadership. It is a job that we must always stand ready to do for ourselves.

When we see that there are individuals and groups, both in and out of public office, who seek to persuade the voters of this Nation to adopt a governmental course which would undermine the economic freedoms of our fellow men—then it is not only our right as citizens, but our inescapable duty as Americans, to speak out clearly, and to warn our people of the dangers that confront them.

Handicapped as we are, we have been saddled with the grave responsibility of leadership; and the time has come, I think, when we ought to take a critical look at our situation and ask ourselves frankly: "How are we doing?" So let me put it to you this way.

For nearly a quarter of a century now, we have attempted—almost singlehanded—to lead the forces of resistance against a rising tide of socialism in this country; and during most of those years, we suffered one disheartening defeat after another.

And then, 2 years ago, the American people rose up in their might and struck a great blow for freedom.

Many of us felt, no doubt, that the war had been won—that the victory was complete, and that America had renounced—once and for all—the dangerous philosophy of those who have tried to make this country a nation of big government and little people. But if so, we were sadly mistaken.

Political experts report that the opponents of free enterprise seem to be gaining ground, And when I use the word "opponents," I do not want to be misunderstood. I am not speaking in partisan terms. I am speaking of those members of both major political parties who would lead our Nation ever further down the road to state socialism—the men who seek always to expand the powers of central government, to increase the Federal deficit, to enlarge the subsidy program, and to impose crippling burdens upon every form of individual enterprise. Wittingly or unwittingly, these men are the spearhead of the Socialist attack in America.

BYSINESSMEN MUST SHOULDER PART OF BLAME I am very much afraid that we business-

I am very much afraid that we businessmen must shoulder a part of the blame. I'm afraid we have tried, too long, to go it alone.

Whether we like it or not, we cannot deny, I think, that we have accepted the heavy responsibility of leadership in this great struggle—not because we wanted it, heaven knows; and not because our fellow citizens have voluntarily chosen us as the defenders of their liberties; but simply because our opponents have cleverly thrust it upon us.

And there, I believe, is the great weakness of our position today.

For 20 years, American business has been the one and only target of the Socialist attack in this country—and so—as business men—we have been forced to fight back in self-defense for the protection and preservation of the enterprises which we manage.

We may tell ourselves that we have nobly defended the economic and political freedoms of every man and woman in this Nation—and that, indeed, is perfectly true—but to millions of our fellowmen it appears that we have been trying chiefly to save our own skins. So they seem to think that this is a private fight between government and business, and that they can afford to remain on the sidelines—as interested spectators—waiting for the best man to win.

Over the years they have developed a deep suspicion that free enterprise—however much it may profit them—is a devise de-signed primarily for the benefit of businessmen; that it is our own personal baby, and that we have a vastly greater stake in its

survival than they do.

That this ridiculous notion should persist in the minds of large numbers of our people is pretty discouraging to some of us who have tried for many weary years to bring about a broader public understanding of the facts; and yet it does persist in spite of all that we have said and done. For in no other way, I think, can we explain the steadfast support and encouragement which our opponents, Socialists in both parties, receive, in every election, from the national leadership of labor and from many other organized groups in almost every segment of our economy.

WHO REAPS GREATEST REWARD?

So. I suggest that we examine this question quite frankly. Who does reap the greatest reward from our system of free, competitive enterprise? Is it the owners and managers of business and industry? Is it the workers, the farmers, the consumers, the taxpayers? Who is it?

The best way to answer that question, perhaps, is to turn it around and ask ourselves which of these groups would suffer most if we were to establish, here in this country, a kind of benevolent, Socialist government like the one, for example, which held power in England for 6 years following the close of World War II. What did that government do? What really did happen in England? Let's take a quick look at the record.

It was only 9 years ago that the British Socialist government came into power, and the election which swept it into office was probably the greatest political victory that organized labor has ever won in any democratic nation. It was the realization of a dream which has been cherished, I suppose, by labor leaders all over the world. controlled every branch of the British Government, lock, stock, and barrel; and they set out at once to create in England the kind of Utopia they had always wanted.

SOCIALISM-BRITISH STYLE

They launched the most ambitiousthe most expensive-program of cradle-tothe-grave security that had ever been attempted. To pay for it, they taxed away the private sources of investment capital; When the key industries of the country could no longer get the funds necessary to modernize their plants and to run them efficiently, the Government had a perfect excuse to step in and nationalize them.

It did so eagerly-starting with the sick industries like coal mining and the railroads, and gradually developing such an appetite public ownership that it took over the utilities, highway and water transportation, aviation, communications, the Bank of England, and even the iron and steel industry Which was not only operating efficiently, but which was also paying a much higher wage than were most other British enterprises.

Now how did the former private owners and managers of these industries make out under the nationalization program? They Were hurt, without doubt, but how badly?

Well, so far as the owners were concerned, their properties were not confiscated. That wouldn't have been cricket; and no true Englishman would have stood for it. So the Government bought the owners out; and, in exchange for their stock-which paid dividends only when there were profits-it gave them government securities which paid interest annually, whether there were any profits or not. And since some of these in-dustries had been in the red for a long time and since practically none of them have ever made a profit since the Government took them over-the owners soon found themselves in a happy and somewhat remarkable position wherein they were being subsidized by a Labor government at the expense of the taxpayers. You might even call it a kind of "guaranteed annual dividend."

As for the former managers of these industries, many of them kept right on in the same old jobs; and if their income shrank in the process, so too, at least, did their headaches. They did not have to worry about profits and prices and competition. had to do was obey the orders that were issued from London, and let the Government

do the worrying.
So they no longer found themselves in the pitiful situation of the businessman who developed ulcers, but still wasn't a success.

SMALL SHOPKEEPER SUFFERS

When it came, however, to the small shopkeeper who was permitted to retain his own business, it was quite a different story. He had headaches aplenty; for he operated un-der a rigid system of price controls and rationing. The Government could—and rationing. The Government could—and did—cut the price of his merchandise without any advance warning whatever. And thus it happened one morning that he awoke and read in the papers that the price of an important part of the stock on his shelves had been lowered 5 percent in the night.

There was no way, of course, that the Government could also lower the price he had already paid for this merchandise; so he had to stand the full loss himself. And when several hundred thousand of these luckless retailers raised their voices in complaint, a Government spokesman suggested that they might compensate for this by making savings in their staff and services. In other words, they could lay off some clerks, and keep their customers waiting.

That was to be expected, perhaps, because after all, these fellows were only businessmen; so let us look for a brighter side the picture and count, if we can, the blessings which the unions enjoyed under this Labor regime. They had achieved their highest ambition. They were their own highest ambition. They were their own bosses. They controlled the biggest and the richest enterprises in the land, and they could divide up the profits as they pleased.

But there weren't any profits to divide. LABOR GOVERNMENT'S DILEMMA

As union leaders, the Government officials would have liked, presumably, to grant every wage demand of their membership; and, as the owners and managers of this newly acquired industrial monopoly, to jack up their prices accordingly.

But as statesmen, responsible for the wel-

fare of the entire nation, they also had to see that British exports remained competitive with the goods which were being offered in the markets of the world by the efficient producers of other nations. So in spite of their natural inclinations, they had to hold prices down; which meant that they had to hold down the costs of production; which meant that they had to hold wages down too.

In this dilemma, they did the best they could. They went back to their unions to explain the great national emergencies which they faced and to beg the boys to hold off with their wage demands. What it amounted to really was a wage freeze. plastered every available signboard with slogan after slogan urging British labor to work men would call it the speedup. harder and produce more. Over here, our

THREAT OF FORCE

I don't know what they called it over there; but I do know that they refused, emphatically, to buy it. Unrest grew in the rank and Absenteeism began to cripple the production of coal. There were slowdowns on the railroads; and strikes on the docks which endangered the national food supply. thing had to be done, and the art of gentle persuasion had failed. So the Government resorted to the threat of force, just as every socialist government has always done in the end.

To cope with the coal situation, it froze the miners in their jobs, thus depriving them of their freedom of choice and their freedom of opportunity.

To meet the situation on the docks, it invoked the provisions of the Emergency Powers Act—a labor control law far more drastic than any that has ever been knownor thought of-in the United States. the defiant strikers refused to be intimidated, and the government never used the powers which it had invoked.

Instead, it took 15,000 drafted troops, many of whom came from union families, and sent them down to the docks to load and unload the ships until the strikers finally gave up. And so it was that labor's own leaders were forced to act as strikebreakers.

But they had to carry on, and, as opposition to the wage freeze continued to grow, they revived another wartime law which gave them still more drastic powers over both labor and business. And among those powers was the compulsory direction of workers into such jobs as the government might designate.

Nor did the farmers of England escape these threats to their freedom. A law passed 2 years after the labor government took office, gave it the right to dispossess from his farm any owner who did not manage his land to the complete satisfaction of the Ministry of Agriculture. And it used to be said that an Englishman's home was his castle.

Now I do not know of any case in which either of these sweeping powers was actually used; but there is no doubt in my mind that the enactment and revival of these laws must have taught the British workingman a great and fundamental truth; that economic liberty and political liberty are merely two sides of the selfsame coin, and any time you give one to the government, it also takes the

But that, of course, is only one of the disillusioning lessons that came to the British worker when his unions took over the Government; for he was also a taxpayer and a consumer-even as you and I.

HIGH PRICE OF WELFARE STATE

As a taxpayer, he learned to his sorrow the ruinous price of the all-out welfare state. He learned it, because he paid it. His leaders, it is true, had soaked the rich while they lasted, but that was only a drop in the budget, as you might say. And they couldn't soak big business, because they had already taken it over, under Government ownership, where it paid no taxes at all. So there was no one left to soak but him.

In the lower brackets his earnings were taxed at a standard rate of 45 cents on the dollar; and in the surtax brackets the rate went up to a peak of 97½ percent. And this was only the income tax. On top of that he still had to pay a sales tax-incredible as that may seem in a labor leader's utopia. Nor was it any puny little loose-change sales tax, either. It ranged from 33 percent to 100 percent of the selling price of each article it covered.

LESS AND LESS OF MORE AND MORE

But in a way this really didn't matter so much, because there wasn't a great deal that a taxpayer could have bought with his money, even if he'd been allowed to keep it, for England, under socialism, was not exactly a consumer's paradise. It was a barren land of shortages and a wilderness of controls.

Its finest quality products were largely reserved for export. The American tourist could buy them readily in the London stores, but the British worker could not buy them at all. He could only admire them in the shop windows, where they were clearly marked, "For export only."

On the other hand the Governmentstruggling with its so-called dollar crisishad to cut British imports to the bone; and it is on these imports, of course, that the British worker has always depended for many of his basic necessities of life. So most of the things he really needed were severely rationed; and a lot of the things he certainly wanted were denied him completely under the export controls.

Such things as a new home, or a car, or any of the usual household appliances and gadgets which are so commonplace to labor over here, were hopelessly beyond his reach. And if he ever did manage to buy an automobile, he wasn't permitted to drive it more than 90 miles a month.

So what was the use? He had little incen-

So what was the use? He had little incentive to work more, to produce more, or to earn more; and the most artful of his union leaders could not persuade him to do so. Even the prospect of overtime pay had no appeal, since most of it would go for taxes anyway, and what could he buy with the rest?

The luxury of leisure was far more attractive than time-and-a-half for an extra day's work; and it was the only luxury left to him; for under the welfare state he had learned another significant lesson, that no matter how little he worked, he would always be able to exist, but no matter how hard he worked, he would never really be able to live.

This indifferent attitude, of course, only added to the woes of the Labor government, and to the general shortage of goods and services. Production lagged in the newly nationalized industries, prices were hiked substantially, quality declined steadily, and the losses were charged up to the taxpayers. Consumers, collecting their meager rations of coal, grumbled loudly about its rapidly mounting cost, and complained, in fact, that some of it wouldn't even burn—but coal, like so many other things they needed, was now a government monopoly, and, with no competing source of supply, there was nothing they could do about it.

So the British worker found himself shut in behind an iron curtain of controls and regulations. He filled out endless forms—in duplicate; he lined up for his daily rations, and he bought whatever it was that the Government—in its wisdom—permitted him to have. But three great necessities of life which it never permitted him to have were opportunity, incentive, and hope.

A DREAM BECOMES A NIGHTMARE

Yet this was his government—run by his unions, primarily for his benefit. It was the fulfillment of his own dreams; and it had been built in strict accordance with his own plans. But, in the cold light of reality, his beautiful dreams had become a crazy nightmare of austerity and government monopoly, in which he was the principal victim.

And, if he sought to escape from this nightmare—if he decided to chuck it all and seek greener fields of opportunity across the seas—he found that here again the iron curtain of controls had greatly curtailed the freedoms which he had once enjoyed. He, himself, was at liberty to go if he pleased, but only at great personal sacrifice and hardship; because the government had limited severely the amount of money which he could take out of the country, and he would have to start all over again, from scratch.

Here we have a brief and sketchy account of what happened in England under the Labor government. Within the framework of their Socialist philosophy, the leaders of that government tried loyally and sincerely, I believe, to solve the many critical problems which confronted them, and to create a better life for their fellow workers. The fault did not lie with their intentions. It lay with their philosophy. And after 6 years of crisis and controls, they were voted out of power.

By whom?

Well, the deciding votes were cast, of course, by the only people in England who

had enough political strength to do it—by the selfsame people who had put the Labor government in office in the first place—by the British workers, and their fellow consumers and taxpayers; in short, by the economic groups which had suffered most painfully in their very blue, Socialist heaven.

So we come back once more to the question we asked ourselves in the beginning: "Who does profit most from our system of free enterprise?" Is it the stockholder who gets the dividend money? Is it the worker who gets many, many times that sum, and enjoys the highest living scale in the world? Is it the consumer who reaps the blessings of competition and surrounds himself with every conceivable comfort and convenience of this modern age? Or is it, perhaps, the suffering taxpayer, whose annual burdens have been lightened by more than \$7 billion since some of our Socialist-minded opponents lost public office in Washington 2 years ago?

The answer, I think, is crystal clear. Free enterprise is the only system on this earth which richly profits all the people; for it is also the only system on this earth which truly belongs to all the people. It is not the private possession of American business, nor of any other economic group—and it never can be. It is the property—and the responsibility—of every man and woman in this Nation.

And so, if we can ever bring to our fellow consumers, our fellow taxpayers, and our fellow workers in the ranks of labor a real understanding of what the preservation of this system means to them and to their children, we shall never again be called upon to go it alone in leading this fight to preserve individual liberty.

serve Individual liberty.

They will be miles ahead of us. And they will not deal softly, I suspect, with these free-spending, fast-talking opponents of ours who are so ready to put freedom on trial at every national election, and so anxious to lead America down a Socialist road that must end, inevitably, behind the Iron Curtain.

Mr. Speaker, the only fault I can find with Mr. Fairless' speech is that he falls into the common error of assuming that sometime at some election or other the people will rise up, throw out our own welfare state or socialism, and restore constitutional government. Or that the Congress will do so. Or possibly the President. I submit that there is no evidence in history to show that once socialism has been substituted even partially for freedom, that the people or the Congress or the President can or will throw it out and restore the Constitution. Obviously one election would not suffice, assuming the issues could be determined at elections. We would have the issues of socialism every 2 years at a minimum to be decided. If we should restore the Constitution at one election, socialism might be substituted at the next, and so on without end.

The fundamental concept of a constitutional or contractual relationship between the Government and the people defining the Government's functions and powers to tax is to avoid submitting the issues to elections. The reason is obvious. Socialist issues cannot be submitted to a vote. It is impossible to frame the issues so that an intelligent vote can be taken on a national basis. For that reason, our forefathers in the beginning proceeded to hold conventions attended by delegates from the States to pronounce the constitutional principles

by which we should be governed. When the principles were announced they were so obviously right that they were affirmed by the courts and assented to by the people.

And so, Mr. Speaker, I submit that if we are ever to restore constitutional government and reject socialism, we must proceed through the States by means of a convention, as provided by the Constitution itself, to reassert and redefine and reestablish the functions of government, and then fix the amount of taxes which the States are willing the Government should spend to carry out those functions.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL RECORD

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Cooley (chairman), Poage, Grant, Gathings, McMillan, Abernethy, Albert, Abbitt, Polk, Thompson of Texas, Jones of Missouri, Watts, Hagen, Johnson of Wiscon-sin, Anfuso, Bass of Tennessee, Mrs. Knutson, Messrs, Angust H. Messrs. Jennings, ——, Hope, August H. Andresen, Hill, Hoeven, Simpson of Illinois, Dague, Harvey, Lovre, Belcher, McIntire, Williams of New York, King of Pennsylvania, Harrison of Nebraska, Laird, Dixon, Mrs. Farrington, Messrs. Bartlett, and Fernos-Isern.

Committee on Appropriations

Messrs. Cannon (chairman), Mahon, Shep-Messrs, Cannon (chairman), Mahon, Shep-pard, Thomas, Kirwan, Norrell, Whitten, Andrews, Rooney, Gary, Fogarty, Sikes, Fer-nandez, Preston, Passman, Rabaut, Yates, Marshall, Riley, Sieminski, Evins, Lanham, Deane, Shelley, Boland, Magnuson, Natcher, Flood, Denton, Murray of Illinois, Taber, Wigglesworth, Jensen, H. Carl Andersen, Horan, Canfield, Fenton, Phillips, Scrivner, Coudert, Clevenger, Wilson of Indiana, Davis Coudert, Clevenger, Wilson of Indiana, Davis of Wisconsin, James, Ford, Miller of Mary-land, Vursell, Hand, Ostertag, and Bow.

Committee on Armed Services

Appendix

The Objections to Federal Assistance for School Construction Are Not Valid

EXTENSION OF REMARKS

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Friday, January 21, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most timely and able address entitled "The Objections to Federal Assistance for School Construction Are Not Valid," delivered by Dr. John K. Norton, head of the department of educational administration, Teachers College, Columbia University, before the Conference of National Organizations for School Construction, on January 11, 1955.

I am advised by the Public Printer that the cost of printing the address will exceed the normal amount, and will come to the sum of \$280. Despite the additional cost, I ask unanimous consent that the address may be printed in the

Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Probably the most frequent objection to Federal aid to public education is that education is a State-local function with which the Federal Government should not be concerned.

The National Association of Manufacturers stated it thus in the recent hearings on Federal aid for school construction:

"Our schools have always been a Statelocal matter; and they should continue to be" (p. 355).

Is this a valid objection? History gives us the answer.

In the ordinance of 1785, 2 years before the Constitution was adopted, the Continental Congress set aside the 16th section of every township in the Northwest Territory for the support of public schools. The same action was soon extended to the Southwest.

The ordinance of 1787 set up a clear policy of Federal aid for education, a policy which was subsequently consistently followed by

the Federal Government.

The Federal aid provided in the early period of our history was no mean amount. The 175 million acres of land set aside for school support has been called "the endow-ment magnificent." It is the greatest grant for the development of education in all his-

One student of this legislation concludes that: "The national land grants were the very foundation of public education in the United States."

It is historical fact that the Federal Government played a substantial role in the establishment of our State school systems and in providing for their support.

This decisive action of the Federal Government in promoting public education was consistent with the viewpoint of the great founders of the Republic.

Washington advocated the establishment of a national university. In his Farewell Address he urged us to-

"Promote, as an object of primary importance, institutions for the general diffusion of knowledge."

Jefferson was vitally interested in the development of a system of education and acted upon it in a number of vital ways.

Franklin, Adams, Madison, and many others emphasized the indispensable necessity of popular education as a foundation for a free society.

The viewpoint of the great founders of the Republic and the early acts of Congress to promote education were no flash in the pan. Since 1785 no less than 50 major bills concerning education have been enacted by the Federal Congress.

One of the most searching tests of the statesmanship of a political leader has been his position on education.

In 1832 a great American made this state-ment in a political speech:

"Upon the subject of education * * * I can only say that I view it as the most important subject which we as a people can be engaged in.

"For my part, I desire to see the time when education * * * shall become much more general than at present and should be gratified to have it in my power to contribute something * * * to accelerate that happy

The great man who spoke thus was not merely engaging in campaign oratory, for in 1862, 20 years later, he, Abraham Lincoln, signed a bill providing for the establishment of a college of agricultural and mechanical arts in every State. This action, along with the supplementary acts of 1887 and 1914 providing for the experiment stations and the Extension Service, brought into being a re markable program of collegiate and adult education

Undoubtedly, this program is one of the reasons why a peasant class has never developed in the United States and why Secretary Benson's principal headache is our

amazing agricultural surpluses.

Federal legislation established this program, and Federal aid ever since 1862 has provided for its partial support. Some \$48 million a year is provided by the Federal Government for A. and M. A. colleges and the associated activities, although this sum is now far exceeded by the voluntary appro-priations of the States for this program.

In 1917, another great statesman, Woodrow Wilson, signed a bill providing for the establishment and continuing support of a program of vocational education at the secondary level in all States.

This program permitted the quick training of some 10 million skilled workers during World War II. Without them, our war effort would have been scriously handicapped. Federal funds totalling \$26 million a year still aid the States in paying for vocational education, although State and local appropriations for this purpose far exceed those of the Federal Government.

More than 200 educational activities are now financed by the Federal Government. Their annual cost is \$1,381,000.1 The largest item totalling \$726 million is for the education of veterans under the GI bills. Some \$300 million of the total is for education

Footnotes at end of speech.

in the States of which \$200 million of the total is for the so-called federally affected areas. The appropriations for the State agricultural colleges and their associated activities, for vocational education and for vocational rehabilitation total \$100 million. The school lunch program and other items compose the remainder.

In the light of the foregoing, it is clear that our schools have not always been a State-local matter. They have been a matter of national as well as of State-local concern since the beginning of our history and down to this very moment. Federal interest in education and Federal aid for the promotion of education is a part of the American tradition. Those who oppose Federal aid for school-building construction on the assumption that education is solely a Statelocal matter are disregarding historical fact either from ignorance or intent.

A second objection to Federal aid for school buildings is that the need has been exaggerated and, therefore, does not justify

Federal assistance.

The immediate and impending classroom shortage is a compound of several factors: (1) The curtailment of construction during the depression; (2) the postponement of building during World War II; (3) the nor-mal building replacement needs due to obsolescene; and (4) the necessity for expansion of school plants due to rapidly rising school enrollments.

To take account of all of these factors, so as to correct present housing conditions in the public schools within a 5-year period, would require \$4 billion a year. If we take 8 years to do the job, \$3 billion a year will be necessary. These estimates do not include costs of either sites or equipment only the buildings.

In spite of valiant efforts by the States and localities, there has been a considerable increase in the classroom shortage during the past 2 years. This shortage threatens to become chronic. That it will worsen in the immediate future is certain on the basis of children already born but not yet of school age. The annual enrollment increase will be something over 1 million a year in the immediate future.

It is also likely that conditions under the present basis of support will continue to worsen in the more remote future, unless the stork develops an anemia, which he shows no signs of doing at present.

During the 1920's and 1930's about 2.5 million children were born each year. They are the parents of the children who are causing current increases in school enrollments. In each of the past 7 years more than 3.5 million children have been born. The total was over 4 million for the first time in 1954. When this greatly increased annual crop of babies reaches maturity, we may expect to flood of their children in our schools exceeding that of the present.

There are children now graduating from the eighth grade who have never attended school except on a parttime basis. More than a million and a half children are attending school in barracklike buildings, in rented churches and garages, and in other makeshift quarters. Many are in basement rooms and hallways, and obsolete firetraps which are a threat to their safety. Many out-sized classes are made necessary by lack of classrooms, so that 40 or 50 children have to be hired up in one room.

And yet there are those who blame the schools for not giving more individual attention to children and for not playing a stronger role in the prevention of juvenile delinquency.

Unless drastic measures are taken, far more effective than those now in effect, there are many children now entering the first grade who 8 years from now will have attended school under circumstances even worse than those of the past 8 years.

Next let us consider another type of objection to Federal assistance for school con-

struction.

There are those who recognize the need for more funds for school buildings but who insist that the States can meet the need solely on their own resources. The United States is no more than the 48 States, they say, so why involve the Federal Government.

To these people we should say that there is a vast difference between each of the 48 States acting individually and the Nation

acting as a Nation.

In the first place, fugitive wealth seeking to dodge its just share of the cost of schools and other public enterprises plays one State against another and as a result depresses the practical ability of both to support State services. For example, industries which mi-grate from New York State to Georgia under the bribe of tax-free status put a damper on taxation in New York and escape it in part in Such tax-dodging is not possible Georgia. when the Federal Government is concerned.

Tax experts generally agree that the Federal Government has superior tax-raising capacity. It not only has it, but circum-stances have compelled the substantial use of this ability. No competent statesmen would propose that the enormous bill for military and other types of preparedness could readily be raised by the States. How ridiculous it would be to propose that since the 48 States are merely the same as the United States, that they have the same ability to raise the more than \$40 billion a year which military and other forms of preparedness are costing us annually.

But, say the opponents of adequate school support, the way to meet the need is to eliminate unnecessary Federal expenses and thereby make revenue available to the States

and localities.

This is a disarming argument until one looks at the facts. The facts are that although there has been much fanfare about reducing Federal taxation, the cuts made

are relatively small.

According to the January 7 issue of U.S. News & World Report, the estimated cash income of the Federal Government for fiscal 1955 will be \$68 billions. The estimates for fiscal 1956, whether one takes the bookkeeping budget or the cash budget, are that the Federal Government expects to collect more and not less revenue next year than in the current fiscal year. As the U. S. News & World Report states: "Despite the cuts in the past 2 years, Government will continue to spend half again as much as it was spending before the war started in Korea."

One may regret this fact or not, but there is little prospect that the situation will substantially change in the next few years

Let us not forget that the rank and file of the voters have had little or no cut in their Federal taxes. They still eye local school tax bills against a background of record peacetime payments to Uncle Sam. In this fact we find a major practical obstacle which stands between adequate school support for buildings and for everything else.

If there were any guaranty that Federal tax collections would be reduced from the present \$60 to \$70 billion a year to something like 35 or even 45 billions, there would be some validity to the proposal that we should cut Federal taxes and thus ease the tax problem in the States.

There is no such prospect. The world sit-uation promises little relief from a colossal bill for military and other types of pre-paredness. At home, industries such as the automotive fight Federal aid for education while they embrace a proposed \$100 billion road-building program with a hoop and a hurrah, a substantial part of which is to be paid for by increased Federal aid appropriations.

Further, it is proposed to finance this huge road-building project on a matching basis; that is, for each dollar received from the Federal Government a dollar must be appropriated from State funds. The result is that the States are likely to appropriate the matching funds first, and take care of construction costs second, or not at all.

A careful reading of the President's state of the Union address offers little hope for any substantial cut in Federal tax collections even from the Republicans in the next

few years.

There is another policy of the Federal Government which has placed education at a serious fiscal disadvantage. This is a policy of allocating large sums for traditionally local and private undertakings, while excluding education in the States from any substantial Federal aid.

Generous Federal aid has been provided for relief, for unemployment, for social security, for road building, for agricultureto specify but a few. No equivalent Fedaid is being allocated to the public

schools in the States.

The basic difficulty in this whole situation is that the Federal Government has no rational and consistent policy as to its fiscal relationships to public education in the States. It discriminates against and starves the schools on one hand, and then when conditions become so bad that they can no longer be ignored it rushes into the situation with hasty and ill-advised legislation. Many illustrations might be given. For example, school people have plead for many years for some funds to eliminate illiteracy They have been dein the United States. nied. But now substantial amounts are being expended by the Defense Department to eliminate illiteracy among those in the military services. Instead of preventing illiteracy at the source, the Federal Government seems to prefer to try to cure it in the military services.

Much of the piecemeal, emergency educational legislation of recent decades passed by the Congress has sought to cure ills in public education which have their origin in financial malnutrition. They could have been prevented by the judicious appropriation of reasonable amounts of Federal aid to the public schools.

This lack of any consistent policy or program for Federal aid for education is largely responsible for the fact that only 8 cents of the total tax dollar-State, Federal, and local—is now expended for public schools, as compared with 16 cents just before World War II. We need just about double what we are now spending to put public educa-tion on a sound financial basis. This amount we would have if 16, rather than 8 cents of each tax dollar went for education. Positive action at the Federal level to redress the situation described is long overdue.

There is another factor which makes the Federal Government a very different animal than a summation of the 48 States. The States differ substantially in their ability to finance education. Sole reliance on State fiscal capacity promises in the future, as in the past, to result both in shocking inequalities of financial provision for school buildings and for any other substantial part of the school budget. The failure of the Federal Government to act on the recommendations of dozens of commissions which have recommended Federal assistance to education in the States is responsible for a tragic denial of educational opportunity for millions of children.

We have a variety of proposals for action in the States by those who would deny Federal assistance to education at any price.

We are told that the local property tax should be reformed. This is true. But the fact is that the local property tax today is raising approximately 60 percent of the total public school bill. This tax falls primarily the homeowner of modest income. Would the opponents of Federal aid place a larger share of school expenditures on the shoulders of these taxpayers?

Then we are told that more State aid should be raised for education. This also is true for some States. The fact is, however, for the country as a whole that there has been a very substantial increase both in the amount of State aid for education as well as the proportion coming from this source.

In 1920 14 percent of public school funds came from the States. In 1954 the cor-responding percent was 37 percent.

If the Federal Government had been as responsive to changing economic and educational conditions as the State governments have been, public education in the United States would not be in its present deplorable condition.

We are also told that the States should reorganize their local school districts. This is still true for some States. It is also true that many of the States have made commendable progress in this regard.

The pertinent fact at this point, however, is that no State has reduced expenditures by consolidating school districts. Consolidation has increased educational opportunity. It has not cut school costs.

The plain fact is that in spite of valiant efforts, the States and localities are not meeting school building needs. Conditions have worsened rather than improved in the past 2 years. They threaten to deteriorate further under present conditions, and certainly if the Federal Government continues its discrimination against education.

The time has come to reject these counsels of perfection and to concentrate on the deplorable fact that inadequate provision for school buildings is one of the factors which is today denying millions of children their

educational birthrights.

Let us begin to think of children first. Let us realize the importance, both to national progress and security, of offering a full educational opportunity to every child. We will then quickly brush aside the objections which stand in the way.

There are two other questions one is likely to encounter from those who place money high and children low in their scale of

values.

The first question is: Do you want to increase Federal taxes-shouldn't they be reduced?

We should meet this question head on. Say that we are in favor of public expenditures which are essential to the progress and security of the United States. If these can be assured on a reduced tax bill that will be fine. But if essential services require present or even increased tax collections, it would be folly not to pay for them. In any case, we should insist that the adequate financing of education deserves to rank as high in our priorities as national defense, and higher than highway construction, if the choice must be made.

Another objection which is raised by the opponents of adequate school support is that we are too poor-our economy cannot afford the cost. This objection is perhaps the most unsound of all.

Gross national production exceeds \$355 billion a year; Beardsley Ruml in the recent report of the National Citizens Commission estimates on the basis of reasonable assumptions that: "The gross national produce in 1965 can hardly be less than \$525 billion."

Disposable personal income, which is what individuals have to spend after personal tax payments, is at an alltime high. We have available for expenditure 40 percent more per person than in 1939. Personal savings, approximating \$20 billion a year, far exceed any other period. Expenditures for au-tomobiles, television sets, and the like have reached fabulous amounts. We have an economy in which, for the first time in history, the total bill for recreation is greater than that for food.

It is ridiculous to claim that such an economy cannot afford to spend whatever is necessary to house satisfactorily its schoolchildren.
